Amendment to Rules of the Court of Appeals of the District of Columbia.

The following certificate received from the clerk of the Court of Appeals of the District of Columbia relative to an amendment to the rules of the court as revised December 4, 1920, is published for the information of those concerned:

It is ordered that the second paragraph of section 2, rule 22, be amended by inserting the following after the words "Commissioner of Patents":

(unless such time for special and sufficient cause be extended by the Commissioner, such time to be definite and fixed)

Promulgated December 14, 1923.

HENRY W. HODGES,
Clerk.

6949.

Amendment to the Rules of Practice.

(Order No. 2,846.)

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, the following rules of the Rules of Practice of the United States Patent Office are amended as follows:

Rule 191, lines 24 and 25, cancel—

Size 10 by 15 inches, per copy ..... .25
Size 8 by 12½ inches, per copy ..... .15

and substitute—

Size 8 by 13 inches, per copy ..... .20
Size 6 by 9 inches, per copy ..... .15

This becomes effective January 1, 1924.

THOMAS E. ROBERTSON,
Commissioner.

Notice—Change in Size and Price of Photostat Copies of Manuscript.

On and after January 1, 1924, photostatic copies of manuscript applications and file wrapper and contents, and records of assignments, will be furnished on prints 8x13 inches, for which a charge of twenty cents per sheet will be made. This will produce a print approximately full size of the original, and hence as legible as the original.

Trade-Marks.

The trade-mark searching facilities open to the public at Room 159 in the Patent Office have been augmented by installing trade-marks published under the act of 1905, but not yet placed upon the register. These are arranged in accordance with the arrangement of words and symbols of registered marks, as well as by classes. All marks published since July 1, 1923, have been included, and those published between January 1 and July 1, 1923, are being inserted.

Disclaimer.

1,371,650.—*Robert J. Adams*, West Auburn, Mass. Device for Removing Broken Picks. Patent dated March 15, 1921. Disclaimer filed December 7, 1923, by the patentee.

Hereby enters this disclaimer—

"To claim 3 in said specification, which is in the following words, to wit:

"3. The combination with the lay of a loom, of a track carried by said lay and extending entirely across the loom, a pair of slides mounted to move on said track, and means for moving said slide in toward the center of the loom, timed to follow the inward motion of the shuttle from that end, and for retracting it."

Condition of Applications Under Examination at Close of Business December 21, 1923.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

LINCOLN PAINT AND COLOR COMPANY *v.* THE AMERICAN PAINT WORKS.

Decided December 30, 1922.

TRADE-MARKS—"CLIMATIC"—ACT OF MARCH 19, 1920—CANCELLATION.

Where the trade-mark was registered on June 14, 1921, and the registrant had used the mark since 1906 and the petitioner claimed no use prior to 1910, but the petitioner had been using the mark for ten years and the registrant had notice of such use prior to 1915 and showed no endeavor to prevent petitioner's use of the mark by legal proceedings, *Held* that the petitioner presumably had the right to use the mark, so that registrant's right was not an exclusive right, and therefore he could not resist cancellation proceedings.

ON APPEAL.

TRADE-MARK FOR DRY, PASTE, AND READY-MIXED PAINT, ETC.

Messrs. Banning & Banning and *Mr. Wm. L. Symons* for Lincoln Paint and Color Company.

Messrs. Mason, Fenwick & Lawrence for The American Paint Works.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiner of Interferences dismissing an application for cancellation of the trade-mark registered under the act of March 19, 1920, on June 14, 1921, No. 143,842, to The American Paint Works.

The mark consists of the word "Climatic." The specimens filed read "Guaranteed Climatic Strictly Pure Prepared Paint."

Registrant endeavored to register the same mark on an application accompanied by the same specimens under the act of 1905. That application was opposed by the present petitioner for cancellation, and the opposition was dismissed in the Patent Office, but sustained by the court of appeals in an opinion reported in 1915 C. D. 162; 216 O. G. 1013; 44 App. D. C. 17, *Lincoln Paint & Color Co.* v. *The American Paint Works*. It appears that the labels relied on by opposer there were substantially the same as those relied on in the present petition for cancellation. In that case the court said:

> We think the mark is clearly descriptive, and not entitled to registration,

basing its conclusion on a consideration of the labels of both parties and the record before it.

Registrant here urges a distinction between its label and that of petitioner for cancellation, suggesting that its use is a true trade-mark use, while petitioner's is a purely descriptive use. It seems clear to me that this is contrary to the holding of the court of appeals. Moreover, I am unable to find registrant's use any less descriptive than that of petitioner, which reads "Lincoln Climatic Paint." Registrant suggests that "Lincoln" is petitioner's trade-mark; but even if this be admitted the fact remains that "Climatic" appears very prominently on petitioner's labels, and petitioner would certainly be very greatly embarrassed if registrant should notify the trade that it had registered "Climatic" as a trade-mark and would hold others using that word on paint as infringers.

It appears that registrant has used the mark since 1906, whereas petitioner claims no use prior to 1910. The question here involved, however, is not one of priority, interferences having been specifically excluded from the act of 1920. The statute clearly states that registrant must have had the exclusive right to use the mark at the date the application was filed to resist cancellation proceedings. It appears that petitioner here had been using the mark for upward of 10 years and that registrant had notice of such use prior to 1915. There is no showing of an endeavor to prevent petitioner's use of the mark by legal proceedings, and we are justified in presuming that petitioner had the right to use the mark, so that registrant's right was not an exclusive right.

Two cases recently decided in cancellation proceedings under the act of 1920 set out principles which apply to the present case and indicate that the Examiner of Interferences must be reversed and the petition for cancellation granted. These cases are *R. H. Macy & Co., Inc.*, v. *The Macey Company, Inc.*, 295 O. G. 463, and *Climax Rubber Company* v. *U. S. Compression Inner Tube Company*, 141 MS. Dec. 119; 313 O. G. 453. [An appeal from the latter decision to the Court of Appeals of the District of Columbia was dismissed, 312 O. G. 400.]

The Examiner of Interferences is reversed. The mark will be canceled.

U. S. Circuit Court of Appeals—Third Circuit.

SHELBY STEEL TUBE CO. *v.* STANDARD SEAMLESS TUBE CO.

Decided January 5, 1923.

[287 Fed. Rep. 320.]

PATENTS—870,246, CLAIMS 2, 4, AND 5, FOR MAKING OF SEAMLESS TUBES, HELD VOID FOR WANT OF INVENTION.

The Nicholson patent, No. 870,246, claims 2, 4, and 5, for a method for making seamless tubes, *Held* void for want of invention in view of the prior art, the advance in the art at the time of the issuance of the patent being due to another invention.

APPEAL from the District Court of the United States for the Western District of Pennsylvania; Charles P. Orr, judge.

Suit in equity by the Shelby Steel Tube Company against the Standard Seamless Tube Company for infringement of a patent. From a decree dismissing the bill, complainant appeals. Affirmed.

Mr. D. Anthony Usina and *Mr. Frederick P. Fish* for the appellant.

Mr. J. Bruce Orr, *Mr. Frederick W. Winter*, and *Mr. Livingston Gifford* for the appellee.

Before WOOLLEY and DAVIS, Circuit Judges.

WOOLLEY, *Cir. J.*:

This is a suit for infringement of Letters Patent No. 870,246, issued November 5, 1907, to John H. Nicholson, assignor to National Tube Company of Pittsburgh, Pa., for a method of making seamless tubes, and is here on the complainant's appeal from a decree of the district court dismissing the bill on the ground that the patent is invalid for want of invention in view of the prior art. Claims 2, 4, and 5 are involved.

As the decision of this case may affect the whole seamless-tube industry, it is important that the reasons for the decision be fully given.

We shall first examine the patent with reference to its validity. The patentee, in his specification, states the prior art and the purpose of his invention as follows:

> Heretofore in the manufacture of hot-rolled blanks from pierced billets for the purpose of cold drawing, a plug-mill of the well-known type is one of the common devices that has been used; the hollow billet is elongated in this mill and the thickness of its wall reduced to a sufficient gage or thinness, so that the same can be cold drawn with smooth surfaces to the desired thickness of wall. In this plug-mill operation it is desirable to produce hot-rolled blanks or tubes, as round and as smooth on the inside as possible, to facilitate the cold-drawing and enable the tube to be finished to the desired gage and to smooth-finish it in as few cold-drawing passes as possible. Heavy reductions cannot be taken on the cold draw bench, without excessive breakage, until the rolled blank has been rounded up and the interior scratches removed, owing to the tendency of the metal to pick up, or accumulate, ahead of the mandrel during the cold-drawing. To partly overcome this difficulty, the rolled blanks are given several additional passes on the plug-mill for the purpose of rounding up the diameter and smoothing the interior surface, little or no work being done in reducing the thickness of wall during such additional passes. This additional work for the plug-mill occupies much time, and reduces the output of the mill.
>
> My invention is designed to overcome this difficulty, so that the plug-mill may be used for its normal function of reducing the thickness and elongating the blank, without giving further passes on such mill for rounding up and working out the scratches, thereby reducing the number of passes that have been heretofore deemed necessary in the production of hot-rolled blanks suitable for cold-drawing. For this purpose I subject the blank to a new operation, intermediate between the plug-mill and the draw-bench. In this additional step I pass the rolled blank through a reeling, or cross-rolling machine, in which the blank is rounded up, its interior and exterior surfaces smoothed, and the scratches practically eliminated, giving a much better blank or tube for cold-drawing than could be produced on the plug-mill, no matter how many additional passes for rounding and smoothing were given.

Omitting for the moment reference to the advantages which he maintains are derived from this method of operation, the patentee claims:

> 2. The herein described method of making seamless tubing which consists in rolling the pierced blank or billet in a plug-mill, then removing the blank and cross-rolling it over a mandrel to eliminate interior ridges or grooves and to true up the gage, substantially as described.
>
> 4. In the method of making seamless tubing, the steps which consist in elongating and thinning the pierced billet in a plug-mill, and then removing the blank and cross-rolling it over a mandrel to smooth out the interior scores or grooves while the blank is hot, without materially changing the thickness of its wall, substantially as described.
>
> 5. In the method of making seamless tubing, the following steps: elongating and thinning the pierced billet by rolling it over a plug, then removing the hot blank and rolling it over a mandrel to smooth out its interior without changing its gage, and then cold-drawing the blank, substantially as described.

The complainant reads these claims as follows: first, a solid round billet is pierced by means of a pointed mandrel, the billet being forced onto the mandrel by means of cross rolls or discs which give it a compound motion. The component motions are a circular rolling which enlarges the billet circumferentially, drawing the central metal out toward the circumference, and a forward spiral motion which as the circumference is enlarged forces the metal over the pointed mandrel.

The next step is to roll the pierced billet in a plug mill. This comprises a pair of rolls forming approximately circular passes in which lie fixed mandrels. This mill works like an ordinary rolling mill, drawing the tube out to greater length and correspondingly reducing the wall thickness. This longitudinal rolling operation may be effected in two or more successive passes in the plug mill. The rolling in the plug mill is in a direction directly at right angles to the rolling that took place in the piercing mill. For this reason the transverse or spiral markings left by the piercing mill are eliminated in the longitudinal rolling operation; but by reason of wear on the plug and rolls, this plug-rolling operation leaves substantial longitudinal markings on the outside and particularly on the inside of the tube.

The third step is cross rolling the tube, not to expand it as in the piercing operation, but to remove or soften the roughness left by the longitudinal plug-rolling operation. In this cross rolling, or "reeling" operation, there is inevitably a certain reduction of the thickness of the wall, material or immaterial according as the operation is directed. When immaterial the reduction is negligible and the result, as required by the patent, is merely the smoothing out of the ridges and grooves left from the plug-mill operation.

The three steps referred to, piercing by cross rolling, longitudinal rolling in a plug mill, and again cross rolling or reeling are performed on the metal while hot. The finish obtained by these three successive steps is sufficiently good to make a marketable tube for many uses. For producing finer tubes there is added to the three steps described a fourth step of drawing the tube cold lengthwise through a fixed annular die. This is the complainant's conception of the method of the patent. Claiming somewhat more than the inventor himself, it maintains that Nicholson was the first to conceive and put into practice the idea of making seamless tubes by the succession of steps embraced within this method and that the economies effected thereby are, first, a saving in cost by eliminating the smoothing passes formerly practiced in the plug mill; second, the production (for the first time) of a hot finished tube so perfect as to be usable in some arts without subsequent cold drawing; third, the providing of such a smooth tube for subsequent cold drawing as to reduce the number of cold-drawing passes and to save wear on the dies and mandrels of the cold-draw bench. Finally, the complainant claims that Nicholson's invention created a rebirth of the seamless-tube art, cheapened it extraordinarily and extended its use into fields which had been previously closed to it. If this were the story—or the whole story—of the patent we would find invention in the method and sustain the patent without hesitation. But there is more in the story than this. Nowhere does the maxim "origo rei inspici debet" apply more appropriately than to an invention which, through a patent, has been accorded a dominating place in the art. This takes us to the prior art; and necessarily so, because, whether we read the claims as starting with a pierced billet and consisting of two steps, first rolling the pierced billet in a plug mill and next cross rolling it in a reeler, or consisting of four steps, piercing the billet, rolling the pierced billet in a plug mill, cross rolling it in a reeler, and finishing it with a cold draw, the claims do not prescribe the means for taking these steps. Regarding the method as comprising four steps, Nicholson points out no particular means for piercing the billet. Obviously, then, he must mean piercing the billet as billets were pierced in the prior art. He prescribes no type of plug mill. He refers, as a preference, to the plug mill of Stiefel and himself (No. 700,195), but says that, "Any desirable type of plug mill may be used." Coming to cross rolling, he says:

> The reeling mill may be of any desirable type so long as it performs the function of smoothing out the scores or grooves on the interior of the tube.

Mentioning cold-drawing only in general terms, he must mean cold-drawing as practiced in the art. Therefore, the invention of the patent, if any, is to be found solely in the new order in which concededly old means are used.

The art was not new when Nicholson entered it. Indeed, it was fifty or sixty years old and was well filled with inventions for which patents had been granted—now long expired—covering billet-piercing mills, plug mills, reelers, cold-draw benches and methods for using them. Nicholson reached back into the art and appropriated the various mechanisms he found there and used them in the steps of his method for the same purposes, or for some of the same purposes, that others had used them before. We shall discuss but two or three of the many patents in the art.

In the British patent to Dyson, No. 2,400 of 1862, sealed February 20, 1863, a reeler is shown for the purpose for which a reeler is used in the method of the patent in suit. The patent deals mainly with a rod, bar or shaft made by groove rolls in the ordinary manner, and provides that while still hot the metal piece should be introduced between the outer ends of the rolls. The patentee states:

> The rotation of these rolls causes the rod, bar or shaft to pass through the rolls and to issue from the opposite end circular, smooth and polished.

While the illustration goes only to the reeling of circular articles exteriorly, the patentee says:

> When applied to the manufacture of pipes and tubes the machinery remains as before described, but in addition to the guides I employ a mandrel between the rolls, over which the pipe or the tube is drawn.

So also in the United States Patent No. 41,836 the same inventor, in 1864, describes the mechanism in part as follows:

> And by virtue of the opposite inclination of the axes of the rolls it is drawn between them in a line nearly parallel to the axes of the rolls, while it is caused to rotate, and is thereby rendered cylindrical, smooth, and polished.
>
> My machine is also adapted to the rolling of tubes or pipes by the addition of a mandrel between the rolls over which the pipe or tube is drawn.

The testimony is to the effect that this is a disclosure of finishing tubes both outside and inside.

We are not comparing Dyson's polishing rolls with the polishing reeler preferably employed by Nicholson in his method, because Nicholson's patent does not cover any particular form of reeler except that it shall perform "the function of smoothing out the scores or grooves in the interior of the tube." Our purpose in quoting Dyson is to show that he was before Nicholson in using a reeler with which to smooth and polish a tube. For the same purpose we refer to United States Patent No. 149,310, granted in 1873, to Hayden for an improvement in machines for rolling tubing. It was intended by this patent that the tube should be drawn through rolls and at the same time revolve around a mandrel. In his specification Hayden says:

> But the mandrel may be dispensed with in cases where the interior of the tube is not required to be smooth and when the diameter of the tube is to be reduced without materially reducing the thickness of the metal of the tube.

We agree with the learned trial judge that there is in this language a plain inference to be drawn by anyone skilled in the art, that if the interior of the tube is required to be smooth and if the wall of the tube is not to be reduced, the mandrel should be used. In other words, it seems that Hayden knew that the mandrel had the function in the cross-rolling operation described by Nicholson and mentioned in each of his claims.

Hayden further says:

> The rolling operation takes place from end to end of the tube, and the tube is polished both internally and externally, the bore being of uniform size.

Here again we are not comparing the roll mechanism of Hayden with that which is preferred by Nicholson; we are quoting Hayden simply to show that he had already done what Nicholson did in the reeling step of his method.

For the same purpose we cite two more patents, United States Patents No. 401,144 and 401,145, granted to Flagler in 1889, one for an apparatus and the other for a method, covering the same inventive conception. In the method patent Flagler says that the object of his invention is to provide a method of manufacturing seamless tubes "in which the interior surface is highly finished" and "the tube itself straightened and given a true cylindrical form in one continuous operation." In practicing his invention the start, or first step, is taking a hollow ingot or blank, which corresponds with the pierced billet of the patent in suit. The second step is the drawing or forming of the blank of a length, diameter and thickness of wall in pro-

portion to the finished tube to be made. This corresponds with the plug-mill operation of the patent in suit. For the third step, Flagler says:

> The tube or tubular blank thus formed is next subjected to the rolling action of concave cross rolls over a mandrel *to further reduce the thickness* of the tube and produce a spiral arrangement of internal fibre walls, to straighten said tube and impart a true cylindrical form thereto. * * * In some cases where the amount of reduction of the thickness of the tube coming from the first rolling operation is not great * * * the form of cross rolls shown in Fig. 2 is employed. In this the area of the pass formed by the working faces of the rolls remain substantially the same throughout.

Continuing, Flagler says:

> By my improved method I am able to produce a *thin* seamless tube having its fibres both internally and externally arranged spirally *and the interior of the tube given a high degree of finish* as well as straightening the tube and giving it a true cylindrical form in *one continuous operation*.

In the companion apparatus Patent No. 401,144 Flagler repeats the same idea:

> I am able to take a hollow ingot or blank, *and by a continuous operation* reduce the thickness of the walls of the same and produce a tube of the desired length, * * * and the tube *smoothed* and straightened so that no further manipulation of the tube is necessary.

This certainly means that by this method a hot-finished tube is produced.

On Flagler's method patent (No. 401,145), and Stiefel and Nicholson's patent (No. 770,195), the Examiner rejected all the claims of Nicholson's application. These claims stated broadly the steps of the method without any limitation. When Flagler was cited against him, Nicholson was called upon to distinguish his invention from that of Flagler. This he did by amending his claims.

In urging his amended claims in the Patent Office, Nicholson distinguished the cross-rolling step of his invention from the cross rolling of Flagler by showing that aside from arranging metal fibers spirally Flagler cross rolled for the double purpose of decreasing wall thickness and smoothing the interior of the tube while he cross rolled for the single purpose of smoothing the interior. The amended claims were similar to the old claims except that they contained such limitations as cross rolling over a mandrel "to smooth out the interior scores or grooves," "to true up its gage, without materially reducing the thickness of its wall," "without changing its gage." In distinguishing Nicholson from Flagler, the complainant aptly refers to the cross-rolling step with these limitations as a "mere" smoothing step. This limitation of cross rolling to one of several uses of a prior art mechanism, is, we think, a narrow ledge on which to build invention. And so, evidently, thought the Examiner who rejected the amended claims. Speaking of them, he said:

> It was known that cross-rolling over a mandrel produced a reasonably smooth finished tube. It was known that longitudinal rolling over a plug produced a tube scored internally and no unexpected result therefore follows from rough rolling over a plug and smoothing over a mandrel by cross-rolling. Whether the cross-rolling reduced the wall or not, it seems to be obvious what the result will be.

The Examiner, however, was overruled by the Examiners in Chief and the claims as amended stand in the patent.

Besides those to which we have referred many of the patents cited are quite old and seem not to have made very great impressions upon the art. In this connection several facts are to be noted. One is that while, in 1903, the seamless-tube art was old, it had not flourished except when supplying seamless tubes to the bicycle industry when at its height. With the collapse of that industry the great demand for seamless tubes fell off and the industry was at low ebb until at or about the time the invention of the patent in suit appeared. Therefore, if early inventions were substantially like the invention of Nicholson, it is quite pertinent to inquire why the art did not adopt them more promptly and why it did not recognize their merit until Nicholson came along.

The answers to these questions turn on something else that happened in the art at or about the time of the invention of the patent in suit. And just here there is a question as to the date of the invention. The patent application was filed December 15, 1904. The complainant maintains that the date of conception was about March 5, 1902, the date of the first reduction to practice in November, 1902, and the date the invention was put into practical use in December, 1903. These dates of conception, reduction to practice and practical use are contested by the defendant on the ground that in December, 1903, Stiefel and the same John H. Nicholson applied for a patent for an invention on which they had been working for some time. The patent was granted in 1904 (No. 770,195). Throughout his application for the patent in suit, Nicholson, or his solicitors, referred to the Stiefel and Nicholson patent, indicating that that patent antedated the conception of the patent in suit by about a year and that the invention of the patent in suit grew out of difficulties encountered in developing and practicing the invention of Stiefel and Nicholson. Without deciding the precise dates of the conception and reduction to practice of the invention of the patent in suit, it is sufficient to say that they were contemporaneous with the appearance, in 1903, of the automatic plug mill invented by Otto Heer. The advent of the automatic plug mill was a capital event in the seamless-tube art. The great problem in this art had to do, not with finishing tubes, but with the economical elongation of tubes and corresponding reduction of their walls before finishing them. Prior to Heer, plug mills had been manually operated and the resultant tubes were relatively short and decidedly rough. Wall thickness had to be reduced by additional passes or subsequent operations. By Heer's automatic mechanism tubes were greatly elongated and wall thickness greatly reduced, and the tubes were advanced farther toward the finished product. When intended for some uses, tubes were wholly finished as to dimensions. There were, however, interior scores and grooves which, as before, had to be disposed of in some way. The means at hand were cross rolling and cold-drawing, both old in the art. Finishing tubes by cold-drawing was slow and costly. This was well known. If they could be finished while still hot, the time and expense of cold-drawing would be eliminated. This was obvious. Therefore Nicholson resorted to cross rolling, which had long before been used for two purposes, first, reducing wall thickness, and second smoothing and polishing tubes made in a hand plug mill. He adopted this means for the one purpose of polishing tubes made in an automatic plug mill, first, as a step intermediate between the plug mill and the drawbench when tubes were to be finished by cold-drawing, and second, as a final step when tubes had been finished as to dimensions in the automatic plug mill and remained only to be smoothed. Even if Nicholson were the first to conceive the four steps in the order named and the first to embody them in a method and reduce it to practice, his method, we think, was but the natural answer to a new call made by the automatic plug mill when it came into the industry. We hesitate to say 20 years after the event that a thing was obvious, yet we are forced to say, in the light which the evidence throws upon the industry at that time, that when the automatic plug mill produced tubes finished as to dimensions it was an obvious thing to smooth such finished tubes by smoothing means at hand in the industry, namely, by cross rolling or cold-drawing, according to the uses to which the tubes were to be put and according to the desire of the operator. Important as is the bearing of the patent in suit on the industry and valuable as it would be to the owner if sustained, we are constrained to hold that the great changes wrought in the industry at or about the time of its appearance were due not to the invention of the patent but to the invention of the automatic plug mill, and that with the automatic plug mill economically finishing (for some uses) tubes of greater length and narrower walls, invention was not involved in taking from this mill hot tubes wholly finished as to dimensions and smoothing them in a way known to the art.

Therefore we are of opinion that the decree below must be affirmed.

ADJUDICATED PATENTS.

(D. C. Pa.) The De Wein patent, No. 961,084, for rock crusher, *Held* valid and infringed. *Worthington Pump & Machinery Corporation* v. *Traylor Engineering & Mfg. Co.*, 292 Fed. Rep. 777.

(D. C. Pa.) The Bernard and Sholl patent, No. 1,145,967, for lubricating device for rock crusher, *Held* valid and infringed. *Worthington Pump & Machinery Corporation* v. *Traylor Engineering & Mfg. Co.*, 292 Fed. Rep. 777.

(C. C. A. N. Y.) The Dunkley patent, No. 1,256,885, for cherry-pitting machine, *Held* not infringed. *Dunkley Co.* v. *Huntley Mfg. Co.*, 292 Fed. Rep. 756.

(C. C. A. Pa.) The Evans patent, No. 1,342,744, for headlight lens, *Held* infringed. *MacBeth-Evans Glass Co.* v. *L. E. Smith Glass Co.*, 292 Fed. Rep. 754.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,319,108, T. D. Palmer, Clothes-pressing machine (drying attachment), decided November 20, 1923, claim 7.

Pat. 1,418,669, E. P. Ogden, Tunnel kiln, decided November 9, 1923, claims 1 and 2.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Dec. 17, 1923.*

Plummer & Edwins, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Buffalo Vegetable Marketing Co., of 29 East Market Street, Buffalo, N. Y., and Sol Perimon, of 1837 West Jefferson Avenue, Detroit, Mich., for registration of a trade-mark and trade-mark registered September 20, 1921, No. 146,841, to Plummer & Edwins, of Second Avenue and University Street, Seattle, Wash., and a letter sent by registered mail to said Plummer & Edwins at the said address having been returned by the post office undeliverable, the Office has failed to secure service upon said Plummer & Edwins. Notice is therefore given that unless said Plummer & Edwins, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 11, 1923.*

Bliss, Painter & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between Johnson & Company, 100 South Minnesota Avenue, St. Peter, Minn., for registration of a trade-mark and trade-mark registered September 1, 1903, No. 41,018, to Bliss, Painter & Co., 108 and 110 Third Street North, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said Bliss, Painter & Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Bliss, Painter & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This interference will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 11, 1923.*

Sprayene Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between Richmond Dairy Company, 314–322 North Jefferson Street, Richmond, Va., for registration of a trade-mark and trade-mark registered December 22, 1914, No. 101,542, to Sprayene Company, Woodstown, N. J., and a notice of such declaration sent by registered mail to said Sprayene Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Sprayene Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Dec. 13, 1923.*

V Co., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The M. Shaffer Company, 724 Passyunk Avenue, Philadelphia, Pa., to effect the cancellation of the trade-mark registration of V Co., of Wheeling, W. Va., No. 90,603, dated March 4, 1913. The Office having been unable to secure service upon said V Co., notice is hereby given that unless said V Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 1, 1924.

[VOL. 318. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 135,612. (CLASS 39. CLOTHING.) NORTHLAND KNITTING COMPANY LIMITED, Winnipeg, Manitoba, Canada. Filed July 30, 1920.

CASEY JONES
$ THE DOLLAR $
GLOVE

Disclaimer is hereby made to words "The Dollar Glove" and "$" sign apart from mark shown in drawing.

Particular description of goods.—Gloves Made of Leather.

Claims use since Oct. 5, 1915.

7,118.—*Title:* CLOVERDALE. For Dairy Products—Namely, Milk and Cream. JAMES E. WARD, Springfield, Ohio. Published September 1, 1921.

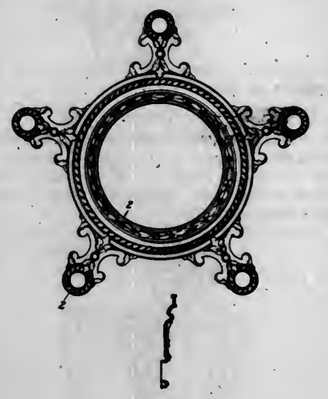
7,119.—*Title:* CLEAR AS A BELL. For Phonographs. JAMES E. WARD, Springfield, Ohio. Published September 1, 1921.

DESIGNS

JANUARY 1, 1924.

63,675. GAS HEATER. JULIUS FERDINAND ADAMS, Pittsburgh, Pa. Filed Sept. 19, 1923. Serial No. 7,270. Term of patent 3½ years.

The ornamental design for a gas heater as shown.



63,676. [WITHDRAWN.]

63,677. BRACELET BUCKLE. AXEL GEORGE EKLUND, Attleboro, Mass., assignor to J. F. Sturdy's Sons Co., Attleboro Falls, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1922. Serial No. 4,011. Term of patent 3½ years.

The ornamental design for a bracelet-buckle, as shown.

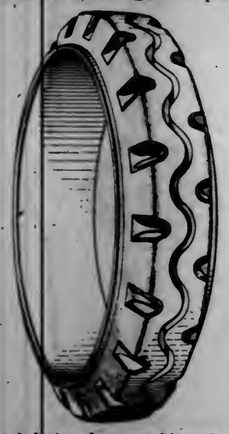
63,678. BODY CENTER FOR AN ELECTRIC-LIGHT FIXTURE. HENRY A. FRAMBURG, Chicago, Ill., assignor to H. A. Framburg & Company, Chicago, Ill. Filed Aug. 21, 1923. Serial No. 7,046. Term of patent 7 years.

The ornamental design for a body center for an electric light fixture, as shown.

63,679. BACKPLATE FOR AN ELECTRIC-LIGHT BRACKET. HENRY A. FRAMBURG, Chicago, Ill., assignor to H. A. Framburg & Company, Chicago, Ill. Filed Aug. 21, 1923. Serial No. 7,047. Term of patent 7 years.

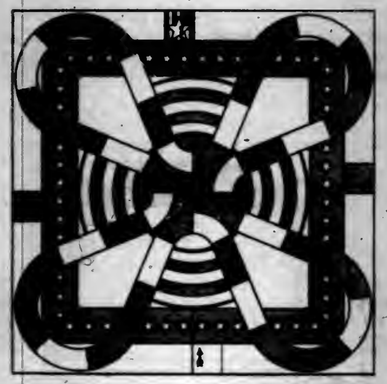
The ornamental design for a backplate for an electric light bracket as shown.

63,680. BACKPLATE FOR AN ELECTRIC-LIGHT BRACKET. HENRY A. FRAMBURG, Chicago, Ill., assignor to H. A. Framburg & Company, Chicago, Ill. Filed Aug. 21, 1923. Serial No. 7,048. Term of patent 7 years.



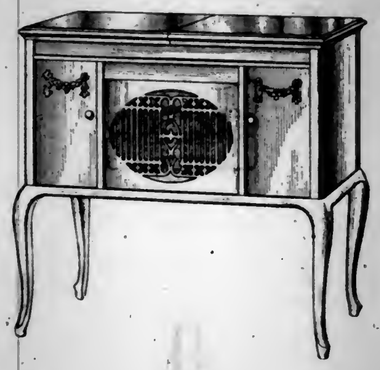
The ornamental design for a backplate for an electric light bracket as shown.

63,681. BACKPLATE FOR AN ELECTRIC-LIGHT BRACKET. HENRY A. FRAMBURG, Chicago, Ill., assignor to H. A. Framburg & Company, Chicago, Ill. Filed Aug. 21, 1923. Serial No. 7,049. Term of patent 7 years.



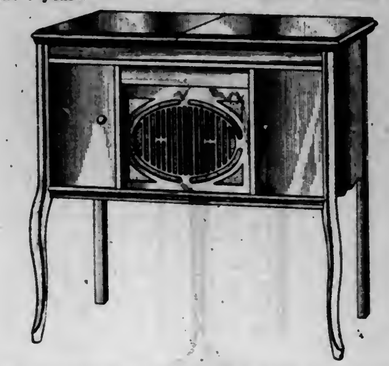
The ornamental design for a back plate for an electric light bracket as shown.

63,682. CUSHION TIRE. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 12, 1922. Serial No. 3,362. Term of patent 14 years.



The ornamental design for a cushion tire as shown.

63,683. GAME BOARD. JACK GERBERHOLTZ, Brooklyn, N. Y. Filed July 12, 1923. Serial No. 6,761. Term of patent 3½ years.

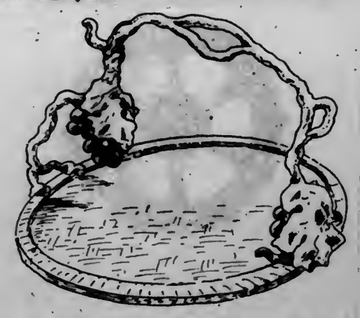


The ornamental design for a game board, as shown and described.

63,684. PHONOGRAPH CABINET. CICERO HINE, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1923. Serial No. 7,480. Term of patent 7 years.

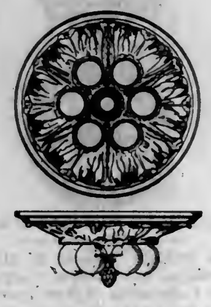
The ornamental design for a phonograph cabinet as shown.

63,685. PHONOGRAPH CABINET. CICERO HINE, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1923. Serial No. 7,481. Term of patent 7 years.



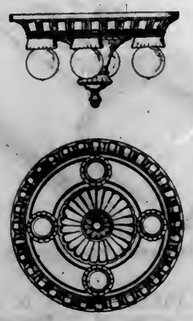
The ornamental design for a phonograph cabinet as shown.

63686. PHONOGRAPH CABINET. CICERO HINE, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1923. Serial No. 7,482. Term of patent 7 years.



The ornamental design for a phonograph cabinet as shown.

63,687. BASKET. MARTIN F. HRUBANIK Alameda, Calif. Filed July 14, 1922. Serial No. 3,084. Term of patent 14 years.



The ornamental design for a basket as shown.

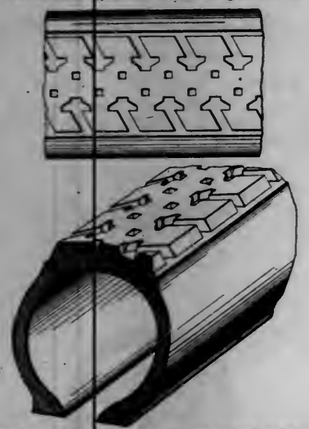
63,688. LIGHTING FIXTURE. WILLIAM J. MEIXNER, Camden, N. J., assignor to Voigt Company, Philadelphia, Pa. Filed Aug. 6, 1923. Serial No. 6,954. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

63,689. LIGHTING FIXTURE. WILLIAM J. MEIXNER, Camden, N. J., assignor to Voigt Company, Philadelphia, Pa. Filed Aug. 6, 1923. Serial No. 6,955. Term of patent 3½ years.

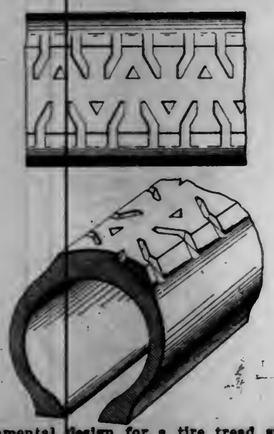
The ornamental design for a lighting fixture, as shown.

63,690. LIGHTING FIXTURE. WILLIAM J. MEIXNER, Camden, N. J., assignor to Voigt Company, Philadelphia, Pa. Filed Aug. 6, 1923. Serial No. 6,956. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

63,691. LIGHTING FIXTURE. WILLIAM J. MEIXNER, Camden, N. J., assignor to Voigt Company, Philadelphia, Pa. Filed Aug. 6, 1923. Serial No. 6,957. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

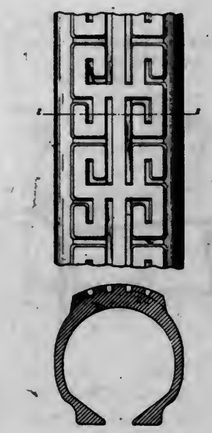
63,692. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 7, 1923. Serial No. 7,713. Term of patent 14 years.

The ornamental design for a tire tread substantially as shown.

63,693. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Inc., Brooklyn, N. Y., a Corporation of New York, Filed Nov. 7, 1923. Serial No. 7,714. Term of patent 14 years.

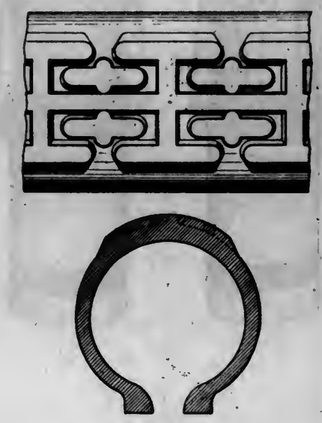
The ornamental design for a tire tread substantially as shown.

63,694. SPOON OR SIMILAR ARTICLE. WILLIAM F. MOWRY, Wallingford, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Sept. 17, 1923. Serial No. 7,226. Term of patent 7 years.



The ornamental design for a spoon or similar article, as shown.

63,695. RING BODY FOR A LAMP FIXTURE. ALBERT J. D. OHM, Astoria, N. Y., assignor to Max Schaffer Company. Filed July 23, 1923. Serial No. 6,824. Term of patent 3½ years.



The ornamental design for a ring body for a lamp fixture as shown.

63,696. PNEUMATIC TIRE. VICTOR A. PARKER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 1, 1922. Serial No. 2,494. Term of patent 14 years.

The ornamental design for a pneumatic tire as shown.

63,697. TIRE. CARL PHARIS, Newark, Ohio, assignor to The Pharis Tire and Rubber Co., Newark, Ohio, a Corporation of Ohio. Filed Oct. 16, 1922. Serial No. 3,987. Term of patent 14 years.

The ornamental design for a tire, as shown.

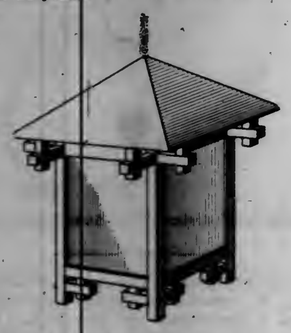
63,698. TIRE TREAD. RALPH W. REINHART, Sandusky, Ohio. Filed Apr. 18, 1922. Serial No. 1,829. Term of patent 14 years.

The ornamental design for a tire tread as shown.

63,699. FINGER RING. HENRY RUFEISEN, Newark, N. J. Filed June 16, 1923. Serial No. 6,517. Term of patent 3½ years.

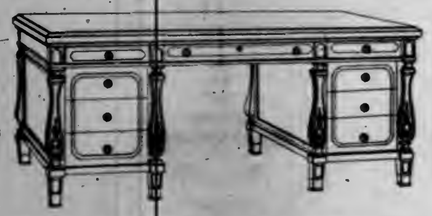
The ornamental design for a finger ring as shown.

63,700. CHANDELIER. EDWARD L. SILVERMAN, New York, N. Y., assignor to London Lightingwares Corporation, a Corporation of New York. Filed Mar. 6, 1923. Serial No. 5,374. Term of patent 7 years.



The ornamental design for a chandelier as shown.

63,701. CEILING LIGHT. EDWARD L. SILVERMAN, New York, N. Y., assignor to London Lightingwares Corporation, a Corporation of New York. Filed Mar. 6, 1923. Serial No. 5,375. Term of patent 7 years.

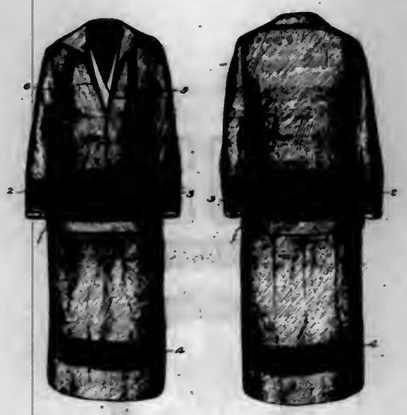


The ornamental design for a ceiling light, as shown.

63,702. LAMP. CHARLES W. SINKINS, Lake Mahopac, N. Y. Filed July 18, 1923. Serial No. 6,799. Term of patent 14 years.

The ornamental design for a lamp, as shown and described.

63,703. DESK. ALFRED HORNER STRINGE, Chicago, Ill., assignor to Commercial Furniture Company, Chicago, Ill. Filed Jan. 20, 1923. Serial No. 4,942. Term of patent 7 years.

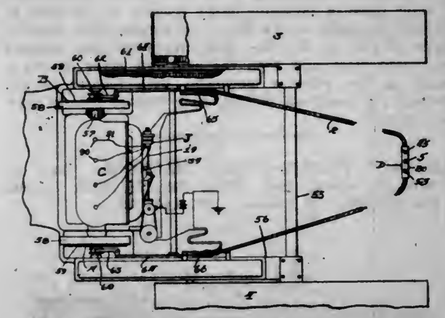


The ornamental design for a desk, as shown.

63,704. CHAIR. ALFRED HORNER STRINGE, Chicago, Ill., assignor to Commercial Furniture Company, Chicago, Ill. Filed Jan. 20, 1923. Serial No. 4,945. Term of patent 7 years.

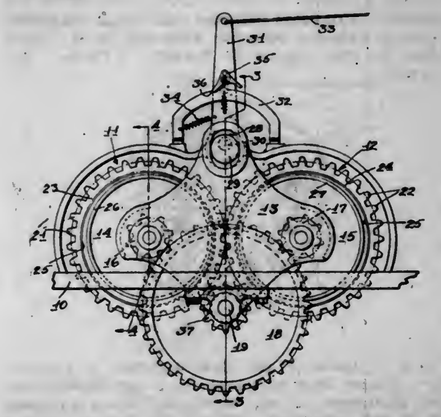
The ornamental design for a chair, as shown.

63,705. DRESS. EDWIN E. WOLF, New York, N. Y., assignor to Colony Club Frocks, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1923. Serial No. 7,696. Term of patent 3½ years.



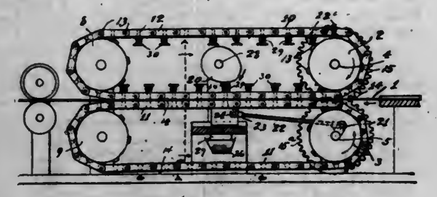
The ornamental design for a dress, substantially as shown and described.

PATENTS



GRANTED JANUARY 1, 1924.

1,478,996. CONTROL MECHANISM FOR OPERATING VEHICLES. DAVID F. GEIGER, Los Angeles, Calif., assignor of one-third to Arthur D. Cole, Minneapolis, Minn. Filed Feb. 12, 1918, Serial No. 216,725. Renewed Apr. 30, 1923. 9 Claims. (Cl. 180—77.)



1. In combination with a self propelled vehicle having an internal combustion engine prime mover, traction wheels driven by said prime mover, a flexible line actuated control for operatively effecting the connection between said prime mover and said traction wheels, electrically actuated means for controlling the gas admitted to regulate the speed and operation of said prime mover and means carried by said line for manipulating the operation of said electrically actuated means.

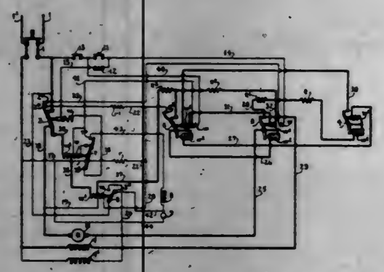
1,478,997. POWER TRANSMITTER AND OPERATING MECHANISM THEREFOR. DAVID FRANKLIN GEIGER, Los Angeles, Calif. Filed May 14, 1921, Serial No. 469,417. Renewed May 22, 1923. 9 Claims. (Cl. 74—26.)

1. In a device of the class described, a pair of intermeshing wheels, a second pair of wheels including a companion wheel for each intermeshing wheel, an internal friction surface on each wheel of one pair, an external friction surface on each wheel of the other pair, a tiltable support upon which said second pair of wheels is journaled, means for tilting said support to severally engage the friction surfaces of second pair of wheels with the friction surfaces of the other pair, power connections associated with said pairs of wheels, said support tilting means including a cam and a lever associated therewith, together with a line and a retracting device operating upon said lever to shift the same in opposite directions.

1,478,998. DESIGN-CUTTING MACHINE. WILLIAM R. HOWARD and WILLIAM H. GREGG, Chicago, Ill., assignors to The Flintkote Company, a Corporation of Massachusetts. Filed Oct. 27, 1919. Serial No. 333,576. 4 Claims. (Cl. 164—89.)

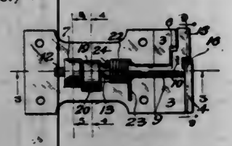
1. In a design cutting machine of the character described, the combination with two endless gripping chains arranged to firmly grip material and guide it continuously through the machine, of male and female die members fixed to chain links for perforating the material, means for actuating said die members at given and predetermined intervals, a reciprocating block operating beneath die members and furnishing solid base for die members during perforating operations.

1,478,999. HOG HOLDER. NELS H. JOHNSON, Dayton, Iowa. Filed Mar. 12, 1923. Serial No. 624,505. 1 Claim. (Cl. 119—153.)



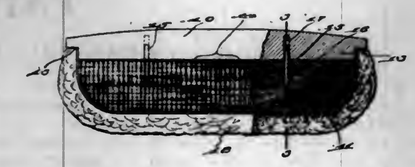
An animal holding device comprising a tubular member having an opening in one end thereof, a toothed bar slidable through the opening of the tubular member, a flexible element formed with a loop intermediate its ends and having one end attached to one end of the tubular member and its opposite end attached to the bar, a sleeve extending laterally from the tubular member at one end thereof, a cap removably engaged on the sleeve, a plunger slidably mounted in the sleeve and adapted to move into the tubular member, and having its inner end bifurcated and slidably embracing the bar and normally holding the latter in a position where one of the teeth will engage one of the walls of the opening.

1,479,000. TENDON BANDAGE BOOT. JAMES D. KELLER, Detroit, Mich. Filed Oct. 26, 1921. Serial No. 510,630. 1 Claim. (Cl. 54—82.)



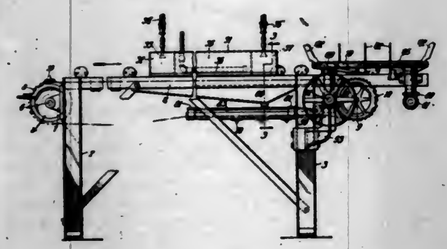
A bandage-boot adapted to extend substantially twice around a limb, one half of the bandage-boot being of two thicknesses of soft flexible material with a cushion between them adapted to extend entirely around the limb, the longitudinal edges of said soft materials being sewed together to prevent the cushion from shifting, the inner thickness being perforated for ventilation, said inner half of the bandage-boot being formed with a downwardly extending pad.

1,479,001. MOTOR CONTROLLER. RALPH G. LOCKETT, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 30, 1922. Serial No. 532,605. 13 Claims. (Cl. 172—179.)



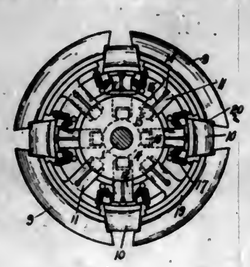
2. In a dynamic braking controller for a motor having a shunt field, in combination, an electro-responsive switch for controlling the shunt field strength of the motor, said switch having an energizing winding designed for relatively low voltage and connections subjecting the same to the E. M. F. of the motor, protective resistance included in circuit with said winding and means for excluding said resistance from the circuit of said winding as the motor is slowed down.

1,479,002. SASH HOLDER FOR RAILROAD-CAR WINDOWS. CYRUS H. LOUTREL, South Orange, N. J., assignor to The National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed Nov. 25, 1922. Serial No. 603,368. 5 Claims. (Cl. 292—228.)



3. A device of the character described, comprising a plate having spaced perforated ears, a rock-shaft journaled within said ears, and a locking lug carried by said shaft intermediate its journals and having its outer portion offset so as to lie in a plane coincident with that of the adjacent journal.

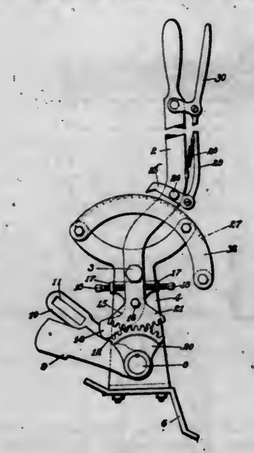
1,479,003. SHOE-POLISHING BRUSH. CLEMENT S. MCPHEE, Newton, Mass. Filed June 23, 1922. Serial No. 570,436. 1 Claim. (Cl. 15—235.)



A polisher comprising a backing block constituting a hand piece, a polishing layer secured at its ends to the end portions of the block, an intermediate yielding layer of felt or the like, and steadying pins engaged with said block and with the said felt layer having a range of free endwise movement with respect to one thereof and anchored in the other thereof for the purpose stated.

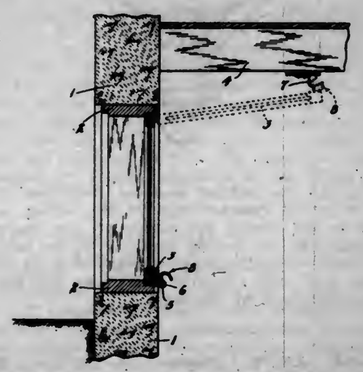
1,479,004. TOMATO-CORING MACHINE. IVAN C. MORGAN, Austin, Ind. Filed Feb. 28, 1923. Serial No. 621,706. 50 Claims. (Cl. 146—52.)

1. In a machine of the class described, a traveling carrier, holders on said carrier adapted to receive the articles to be cored, said holders comprising coring means for coring the articles thereon, and means for actuating said holders.



1,479,005. HOLDING MEANS FOR TIRE CASINGS. GEORGE CHESTER PEARSON, Rochester, N. Y. Filed July 29, 1920. Serial No. 399,830. 3 Claims. (Cl. 154—9.)

1. In a device of the class described, a shaft, a wheel member fixed to the shaft, a cam mounted for axial movements on the shaft and having adjoining conical and cylindrical surfaces, rim sections carried by the wheel member for radial movements and each having bearing contact at its inner side with the cam, with the bearing contact of one set of rim sections axially spaced from the bearing contact of the other



set of rim sections with the cam whereby an axial movement of the cam in one direction will force the rim sections outwardly a uniform extent during a portion of the movement and will then move one set of sections outward relative to the other to bring the sections into circumferential register, and vice versa, and means urging an inward collapsing of the sections.

1,479,006. AUTOMOBILE CONTROLLING APPARATUS. FRANK G. PECK, Lewiston, Me. Filed Dec. 8, 1920. Serial No. 429,054. 5 Claims. (Cl. 74—39.)

1. A hand controlling apparatus for automobiles, comprising, in combination, a hand lever, independent members for operating the clutch and brake pedals, a cam arranged to be moved by said lever for operating said clutch pedal operating member, a shaft connected with said lever to be rocked thereby, and a lost motion between said rock shaft and said brake pedal operating member for operating the latter after the clutch pedal has been operated.

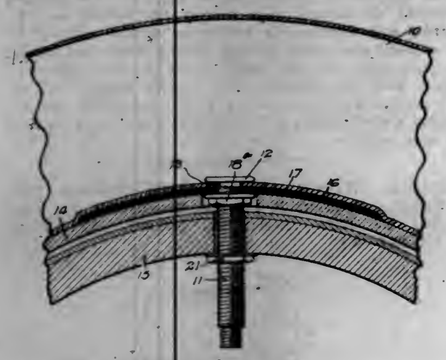
1,479,007. FASTENING DEVICE FOR SWINGING WINDOWS AND DOORS. ARNT B. PEDERSEN, Minneapolis, Minn. Filed Aug. 31, 1921. Serial No. 497,187. 5 Claims. (Cl. 292—80.)

1. The combination with a swinging door or window and the frame thereof, of a pair of retainers, one of which is adapted to be secured to the upper surface of the bottom member of said frame to project therefrom and having a looking means thereon, the other retainer being adapted to be attached to the side of a window adjacent the bottom edge thereof and having an outwardly and downwardly projecting portion adapted to be engaged and locked by said locking means and having an upwardly and outwardly curved portion forming a finger hold or releasing said locking means and retainer and also constituting a resilient latch for engaging a stationary retainer to hold the door or window in open position.

1,479,008. WATCH AND COMPASS HOLDER FOR BELTS. TIMOTHY B. POWERS, Brooklyn, N. Y. Filed May 25, 1922. Serial No. 563,604. 12 Claims. (Cl. 224—4.)

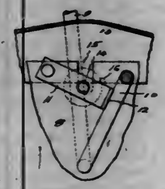
1. A device of the character set forth, the combination of an annular frame, a pair of journal members at remote portions on the frame, in which the apertures extend toward each other, said apertures lying in the same plane perpendicular to the base plane, and a holder member in the form of a bail member of spring wire in which the end portions are bent backwardly parallel to form a loop on each side with the extremities bent inwardly each toward the other, said extremities being located in said journal portions under spring tension of the bail member, whereby the bail member will be normally yieldably retained in the plane of the base with the loop members above the same to form a holder for belt attachment, and means on the base for removaby holding a watch or similar article.

1,479,009. PUFF-HOLDING DEVICE FOR VANITY BOXES. PHILIP A. REUTTER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 27, 1923. Serial No. 627,974. 7 Claims. (Cl. 132—82.)



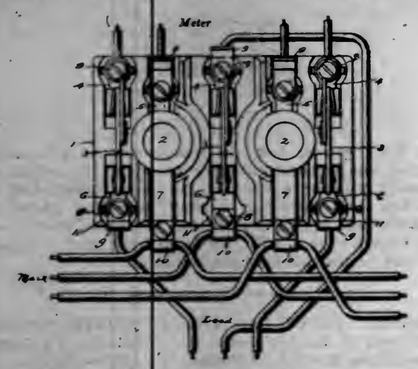
1. In a powder box, the combination of a cometic holding compartment, a cover associated therewith, a cosmetic retainer secured in the compartment, and a resilient puff retaining member projecting above a cosmetic held in the retainer and put under tension by the insertion of a puff therebeneath so that it holds the puff in position over the cosmetic.

1,479,010. VALVE PAD FOR PNEUMATIC TIRES. NATHAN F. RICE, Chicago, Ill. Filed Oct. 16, 1922. Serial No. 594,761. 5 Claims. (Cl. 152—13.)



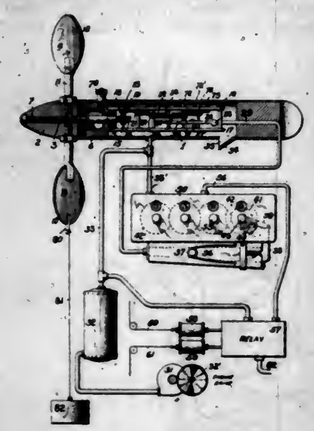
5. A pneumatic tube having an opening therethrough, a valve stem passing through said opening, and a pad for preventing injury to said tube adjacent said stem, said pad comprising a body of flexible yielding material, and a layer of woven metal embedded in said body, said

layer of woven metal having an opening through which said valve stem extends, said valve stem being pro-



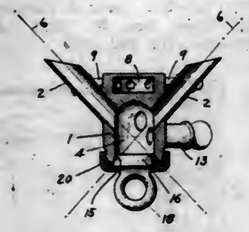
vided with clamping members embracing the pad and the portion of the tube through which the valve stem extends.

1,479,011. LOCKING MEANS FOR INCLOSED ELECTRIC SWITCHES. JOSEPH SACHS, Hartford, Conn. Filed Feb. 2, 1922. Serial No. 533,733. 13 Claims. (Cl. 200—42.)



13. An inclosed switch having external operating means, and means adapted to prevent the complete shutting of the closure unless said means is in position to limit the movement of the operating means.

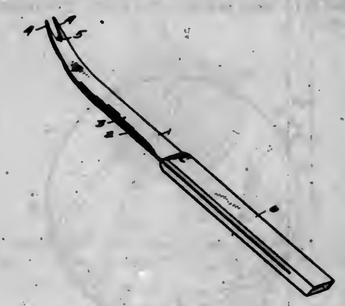
1,479,012. ELECTRICAL CONNECTION MEANS. JOSEPH SACHS, Hartford, Conn. Filed July 29, 1922. Serial No. 578,340. 6 Claims. (Cl. 175—369.)



1. A branch block having conducting paths with terminals provided with wire attaching means, said wire attaching means at one end of the paths extending beyond the edge of the block and positioned at different levels, whereby circuit wires may be readily looped to said attaching means and those of different polarity suitably separated without excessive bending of the wires.

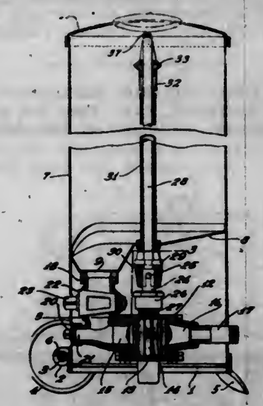
1,479,013. DISTANCE-MEASURING INSTRUMENT FOR AIRCRAFT. LAWRENCE B. SPERRY, Farmingdale, N. Y. Filed May 5, 1921. Serial No. 467,158. 10 Claims. (Cl. 244—1.)

1. In an air distance measuring instrument, the combination with a casing, a part rotated by the wind, reduction gearing actuated thereby, means for maintaining a pressure differential within said casing, a normally closed connection leading out of said casing, and quick action means for opening said connection actuated by said gearing.



1,479,014. CLAW FOR MILKING MACHINES. JACOB J. STAMPEN, Chicago, Ill., assignor to Pine Tree Milking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1921. Serial No. 491,334. 4 Claims. (Cl. 31—99.)

1. A claw for milking machines comprising a body with a central chamber open at the bottom, a plug seated in and closing the bottom of said chamber, a retaining ring for holding the plug to its seat, said ring having securing engagement solely with the exterior of the body, and operative connections for the claw carried exclusively by the body.

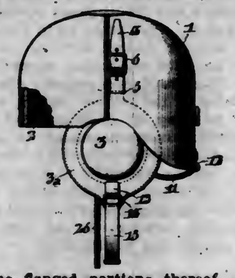


1,479,015. KNIFE. GERTRUDE A. STEINMAN, Toledo, Ohio. Filed Dec. 22, 1921. Serial No. 524,050. 1 Claim. (Cl. 146—3.)

In a fruit knife, a blade, the outer end portion of the blade being curved cylindrically away from the bottom portion of the blade, the cutting edge of the blade being formed by a sloping surface formed on the concave side

of the blade towards the edge of the blade, prongs formed on the end of the blade and having a U-shaped crotch between the prongs, the crotch having a cutting edge.

1,479,016. APPARATUS FOR CLEANING AND FILLING THE TRANSMISSIONS AND DIFFERENTIALS OF MOTOR VEHICLES. CHARLES H. TESTS, Union, N. J. Filed May 24, 1921, Serial No. 472,161. Renewed Nov. 8, 1923. 9 Claims. (Cl. 221—102.)

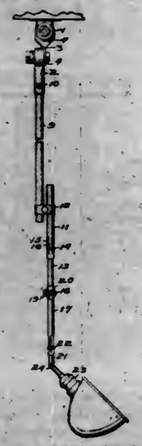


1. An apparatus of the character described embodying a reservoir, a pump, a valved duct leading from the reservoir to the inlet side of the pump, a second duct leading away from the inlet side of the pump, means for sealing said second duct, a discharge duct leading from the outlet side of the pump, and means for operating the pump in either direction to pump lubricant from the reservoir through the discharge duct or to pump fluid through the discharge duct to the pump and through said second duct leading from the inlet side of the pump.

1,479,017. TELEPHONE HEAD SET. JOHN S. TIMMONS, New York, N. Y. Filed Oct. 4, 1918. Serial No. 256,867. 7 Claims. (Cl. 179—156.)

1. A telephone head set consisting of a helmet, combined with separate ear pieces loosely connected to the helmet with capacity for vertical and free lateral adjustment relative thereto and containing receivers, and an adjustable chin strap connected with the lower portions of the ear pieces for holding the helmet in position and the ear pieces close to the ears and in which further the ear pieces are shaped to provide flanged pockets for reception of the telephone receivers and having flanges

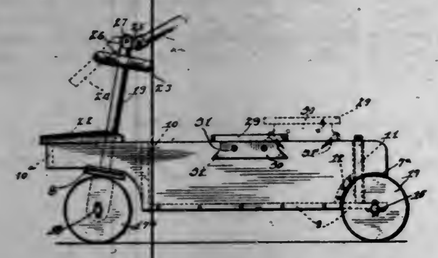
fitting yieldingly about the ears by their own resiliency and also having annular padding secured to the inner



surfaces of the flanged portions thereof, said annular padding being outside of and independent of the flexible flanges.

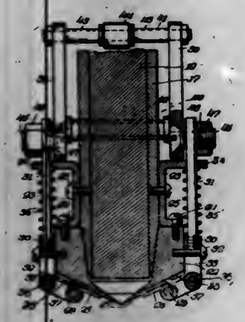
1,479,018. PAPER BOX. HAROLD RAYMOND WARREN, Boston, Mass., assignor to P. R. Warren Company, Everett, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1921. Serial No. 461,624. 7 Claims. (Cl. 206—44.)

1. A display box or container made from a single folded blank comprising a plurality of panels and including three alined panels which form the bottom and one wall of the box, said blank having, in connection with one of said last named panels, a portion constituting a display card adapted, when the box is set up, to project from said wall, the entire exposed surface of said box, including the display face of said display card portion, being upon the reverse side of said blank from that forming the inside of the box.



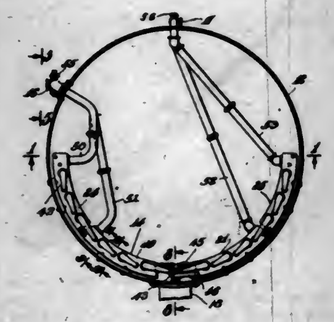
1,479,019. LAMP BRACKET. DAVID W. WILSON, Toledo, Ohio. Filed Nov. 28, 1921. Serial No. 518,279. 2 Claims. (Cl. 248—8.)

1. In a lamp bracket, a pair of telescoping members, one of the members having a plurality of slots closed at both ends and located near one end of the member and



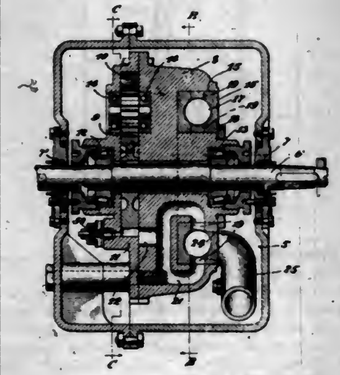
forming flexible portions between the slots, a split elastic ring surrounding the last named member and slidable along the member and the portions between the slots of the member and so constructed as to force the said portions of the member located between the slots against the other of the said telescoping members by the elasticity of the ring itself and pressing the said portions against the inner of the said telescoping members by the elasticity of the ring to yieldingly and adjustably secure the telescoping members relative to each other when the elastic ring is located over the central parts of the said portions between the slots and to receive the said portions and disconnect the telescoping members from each other when the elastic ring is moved along the outer of the telescoping members to the ends of the slots, whereby the elastic ring is distended.

1,479,020. TOY VEHICLE. HENRY ZIEMSS, Jr., Chicago, Ill. Filed May 24, 1920. Serial No. 383,621. 8 Claims. (Cl. 280—165.)



1. A toy vehicle comprising a body having two longitudinally extending side members spaced apart and arranged in diverging relationship, rear supporting wheels, a forward supporting and steering wheel, steering means operatively associated with the steering wheel and including a steering member, a seat having depending supporting blocks adapted to either receive between them the diverging side members or rest directly upon the upper edges of the side members, and means for securing the said depending supporting blocks to said members.

1,479,021. FILLING MACHINE. BASIL P. BABCOCK, Chicago, Ill., assignor to Sprague Canning Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 13, 1920. Serial No. 416,636. 12 Claims. (Cl. 226—96.)



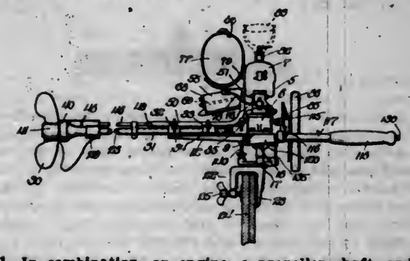
1. An automatic filling machine provided with a series of discharge means movable consecutively in a definite path; means for causing material to be discharged by said discharge means; and means movable with each of said discharge means for removing the surplus material which sticks to said discharge means.

1,479,022. TANK-CAR HEATER. THOMAS BEAGHEN, Jr., Mount Vernon, N. Y. Filed Feb. 20, 1920, Serial No. 360,141. Renewed Nov. 20, 1923. 25 Claims. (Cl. 257—207.)

4. A tank car heater comprising a header mounted within the tank and having a live steam and a drainage chamber, a plurality of radiator pipes leading outwardly from the live steam chamber, a plurality of drainage pipes of relatively small size leading outwardly from the drainage chambers and connected at their outer ends to the radiator pipes, and an ejector supplied with live steam from the live steam chamber and arranged to withdraw condensed steam from the drainage chamber.

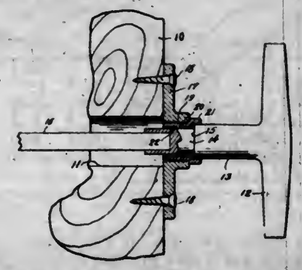
1,479,023. SPEED-CONTROL MECHANISM. CHARLES O. BECH, Weehawken, N. J. Filed Jan. 4, 1922. Serial No. 527,007. 8 Claims. (Cl. 188—90.)

1. In combination with a shaft, hydraulically influenced mechanism for impressing a braking force upon said shaft, and means for controlling the distribution of the hydraulic medium to effect a circumferentially balanced application of the braking force upon the shaft.



1,479,024. INCLINATION INDICATOR FOR AIRPLANES. JOHN FRANCIS BOOSAEM, Greenwich, Conn. Filed June 19, 1919. Serial No. 305,365. 2 Claims. (Cl. 33—206.)

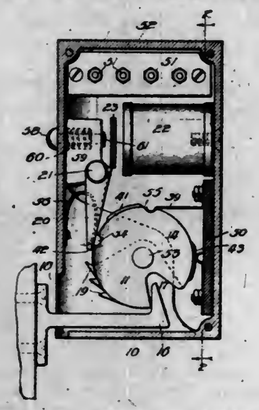
1. An inclination indicator for airplanes comprising a hollow spherical transparent globe provided with meridian markings, a plurality of circular plates fitted within said hollow globe and lying in intersecting planes marked off by the meridian lines, said plates provided with openings therethrough, and a liquid body filling substantially the



lower hemisphere and adapted by gravity to maintain a constant position relatively to the earth's center, said body being colored.

1,479,025. MARINE MOTOR. ARTHUR J. CAILLE and THEODORE L. SMITH, Detroit, Mich. Filed Oct. 11, 1922. Serial No. 593,794. 17 Claims. (Cl. 115—18.)

1. In combination, an engine, a propeller shaft, and a circulatory pump, said pump having a plunger operable longitudinally along said propeller shaft.



1,479,026. VEHICLE-DOOR HANDLE. WILLIAM A. CARMICHAEL, New Haven, Conn., assignor to C. Cowles and Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 14, 1921. Serial No. 500,502. 10 Claims. (Cl. 292—348.)

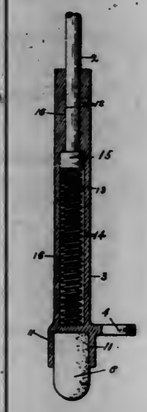
1. A device of the character described comprising a lock spindle, an escutcheon embracing the spindle and in which the spindle is adapted to rotate, and spring means between the spindle and escutcheon acting radially of the spindle and yieldingly reacting against both the spindle and the escutcheon.

1,479,027. ELEVATOR LOCK. JOHN F. CLANCY, Chicago, Ill., assignor to Kaestner & Hecht Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1919. Serial No. 300,663. 21 Claims. (Cl. 187—31.)

5. In combination, an elevator shaft, doors in said shaft, locks for said doors, said locks each comprising a movable member, a projection on each of said doors adapted to engage said movable member and move it into locking position, a plurality of projections on said movable member, a locking pawl, said projections being adapted to move past and be engaged by said locking

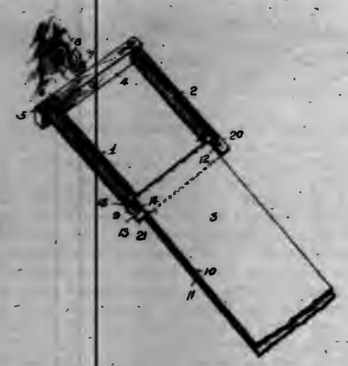
pawl, electro-magnetic means for releasing said pawl and means in the circuit of said electro-magnetic means and carried by said movable member adapted to permit the flow of current during movement of said projections past said pawl in either direction.

1,479,028. FAUCET. GEORGE W. COOKE, Jamaica, N. Y., assignor to George W. Cooke Co. Inc., a Corporation of New York. Filed Feb. 24, 1923. Serial No. 620,915. 7 Claims. (Cl. 251—137.)



7. In combination, a threaded tubular shank adapted to be secured in an opening in a container, and having a tool-engaging part external of the container, a faucet comprising a tubular body member screwed on the outer end of the shank beyond the tool-engaging part and having its internal diameter enlarged toward its outer end to form a discharge chamber with an overhanging annular shoulder at its inner end constituting a valve seat, a removable dome shaped head screwed on the body member having a reduced tubular axial extension provided with two opposite longitudinal slots and having a seat for a packing ring formed in its top around the opening into the extension, a valve and stem therefor guided in said extension, a packing ring on the stem disposed against the seat therefor in the head, a spiral thrust spring surrounding the stem within the discharge chamber and bearing with its outer end against the packing ring and with its inner end against the valve and biasing the valve to closed position, a manipulative annulus slidably disposed on the tubular extension and having two opposing longitudinal slots in its inner periphery extending from its outer face partially through the annulus, and a transverse pin removably disposed in the end of the valve stem and protruding through the slots in the tubular extension into the slots in the annulus.

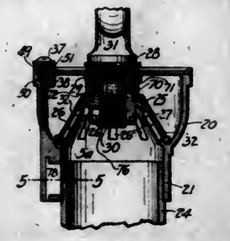
1,479,029. DOOR HOLDER. WILLIAM DIXON, Oklahoma, Okla. Filed Aug. 31, 1922. Serial No. 585,490. 1 Claim. (Cl. 292—338.)



In combination with a door, a bracing rod pivoted to the door and adapted to be dragged along the surface of a floor or ground by the door, the lower or free end

of the rod being adapted to frictionally engage the floor or ground to hold the door against movement in one direction, the rod being adapted to yield resiliently to lineal compression, the point of pivotal connection of

the rod being out-set from the door to allow a vertical dead-center line passing through the point of pivotal connection of the rod to be moved past the lower or floor-contacting or ground-contacting end of the rod when the door is forcibly moved in opposition to the bracing force of the rod.

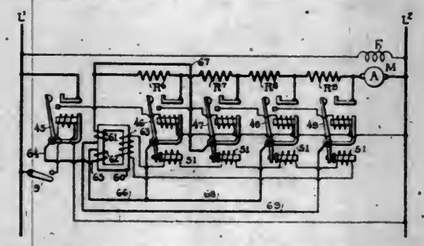


1,479,030. RAZOR STROP. JAMES F. DOBBINS, Brooklyn, N. Y. Filed Nov. 15, 1921. Serial No. 515,207. 2 Claims. (Cl. 51—201.)

1. In a razor strop, the combination with a stropping portion and a resilient hanger for the same comprising a transverse member adapted to be secured to a support, a pair of spaced springs secured thereto at one end, and a transverse bar detachably attached to the other end of at least one of the springs and adapted to be inserted between the folds of the strop.

1,479,031. INSTANTANEOUSLY-ACTING RADIATOR CAP WITH MOUNTING FOR TEMPERATURE INDICATORS. JESSE A. ECTON, Murray, Utah. Filed June 14, 1921. Serial No. 477,567. 6 Claims. (Cl. 220—86.)

1. In a device of the kind specified, a sleeve portion having an upwardly extending tunnel portion and a ported central portion, all in substantial axial alignment with each other, a ported valve portion seated on the said central portion, an operating arm projecting from the said valve portion, and a bifurcated pivoted

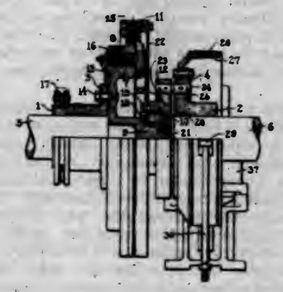


cover member for the said funnel portion, the said operating arm and the bifurcated cover being adapted to co-act for the purpose specified.

1,479,032. BELT. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 5, 1918. Serial No. 256,989. 23 Claims. (Cl. 74—63.)

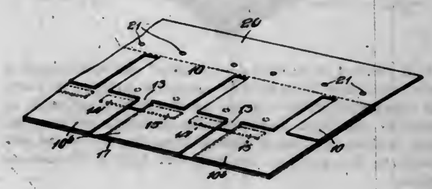
1. The belt comprising a body traction member formed of a number of layers of canvas carrying and thoroughly impregnated with thirty to forty per cent by weight of cured phenolic condensation cementing material, a fabric connector cemented to said traction member, a vulcanized rubber strengthening and gripping member securely united and vulcanized to said connector, flight supports secured to one side of said traction member, and a vulcanized rubber carrier surface permanently secured to said traction member and said flight supports to substantially enclose the same.

1,479,033. MOTOR CONTROLLER. CLARENCE T. EVANS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 17, 1919. Serial No. 283,087. 24 Claims. (Cl. 172—288.)



1. In a motor controller, in combination, resistance varying means and means to effect arrest of the action of the former means in different stages thereof, the latter means having an inherently transient effect influenced by the electrical condition of the motor circuit and including means providing for differentiation of the conditions under which the action of the first mentioned means is arrested in different stages thereof.

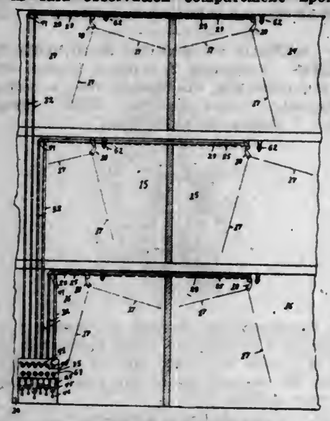
1,479,034. POWER-TRANSMISSION MECHANISM. BERNHARD E. FERNOW, Jr., Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 16, 1918. Serial No. 266,926. 13 Claims. (Cl. 192—84.)



1. The combination with substantially aligned flanged driving and driven members arranged with their flanges adjacent one another and relatively spaced, of a power

transmission mechanism insertable between said flanges and removable therefrom without displacement thereof, said mechanism including axially aligned members to be secured to said flanges respectively for support solely thereby and being adapted to provide a flexible and a releasable power connection therebetween.

9. The combination with flanged and substantially axially aligned driving and driven members, of a power transmission mechanism including an electro-magnetic clutch providing a releasable and flexible driving connection between said members, said mechanism comprising elements coordinated for support of said mechanism solely by the flanges of said members and a brake including a brake wheel carried by one of said members.



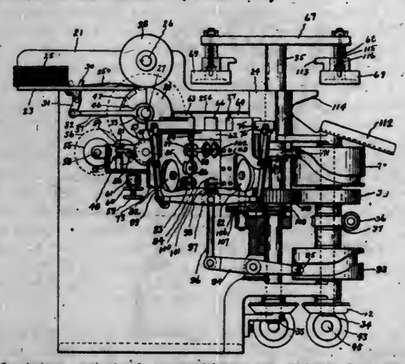
1,479,035. ROOF COVERING. ALBERT C. FISCHER, Chicago, Ill. Filed Aug. 16, 1920. Serial No. 403,894. 7 Claims. (Cl. 108—8)

1. In felt roofing, an antecedent course of closely spaced shingle-like roofing members, and a succeeding course of shingle-like roofing members bridging the spaces between the members of the antecedent course and supported thereby in a plane above that of said antecedent course; the members of the succeeding course being constructed on their lower edges with interlocking heads connected with said members by narrow flexible necks that permit the heads to be bodily depressed from the plane of the course which carries them downwardly to a plane beneath the members of the antecedent course.

1,479,036. DETECTOSCOPE. ROBERT E. FORDICK, Cincinnati, Ohio. Filed Sept. 20, 1920. Serial No. 411,579. 9 Claims. (Cl. 88—1.)

5. An observation apparatus comprising a series of objectives located in a plurality of independent compartments to collect light rays into independent pencils of substantially parallel light rays, independent angular conduits through which said respective light rays are transmitted to an observation compartment, and a plurality of screens in said observation compartment upon which

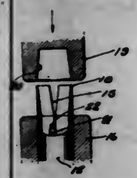
different images are respectively thrown, and which screens and respective images thereon are adapted to be collectively observed.



1,479,037. TINSEL REFLECTOR. BERNARD E. FRANKE, Baltimore, Md., assignor to The George Franke Sons Company, a Corporation of Maryland. Filed Apr. 6, 1923. Serial No. 630,204. 4 Claims. (Cl. 240—103.)

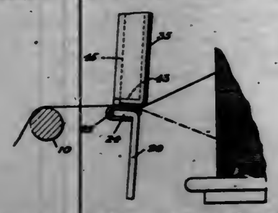
1. The combination with a light bulb and socket of a reflector composed of radiating tinsel and a central holder for the tinsel consisting of a disc having a central aperture to pass the shank of the bulb

---



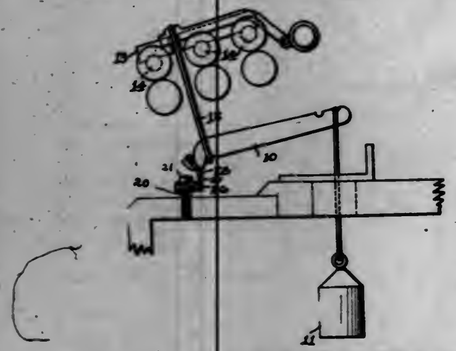
1,479,038. CORNER-STAYING MACHINE. WILLIAM FUHR, Chicago, Ill. Filed Aug. 18, 1922. Serial No. 582,620. 14 Claims. (Cl. 93—41)

1. A corner staying machine comprising blank forming members, means for feeding blanks to said forming members, means for applying glue to the corners of the



blank in the movement thereof toward said forming members, and means for applying tape over said corners while said blank is on said forming member.

1,479,039. METHOD OF MAKING WARDROBE-TRUNK TROLLEYS. FREDERICK J. GREENE, Racine, Wis., assignor to Greene Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Jan. 15, 1923. Serial No. 612,819. 7 Claims. (Cl. 29—156.)

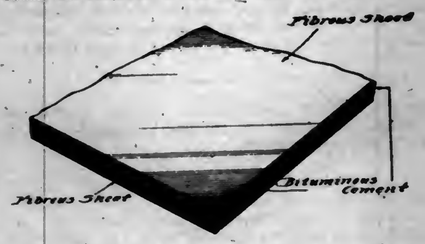


1. The hereindescribed method of forming a tubular member having a tapered end, which consists in reaming the bore of a tube to a thin edge at one end, and in contracting the reamed end of the tube to produce an external bevel thereon.

1,479,040. YARN GUIDE AND CLEANER. LEWIS T. HOUGHTON, Worcester, Mass. Filed Feb. 7, 1921. Serial No. 442,911. 14 Claims. (Cl. 28—66.)

1. In a yarn guide, the combination of a pair of jaws, one constituting a supporting table having a wide flat bearing surface all the way across it, on which the yarn will lie in a flat condition, but rounded at its forward, or yarn receiving and rear, or yarn delivering, edge, and the other jaw, spaced adjacent thereto and parallel therewith provided with a sharp forward edge and a rounded rear edge, said rounded forward edge being located in position to be engaged by the yarn before it passes between the jaws.

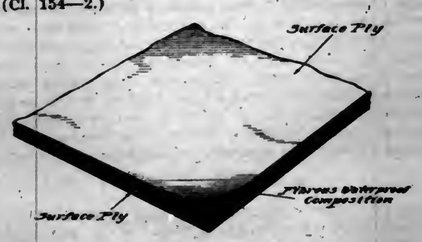
1,479,041. LEVER SCREW FOR TOP-ROLL WEIGHTING DEVICES. LEWIS T. HOUGHTON, Worcester, Mass. Filed June 12, 1922. Serial No. 567,621. 6 Claims. (Cl. 19—136.)



2. As an article of manufacture, a lever screw for forming a fulcrum for a lever comprising a head and a lever supporting piece having locking means co-operating with the head to prevent the easy turning of the screw when in one position and when in another position permitting the screw to be turned and adjusted to take up the wear and maintain the lever in its normal horizontal position.

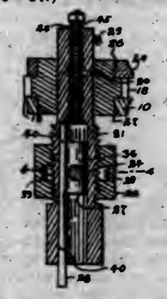
1,479,042. EMULSION AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 510,127. 5 Claims. (Cl. 134—1.)

1. A non-adhesive emulsion, consisting of water, colloidal clay and asphalt, the asphaltic particles being so finely dispersed that more than 95% of the emulsion will pass a screen having openings not larger than .02 of a millimeter.



2. A process of making a non-adhesive emulsion, consisting in making a bulk supply of water, an emulsifying agent and a water-proof pitchy binder, continuously adding a colloidal clay suspension of appreciable viscosity and a pitchy binder in liquid condition to said bulk supply, passing such binder and clay suspension slowly through the bulk supply, and simultaneously causing a rapid rotation of propeller blades through said binder and clay suspension transversely of their path of movement and at a sufficient speed to produce an emulsion 95% of which will pass a screen having openings not in excess of .02 of a millimeter in size.

1,479,043. WATERPROOF AND MOISTUREPROOF SHEET AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Aug. 16, 1922. Serial No. 582,305. 3 Claims. (Cl. 154—2.)



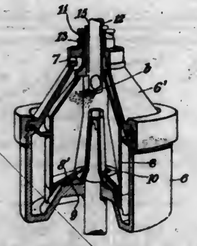
1. A process of making a waterproof and moistureproof sheet consisting in making an emulsion miscible in water and containing pitch and an emulsifying agent such as bentonite and then applying said emulsion between opposed surfaces of fibrous sheets, removing the water and permitting the pitch to coalesce and form a bituminous cement.

1,479,044. COMPOSITE BOARD AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Aug. 16, 1922. Serial No. 582,310. 5 Claims. (Cl. 154—2.)

5. A process of making a board consisting in making an emulsion of bitumen or pitch, water and an emulsifying agent adding thereto relatively dry fibre and infusorial earth and forming this composition into a sheet between two outer covering plies.

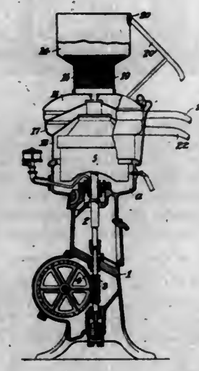
1,479,045. HAND TOOL. ROBERT D. KOHNE, Toledo, Ohio. Filed Mar. 14, 1921. Serial No. 451,903. 3 Claims. (Cl. 279—87.)

1. A tool holder shaft provided with an external non-circular portion for effecting engagement thereof for driving rotation, and a concentric socket for directly receiving a cylindrical shank of a tool having a flat side, said socket being provided with a key way opposing said flat side, a spline having a head, located inwardly of the tool shank, and means exterior of the holder shaft rotatable as to the shaft for adjusting the head and for bringing the spline into binding engagement with the flat side of the tool shank.



1,479,046. FLY SWATTER. HERBERT KOONTZ, South Bend, Ind. Filed Jan. 23, 1922. Serial No. 531,173. 3 Claims. (Cl. 43—137.)

1. A swatting device comprising a rectangular shaped frame formed from a single piece of wire and having its ends terminating in inwardly extending coiled springs, the inner convolutions of the springs terminating in outwardly extending arms, a handle member formed from a single piece of wire bent upon itself to form spaced arms, the outer ends of said arms terminating in axially aligned outwardly extending arms disposed in the convolutions of the coiled springs, and means for anchoring the outwardly extending arms carried by the end convolutions of the springs to the handle member.

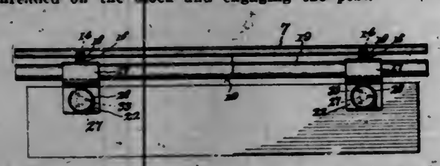


1,479,047. GRITLESS CARBONIFEROUS INK AND METHOD OF MAKING SAME. WALTER W. MOCK, Rutherford, N. J. Filed Feb. 8, 1922. Serial No. 534,873. 4 Claims. (Cl. 134—35.)

4. The method of making a carboniferous ink which consists in intimately mixing carbon pigment, composed essentially of an oily vehicle, with an ink vehicle, subjecting the mixture to centrifugal action while maintaining a temperature between 100° F. and 120° F. while maintaining a sufficient rate of flow of the liquid, while subjected to centrifugal action, to substantially prevent

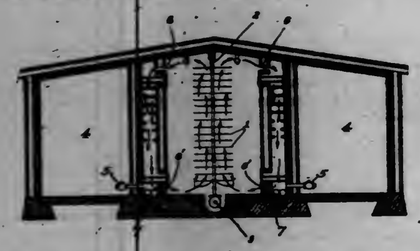
the expulsion of amorphous carbon particles and effect the expulsion of substantially all of he gritty crystalline carbon particles.

1,479,048. APPARATUS FOR MAKING GRITLESS CARBONIFEROUS PRINTING INKS. WALTER W. MOCK, Rutherford, N. J. Filed Feb. 8, 1922, Serial No. 534,874. Renewed Nov. 22, 1923. 4 Claims. (Cl. 233—4.)



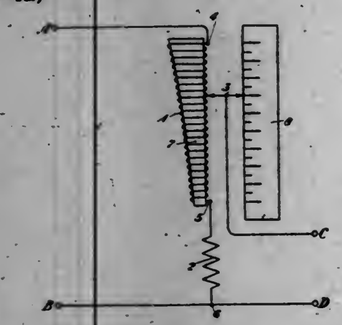
1. In a centrifugal apparatus for making gritless carboniferous printing inks, the combination comprising a standard, a rotary bowl provided with an outlet orifice, a supplemental bowl mounted within said rotary bowl, a super-structure having a chamber of relatively large cross-section at its top and of reduced cross-section at its bottom, filtering means arranged in said bottom portion of said super-structure, outlet conduits respectively connecting with the said enlarged top portion of said super-structure and with the reduced bottom portion of said super-structure respectively, the latter outlet conduit connecting with the interior of said supplemental bowl and the height of such super-structure being sufficient to maintain such a head upon printing ink delivered into said supplemental bowl as to insure that such ink will remain in at least one of the bowls of said apparatus a sufficient length of time to insure the expulsion of gritty carbon particles, but an insufficient time to afford of the explusion of amorphous carbon particles from said ink.

1,479,049. FILE BINDER. JOHN PARKS ALMAND, Little Rock, Ark. Filed Dec. 23, 1922. Serial No. 608,670. 3 Claims. (Cl. 129—16.)



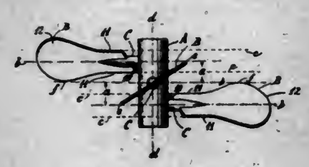
1. A binder comprising a body having spaced legs, a plate associated with one leg, a post connected to the

plate a spring for urging the plate outwardly, a block removably secured to the outside of one leg, and a cap threaded on the block and engaging the post.



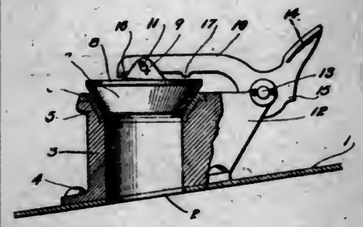
2. A binder comprising a channel track, a rod, and clamps spaced upon said rod and having means to slide in the channel track.

1,479,050. APPARATUS FOR THE CURING AND DESICCATING OF FISH AND OTHER PERISHABLE ARTICLES OF FOOD. JOSEPH TETU BERTRAND, Isle-Verte, Quebec, Canada. Filed Mar. 11, 1918. Serial No. 221,861. 2 Claims. (Cl. 99—2.)



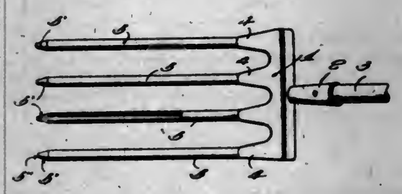
1. The combination in an apparatus of the character described, of a fish receiving compartment, vertical shafts journaled therein, means for rotating said shafts, horizontal perforated trays carried by the shafts, means for directing smoke to the bottoms of said trays, and means for redirecting smoke from the uppermost of said trays downwardly to the bottoms of the trays for further use.

1,479,051. ARTIFICIAL LINE. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 14, 1920. Serial No. 381,460. 5 Claims. (Cl. 178—44.)



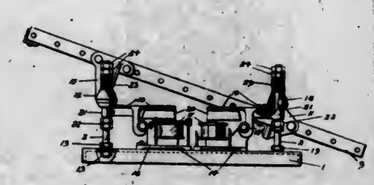
1. An artificial line having input and output terminals and comprising an impedance connected between said input terminals, adjustable means to include any desired part thereof between the output terminals, an indicator to show the adjustment of said means, and a scale for said indicator, said impedance being graduated and said scale being marked so that the indication on the letter is in terms of length of a transmission line having the same attenuation as the artificial line at the corresponding adjustment.

1,479,052. PROPELLER. ERNEST BOENING, Yonkers, N. Y. Filed May 19, 1921. Serial No. 470,846. 1 Claim. (Cl. 170—165.)



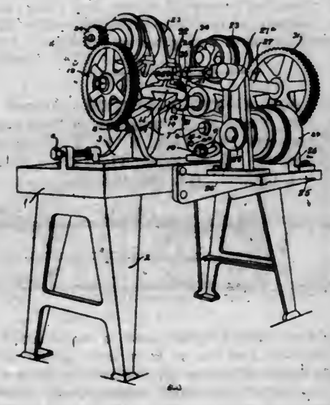
A structure adapted for use as a propeller and for other purposes, comprising a hub, a plurality of inclined blades having their inner ends spaced from the outer surface of the hub, and shanks extending from the outer surface of the hub to said blades, said blades having relatively narrow inner portions with parallel side edges, and relatively wide outer portions with curved tips, the side edges of which merge into said parallel edges of the narrow inner portions.

1,479,053. GAUGE-HOLE COLLAR. STEPHEN H. BROOKS, Cleveland, Ohio, assignor to The Oil Conservation Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1922. Serial No. 544,538. 1 Claim. (Cl. 220—32.)



A gauge hole cover collar having a seat, a lever pivoted intermediate its ends and having an offset portion to provide an operating end, the operating end having a shoulder to contact with the collar to keep the other end portion of the lever from swinging to a perpendicular plane, a cover having pivotal connection with the second mentioned end of the lever, and stop projections on said second mentioned end of the lever at opposite sides of said pivotal connection, for the purpose set forth.

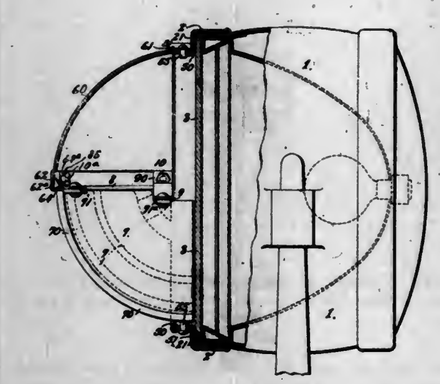
1,479,054. PITCHFORK. JOSEPH FRANK CHLADEK, Niobrara, Nebr. Filed June 19, 1922. Serial No. 569,352. 2 Claims. (Cl. 294—49.)



1. A pitch fork having a head, and teeth extending from said head, each of said teeth being in the form of a tube of substantially an even diameter throughout practically its entire length, the free end portion of the tooth being formed into a solid end portion tapered and terminating in a blunt point.

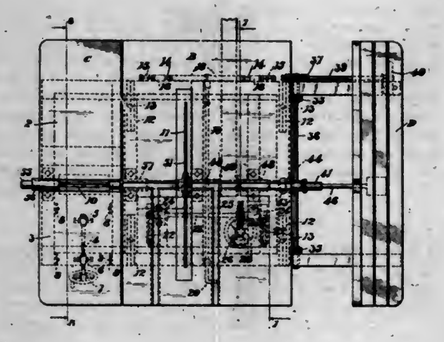
1,479,055. ELECTRIC SEPARATOR. WALTER CROW and JOHN C. SCHAFFER, Pittsburgh, Pa., assignors to Schaffer Engineering & Equipment Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1920. Serial No. 406,667. 8 Claims. (Cl. 83—56.)

1. A material carrying platform having a screen and a frame for the screen, supporting means for the frame embodying relatively movable members, and alternating current electromagnet lifting means coacting with the supporting means movable members for shifting the frame.



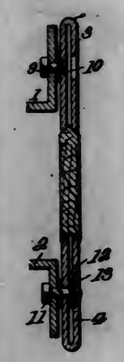
1,479,056. APPARATUS FOR AND METHOD OF CUTTING METAL. JOHN T. CUMMINGS, BENJAMIN H. DAULTON, FRANK W. TAYLOR, and CLARENCE J. ROBINSON, Wilmington, Ohio, assignors to The Irwin Auger Bit Company, Wilmington, Ohio, a Corporation of Ohio. Filed Nov. 12, 1921. Serial No. 514,469. 8 Claims. (Cl. 76—8.)

1. In a machine of the character described, the combination with a bed and bit-securing devices, of cutting units comprising a reciprocating rotary element adapted to travel at an incline across the face of a bit head and to remove the material and finish the face.



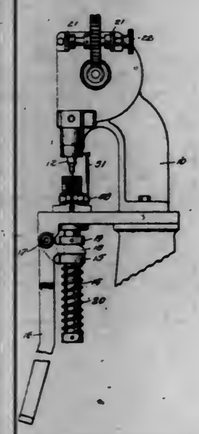
1,479,057. HEADLIGHT DIMMER. WALTER M. CURRAN, Pavilion, Mich. Filed Feb. 1, 1923. Serial No. 616,426. 8 Claims. (Cl. 240—48.4.)

1. A glare eliminator for vehicle head lights comprising a visor ring, a visor carried by said ring, a horizontal cross frame supported beneath the visor, an assembly of vertically disposed glare eliminator plates secured to said horizontal frame and sustained thereby, and means for securing the visor ring to the head light



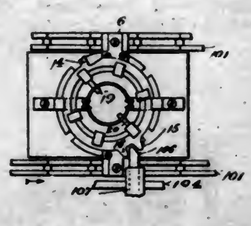
rim to hold the assembly of eliminator plates over the lower exposed half of the head light lens.

1,479,058. WOODWORKING MACHINE. MICHAEL F. DALY, Millbrae, Calif. Filed Jan. 23, 1923. Serial No. 614,398. 9 Claims. (Cl. 144—1.)



1. In a machine of the character described, a main frame, a driving shaft journaled therein, a circle saw secured on the shaft and driven thereby, a table transversely movable with relation to the saw and the frame, and means permitting pivotal movement of the table with relation to the saw and the frame, said means comprising a pair of perforated lugs carried by the table, a pair of bearing members carried by the frame, a pin slidable in each bearing member and adapted to enter or be retracted with relation to the perforated lugs, and manually operated means for retracting or projecting the pins in unison.

1,479,059. YIELDABLE GUIDE FOR COATING MACHINES. IRVIN F. DITTMAR, Williamsport, Pa., assignor to The Crooks-Dittmar Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed July 27, 1922. Serial No. 577,869. 7 Claims. (Cl. 91—60.)

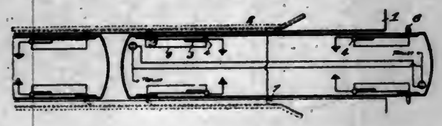


1. A guideway for coating machines comprising spaced guide members, each guide member having yieldably spaced guiding edges.

1,479,060. FEEDING MECHANISM. JOHN DLESK, Berwyn, Ill., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 6, 1922. Serial No. 550,235. 12 Claims. (Cl. 78—48.)

1. In a riveting machine, a longitudinally movable anvil, a magazine movable thereby, a chute through which rivets may be fed, and a movable member normally closing the end of said chute, said member being movable by said magazine to a position where said member uncovers the end of the chute and permits the rivet at the bottom of the chute to drop thereon, said member forcing said rivet into the magazine on the next forward actuation of said member.

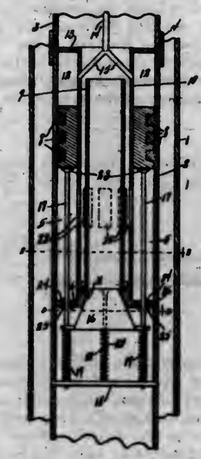
1,479,061. CORER. WILLIAM B. FENN, Port Washington, N. Y. Filed Apr. 8, 1922. Serial No. 550,643. 21 Claims. (Cl. 146—52.)



1. In a coring device comprising a pair of blades normally adapted to encompass a core and upon which the article to be cored is impinged, and means for moving said blades to sever the core from the article.

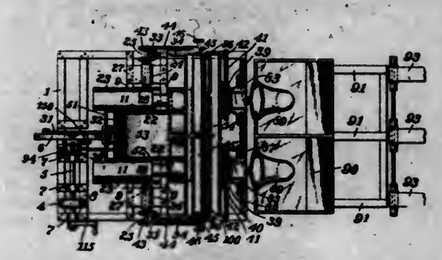
1,479,062. SAFETY MECHANISM FOR DOORS. ALBERT GOTTSCHALK, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Sept. 13, 1919. Serial No. 323,657. 10 Claims. (Cl. 180—82.)

1. In a safety mechanism adapted to effect control of an associated power motor, the combination with a door, and a motor for actuating said door, of a fluid pressure operated indicating or control device, and means governed by the movement of the door actuating motor for varying the fluid pressure acting on said device.



1,479,063. DOOR-CONTROL SYSTEM. ALBERT GOTTSCHALK, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Sept. 11, 1920. Serial No. 409,737. 7 Claims. (Cl. 105—341.)

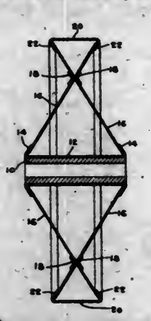
1. In a door control system, and in combination with a station platform and one or more cars having doors and electrically operated means for controlling the doors, of a current conductor extending substantially parallel to the platform, a contactor for each door carried by the car and adapted to contact with the conductor when opposite the platform, said contactor being in electrical connection with said door controlling means, and means for supplying current to said conductor.



1,479,064. FLUID LIFT PUMP. HARVEY H. GRACEY, Fort Worth, Tex. Filed Dec. 11, 1922. Serial No. 606,061. 4 Claims. (Cl. 103—232.)

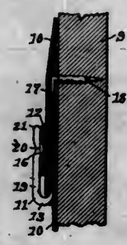
1. A fluid lift pump comprising a working barrel, an air feed pipe within and spaced from said barrel, partition plates closing the annular space between the ends of said air-feed pipe and the wall of said barrel and forming an air chamber of the annular space between said pipe and said barrel, a piston movable in said chamber, a liquid discharge pipe within and spaced from said air-feed pipe, a cone-plug seat closing the space between the air-feed pipe and said liquid discharge pipe at their bottom ends, a cone-shaped plug adapted to close the passage through said seat, said air-feed pipe having slots intermediate its ends, means for feeding a fluid element

to said air-chamber above said piston for forcing said piston downwardly, means for retarding the movement of said piston until the required pressure of the fluid element is obtained, and means carried by said piston for opening the passage through said discharge pipe.



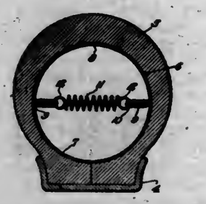
1,479,065. WRAPPING MACHINE. GEORGE T. GREER, Roanoke, Va. Filed Mar. 31, 1921. Serial No. 457,402. 16 Claims. (Cl. 93—5.)

1. In a wrapping machine the combination of a base, a plunger mounted for horizontal movement on said base, a hopper opening in front of said plunger, paper feeding and cutting mechanism, a twister mounted in front of said plunger and thrown into operation by a stroke of said plunger, means for receiving and holding the articles to be wrapped while said twister is operating and means for driving said plunger.



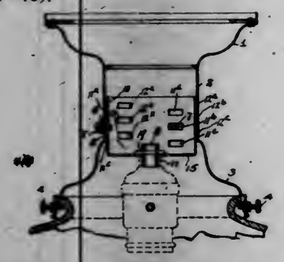
1,479,066. WHEEL. RALPH R. GRIFFITH, Minneapolis, Minn. Filed June 4, 1921. Serial No. 475,039. 1 Claim. (Cl. 301—66.)

A wheel comprising a rim having an inwardly extending flange at each of its sides, a cylindrical hub, a sleeve secured on said hub and having an outwardly extending flange at each of its ends, separate sheet metal spoke elements secured to said inwardly and outwardly extending flanges so as to converge inwardly and outwardly from said rim and sleeve respectively, toward a circle located between said rim and sleeve, and a circular re-enforcing member secured to said spoke elements at the



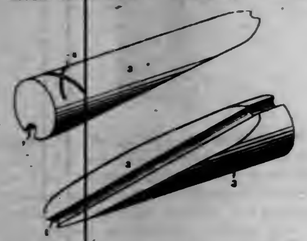
position of said circle, said re-enforcing member being so limited that portions thereof lie within and close to said circle.

1,479,067. ROLL-ROOFING FASTENER. ALBERT ABBE GRISWOLD, Providence, R. I. Filed May 3, 1923. Serial No. 636,423. 6 Claims. (Cl. 108—33.)



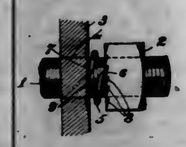
1. In a roof construction and the like, overlapping strips of roll roofing, means for securing the roll roofing to the roof, consisting of roll roofing fastener, each comprising under and upper fastening members, the under fastening member having a roll roofing and roof penetrating portion, a thin flat body portion and a hook shaped portion with locking means on the hook and the upper fastening member being in the form of an elongated cleat and having means for locking it to the locking means on the hook shaped portion of the under fastening member, for the purpose as described.

1,479,068. INNER TUBE FOR THE TIRES OF VEHICLES. DAVID JACOB HAMMER, Pittsburgh, Pa., assignor of one-half to James H. Flinn and James McEwan, both of Pittsburgh, Pa. Filed Mar. 23, 1923. Serial No. 627,157. 4 Claims. (Cl. 152—8.)



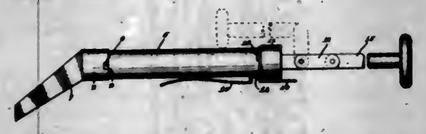
2. An inner tube for vehicle tires including inner and outer sections equipped with co-acting marginal edges, and resilient means connecting the edge of one of said sections.

1,479,069. LIGHTING FIXTURE. ISAAC IRVING HANCE, Cleveland, Ohio, assignor to The Crescent Brass Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 22, 1922. Serial No. 556,035. 3 Claims. (Cl. 240—78).



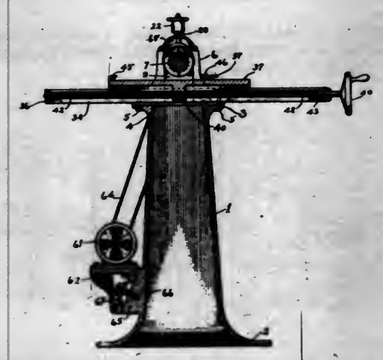
1. In a lighting fixture and lamp socket holder, the combination of a fixture and globe holder having a central barrel provided with spaced tapped apertures, and an adjustable socket holding cup comprising a horizontal base portion and a cylindrical flange portion, a series of spaced aligned slots in said flange portion, each alternate row of slots belonging to one of two series, the slots of one series being staggered relative to those of the other series, such slots being adapted to register with such spaced apertures, and holding means mounted in such apertures to engage and secure said cup in adjusted position.

1,479,070. BLASTING. WILLIAM EDWARD HARRIS, Luipaardsvlei, Transvaal, South Africa. Filed July 18, 1922. Serial No. 575,791. 4 Claims. (Cl. 102—11.)



3. A check for insertion after the usual tamping consisting of two portions each substantially the shape of a cylinder a portion of which has been removed by a plane passing from one end of a diameter at or near the base to the opposite end of the corresponding diameter of the top, the face thus formed having in it a groove running centrally down it and graduated in depth from one end to the other so that when the two portions are placed together face to face the grooves on each portion form a channel in which the fuse fits.

1,479,071. NUT LOCK. JOHN A. HATFIELD, Fort Worth, Tex. Filed Nov. 12, 1920. Serial No. 423,608. 1 Claim. (Cl. 151—41.)



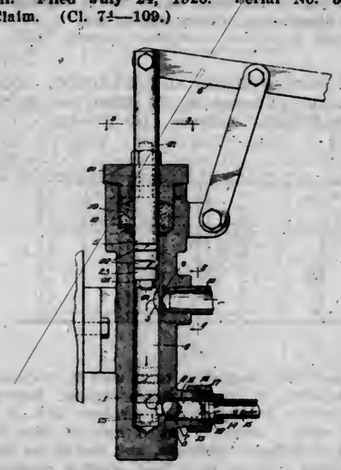
A nut lock comprising in combination, a nut having a threaded bolt opening and ratchet teeth on one face thereof, said ratchet teeth beginning in the bolt opening and extending radially outwardly, a bolt, a work piece having a bolt opening to receive said bolt, and a ratchet on its face surrounding said opening, said ratchet comprising outwardly and upwardly tapering serrations beginning in the said bolt opening of the work piece and extending radially outwardly, and a coiled washer surrounding said bolt and having oppositely projecting ends, one end adapted to engage the ratchet teeth on the nut adjacent the bolt opening thereof, and the other end adapted to the tapered serrations of the work piece adjacent the bolt opening thereof, the entire washer lying well within the periphery of the nut, whereby to prevent accidental disengagement of the ends of the coiled washer.

1,479,072. GREASE GUN. ROBERT C. HOAGLAND, Pueblo, Colo. Filed July 17, 1922. Serial No. 575,590. 1 Claim. (Cl. 24—3.)

A grease gun comprising a barrel, a removable cap for closing one end of the barrel, pins extending laterally from the barrel and disposed adjacent to one end of the cap, a hook member including a ring, said ring adapted to be positioned over the barrel between the pins and cap, and said cap adapted to force the ring member into close engagement with pins to secure the hook to the barrel.

1,479,073. MILLING MACHINE. IRA T. HOWARD, Goshen, Ind. Filed Dec. 22, 1920. Serial No. 432,594. 8 Claims. (Cl. 90—16.)

1. In a machine of the character described, the combination of a work support, a rotary tool and a bearing structure for the rotary tool, the structure including a housing, a bearing block, a ball bearing supported in said bearing block, means for adjusting the location of said bearing block with respect to the housing, and means for adjustably limiting the movement of said bearing block, said last named means and the bearing block being provided with a lubricating passage, terminating on the bearing in said bearing block, said passage being straight and uninterrupted independently of the adjustment of the bearing block in the housing.



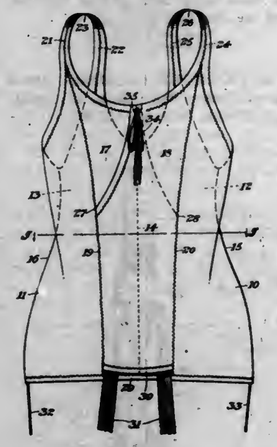
1,479,074. TIRE-CHAIN FASTENER. JOEL W. HUBBLE, Jacksonville, Ill. Filed July 3, 1922. Serial No. 572,368. 6 Claims. (Cl. 24—230.5.)

1. In a tire chain fastener, a body having a slot opening through a wall thereof, and provided with a substantially central opening having opposite walls which are formed with substantially alined chain-engaging

seats, one of said walls having a second chain-engaging seat located beyond the first named chain-engaging seat of said wall of the opening.

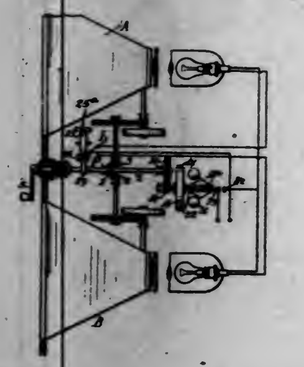
1,479,075. PUMP. HENRY AUGUST JOHNSON, Chicago, Ill. Filed July 24, 1920. Serial No. 398,764. 1 Claim. (Cl. 74—109.)

In a force pump adapted for feeding boiler compound into a steam boiler, a piston rod having on its active end a piston of the same diameter as the main body part of said rod, said piston comprising a reduced axial extension of said rod in combination with a series of alternately arranged solid and split rings and means on the outer end of said extension to secure said rings demountably, the said split rings being naturally somewhat expansive but sufficiently compressible radially to permit forcing them into the bore of the pump when in place on said extension, and said main body part being adapted to serve as a check-valve when said piston rod is advanced.



1,479,076. APPAREL CORSET. DANIEL KOPS, New York, N. Y., assignor to Kops Bros. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1922. Serial No. 607,016. 4 Claims. (Cl. 2—73.)

2. In an apparel corset and in each corset body half having a back lacing edge, a back resting strap secured along one edge in a line of stitching distant from the back lacing edge and extending toward the same, the said back resting strap having a series of eyelets therein along the edge opposite the edge in which it is attached to the garment, with the upper and lower edges of the back resting strap diverging, making the lacing edge thereof appreciably longer than the edge in which it is attached to the garment, the length of the back resting strap between the line of attachment and the lacing edge thereof being appreciably greater than the adjacent portion of the body of the garment between the line of attachment of the back resting strap and the back lacing edge of the garment, an elastic insert extending from the lower edge of the garment parallel to the back lacing edge thereof to approximately the upper edge of the said back resting strap whereby in adjusting the garment to position the tension exerted by the laces is first applied to the back lacing edges of the portions of the garment overlying the back resting straps to bring the back lacing edges of the garment into alignment



with the back lacing edges of the back resting straps and then is applied simultaneously to both the back lacing edges of the garment and the lacing edges of the back resting straps.

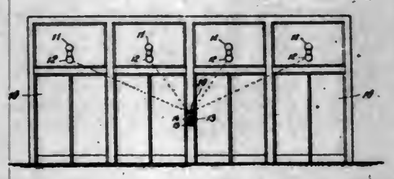
1,479,077. APPAREL GARMENT. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros., New York, N. Y., a Firm. Filed Aug. 10, 1921. Serial No. 491,103. 9 Claims. (Cl. 2—73.)

1. An apparel garment forming a combined undervest, corset and brassière and comprising a single piece body member adapted to cover the body of the wearer from substantially the busts to the thighs and made of a material sufficiently elastic to cling and conform to the body of the wearer, the said body member having longitudinal overlapping extensions in the front thereof to form a multi-ply front supporting section which is less yielding than the other sections of the garment, the longitudinal edge of the extension from one side of the body member being connected to the other side of the body member and the longitudinal edge of the extension from the said other side of the body member being connected to the first aforesaid side of the body member of the garment.

1,479,078. AUTOMATIC CINEMATOGRAPH. VÁCLAV KRIEGSBRECK and JINDŘICH BAUTZ, Prague, Czechoslovakia. Filed Jan. 14, 1922. Serial No. 529,347. 6 Claims. (Cl. 88—17.)

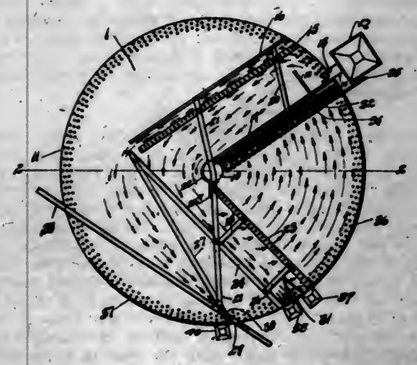
1. An automatic cinematograph comprising two similar stable cinematographic apparatus each having an unwinding reel and a winding up reel for the film in combination with means for interconnecting the cinematographic apparatus in such a manner that while one exhibits the record, the other winds up in the reverse direction the film containing the adjacent record and with means on the unwinding reel of the one apparatus and on the winding up reel of the other apparatus for braking the automatic cinematograph, which latter means prevent the films being torn, if the turning of the reels is continued, as set forth.

1,479,079. EXPANSIBLE REAMER. ADOLF KUTCHERA, Bismarck, N. Dak. Filed Aug. 11, 1922. Serial No. 581,255. 1 Claim. (Cl. 77—75.5.)



An expansible reamer comprising a spindle having grooves gradually increasing in depth toward the forward end of the spindle, blades received in said grooves and having their outer sides formed with cutting means, said blades and said grooves being V-shaped in cross section, and nuts threaded on said spindle and engaging opposite ends of said blades whereby to hold the blades in position and adjust them longitudinally in said grooves.

1,479,080. SILENT CHAIN DRIVING TRANSMISSION. JOHN FRANCIS MCCANN, Springfield, Mass., assignor to Duckworth Chain & Manufacturing Company, Springfield, Mass. Filed May 7, 1923. Serial No. 637,388. 1 Claim. (Cl. 74—32.)

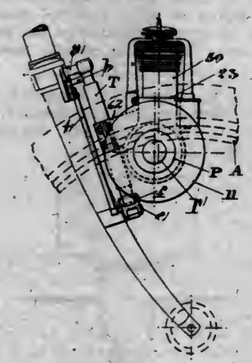


In a silent chain, a round hollow pin with a narrow split opening, extending between shoulders, said shoulders unlike rest of pin being rolled tightly together and smaller in diameter than body size of pin.

1,479,081. ELEVATOR-SIGNAL REFLECTOR. ERNEST W. MARSHALL, Yonkers, N. Y. Filed Dec. 6, 1919. Serial No. 342,971. 6 Claims. (Cl. 88—1.)

1. A signal reflector adapted to be used in conjunction with a plurality of spaced visible signals, having a reflecting surface so curved as to reflect each of the signals in such a manner that it may be seen from a plurality of different positions, and means for securing said signal reflector in a fixed position relative to the signals.

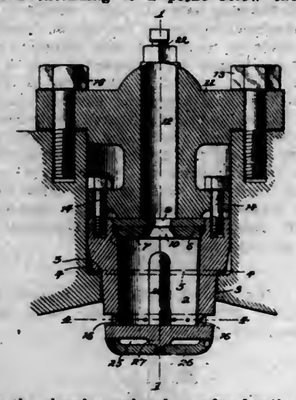
1,479,082. BEAN-SORTING DEVICE. LEE A. MEDCALF, Fairgrove, Mich. Filed Apr. 18, 1922. Serial No. 554,566. 3 Claims. (Cl. 130—18.)



1. A bean sorting machine comprising a revolving flat tilted table having a plurality of small sand openings around the outer edge thereof, spaced apart brushes and scrapers thereon and stationary with relation thereto, a plurality of adjustable paddles for forcing the product towards the center of the table, and means for adjusting said paddles.

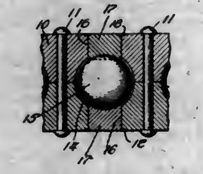
1,479,083. MAGNETIC OPERATING MECHANISM. HOWARD I. MORRIS, Cleveland, Ohio, assignor to The Yoder-Thomas Mfg. Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1921. Serial No. 469,981. 26 Claims. (Cl. 236—48.)

3. In apparatus of the class described, the combination of a conduit, a valve therefor, a pair of magnetic elements one of which is connected to said valve and mounted to move about a pivot, and means for moving the other element relative to said first mentioned element.



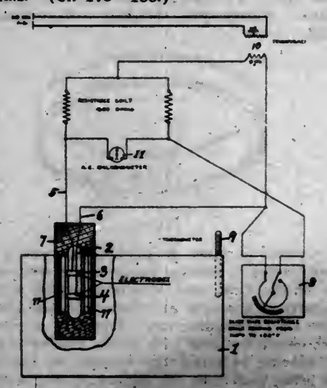
1,479,084. INTERNAL-COMBUSTION ENGINE FOR BICYCLES. JOSEPH NEYRET, Lyon, France. Filed Mar. 16, 1921. Serial No. 452,785. 1 Claim. (Cl. 180—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An internal combustion engine for propelling bicycles, having a crank shaft, a revolving casing mounted on the crank shaft, said casing being staggered so as to form two pulleys, a crank case having an extension provided with an opening, a tube movable in said opening and by the movement of which the motor can be displaced to engage either of the pulleys, or to allow the engine to run free, means for connecting the tube to the frame of a bicycle, a second tube inside the first named tube, a spring tending to separate the tubes, a shaft at the upper end of the outer tube, a gear change lever pivoted at the shaft, a guide for said shaft pivoted on the frame of the bicycle, means for connecting said guide to the lower end of the inner tube, bearings for the shafts affixed to the steering column of the bicycle and to the wheel fork respectively so that the engine turns with the movement of the front wheel of the bicycle, and a ring affixed to the rim of the front wheel to be engaged by either of the pulleys of the motor.



1,479,085. INTERNAL-COMBUSTION ENGINE. BRUNO V. E. NORDBERG, Milwaukee, Wis. Filed Dec. 8, 1917. Serial No. 206,236. 4 Claims. (Cl. 123—33.)

1. In combination with a cylinder of an internal combustion engine; a combined heating and fuel ejecting chamber projecting into the cylinder and into which the fuel is introduced and intermixed with air and caused to be expelled by the explosive action in part of said mixture, said chamber being provided with lateral openings for the discharge of fuel; and means carried by the chamber and extending to a point below the openings

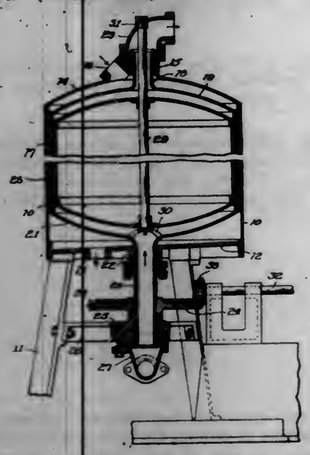


for cooling the chamber, whereby undue heating and consequent premature explosion of the mixture within the chamber is prevented.

1,479,086. BALL RETAINER. HARRY N. PARSONS, Chicago, Ill., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1922. Serial No. 530,820. 3 Claims. (Cl. 64—59.)

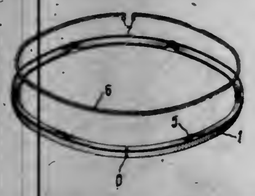
1. A ball retainer for ball bearings comprising a ring having recesses therein for the balls and bearing members secured in the sides of said recesses and adapted to contact with said balls at their axes, said bearing members being secured in holes in the sides of said recesses.

1,479,087. METHOD OF DETERMINING FINISHING POINT IN PROCESS OF CONDENSING MILK. FRANK E. RICE, Ithaca, N. Y., assignor to Nestle's Food Company, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1919. Serial No. 318,895. 7 Claims. (Cl. 175—183.)



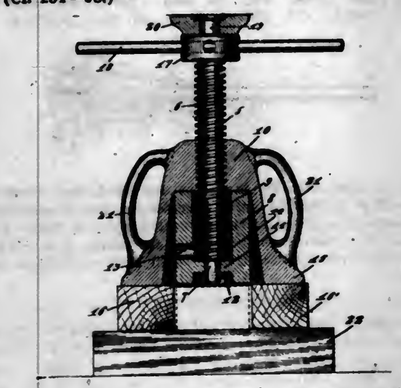
1. A method of determining the finishing point in condensing milk, which consists in passing an electric

current through the milk and indicating the resistance offered to the current by said milk during condensation and at the finishing point.



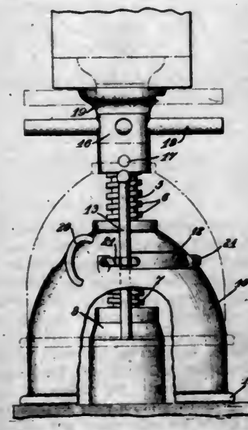
6. An electrical apparatus for use in determining the finishing point in condensing milk including a plurality of known resistances, a galvanometer and an adjustable resistance all in operative electrical connection, an evaporating pan, an insulating member extending into said pan, and a plurality of spaced electrodes co-operating with said known resistances, galvanometer and adjustable resistance, and arranged on said member, said electrodes being designed to be submerged in the milk undergoing treatment whereby said milk will form a resistance between the electrodes and complete an electric circuit through said known resistances, galvanometer and adjustable resistance.

1,479,088. HEAT EXCHANGER. JOSEPH SCHNEIBLE, Chicago, Ill. Filed Apr. 16, 1921. Serial No. 461,893. 3 Claims. (Cl. 257—111.)



1. In combination, an annular chamber, a cylindrical wall partitioning said chamber, means for rotating said wall, and means for passing fluids through the chambers in directions substantially transverse to the movement of the wall on each side of the latter.

1,479,089. PISTON PACKING. CHARLES R. SHOAT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1919. Serial No. 341,746. 5 Claims. (Cl. 74—109.)



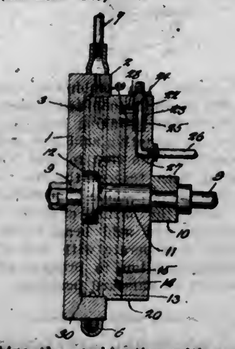
1. In a piston packing, the combination with a resilient split ring having a surface on its inner side oblique to the axis of the ring, said surface provided with raised bearing portions arranged at intervals around the ring, of a resilient split expanding ring adapted to be placed with said first mentioned ring in a piston groove and to seat on said bearing portions, the relation of the engaging surfaces being such that the expanding ring will operate to force the first mentioned ring outwardly and axially when said rings are seated in a piston groove.

1,479,090. JACK. ABRAM J. SLONECKER, Trenton, Mo., assignor to Slonecker Products Company, Trenton, Mo. Filed Dec. 20, 1922. Serial No. 608,034. 2 Claims. (Cl. 254—98.)

1. A lifting jack comprising a screw, a reversible base swiveled on the lower end of the screw, a hollow movable base adapted to move over the screw, means for rotating the screw, and handles on the hollow movable base for rotating the hollow movable base.

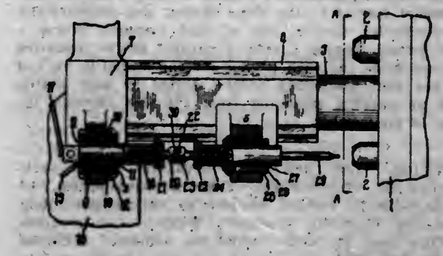
1,479,091. JACK. ABRAM J. SLONECKER, Trenton, Mo., assignor to Slonecker Products Company, Trenton, Mo. Filed Dec. 20, 1922. Serial No. 608,035. 4 Claims. (Cl. 254—98.)

1. In a lifting jack, a lifting screw having oppositely disposed threads, an inner base having threads to receive the threads of the screw, an outer hollow base adapted to house the first mentioned base and operating over the threads of the screw, means for rotating the screw, and means for oscillating the inner base.



1,479,092. MOTOR-PROPELLED AGRICULTURAL MACHINE. WILLIAM N. SPRINGER, Peoria, Ill., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 30, 1917. Serial No. 189,017. 9 Claims. (Cl. 180—17.)

6. In a device of the class described, a main frame; tractor wheels located adjacent the front end of said main frame for propelling the same; steering mechanism carried by said main frame and cooperating with said wheels to steer the same; a supplemental frame pivoted to said main frame adjacent the front end of the latter, and adapted to swing relative thereto; and a castor wheel

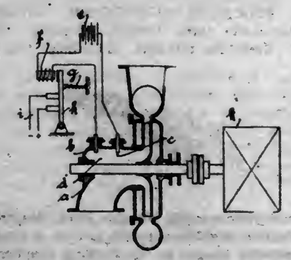


whereby the rear end of said supplemental frame is supported, and whereby said supplemental frame may be guided independently of said main frame.

1,479,093. TURBINE. JOHN GORDON SUMMERS, San Diego, Calif. Filed Mar. 19, 1923. Serial No. 626,117. 3 Claims. (Cl. 253—81.)

1. In a turbine the combination with a stator having non-communicating grooves in one face and oppositely pitched ports opening into the periphery of the stator and communicating with the respective grooves, of valve controlled means for directing fluid under pressure into either groove, a rotor extending around the stator, an annular series of buckets within the rotor for successively receiving the impact of fluid discharged from the ports, exhaust ports extending from the buckets through the periphery of the rotor, and an exhaust ring for receiving fluid from the exhaust ports.

1,479,094. ATTACHMENT FOR AUTOMATIC TURRET MACHINES. FRANK H. ERNSER and RALPH B. VERSEY, Flint, Mich., assignors to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Dec. 4, 1919. Serial No. 342,430. 5 Claims. (Cl. 29—37.)

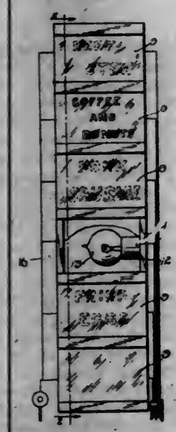


1. The combination with a main tool slide of an auxiliary tool slide mounted thereon, means for preliminary adjustment of the auxiliary slide on the main slide, and cam means for causing relative movement between said slides.

1,479,095. CLINCHER RIM. WILLIAM H. HARWOOD, Cheyenne, Wyo. Filed Aug. 25, 1920. Serial No. 406,951. 1 Claim. (Cl. 152—21.)

A clincher rim including two separable rim members, one rim members being in the form of a band having its inner periphery straight transversely thereof, one edge of said rim member being provided with an external annular hook-shaped flange overhanging the rim member, said edge of the rim also being provided with an internal annular shoulder, the outer periphery of the rim member being externally screw-threaded at the opposite edge of the member and inclined transversely adjacent the hook shaped flange, the other rim member being in the form of a band which is wedge shaped in cross section and internally screw-threaded to fit the externally screw-threaded portion of the first mentioned band, the second mentioned band being provided at its outer edge with an external annular hook-shaped flange overhanging the band, the said band also being provided at its outer edge with an internal annular shoulder extending transversely across the adjacent edge of the first mentioned band and also projecting beyond the inner periphery thereof, and a set screw extending through the shoulder of the second mentioned band for engagement with the adjacent edge of the first mentioned band, the head of the set screw projecting externally of the rim member and constituting a shoulder or abutment for use in assembling and disassembling the rim members.

1,479,096. SAFETY DEVICE FOR CENTRIFUGAL PUMPS. PETER IBACH, Konigswinter, Germany. Filed Oct. 15, 1921. Serial No. 507,938. 5 Claims. (Cl. 103—25.)

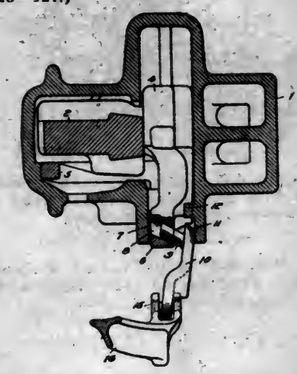


1. In a pumping plant in combination, a centrifugal pump and a motor operatingly connected therewith, a pump chamber and a switching device adapted to be influenced by the liquid level in said chamber for preventing said motor from running.

1,479,097. RAILWAY TIE. PETER C. ICKES, Kans City, Mo., assignor to K. C. Concrete Tie Co., Kansas City, Mo. Filed Aug. 24, 1922. Serial No. 584,069. 8 Claims. (Cl. 238—117.)

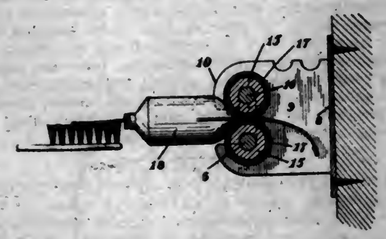
1. A railway tie comprising two cementitious rail supporting sections, two nuts respectively embedded in said sections, and a threaded bar engaging said nuts by which the sections are tied together and are adjustable toward and from each other, substantially as set forth.

1,479,098. INDICATING DEVICE. BENNIE JAMES. Chicago, Ill. Filed Apr. 10, 1922. Serial No. 551,358. 1 Claim. (Cl. 40—132.)



In an indicating device of the character described, a glass slide, a coating of opaque composition on one side of said slide, said composition being removed from portions of said slides to form legends designating certain articles, and a coating of white translucent composition on the opposite side of said slide, whereby the said legends may not be viewed from one side of said slide.

1,479,099. STOCKING SUSPENDER. HUGH SNOWIE JONES, Lancaster Gate, London, England. Filed Nov. 16, 1922. Serial No. 601,395. 3 Claims. (Cl. 24—245.)

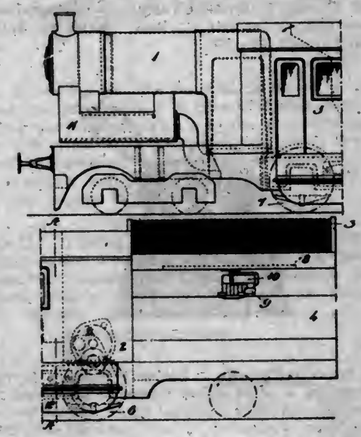


3. A garment suspender of the kind described, comprising a flexible backing member having a stud-like projection, a member hinged to the backing member and having a keyhole-shaped slot in which the projection is adapted to slide, a hook on the slotted member in the neighbourhood of the narrow end of the slot, a ring connected by a strip of elastic material to the upper end of the slotted member and adapted to slip over the projection and also over the hook when the said strip is slightly stretched and means for releasing the ring from the hook.

1,479,100. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1923. Serial No. 630,138. 8 Claims. (Cl. 213—127.)

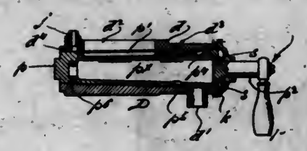
1. In a car coupler, the combination with a coupler head, of a knuckle pivotally mounted thereon, a vertically movable and rearwardly swinging lock for said knuckle, and a lock lifter for actuating said lock, said lifter being slidably and pivotally connected to said lock so as to be capable of sliding with respect thereto transversely of said head and also being capable of pivoting with respect to said lock when the latter executes its rearward swinging movement, and said head having a shoulder which is adapted to cooperate with said lifter when the latter is in locked position to prevent said lock from accidentally moving to unlocked position.

1,479,101. SQUEEZING APPLIANCE. ALPHONSE PROSPER LEGENDRE, Fitchburg, Mass. Filed Oct. 4, 1921. Serial No. 505,225. 2 Claims. (Cl. 221—60.)



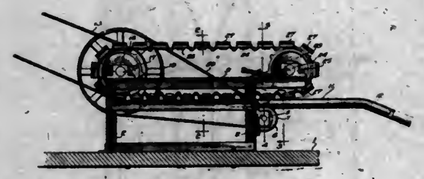
1. A squeezing device including a back, a pair of side members formed at the edges thereof and substantially perpendicular thereto, one of said members having a slot formed therein, a pair of parallel shafts supported by said sides and each having one end seated in an end of the slot, contacting rollers carried by said shafts, and an opening extending from the slot through the edge of the member.

1,479,102. LOCOMOTIVE PROVIDED WITH AIR-COOLED CONDENSER. FREDRIK LJUNGSTRÖM, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Aug. 21, 1922. Serial No. 583,455. 2 Claims. (Cl. 105—38.)



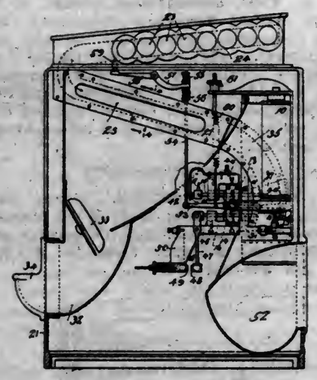
1. In a locomotive provided with an air-cooled condenser and a pertinent steam accumulator operating under vacuum and with the driving engine located between the steam boiler and the condenser of the locomotive, an arrangement, characterized by the steam

boiler, the driving engine and the condenser together with the steam accumulator being placed on the same



carriage, the driver's cab being located between the steam boiler and the accumulator.

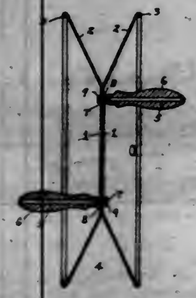
1,479,103. DISPENSING MEANS FOR AERATED BEVERAGES. HARRY C. LYONS, New York, N. Y. Filed May 17, 1922. Serial No. 561,575. 1 Claim. (Cl. 225—26.)



In a device for dispensing aerated beverages, a container for syrup, said container having an outlet communicating with the top of a tapering valve chamber, the top of said valve chamber having an inlet passage connected with a source of carbonated liquid, a discharge outlet on the lower side of said valve chamber, a tapering valve having a measuring chamber seated in said valve chamber, said valve having on one side an aperture adapted to connect the measuring chamber with the syrup outlet passage and a passage adapted to connect the measuring chamber with the discharge outlet and on the opposite side an aperture adapted to be in register with the inlet passage for carbonated water, said valve being free of obstructions at its smaller end, a removable cap on the larger end of said valve chamber, and spring means between said cap and the larger end of said valve for holding the latter to its seat.

1,479,104. CUTTING MACHINE. ARCHIE K. LYTLE, Chicago, Ill., assignor to Swift and Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1923. Serial No. 663,313. 5 Claims. (Cl. 17—43.)

1. In a device of the character described, a rotatable cutter, a guide arranged over said cutter, a drag plate arranged rearwardly of said cutter, and means for frictionally engaging casings on said guide and said drag plate and feeding them over said cutter.

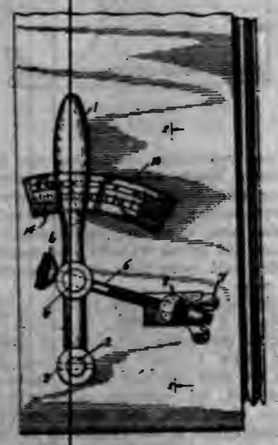


1,479,105. AUTOMATIC COIN CONTROLLING AND REGISTERING MECHANISM. GEORGE WASHINGTON MEYERS, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 20, 1919. Serial No. 318,772. 5 Claims. (Cl. 235—32.)

1. In a coin registering mechanism the combination of a registering device and circuit controlling means for rendering said device effective to thereby register selective coins passing through said mechanism into a circuit closing zone, a magnet for operating said controlling means, and means whereby said magnet remains energized after said coins have passed beyond said circuit closing zone.

5. The combination, in a coin register, of a registering mechanism, a coin chute, electrically controlled means normally ineffective but rendered effective by a coin in said chute, a motor for operating said mechanism, means for simultaneously closing main and auxiliary circuits and for operating coin advancing and coin retarding mechanism, and means operated by the registering mechanism at the conclusion of its registering function for returning the electrically controlled means to its normal position.

1,479,106. REEL FOR CLOTHESLINES AND THE LIKE. VICTOR G. MOSS, Cleveland, Ohio, assignor to The Champion Register Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 14, 1922. Serial No. 606,810. 2 Claims. (Cl. 242—100.)



1. In a device of the character described, the combination of two similar disks, each provided with a peripheral outwardly flaring flange, said disks each having two diametrically opposed holes and being placed together with corresponding holes in register and with the flanges thereof extending in opposite directions; bolts passing through such registering holes and clamping said disks together, said bolts extending in opposite directions from said disks; and handles rotatively mounted on said bolts, respectively.

1,479,107. REFRACTORY COMPOSITION. JOHN L. OHMAN, deceased, late of Niagara Falls, N. Y.; by Charles A. White, administrator, Buffalo, N. Y., assignor to Buffalo Refractory Corporation, Buffalo, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1917, Serial No. 199,792. Patent No. 1,356,939. Divided and this application filed Oct. 9, 1920. Serial No. 415,876. 13 Claims. (Cl. 106—9.)

1. A refractory composition for heat resisting articles, comprising silicon carbide and fused silicon oxide, and crystalline graphite.

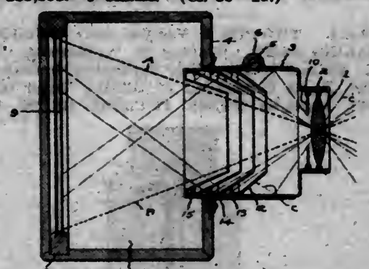
1,479,108. ADJUSTING DEVICE. HENRY RENKEN, New York, N. Y., assignor to F. Wesel Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed July 5, 1922. Serial No. 573,006. 5 Claims. (Cl. 74—89.)

1. In a screen adjusting device for cameras a handle provided with a slot, a rotatable adjusting rod extending through and freely movable in said slot, said handle being movable relatively to said rod and limited in its movement thereby.

1,479,109. CLEANING IMPLEMENT. WALTER H. RUDOLPH, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 12, 1921. Serial No. 444,364. 4 Claims. (Cl. 15—229.)

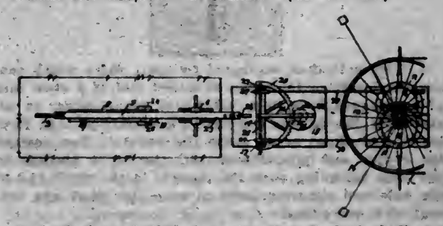
1. A brush comprising a holder formed of overlying plate members, a brush pocket formed between said plate members adjacent their marginal edges, said plates being provided with registering cut-out portions inwardly of said pocket for forming a pair of mating cross bars, a wire frame having free ends bent to extend transversely thereof, said frame being positioned within said pocket with the free ends between said cross bars, strands of brush material secured to said frame extending outwardly of said holder between the marginal edges of said plates, and means associated with said cross bars and frame ends for retaining said frame in the holder.

1,479,110. NOZZLE ATTACHMENT FOR OIL GUNS. BERNARD H. SKELLY, Bridgeport, Conn., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed June 15, 1921, Serial No. 477,691. Renewed Sept. 17, 1923. 5 Claims. (Cl. 284—1.)



1. An attachment for oil guns embodying a sleeve formed at one end to be received over the nozzle of a grease gun and at its opposite end to be telescoped over a nipple, a shoulder interiorly of the sleeve, and a disk in the sleeve abutting the shoulder and having upper and lower projections the former to engage and unseat the gun valve and the latter to engage and unseat the nipple ball valve, the disk and projections having an oil passage therethrough, the lower disk being formed with a non-circular countersink to engage the ball valve.

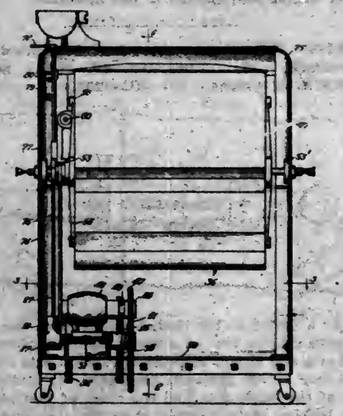
1,479,111. EMERGENCY TIRE FOR VEHICLE WHEELS. JOSEPH SLOMER, Waukegan, Ill. Filed Jan. 3, 1922. Serial No. 526,470. 3 Claims. (Cl. 152—23.)



1. An emergency tire for attachment on a standard wheel rim, comprising a flexible, elongated body encompassing the rim and having a flexible strip extending from each end of the tire; a clip at each end of the tire to which the strips are connected, respectively, and a screw for extension thru the valve opening in the rim to hold the clips in place on the rim.

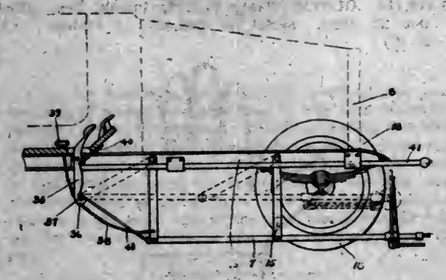
1,479,112. LIGHT ABSORBER FOR CAMERAS. WILL SPARKS, San Francisco, Calif., assignor to The Light-Absorber Camera Company, San Francisco, Calif., a Corporation of California. Filed Apr. 18, 1922. Serial No. 555,353. 6 Claims. (Cl. 95—11.)

1. In a photographic camera means intermediate the lens and the plate thereof and tapering toward the axis of the lens for preventing all but direct light rays reaching said plate.



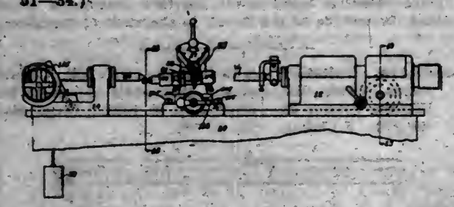
1,479,113. COMBINATION POWER AND JACK. GEORGE A. STAFFORD, Sour Lake, Tex. Filed Apr. 14, 1921. Serial No. 461,890. 3 Claims. (Cl. 74—14.)

1. A device of the character described, including a power wheel, a pair of oppositely disposed eccentrics connected to and operated thereby, a pump jack, and a mechanism through which said eccentrics are connected to said jack to operate the same, said mechanism including gearing which imparts two strokes to the jack for each revolution of the power wheel.



1,479,114. POWER-TRANSMITTING MECHANISM. CARL W. SWANSON, Chicago, Ill., assignor to Apex Appliance Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1920. Serial No. 369,544. 5 Claims. (Cl. 74—60.)

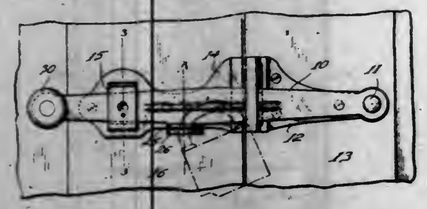
1. A power transmitting mechanism having a power shaft divided transversely into two aligning members, one of which is axially movable; a gear on the axially fixed aligning member; an elongated pinion on the axially movable member near the mid portion thereof; a bearing at each end of the axially movable member within



which said member is movable; clutch members at adjacent ends of the two shaft members and means substantially enclosing the clutch members.

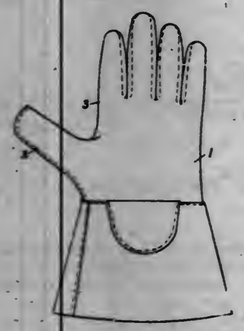
1,479,115. SAFETY DEVICE. MICHAEL THIERY, Cincinnati, Ohio. Filed Jan. 17, 1923. Serial No. 613,295. 16 Claims. (Cl. 293—37.)

1. In a device of the class described the combination with a main fender of an auxiliary fender and a supplemental fender contractible within the body line of the main fender, and means for extending the auxiliary and supplemental fenders beyond the body line of the main fender.



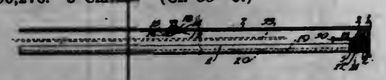
1,479,116. THREAD-GRINDING MACHINE. EDWIN R. TOZER, Lakewood, Ohio, assignor to The J. C. Ulmer Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 24, 1920. Serial No. 361,060. 26 Claims. (Cl. 51—34.)

1. In combination, a tail stock comprising two upright standards, a spindle slidably mounted in each standard, said spindle having rack teeth on the under side thereof, a pinion extending transversely of the



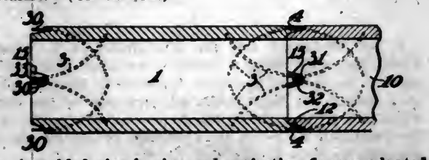
spindle and having an extension projecting beyond the sides of the standard, a pulley mounted on the extension, and gravitational means extending over the pulley for urging said spindle in one direction.

1,479,117. DOOR LATCH. RAY F. TRIMMER, East Cleveland, Ohio. Filed Oct. 19, 1921. Serial No. 508,675. 2 Claims. (Cl. 292—205.)



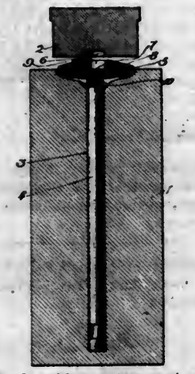
1. In a device of the character described, the combination with a latch arm, of a keeper therefor, plates for the latch arm and keeper respectively, one of said plates having a loop struck upwardly therefrom for limiting movement of the latch arm, and the other of said plates having a bearing surface struck upwardly therefrom and extending transversely of the latch arm and comprising a fulcrum therefor, said keeper having an inwardly extending protuberance and said latch arm having a recess cooperating with said protuberance for locking the latch arm to the keeper when said latch arm is constrained over said fulcrum.

1,479,118. GLOVE. VASLE VINCIN, Humble, Tex. Filed Oct. 22, 1921. Serial No. 509,637. 2 Claims. (Cl. 2—9.)



1. A glove whose palm, thumb, first finger and the front part of the other fingers are formed of a single piece of material, and the backs of all of the fingers, excepting the first finger are formed of separate strips of material, the material between the thumb and first finger being formed into a crotch, and the edges of the thumb material being sewed together forming a seam along the outside of the thumb to the wrist of the glove.

1,479,119. GARMENT-MEASURING DEVICE. JOHN VRANA, Cicero, Ill., assignor of one-half to George B. Efantis, Cicero, Ill. Filed Aug. 6, 1921. Serial No. 490,276. 5 Claims. (Cl. 33—9.)

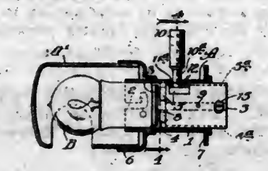


3. In a device of the type described, a U-shaped member having spring arms, two measuring bars respectively carried by the arms of said member, a marking member carried by one of said bars and adapted to be brought into engagement with the other bar, a set screw carried by said U-shaped member, and a third measuring bar slidably and rotatably supported by said set screw, said third-named measuring bar being movable at will into substantial alignment with the first-named bar.

1,479,120. MOLDED PIPE AND TIE LOCK. EDGAR L. WARNER, Seattle, Wash., assignor to Concrete Pipe Company, Seattle, Wash., a Corporation of Washington. Filed Apr. 19, 1922. Serial No. 555,607. 4 Claims. (Cl. 72—53.)

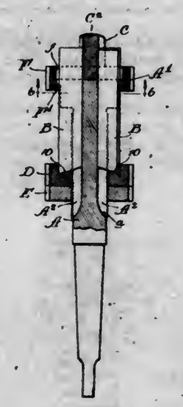
1. A molded pipe having end projecting flanges adapted for nesting engagement, and also having peripheral recesses at their ends and tie rods imbedded in the walls with portions projecting into said recesses and adapted to interlock with like rods of adjacent assembled pipe sections by passing one through a loop of the other and then bending it over to form an interlocking hook end.

1,479,121. TWO-PIECE VALVE AND METHOD OF MAKING SAME. WILLIAM H. WASHBURNE, Chicago, Ill., assignor to The Oliver Typewriter Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1921. Serial No. 509,948. 11 Claims. (Cl. 29—156.7.)



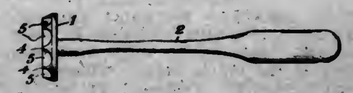
1. The method of making a two-part valve which consists in inserting the screw threaded end of a stem into a cone-shaped hole in a valve-head blank larger in diameter at the smaller end than the stem, and then forging the blank so as to cause the metal to flow toward the center and progressively fill the screw threads in the stem beginning with the threads in the small end of the hole and simultaneously give to the blank the contour of a valve-head.

1,479,122. COMBINED FIREARM AND GRENADE DISCHARGER. SAMUEL WILEY, Metuchen, N. J. Filed Nov. 8, 1923. Serial No. 673,443. 9 Claims. (Cl. 42—1.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



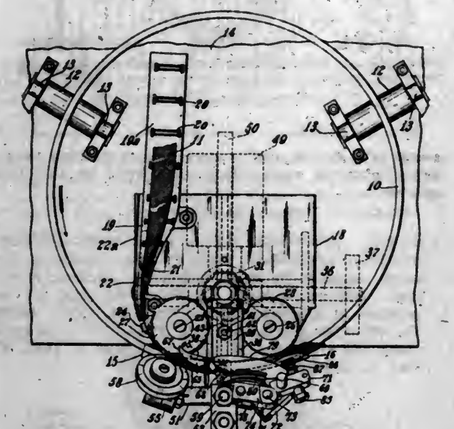
9. A combined fire arm and grenade discharger embodying a fire arm adapted to be used as an ordinary service weapon and provided with a butt having means for discharging a grenade therefrom.

1,479,123. ELECTRIC CONNECTER. CARL I. WILLE, Chicago, Ill., assignor to Metal Specialties Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1919. Serial No. 318,695. 3 Claims. (Cl. 173—346.)



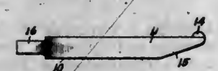
1. In a device of the character set forth, the combination of a shell having one end constructed to serve as a socket, said shell being provided with a cam slot, a plug of insulating material in said shell, contacts in said plug comprising metallic sleeves affording spring sockets, springs in said sockets, and plungers above said springs, one of said sleeves having a cutaway wall, and a stem projecting laterally from the corresponding plunger through said cutaway wall and working in said cam slot, whereby the plunger may be retracted by rotating it on its own axis.

1,479,124. COUNTERBORING OR COUNTERFACING TOOL. FRANK D. WINKLEY, Chicago, Ill. Filed May 29, 1922. Serial No. 564,413. 4 Claims. (Cl. 77—58.)



1. A counterboring or counterfacing tool, comprising a member in which the cutters are engaged for rotation, consisting of a main body constituting the stem or base of the tool, and a terminal separable from said stem or base, said separable terminal having a centering nipple and a peripheral flange which abuts transaxially on the end of the main body, and means engaging said flange and the main body for securing the latter and said terminal together.

1,479,125. JUICE EXTRACTOR. THOMAS O. ALGER, Bridgeport, Conn. Filed May 8, 1923. Serial No. 637,413. 2 Claims. (Cl. 146—3.)

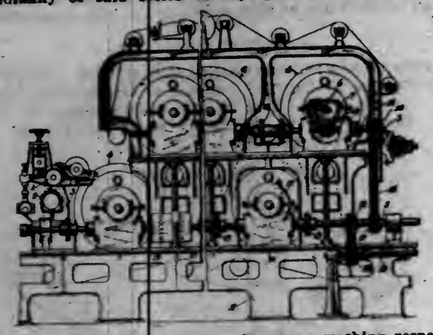


1. A juice extractor comprising a circular head having a handle extending from its rear face, the front face of the head formed with flaring concave depressions which converge toward the center of the head, the side walls of said depressions merging into ridges that are all in one plane at right angles to the axis of said head.

1,479,126. RING-COVERING APPARATUS. JAMES L. BUTLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,238. 9 Claims. (Cl. 154—9.)

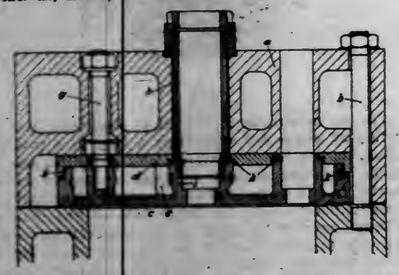
1. In an apparatus of the class described, the combination of means for supporting a ring in a horizontal position, means for circumferentially propelling the ring, a guide structure adapted to twist a strip of covering material from a horizontal to a vertical plane and guide it longitudinally onto the inner side of the ring with the lower edge of the strip in a predetermined position relative to the lower side of the ring, and means for folding the free upper edge of the strip outwardly over the ring.

1,479,127. MACHINE CLAMP. HARRY CADWALLADER, Jr., Philadelphia, Pa. Filed Mar. 15, 1921. Serial No. 452,558. 6 Claims. (Cl. 90—59.)



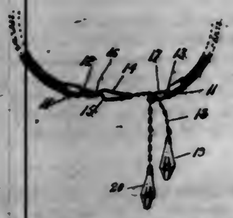
1. In a clamp for machine work, the combination of a body of substantially U-shape forming a pair of jaws, each paw having a rounded gripping surface, a lug axially disposed at the opposite end of said body from said jaws and arranged to be inserted in an opening formed in the material to be clamped, and means to clamp said body in operative position.

1,479,128. PAPER-MAKING MACHINE. WILLIS S. CRANDELL, Elsmere, N. Y., assignor to Albany Paper Mill Machinery Company, Inc., Albany, N. Y., a Corporation of New York. Filed Nov. 14, 1922. Serial No. 600,855. 7 Claims. (Cl. 34—48.)



1. A paper-making machine comprising a series of drying rolls having spindles and carrying gears adjacent

ends of their spindles, a driving shaft extending longitudinally of said series of drying rolls adjacent said



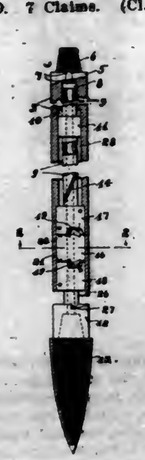
gears, said driving shaft carrying gears meshing respectively with the gears which are carried by the drier spindles.

1,479,129. CYLINDER HEAD FOR INTERNAL-COMBUSTION ENGINES. KARL FEILNER, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed June 29, 1921. Serial No. 481,382. 6 Claims. (Cl. 123—173.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. A cylinder head for internal combustion engines made in two main parts and having in combination an external part to take up the working stresses, and a bipartite internal part consisting of two separate wrought iron pieces machined and united so as to form water spaces between them.

1,479,130. FASTENER. THEODORE W. FOSTER, Providence, R. I., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed Dec. 20, 1921. Serial No. 523,733. 5 Claims. (Cl. 24—201.)

A fastener comprising an eye member, a fastener member adapted to engage said eye, a flexible member passed through said eye and connected with said fastener, and a stop on said flexible member limiting movement thereof in one direction through said eye.

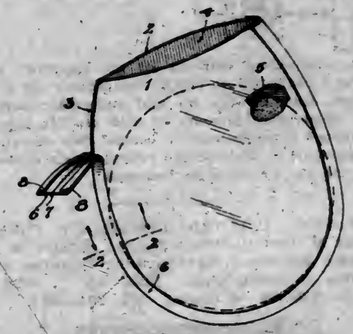


4. A fastener comprising an eye member, a wire loop pointed at one end and provided with oppositely extending yielding shoulders for engaging and releasably retaining said fastener in the eye, and a flexible member carried by the fastener and passed through the eye and having a stop member on its outer portion to engage the eye and limit the separating opening movement of said members.

1,479,131. MINE-RAIL FASTENER AND ANTI-SPREADER. CHARLES E. FOWLER, Allais, Ky. Filed Dec. 13, 1922, Serial No. 606,569. Renewed Nov. 22, 1923. 1 Claim. (Cl. 238—10.)

In mine car track-ways, wherein the end rails thereof, are laid upon their side and between adjacent rails of the track-way, means for securing the end rails to the adjacent rails, said means including a flat-like bar member extending beneath the rails, hooks upon the opposite ends of the bar member for engagement with the base portion of the outer rails, vertical brackets secured to the bar member adjacent the base of the end rails, and wedge blocks between the brackets and said bases of the end rails.

1,479,132. COMBINATION REVERSING JAR. LEO J. GIANELLA, Long Beach, Calif. Filed Sept. 18, 1922. Serial No. 588,889. 7 Claims. (Cl. 294—86.)



1. In a deep well tool, a body member, a stem member shiftably and turnably disposed in the body, and ratchet means in the body adapted to free the stem so as to allow the stem to slide in longitudinal direction in relation to the body without turning.

1,479,133. DIASTATIC MATERIAL AND PROCESS OF MAKING THE SAME. HERBERT C. GORE, Takoma Park, Md.; dedicated, by mesne assignments, to the people of the United States. Filed May 22, 1922. Serial No. 640,779. 5 Claims. (Cl. 195—32.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

5. A new process of preparing diastatic and other enzymes consisting of precipitating an aqueous extract

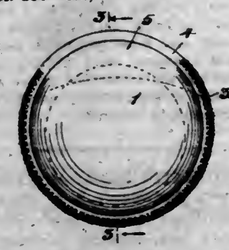
containing enzymes with tannic acid or other tannin-containing material, separating the enzyme bearing precipitate, and digesting it with an aqueous preparation of protein capable of reacting with tannin and thus set free a large proportion of the enzyme.

1,479,134. POWDER-PUFF HOLDER. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1922. Serial No. 593,823. 4 Claims. (Cl. 150—1.)

2. An article of the class described comprising a bag having a reinforcing strip extending about its edge and adhesively secured thereto, said strip being provided with thickened edges and a thinner central portion.

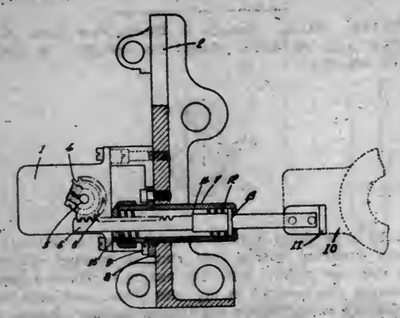
1,479,135. POWDER-PUFF HOLDER. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1922. Serial No. 593,824. 2 Claims. (Cl. 150—52.)

1. An article of the class described comprising a powder puff bag composed of two sections of material with their edges united, a flat contracting strip permanently secured for its entire length, upon the inner face of said bag and at a distance from the upper edge thereof and normally tending to contract the mouth of the bag to provide a shirred skirt portion above said strip and a substantially closed puff-receiving chamber below the same.



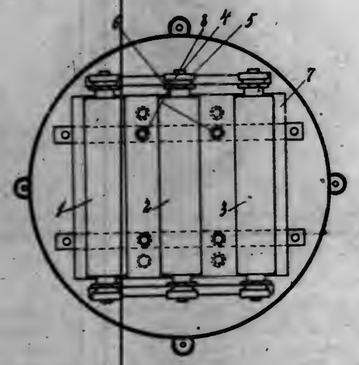
1,479,136. POWDER-PUFF HOLDER. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1922. Serial No. 593,825. 1 Claim. (Cl. 150—52.)

An article of the class described comprising a pair of flat, substantially circular disks of expansible material, said disks being secured together at their edges for a portion of their circumference, leaving an expansible



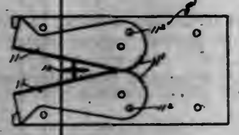
opening of less length than the diameter of the disks, and detachable means for uniting together the unsecured portions of the disks to close the opening.

1,479,137. POWDER-PUFF HOLDER. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1922. Serial No. 593,826. 5 Claims. (Cl. 150—52.)



2. An article of the class described comprising a pouch having a pair of opposing flaps on opposite sides of the pouch opening and a strip of material extending across the inner face of one of said flaps and intended to overlie a portion of an article contained within the pouch.

1,479,138. MACHINE GUN. GEORGE HAZELTON, Battersea, London, England, assignor to Vickers Limited, Westminster, London, England. Filed July 30, 1920. Serial No. 400,203. 4 Claims. (Cl. 89—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

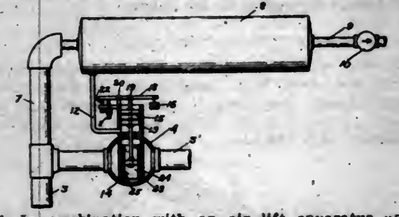


2. In a machine gun of the barrel recoiling type, the combination with a reciprocating part of the gun, of a counter, a member interposed between said part and said counter and a spring operating on said member to effect movement of this member, during the forward movement of the barrel after recoil, to operate the counter.

1,479,139. ELECTRIC HEATING APPARATUS. OLE ANTON JOHANSEN, Christiania, Norway. Filed Nov. 20, 1922. Serial No. 601,953. 2 Claims. (Cl. 219—37.)

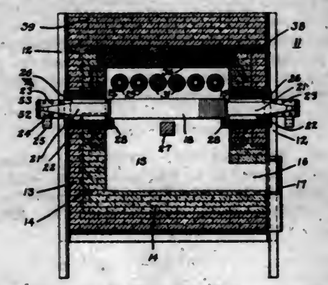
1. In an electric heating apparatus, a heat accumulating or transmitting body, channels open at both ends through said body and interchangeable heating elements fitting into said channels, said heating elements having means at one end for connection to one electric supply conduit, and means at the opposite end for connection to the other electric supply conduit.

1,479,140. AUTOMATIC BREAD-MAKING MACHINE. JOSEPH KENNEDY, Providence, R. I. Filed Apr. 7, 1922. Serial No. 550,503. 7 Claims. (Cl. 107—9.)



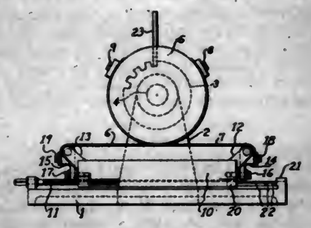
5. In a machine for forming loaves of bread having a molding-board and spring controlled laterally separable jaws pivoted on said board the combination therewith of means mounted on said board and arranged and adapted to limit the opening movement of said jaws.

1,479,141. MILL. HORACE L. KENT, New York, N. Y. Filed Aug. 12, 1921. Serial No. 491,687. 6 Claims. (Cl. 83—9.)



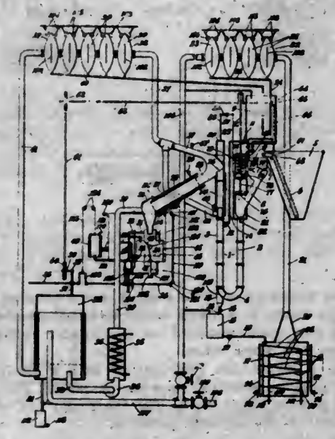
1. In a crushing mill, a grooved ring, a plurality of rollers engaging within said ring, a housing enclosing said ring and rollers, said ring having continuous flanges extending therearound at opposite sides: and said housing having substantially continuous annular flanges, the flanges on said housing overlapping and extending within and being spaced from the flanges on said ring whereby material fed into the housing is prevented from falling outside of the ring, there being formed a narrow annular space for discharge of crushed material over the outer edges of the flanges on the ring between the spaced apart annular flanges on the housing and ring.

1,479,142. AUTOMATIC AIR-LIFT-CONTROL SYSTEM. CHARLES I. LINDAU, Hurley, N. Mex., and EDWARD J. FRANKLIN, Salt Lake City, Utah. Filed Mar. 14, 1922. Serial No. 548,741. 8 Claims. (Cl. 103—232.)



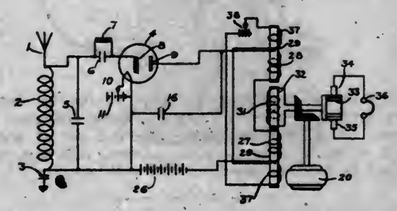
1. In combination with an air lift apparatus and a compressor connected to supply compressed air to such apparatus, control means for said compressor responsive to the submergence pressure of said air lift apparatus and adapted to automatically control the operation of the compressor to increase the volume of air compressed thereby as the submergence increases.

1,479,143. ELECTRIC RESISTANCE FURNACE. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,388. 6 Claims. (Cl. 204—64.)



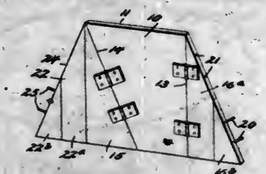
1. In an electric-resistance furnace, in combination, a plurality of refractory walls enclosing a furnace chamber, a plurality of refractory muffle tubes extending through said chamber, and a relatively narrow, elongated refractory resistor member located in the chamber below said muffle tubes and extending transversely thereof, thereby obtaining a predetrmined temperature gradient from the intermediate portion of said muffle tubes to the ends thereof.

1,479,144. MACHINE FOR PRODUCING INDEX DISKS AND THE LIKE. AXEL FREDRIK THURE LÖFQUIST, Utbynas Villa tad, near Gottenborg, Sweden, assignor to Aktiebolage Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed May 4, 1921. Serial No. 466,787. 6 Claims. (Cl. 90—59.)



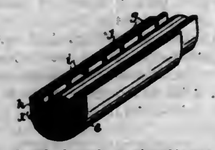
1. A device comprising in combination a frame, means thereon for holding the work to permit of its angular movement, a member adapted to be connected with the work in co-axial relation thereto, a turning band engaged with said member, and means for displacing the band to turn the work; whereby the amount of angular movement may be determined by measuring the amount of displacement of the band.

1,479,145. EXTRACTION OF SOLUBLE CONSTITUENTS OF MATERIALS. JOSEPH MCMAHON and JAMES A. MCMAHON, Brooklyn, N. Y. Filed Mar. 8, 1920. Serial No. 364,152. 10 Claims. (Cl. 87—6.)



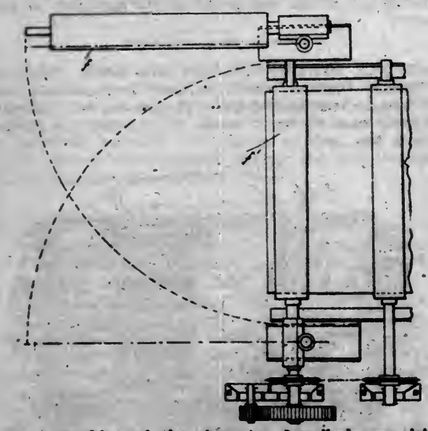
1. A process of extracting soluble constituent from material containing it which comprises or includes the passing of a continuous flow of volatile menstruum in one direction through a continuous stream of material to be treated moving in the opposite direction to dissolve the soluble constituent from such material, heating the residue as it is discharged and passing through it an inert gas, saturated at atmospheric temperature with the menstruum vapor and thereafter heated to remove from the residue the menstruum remaining therein, cooling the combined inert gas and menstruum vapor to condense menstruum therefrom, returning the menstruum for further use in the process, and reheating it for further use in the process.

1,479,146. WIRELESS RECEIVING SYSTEM. RALPH E. MARBURY, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 5, 1921. Serial No. 449,649. 15 Claims. (Cl. 250—20.)



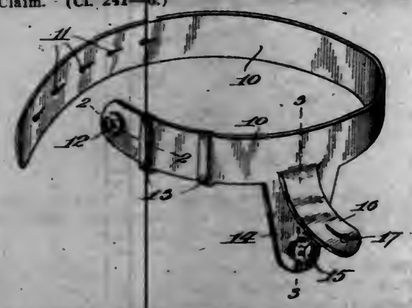
1. A system for amplifying received signal current comprising a source of unidirectional signal current, a dynamo-electric machine, a source of power operating the rotor of the machine, a steady source of excitation for said machine, and means affected by the unidirectional signal current for producing a change in magnetic flux in the machine to effect current output.

1,479,147. EDUCATIONAL APPLIANCE. JOHN C. MARKWORTH, Cleveland, Ohio. Filed Aug. 1, 1923. Serial No. 654,974. 3 Claims. (Cl. 35—2.)



1. In an educational appliance, a board, a pair of flaps hingedly connected to said board, and separate triangular members attachable to said flaps.

1,479,148. PACKING. CHARLES I. E. MASTIN, Midland Park, N. J. Original application filed Aug. 4, 1920, Serial No. 401,145. Divided and this application filed Dec. 5, 1921. Serial No. 520,197. 6 Claims. (Cl 154—45.5.)

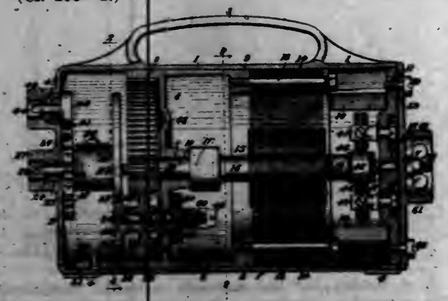


1. The method of forming simultaneously two elongated packings each having a longitudinal working face composed in part of wear-resisting material and in part of material more yielding than the wear-resisting material which consists in forming an elongated mass whose constituents are adhesively joined together and including coils arranged around a common axis extending longitudinally of the mass and side by side and alternating ones of which are composed of wear-resisting material and the remainder of material more yielding than the wear-resisting material, and then severing the mass lengthwise in a plane bisecting the coils.

1,479,149. APPARATUS FOR THE MANUFACTURE OF WELDLESS TUBES FROM FIBROUS MATERIALS AND HYDRAULIC CEMENT SUBSTANCES. DIEGO MATTEI and ADOLFO MAZZA, Genoa, Italy. Filed July 8, 1920. Serial No. 394,814. 3 Claims. (Cl. 92—66.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

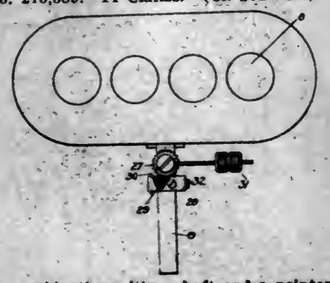
1. A machine of the character described comprising two supporting mandrels, and means rotatably supporting said mandrels for swinging movement about different axes, whereby the mandrels may be alternately moved to operative position.

1,479,150. GARTER. GROVER B. MELLUS, Los Angeles, Calif. Filed May 11, 1922. Serial No. 560,041. 1 Claim. (Cl. 241—6.)



As a new article of manufacture, a garter composed wholly of rubber and including a leg encircling strap, one end being provided with a series of apertures, an aperture engaging stud projecting from the other end of said strap, a pair of tabs formed integral with and depending from the strap, the inner one of said tabs being provided with a stud and the outer one of said tabs being provided with an aperture that is adapted to receive said last mentioned stud.

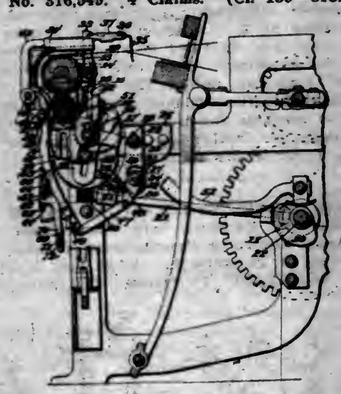
1,479,151. PROTECTIVE COVER FOR ARTICLES. ALBERT E. F. MOONE, Wyoming, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 14, 1920. Serial No. 388,765. 4 Claims. (Cl. 150—54.)



1. A protective cover for articles adapted to cover the edges thereof, a pocket arranged along the edge of said cover, and a cord member located within said pocket, adapted to hold the cover in position, said member fixedly held within said pocket at the ends only of said pocket.

1,479,152. DYNAMO-ELECTRIC MACHINE. ROMAINE MYERS, Oakland, Calif., assignor to California Cap Company, Oakland, Calif., a Corporation of California. Filed Mar. 8, 1921. Serial No. 450,599. 2 Claims. (Cl. 290—1.)

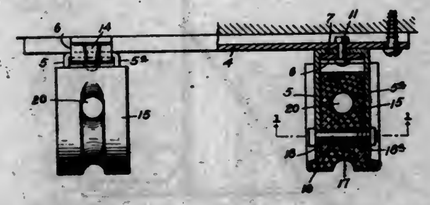
2. A dynamo electric machine including a casing, a generator therein adjacent one end, means within the casing at its opposite end for operating the generator, an external circuit extending from the generator field and exteriorly of the casing through the generator end, a contact device across the generator field, and means actuated by the generator operating means for opening said contact device and maintaining the same open on and after the generator attains its maximum speed.



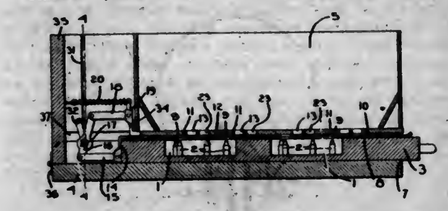
1,479,153. ELECTRICAL MEASURING INSTRUMENT. WALTER G. MYLIUS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,389. 14 Claims. (Cl. 171—34.)

1. The combination with a shaft and a pointer mounted on the shaft, of a worm wheel mounted on the shaft, and a worm screw mounted on the pointer and adapted to engage the worm wheel.

11. In a meter, the combination with a shaft and a pointer loosely mounted thereon, of means for adjusting the pointer relatively to the shaft and for retaining the pointer in its adjusted position.



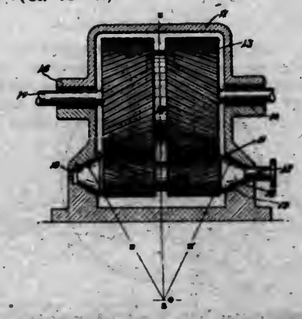
1,479,154. TAKE-UP MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Aug. 11, 1919. Serial No. 316,549. 4 Claims. (Cl. 139—313.)



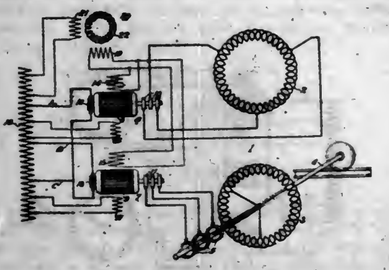
1. A take-up mechanism for looms having, in combination, driving members including a worm and gear, and means for moving the worm into and out of engagement with the gear including a cam, said cam being shaped to lock the worm in both positions.

1,479,155. INSULATOR SUPPORT OR BRACKET. CHARLES L. PEIRCE, Jr., Pittsburgh, Pa., assignor of one-half to Hubbard & Company, a Corporation of Pennsylvania. Filed Feb. 23, 1918. Serial No. 218,802. 4 Claims. (Cl. 173—366.)

1. The combination with an insulator support having outwardly projecting arms, of an insulator straddled by said arms and having an arm receiving groove formed in each lateral face thereof, a wire receiving aperture extending therethrough intermediate said faces, a peripheral groove extending partially around the insulator and terminating at each end in said wire receiving aperture and a bolt receiving aperture terminating in said arm receiving grooves, and a bolt extending through said bolt receiving aperture and through registering apertures formed in said arms.



1,479,156. APPARATUS FOR LOADING HEEL MOLDS WITH WASHERS. GEORGE R. PRESCOTT, Somerville, Mass. Filed Mar. 2, 1923. Serial No. 622,370. 6 Claims. (Cl. 18—1.)



4. In a device for loading washers into the heel cavities of a heel mold, the combination with a hopper to receive washers loosely, of a delivery plate provided with apertures having the same spaced relation as the washer-receiving pins of the heel mold, a mold-receiving guideway beneath the plate, and means operated by the insertion of the plate in said guideway into a position with its pins in alignment with the apertures of the delivery plate to deliver washers from said hopper through said apertures onto the pins.

1,479,157. BEARING FOR GEARING. IRA SHORT, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed Dec. 20, 1921. Serial No. 523,673. 10 Claims. (Cl. 74—7.)

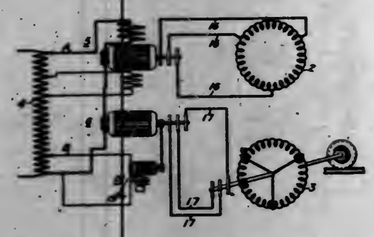
1. A reduction gear comprising a gear member having two rows of opposed, helical teeth, a pinion member having two rows of helical teeth meshing with the gear member teeth, and means for directing a tilting of the pinion in a plane parallel to the plane action of the meshing teeth to evenly distribute tooth pressures.

1,479,158. COMMUTATOR MOTOR. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 8, 1919. Serial No. 316,171. 37 Claims. (Cl. 172—274.)

2. A dynamo-electric machine comprising primary and secondary members, and means for independently and simultaneously supplying each of said members with a rotating field, one of said fields being an alternating field of variable speed.

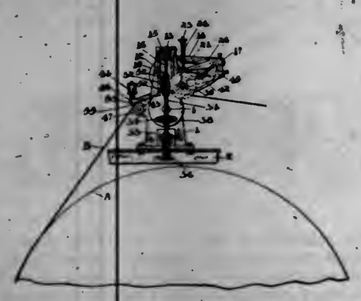
18. The method of operating a dynamo-electric machine comprising primary and secondary members each supplied with power conductively from an auxiliary commutator-type dynamo-electric machine electrically associated therewith, which comprises running said auxiliary machines at speeds in excess of that at which commutation difficulties are pronounced, while the main dynamo-electric machine runs at any speed.

1,479,159. DYNAMO-ELECTRIC SYSTEM. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 15, 1919. Serial No. 317,689. 5 Claims. (Cl. 172—274.)



1. The combination with a series-type single-phase commutator machine, of polyphase current-distributing members connected to the armature winding of said machine, a second machine having a polyphase member and a relatively rotatable single-phase member, and connections between said polyphase member and said polyphase current distributing members.

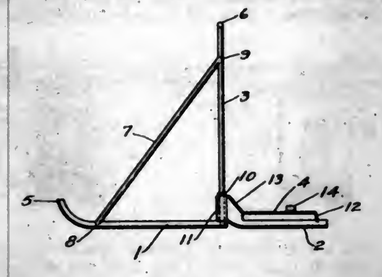
1,479,160. COMMUTATOR MOTOR. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1919. Serial No. 328,808. 11 Claims. (Cl. 172—274.)



1. A dynamo-electric machine comprising primary and secondary members, and auxiliary single-phase dynamo-electric machines electrically associated therewith to furnish currents conductively to each of said members, the frequency of said currents being dependent upon the speeds of said auxiliary machines, at least one of said currents being polyphase currents of such nature as to produce a rotating alternating field, series exciting windings for at least one of said auxiliary machines, and means for varying the speeds of said auxiliary machines, the algebraic difference in the speeds of said auxiliary machines determining the absolute speed of said first-named dynamo-electric machine.

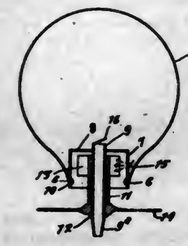
8. The method of operating a dynamo-electric machine comprising primary and secondary members, each conductively supplied with power from auxiliary machines electrically associated therewith, the latter being energized from a variable source of electromotive force, which comprises running one of the auxiliary machines

at a predetermined speed, irrespective of the voltage applied thereto, and feeding one member of the main dynamo-electric machine therefrom, the speed of the other auxiliary machine being determined by the magnetic action between the primary and secondary members of the main dynamo-electric machine.



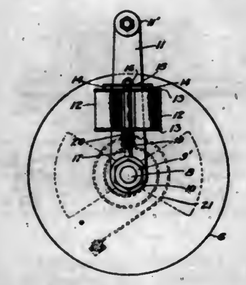
1,479,161. MACHINE FOR SEMITRIMMING AND MARKING WALL PAPER. EDMUND G. STAUNTON, Toronto, Ontario, Canada. Filed Sept. 8, 1922. Serial No. 587,029. 10 Claims. (Cl. 91—14.5.)

1. Apparatus for partly trimming the selvages of a web of wall paper provided with means for automatically suspending the operation of said means for a predetermined period at regular predetermined intervals and with means for varying the length of said intervals without varying the periods of suspension.



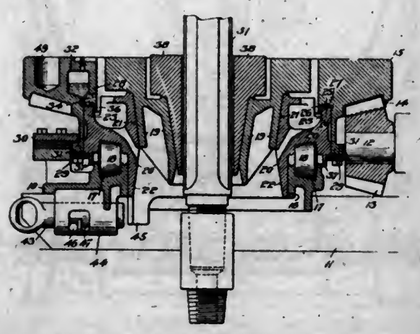
1,479,162. SKI SLED. PETER J. SWANSON, Seattle, Wash. Filed Dec. 14, 1922. Serial No. 606,769. 2 Claims. (Cl. 280—23.)

2. A device of the type described embodying a triangular shaped frame; the base or horizontal member of which is constructed of an inverted T bar with its forward end projecting beyond the diagonal member and curved upward and the vertical member of which extends upward from the rear end of the base member and has handles at each side of its upper end and a collar around it a short distance above the base member; and a smaller frame with an inverted T shaped base member having its forward end slightly curved upward, and a horizontal plate with its forward end bent upward and a clip on



it above the base member; said smaller frame being pivotally attached to the vertical member of the triangular shaped frame.

1,479,163. TOY BALLOON. THOMAS P. TYRRELL, Akron, Ohio. Filed May 16, 1922. Serial No. 561,476. 3 Claims. (Cl. 244—3.)

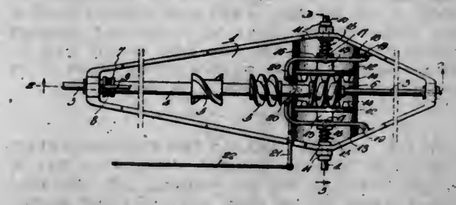


1. In combination, a toy balloon, a closure member secured in the mouth thereof, a valve controlled inflation stem extending through said closure member, a hollow shaft rotatably mounted on said stem, an air turbine associated with the upper end of said shaft, a propeller secured to the lower end thereof and an opening arranged in said closure member to permit air to escape therethrough and operate said turbine.

1,479,164. SAFETY DEVICE FOR CONTROLLERS. JOHN J. WAY, Edgeworth, Pa. Filed May 18, 1921. Serial No. 470,538. 8 Claims. (Cl. 70—50.)

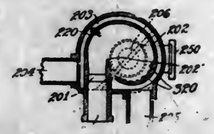
1. The combination with a controller having a movable member and an operating member for effecting the movement thereof, of magnetically controlled means carried by one of said members having means for cooperation with the other member for normally retaining the operating member in operative connection with the movable member.

1,479,165. DUPLEX-TABLE ROTARY DRILLING MACHINE. VICTOR W. ZILEN, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Mar. 3, 1922. Serial No. 540,726. 8 Claims. (Cl. 255—23.)



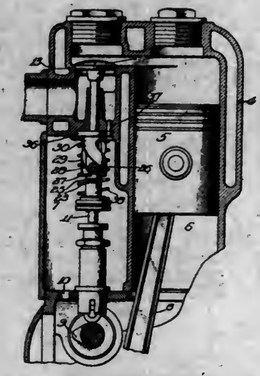
1. In a rotary drilling machine, the combination of the base, a circular race-way in the base, anti-friction elements in said race-way, an inner table rotatable on said anti-friction elements, work gripping means carried by said inner table, an outer table rotatably mounted on the inner table, a second series of anti-friction elements interposed between the two tables, an internal depending skirt on the outer table overlapping the inner table for enclosing the second set of anti-friction elements, and means for locking said tables together for simultaneous rotation.

1,479,166. DEVICE FOR SUPPORTING AND ROCKING PATIENTS. JOSEPH S. AMUSSEN, Los Angeles, Calif. Filed Aug. 29, 1922. Serial No. 584,989. 9 Claims. (Cl. 128—32.)



6. A device for supporting and turning a patient, comprising a curved rocking frame, a pair of coupling detachably connected with the ends of the frame, straps connected with the couplings, and a pad supported by the straps.

1,479,167. TRANSMISSION MECHANISM. ALBERT ANDREWS, Sheridan, Wyo., assignor, by direct and mesne assignments, to Andrews Worm Transmission Corporation, a Corporation of Wyoming. Filed Jan. 8, 1923. Serial No. 611,446. 3 Claims. (Cl. 74—36.)

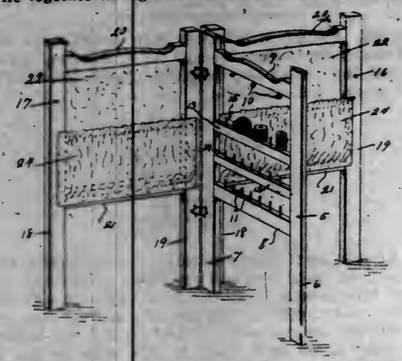


2. A transmission mechanism comprising a pair of axially shiftable and axially alined crown gears, springs normally pressing said crown gears inwardly toward each other, a plurality of axially alined worms adapted for mesh one at a time with said crown gears, means for shifting said crown gears outwardly against the action of said springs, and means for axially shifting said worms.

1,479,168. INLET MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. ROBERT W. A. BREWER, Indianapolis, Ind. Filed Dec. 16, 1919. Serial No. 345,377. 5 Claims. (Cl. 48—180.)

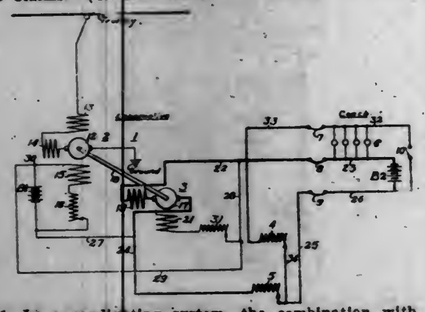
1. An inlet manifold comprising a vortex chamber having two oppositely arranged discharge eyes and a tangential inlet passage, heating means associated with said chamber, and a delivery passage leading from each eye, said delivery passage being bifurcated and the bifurcations lying at an acute angle to each other in the delivery direction.

1,479,169. ROTATOR FOR VALVES OF INTERNAL-COMBUSTION ENGINES. WILMER G. BUCK, Fremont, Nebr., assignor to Continental Engineering Corporation, Omaha, Nebr., a Corporation of Nebraska. Filed Mar. 13, 1918. Serial No. 222,119. 2 Claims. (Cl. 123—90.)



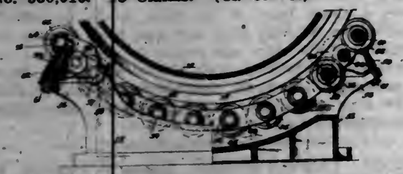
1. In a device of the class described, the combination of a valve stem, a valve secured to the stem, a lower sleeve, a head on the lower end of said sleeve, a non-circular recess in the under face of said head, a washer embracing the stem and having a transverse sliding and non-rotative engagement with said stem, said washer resting in said head recess and having the periphery thereof of complementary configuration to the walls of the recess, the periphery of the washer and the walls of the recess co-operating to form an interlocking non-rotative connection between said stem and sleeve, a sleeve loose on the stem, means for effecting a connection between said fast and loose sleeves upon movement of the stem, and means for imparting a rotative movement to said loose sleeve while said sleeves are connected, whereby a rotative movement is imparted to the stem during the movement thereof, substantially as described.

1,479,170. SEWING STAND. JOSEPH P. CASPARY, Milwaukee, Wis. Filed Sept. 25, 1922. Serial No. 590,556. 3 Claims. (Cl. 228—57.)



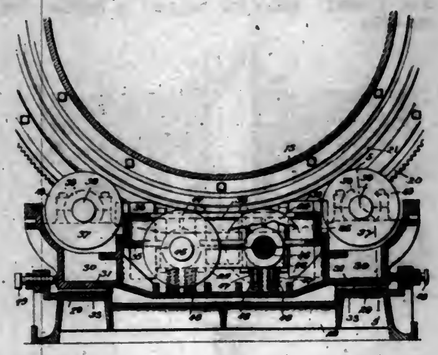
1. A stand of the character described comprising an intermediate frame, means within said frame for supporting spools and balls of material used in sewing, a pair

of end frames hinged upon opposite sides of one edge of said intermediate frame for horizontal swinging movement, all of said frames being of the same size whereby to lie together in registration when folded, and a flexible



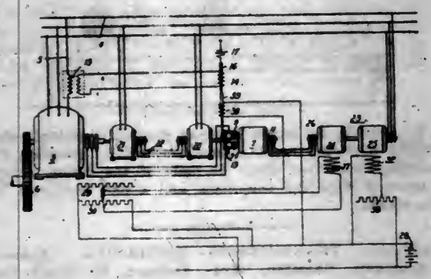
pocket on the inside of each end frame adapted to contain material and articles, said pockets bearing against opposite sides of the spools and balls of material whereby to prevent disengagement thereof from the stand when all the frames are folded together.

1,479,171. TRAIN-LIGHTING SYSTEM. JOHN A. CLARKE, Jr., Edgewood Park, Pa., and MORRIS R. MOODY, Deer Lodge, Mont., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1920. Serial No. 396,577. 3 Claims. (Cl. 171—225.)



1. In a car-lighting system, the combination with a source of energy, a load, and a counter-electromotive force device, of means connected in circuit with said device and said load to prevent voltage variations on said load in proportion to changes thereof.

1,479,172. GRINDING MILL. DAVID COLE and JULIUS G. BERGMAN, El Paso, Tex. Filed Apr. 6, 1922. Serial No. 550,016. 5 Claims. (Cl. 83—9.)



1. The combination with a rotary drum of a flexible supporting member suspended in arcuate form between points adjacent its ends, and a plurality of rolling antifriction elements sustained by said supporting member in rolling contact with said drum.

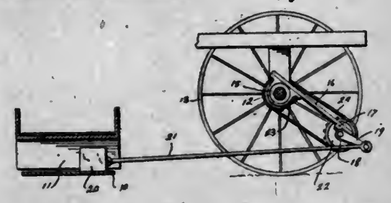
1,479,173. GRINDING MILL. DAVID COLE and JULIUS G. BERGMAN, El Paso, Tex. Filed Apr. 6, 1922. Serial No. 550,017. 6 Claims. (Cl. 83—9.)

1. The combination of a drum provided with a riding ring; a housing provided with a pair of parallel rollers serving to support said ring; a frame movably mounted in said housing and positively guided thereby to move in a right line toward and from said riding ring; a roller rotatably mounted in said frame on an axis parallel to the axes of the first named rollers; and a spring structure urging said frame toward said riding ring.

1,479,174. REGULATING SYSTEM FOR INDUCTION MOTORS. ADOLPHUS M. DUDLEY, Oakmont, and CHARLES W. KINCAID, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 28, 1917. Serial No. 183,340. 5 Claims. (Cl. 173—274.)

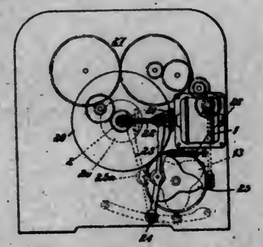
1. The combination with a variable-speed main induction machine, of a frequency changer electrically connected to the secondary of said main induction machine, and dynamo electric means for causing said frequency changer to rotate at the same speed as said main induction machine and for securing correspondence in the angular position of the rotors of the two machines.

1,479,175. CUTTER CLEANER FOR FOOD CHOPPERS. LOUIS C. EDWARDS, Ellington, Conn. Filed Mar. 8, 1923. Serial No. 623,766. 2 Claims. (Cl. 146—188.)



1. A cleaner for the rotary cutter of a food chopper, comprising a cleaning finger adapted for co-action with the periphery of the cutter, and a carrying band for said finger, said band being transversely split and adapted to surround the discharge neck of the chopper, the ends

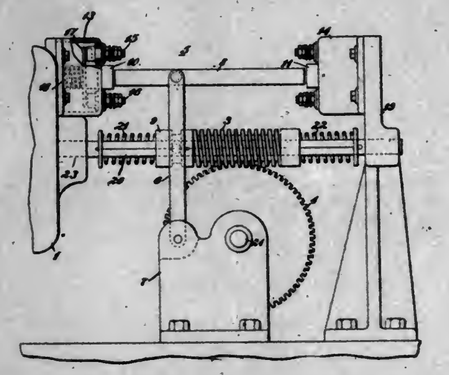
of the band being extended laterally in spaced parallelism, and a link carried by one of said ends, the other end be-



ing shaped to provide a cam over which a portion of the link is drawn to contract the band around said discharge neck.

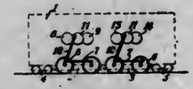
1,479,176. BELT CLEANER. WILLIAM N. GREEN, Paris, Tex. Filed Mar. 3, 1923. Serial No. 622,586. 2 Claims. (Cl. 198—230.)

1. The combination with a combined elevator and grader including a belt, a belt mounting having openings affording access to the inner face of the belt, an axle driven by the supporting wheels and bearings supporting the axle, of supports rigidly secured to such bearings and extending downwardly and rearwardly thereof, bearings secured to such supports adjacent the free ends thereof, a crank shaft rotatably mounted in such bearings, a block engaging the inner surface of the belt, pitman connection between the crank of the crank shaft and the block whereby the block is reciprocated when the crank shaft is rotated, a driving connection between said crank shaft and said axle.



1,479,177. SPEED-CONTROLLING DEVICE. FLETCHER D. HALLOCK and LEWIS WARRINGTON CHUBB, Pittsburgh, and CHARLES T. GUILDFORD, East Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,460. 3 Claims. (Cl. 118—82.)

1. In a spinning machine, the combination with a reciprocable ring rail for carrying a ring surrounding a spindle, and a rotatable shaft for rotating said spindle,

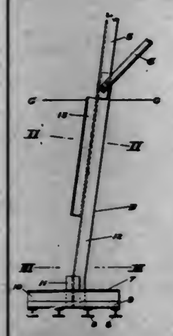


of a friction disk rotatable with said shaft, a constant-speed motor, a friction disk rotatable by said motor for engaging said first-named friction disk to cause rotation of said shaft, and means operatively connected to said motor for moving said second-named disk toward and away from, the center of rotation of said first-named disk in accordance with the position of said ring rail.

1,479,178. SWITCH. ALBERT L. HARVEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 11, 1920. Serial No. 509,573. 5 Claims. (Cl. 81—57.)

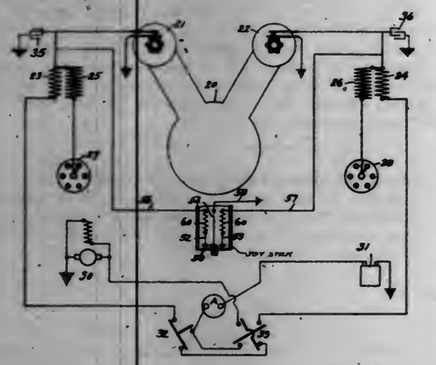
1. In a system of control, the combination with a driving motor and a shaft, of means for operatively connecting said driving motor to said shaft, said means comprising a worm, and a worm wheel and means responsive to a movement of said worm in either direction whereby the torque exerted by said shaft is limited to a predetermined value.

1,479,179. MOTOR-CONTROL SYSTEM. LLOYD J. HIBBARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1921. Serial No. 435,102. 19 Claims. (Cl. 172—179.)



2. In a motor-control system, the combination with an electric locomotive having a plurality of driving wheels and a plurality of motors for actuating said driving wheels, each of said motors having a plurality of windings, of means for successively increasing the torque of said motors throughout a number of steps while maintaining the relation of said windings, said increase in torque of each motor being substantially equal to the allowable accelerating rate of said locomotive.

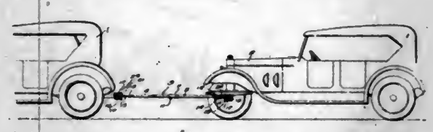
1,479,180. TOWER CONSTRUCTION. HAROLD O. HILL, Aspinwall, and WILLIAM WILKINSON, Ingram, Pa., assignors to Riter-Conley Manufacturing Company, Leetsdale, Pa., a Corporation of Pennsylvania. Filed July 19, 1922. Serial No. 576,017. 9 Claims. (Cl. 189—21.)



1. A stub for tower constructions comprising a structural member having anchoring means at its lower end, and a reinforcing longitudinally extending member se-

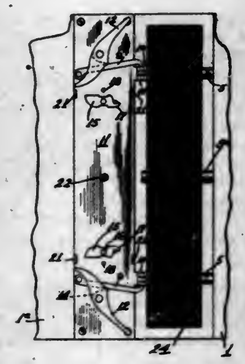
cured to the upper portion of said stub and extending well down toward the center thereof, said member

having means for resisting strains in different directions and giving added surface to the stub for resisting movement in the earth.



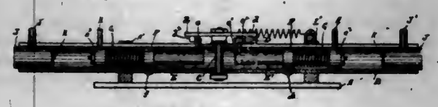
1,479,181. IGNITION CONTROLLER. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Sept. 27, 1918. Serial No. 255,913. 4 Claims. (Cl. 123—148.)

1. In an automotive vehicle having an internal-combustion engine, the combination of a member for controlling the direction of movement of the vehicle; a main ignition circuit for the engine, including a source of direct current, an ignition coil, a timer and circuit connections therebetween; switch mechanism for rendering said ignition circuit inoperative to provide ignition while the main circuit remains intact, said mechanism serving to limit the passage of current from said current source; and manually operable means for controlling the switch mechanism, said means being movable with the said member.



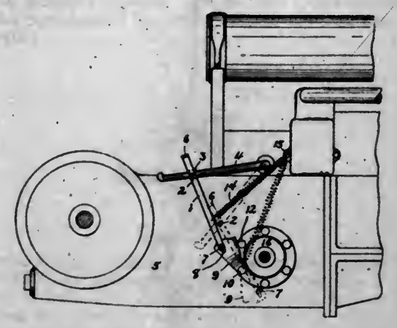
1,479,182. TOW ROD. EDWARD JESCHKE, Bellevue, Ohio. Filed Mar. 21, 1922. Serial No. 545,454. 4 Claims. (Cl. 280—33.14.)

1. A tow rod comprising a pair of tubular members, a sleeve adapted to receive the adjacent ends of said members, an end member arranged in the outer end of each of said members, clamps adapted to embrace a



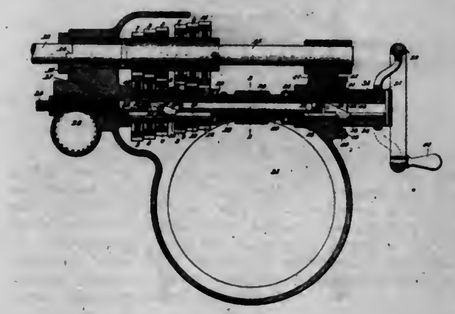
portion of a vehicle transverse members connected to each clamp, and means for connecting said transverse members to said end members.

1,479,183. LOOSE-LEAF BINDER. JOSEPH KAHN, Chicago, Ill. Filed May 1, 1922. Serial No. 557,720. 10 Claims. (Cl. 129—23.)



1. In a loose leaf binder having a pair of clamping members with covers hinged thereto, an impaling post anchored at one end in one of said clamping members, a hinge plate inset in the cover of the opposite clamping member, a swingable hinge member pivoted on said plate and adapted for effecting a hinge connection between the other end of said impaling post and said hinge plate, a cover enclosing said hinge member, and an actuator for said hinge member pivoted to said plate and projecting beyond said cover.

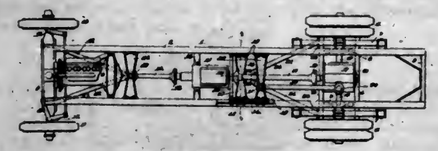
1,479,184. BURGLAR ALARM. HENRY L. KESLER, Lundys Lane, Pa. Filed June 11, 1923. Serial No. 644,695. 2 Claims. (Cl. 116—81.)



1. In a device of the class described, a tube, having a longitudinal slot in the wall thereof, a trigger lever mounted on said tube, a spring pressed bolt within said tube, a stud post on said bolt projecting outwardly through said slot, means on said trigger lever to engage said stud post, and means to operate said trigger lever to release said spring pressed bolt.

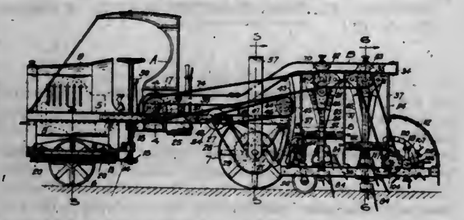
1,479,185. LATCH FOR CLUTCH PEDALS. CARL C. KINT, Ray, Ind. Filed Nov. 7, 1921. Serial No. 513,296. 1 Claim. (Cl. 74—81.)

In a clutch pedal latch for tractors, a link having pivotal support at one end thereof and an elongated slot at the other end and adapted to have limited swinging movement in each direction; a lock lever having pivotal connection with the clutch pedal of the tractor and a sliding connection in the slot of the link; and a tension means engaging the lock lever tending to sustain the link in its opposite positions.



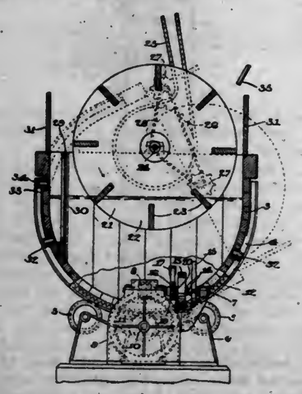
1,479,186. SAFETY HANDWHEEL FOR FEEDING DRILLS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 6, 1923. Serial No. 623,191. 6 Claims. (Cl. 74—7.)

1. A drilling-machine combining spindle-feeding mechanism including a rotatable shaft; a power-driven shaft; a series of gear-sets; manually-operated means for operatively connecting said two shafts through any one only of said gear-sets; a hand-wheel adapted to be connected to said first-mentioned shaft for its manual operation; and a device for controlling said connection, the position of said device being so determined by the manual means for connecting the gear-sets that said hand-wheel will be positively connected to its shaft only when none of the gear-sets is operative to move the spindle-feeding mechanism.



1,479,187. MOTOR VEHICLE. JOHN M. LANSDEN, New York, N. Y. Filed Dec. 2, 1918. Serial No. 264,888. 10 Claims. (Cl. 180—73.)

1. A vehicle comprising a frame, a motor carried by the frame and in the longitudinal center thereof, a driving axle, a shaft connecting the motor and axle, a flexible joint in the shaft, a thrust element pivoted to the axle, and a flexible connection between the thrust element and the frame, said connection being in the

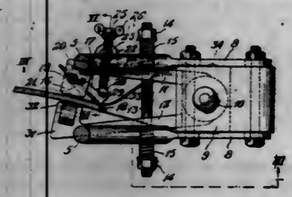


longitudinal center of the frame and in proximity to joint in the shaft, the said shaft and thrust element lying in parallel planes.

1,479,188. GROUND-TILLING MACHINE. FRED E. LARSON, Denver, Colo. Filed Apr. 26, 1920. Serial No. 376,754. 7 Claims. (Cl. 97—36.)

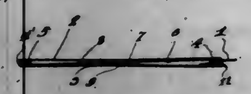
1. In a ground-tilling machine, a spading element comprising a crank shaft, a spade having a stem connected with a crank thereof, and a fulcrum for said spade, consisting of a pair of rollers yieldingly engaging the stem at opposite sides thereof.

1,479,189. DETANNING APPARATUS. ALFRED LAUKHUFF, Shorewood, Wis., assignor to Albert O. Trostel, Milwaukee, Wis. Filed Aug. 17, 1923. Serial No. 657,995. 6 Claims. (Cl. 259—46.)



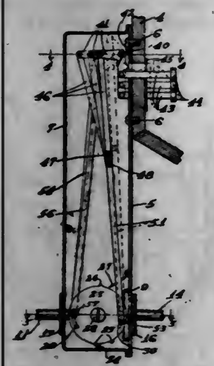
1. In a detanning apparatus, the combination with a tank containing the material and having a drain passage above its bottom, of a stationary screen removably positioned in the tank adjacent said drain passage and an agitator adjacent the screen to prevent its clogging.

1,479,190. SHARPENING DEVICE. GEORGE BENJAMIN LINDSAY, Kokomo, Ind. Filed July 9, 1921. Serial No. 483,440. 3 Claims. (Cl. 76—85.)



1. A disk-sharpening device comprising the combination of a suitable frame-member; two relatively movable

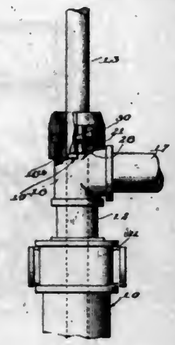
jaws mounted upon the latter; an abrading member pivotally mounted upon one of said jaws; means tending



to close the latter; and means for adjusting said abrading member upon its pivotal axis.

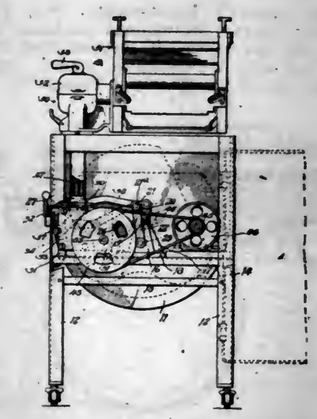
1,479,191. CUFF. NATHAN LEVY, New York, N. Y. Filed Mar. 25, 1922. Serial No. 546,702. 3 Claims. (Cl. 2—79.)

1. A foldable cuff including spaced opposing facing members having their extremities folded inwardly, lining members disposed at the opposing sides of the facing members the same terminating at the fold line and having opposite ends folded over in opposite directions, an end of each lining member extending adjacent the ends of the facing members, and means for holding the ends of the facing and lining members together.



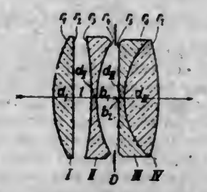
1,479,192. GASOLINE COMBINATION VALVE LOCK. FRED J. LUDLEN, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,528. 10 Claims. (Cl. 251—6.)

10. The combination with a supply line, of a valve therein, slotted disks connected with the valve, control bars connected with said disks, and a plurality of key mechanisms adapted to be selectively operated to cause a selective operation of the control bars whereby the disks are actuated to cause opening of the valve.



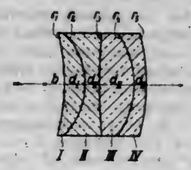
1,479,193. SUCTION-ROD-GUIDE CLAMP FOR OIL PUMPS. THEODORE R. MCSPADDEN, Nowata, Okla. Filed Jan. 13, 1923. Serial No. 612,533. 4 Claims. (Cl. 76—85.)

1. As an article of manufacture, a two-part clamp for the upper end of an oil outlet T, having means to immovably engage the said outlet T and having an internal annular portion adapted to overlie the upper end of the T and to extend inwardly beyond the inner surface



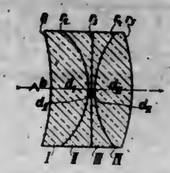
of the T in order to protect the latter during withdrawal and reinsertion of a sucker rod through the T.

1,479,194. GEARING. THOMAS H. MARS, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1921. Serial No. 510,828. 5 Claims. (Cl. 74—14.)



1. In a gearing for washing machines, in combination with a body including an upright pair of legs and a wall spaced back from the plane of the outer face of said legs, a bar fixed adjacent said wall and extending transversely between said legs, an upright bracket fixed to the middle of said bar, a rock arm carried by said bracket, means for operating said rock arm including, a motor on said bar at one side of said bracket, a crank arm at the other side of said bracket, and a speed reduction unit for connecting said crank arm and motor comprising a box attached to said bar adjacent said crank arm and open in front, a removable closure for said open front, said closure and the opposed back wall of said box having associated bearing recesses, parallel drive, driven, and intermediate shafts journalled in said bearing recesses, reduction gearing connecting said shafts, the driven shaft projecting as a stud through the said back wall and there having fixed to it said crank arm, and the drive shaft projecting as a stud through said front wall, and a pulley fixed to the projecting end of said drive shaft and being operatively connected to said motor.

1,479,195. PHOTOGRAPHIC OBJECTIVE. WILLY MERTÉ, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,119. 1 Claim. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

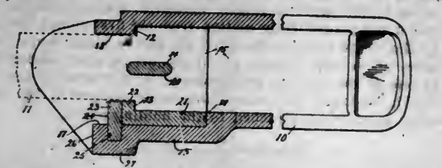


Photographic objective consisting of four lenses, two of which, the difference between their refractive indices lying between 0.05 and 0.02 when sodium light is employed, are joined in a collective cemented surface, of which the radius of curvature amounts at least to one tenth and at the most to one half of the focal length of the objective, while between the other two lenses, which are disposed at one and the same side of the cemented lenses, and of which the outer lens is a collective one and the inner lens a dispersive one, there is an air-space, and they form a pair of facing surfaces having a negative power.

1,479,196. PHOTOGRAPHIC LENS. WILLY MERTÉ, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,120. 2 Claims. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a photographic lens four members cemented together, each of the five boundary surfaces, except the middlemost, turning its concave side towards the diaphragm, each of the two outer surfaces having a slighter curvature than the respective adjacent cemented surface, the first member (from the diaphragm) having a smaller refractive index than the second member and the third member having a higher refractive index than both the second and the fourth member.

1,479,197. PHOTOGRAPHIC LENS. WILLY MERTÉ, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,121. 2 Claims. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

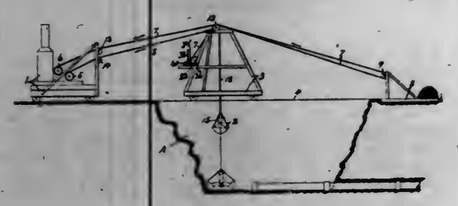


1. In a photographic lens four members cemented together, each of the five boundary surfaces, except the middlemost and the one which (from the diaphragm) follows it, turning its concave side towards the diaphragm, the outer surface facing the diaphragm and the middlemost cemented surface each having a slighter curvature than the respective following cemented surface and the refractive index increasing from the diaphragm through the whole lens.

1,479,198. METAL RAILWAY OR LIKE SLEEPER AND RAIL ATTACHMENT THEREFOR. LOUIS MICK, Tilleur-les-Liege, Belgium, assignor to Société Anonyme des Acieries d'Angleur, Tilleur, near Liege, Belgium, a Corporation of Belgium. Filed Nov. 2, 1922. Serial No. 598,681. 5 Claims. (Cl. 238—290.)

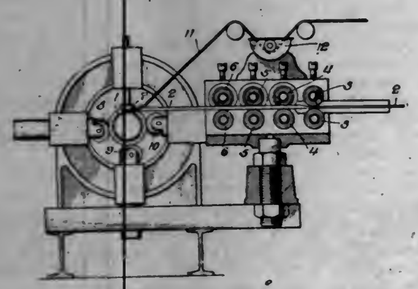
1. In a railroad tie, the combination of spaced ribs extending longitudinally of the upper surface of the tie, chair-plates adapted to rest upon the upper surface of the tie, tenons upon said chair-plates, said tenons fitting between said ribs, interengaging surfaces upon said ribs and chair-plates maintained in engagement by separation of said chair-plates, and means for securing the rails to said chair-plates, said securing means tending to separate said chair-plates.

1,479,199. COUPLER YOKE. WILLIAM A. MITCHELL, Denison, Tex., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,556. 1 Claim. (Cl. 213—70.)



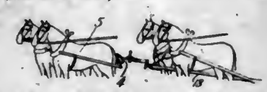
In combination, a draw-bar having a butt with top and bottom shoulders and a transverse closed slot therethrough, a coupler yoke comprising a four-sided butt-receiving box having a plurality of closed slots in each of its side walls, the vertical dimension of the box being in excess of the vertical dimension of said butt, a butt-retaining shoulder integral with the top wall of the box, a block adapted to support the butt in engagement with said shoulder, a butt-retaining shoulder on said block, a key conforming to and extending through one pair of the slots in said box and the slot in said butt for preventing vertical and longitudinal movement of said butt relatively to said box, and a key in another pair of said slots adapted to directly retain the butt.

1,479,200. GRAB-BUCKET TRENCHING MACHINE. THOMAS F. MOORE, Morris Plains, N. J., assignor to Moore Trench Machine Company, Rockaway, N. J., a Corporation of New York. Filed Mar. 14, 1922. Serial No. 543,716. 10 Claims. (Cl. 212—84.)



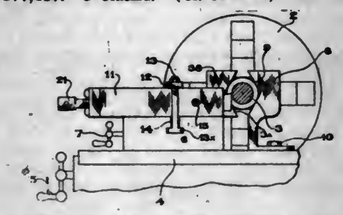
1. In an excavating and back-filling apparatus of the character described, the combination with a power station and an anchorage station a distance one from the other, of a carriage movable between said stations, a rotary drum on the carriage, a cable wound upon said drum and extended around the sheave to the power station, means at the power station for drawing the cable endwise and unwinding it from the drum for rotating

said drum, a rotary hoisting drum on the carriage actuated by the first named drum, a cable attached to the hoisting drum to be wound thereon as the first named cable is unwound from its drum, a "grab" bucket having its jaws operatively connected to the second named cable to close said jaws and to hoist the bucket as it is wound upon its drum, a holding drum mounted on the carriage and rotatable independently of the hoisting drum, a cable wound upon the holding drum and operatively connected to the bucket to support the same independently of the hoisting cable, means for transmitting rotary motion from the first named drum to the holding drum to wind its cable thereon simultaneously with the winding cable on the hoisting drum, and means operable at will for holding the holding drum against rotation to hold the bucket in an elevated position independently of the hoisting cable whereby the jaws of the bucket may be released from their closed positions by slackening of the hoisting cable.



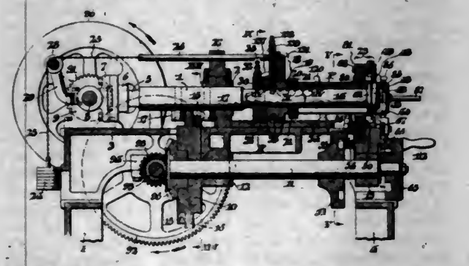
9. In an excavating and back filling apparatus, the combination of a track, a carriage movable along the track, a shaft journaled on the carriage, a hoisting drum coaxial with and rotatable independently of the shaft, means for rotating said drum, a holding drum secured to the shaft to rotate therewith, means including a clutch for transmitting motion from the first named means to the shaft, sheaves mounted on the carriage some distance above said drums, a load-supporting cable supported by one of the sheaves and attached to the hoisting drum, and a separate load-supporting cable supported by the other sheave and attached to the holding drum.

1,479,201. SPIRAL PIPE. CARL G. NAYLOR, Chicago, Ill., assignor to Naylor-Robertson Company, a Corporation of Delaware. Filed Nov. 7, 1921. Serial No. 513,377. 5 Claims. (Cl. 113—35.)



1. The process of making pipe from a ribbon of metal which consists in winding the ribbon into a series of spirally related convolutions, rigidly interlocking edges of adjacent convolutions of the ribbon to form a continuous spiral lock-seam, heating and including a continuous strip of impregnated compressible packing within the rigid lock-seam as the same is formed.

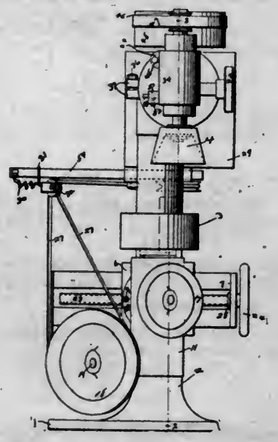
1,479,202. DRAFT COUPLING. JOHN OBERG, Bovey, Minn. Filed Feb. 13, 1922. Serial No. 536,333. 2 Claims. (Cl. 278—21.)



1. In a draft coupling, a frame bar, parallel spaced plates bolted to one end of said frame bar and to each other, a hook bar fulcrumed between said spaced plates, a spring connecting said hook bar and the bolt that connects said spaced plates, a lever fulcrumed to said frame bar for releasable engagement with one end of said hook bar, a finger integral with said lever for engagement with said frame bar whereby relative movement of said members in one direction is limited, a spring for yieldingly preventing relative movement of said members in the opposite direction, and means for securing said frame bar to an evener.

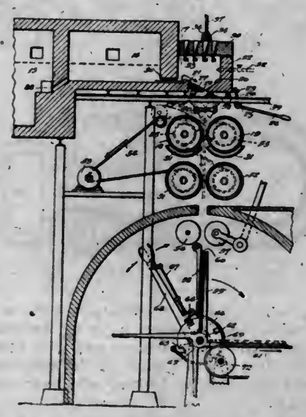
1,479,203. CUT-OFF-TOOL HOLDER. GUSTAV ADOLF ODDSEN, Brooklyn, N. Y. Filed July 25, 1922. Serial No. 577,487. 3 Claims. (Cl. 82—24.)

1. In means for the purpose described, the combination of a cross slide, means to adjust the same, a compound adjustable on the cross slide, means to adjust the compound, a cut-off tool holder mounted on the compound and comprising a body, a tool carrier movable rectilinearly in the body, means to adjust the carrier in and relative to the body, work-engaging means carried by the body, and work-engaging means adapted to be arranged at the opposite side of stock or work with reference to the first-named work-engaging means; the tool-carrier being kerfed to receive a cut-off tool and being provided with a tool engaging set screw adapted to be registered with an opening in the side of the body.



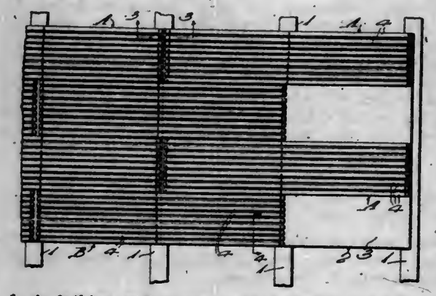
1,479,204. PIPE-BENDING MACHINE. THEODORE F. ORCHSLE, Philadelphia, Pa., assignor to David Lupton's Sons Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1921. Serial No. 514,093. 7 Claims. (Cl. 153—69.5.)

1. A pipe bending machine comprising a die mechanism for crimping the pipe to be bent, a reciprocatory mandrel provided with notches about which the pipe is placed, a cross head for progressing the pipe step by step through the die mechanism, a gravity dog carried by said cross head adapted to cooperate with the notches in



the mandrel in locking the head to the mandrel during the forward movement of the latter, a fixed rack, and a second gravity dog cooperative with said fixed rack in holding the head in check during retractions of the mandrel.

1,479,205. UNIVERSAL GRINDING, DRILLING, AND TURNING MACHINE. JOHN W. PARKER, Detroit, Mich. Filed June 6, 1921. Serial No. 475,464. 4 Claims. (Cl. 29—26.)



1. A device of the class described comprising a base, a vertical supporting member, a tool holding member and power transmission device for transmitting power to the said tool holding member so as to rotate the same and resilient means disposed between said tool holding member and said power transmission device for controlling the distance between said tool holding member and said power transmitting devices.

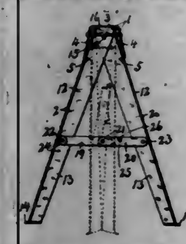
1,479,206. GLASS MACHINE. GEORGE A. SHIELDS, Columbus, Ohio. Filed Apr. 13, 1921. Serial No. 460,931. 12 Claims. (Cl. 49—3.)

2. In a glass machine, a transfer reel, a shaft on which the reel is mounted having a peripherally notched disk, a lever loosely mounted on the shaft and having a latch mechanism for cooperation with the notches of the disk, and a brake band engaging the said disk and connected to and controlled by the said lever.

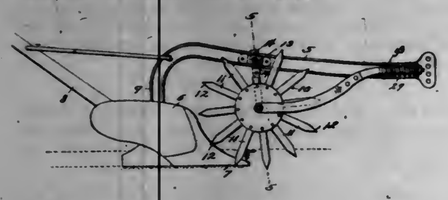
1,479,207. LATHING STRIP. FRED M. SPAYD, Van Wert, Ohio. Filed Aug. 10, 1922. Serial No. 580,927. 3 Claims. (Cl. 72—116.)

1. A lathing strip comprising a backing strip and spaced laths carried by and all extending transversely of the backing strip, certain of said laths extending beyond the backing strip at one side thereof and having their inner ends terminating intermediate the width of the backing strip, thereby leaving portions of said backing strip unoccupied by laths, and the remaining laths having their ends terminating within the confines of the backing strip.

1,479,208. OIL-WELL EQUIPMENT. ROBERT D. THOMPSON and JOHN PENROD, Okmulgee, Okla. Filed Oct. 28, 1922. Serial No. 597,590. 4 Claims. (Cl. 103—179.)



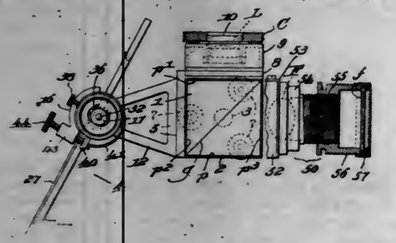
1. The combination of a plunger provided adjacent its upper end with oil passages, and a sleeve connected to the plunger and terminating adjacent said oil passages, the upper end of said sleeve being provided with a combined sand scraper and sand guide, by means of which said upon settling is directed into the plunger, the bore of said sleeve being enlarged adjacent the top of the sleeve whereby to form a shoulder located at the lower end of said passages, and means whereby to protect and guide the sleeve during its withdrawal from a well.



1,479,209. COLLAPSIBLE SAWHORSE. MAURICE J. TOPP, Manlius, N. Y., assignor of one-third to William C. Clark and one-third to Alexander R. Hammerle, both of Syracuse, N. Y. Filed Mar. 14, 1922. Serial No. 543,720. 4 Claims. (Cl. 304—5.)

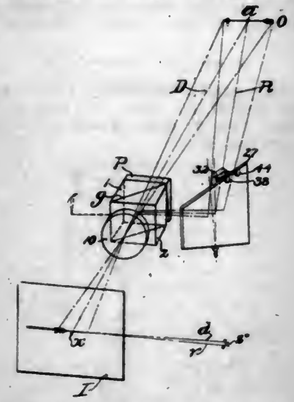
1. A collapsible horse comprising a channel bar and pivotal pins extending across the channel and secured

to the opposite sides thereof, and separate pairs of legs pivotally hung upon said pins and slidable lengthwise thereof to swing into and out of the channel, the legs of each pair being pivoted to each other to swing transversely of the channel.



1,479,210. PLOW ATTACHMENT. JOHN E. WAGAMAN, Hagerstown, Md. Filed June 7, 1922. Serial No. 566,646. 8 Claims. (Cl. 97—209.)

1. The combination of a rigidly connected plow device and beam, a protective device for the plow consisting of a rotary wheel provided with suspending means adjustably connected to the beam in advance of the plow device and adjustable and movable independently of the plow device, and means connected to the axis of the wheel and the front extremity of the beam for automatically restoring the wheel to normal position.

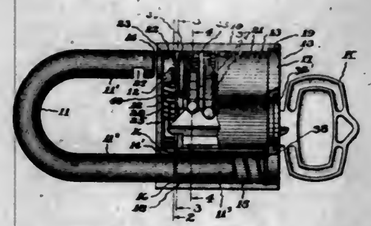


1,479,211. CAMERA APPARATUS FOR BINOCULAR PHOTOGRAPHY. ADELBERT AMES, Jr., and CHARLES A. PROCTOR, Hanover, N. H. Filed June 2, 1921. Serial No. 474,560. 20 Claims. (Cl. 95—18.)

1. Photographic apparatus having therein an image-forming lens, and an optical system comprising means for causing a plurality of mutually divergent rays of light emitted from the same point in the object-field to enter the lens simultaneously in parallel relation.

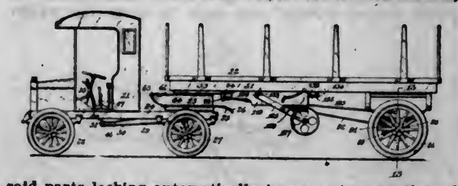
1,479,212. APPARATUS FOR COMPOSITE PHOTOGRAPHY. ADELBERT AMES, Jr., Tewksbury, Mass. Filed Oct. 25, 1921. Serial No. 510,287. 8 Claims. (Cl. 88—1.)

1. Apparatus for composite photography from laterally separated points of view having therein means for forming images respectively from said points of view, and means for causing the images to be rotated to a predetermined extent in respect to each other about a center of coalescence common to the component images.



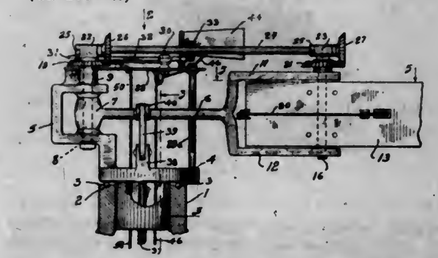
1,479,213. COVER. HERSHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, Jersey City, N. J. Filed Oct. 4, 1922. Serial No. 592,281. 3 Claims. (Cl. 292—246.)

1. In a device of the character described, comprising in combination a housing having an opening, a cover for closing said opening, a stud secured to the housing, a leaf spring fixed to the cover and having a free end in all positions spaced from said stud, and means for connecting said free end of the spring with said stud.



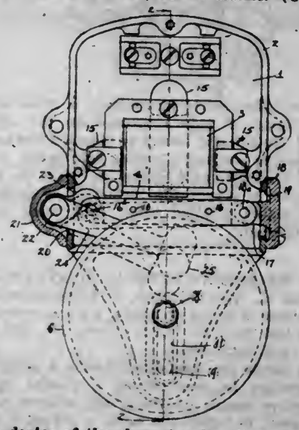
1,479,214. PADLOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Feb. 14, 1922. Serial No. 536,429. 4 Claims. (Cl. 70—108.)

1. In a lock, a lock core embodying twin barrel members of substantially figure 8 cross sectional shape, a lock housing shaped to receive said lock core and lock means operative at the point of intersection of said twin barrel members for locking said lock core in said lock housing.



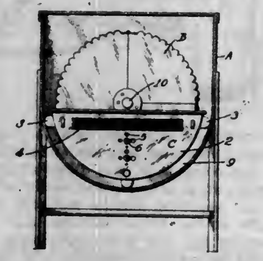
1,479,215. AUTOMOBILE TRAIN. ANDREW J. BORST, Jr., Buffalo, N. Y. Filed Aug. 14, 1919. Serial No. 317,582. 51 Claims. (Cl. 280—33.1.)

1. The combination with a semi-trailer and a tractor adapted to be coupled to said semi-trailer, of dog and ratchet mechanism comprising two parts adapted to cooperate when coupling said tractor to said semitrailer,



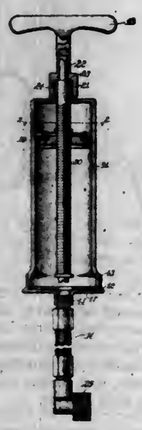
said parts locking automatically to prevent separation of the tractor from the semi-trailer before being completely coupled.

1,479,216. WINDMILL. OTTO BOTT, Oshkosh, Nebr. Filed Jan. 30, 1923. Serial No. 615,807. 6 Claims. (Cl. 170—7.)



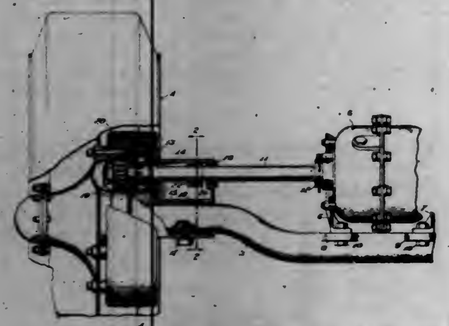
1. In a device of the class described in combination; a turntable adapted to rotate about a vertical axis; a bracket secured to said table; an arm pivoted to said bracket and adapted to oscillate about a vertical axis; a sail pivotally connected to the free end of said arm and adapted to be oscillated about a vertical axis so as to vary its angular relation to the arm; means for altering the angular relation of the arm and the sail as the arm oscillates about its pivot; and means for reversing the angular relation of the arm and the sail at the end of each oscillation of the arm.

1,479,217. ELECTROMAGNETIC BELL. WILLIAM H. BRADLEY, Shelby, Ohio, assignor to The Autocall Company, Shelby, Ohio, a Corporation of Ohio. Filed Dec. 26, 1918. Serial No. 268,286. 4 Claims. (Cl. 177—7.)



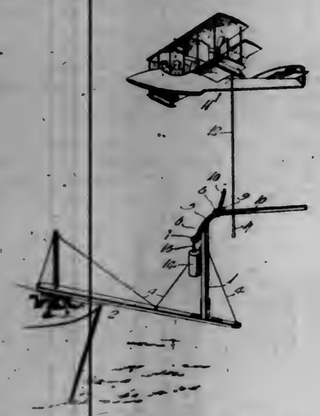
2. In a device of the character described, the combination of a suitable base, a gong and an electro-magnet mounted thereon, the latter above the former, side-walls and a cover plate encasing said electro-magnet, apertures in opposite side-walls, detachable plates covering such apertures, an armature for said electro-magnet pivotally attached at one end to one of said detachable plates and removable therewith from said encasing side-wall, a spindle oscillatory in the other detachable plate and removable therewith from said encasing side-wall, a lever-arm on said spindle lying within said cover-plate and adapted to be directly engaged by the free end of said armature, and a striker for said gong attached at one end to said spindle and lying without said cover-plate.

1,479,218. WASHING MACHINE. JOHN S. BRADY, Wilkes-Barre, Pa. Filed Apr. 5, 1922. Serial No. 549,751. 2 Claims. (Cl. 68—18.)



1. In a washing machine, the combination of a container, an auxiliary container of lesser depth than the main container, said auxiliary container being mounted concentrically within the main container in spaced relation therewith and provided with a plurality of end ports or openings of different sizes and means for closing all of the openings except the one desired.

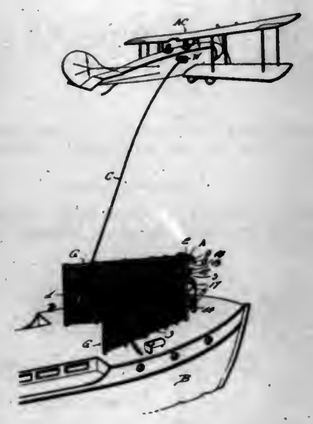
1,479,219. GREASE GUN. CARL BRAMMING, Chicago, Ill., assignor to Accessories Manufacturing Company, a Corporation of Illinois. Filed Jan. 19, 1922. Serial No. 530,341. 4 Claims. (Cl. 221—79.)



2. In a grease gun, the combination of a barrel of out of round cross section and having one closed end, a substantially cylindrical threaded extension adjacent to the opposite end, a delivery cap secured to said threaded extension, a threaded stem swiveled in the closed end, and extending longitudinally in the barrel, and a plunger engaged with said stem and slidable in the barrel.

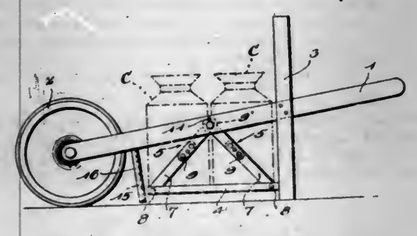
1,479,220. AXLE FOR MOTOR VEHICLES. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed July 12, 1919. Serial No. 310,425. 3 Claims. (Cl. 74—7.)

1. A motor vehicle axle comprising a dead axle member, a differential housing, jack shafts having bearings at their inner end portions in said differential housing and having bearings at their outer end portions supported by said dead axle member, pinions mounted on said jack shafts outside of the latter bearings, and intermediate circular bearings for said jack shafts, said intermediate bearings being normally inoperative and being brought into operation by deflection of said jack shafts.



1,479,221. SUPPLY MEANS FOR AIRCRAFT. GODFREY L. CABOT, Boston, Mass. Filed May 9, 1918. Serial No. 233,520. 26 Claims. (Cl. 258—1.)

1. Supply means for aircraft comprising an anchor to which the supplies are attached, said anchor having a cable-receiving throat, means for normally holding said anchor but permitting ascent thereof, a cable depending from the aircraft, means for guiding said cable into the throat of said anchor, and means for preventing slippage of said cable from said throat.

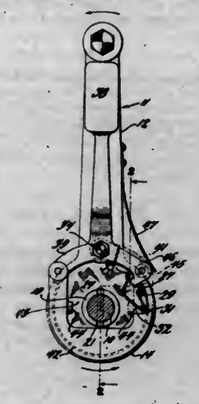


1,479,222. SUPPLY MEANS FOR AIRCRAFT. GODFREY L. CABOT, Boston, Mass. Filed Nov. 25, 1918. Serial No. 264,083. 14 Claims. (Cl. 258—1.)

1. In a supply means for aircraft, a pair of converging vertical walls, an anchor member to which the supplies are attached, means for holding said anchor member at the closely spaced ends of said walls, a cable depending from the aircraft to be guided to said anchor member by said walls, a weight on the end of said cable, and an inclined bottom between said walls to guide the weight

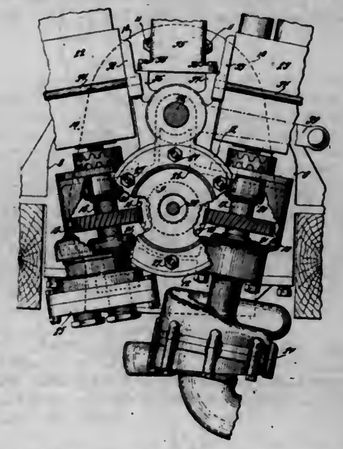
upwardly, provision being made for connecting said cable and anchor member upon engagement of the former with the latter.

1,479,223. COMBINATION WHEELBARROW. GEORGE BYRON CARROLL, East Lansing, Mich. Filed June 19, 1922. Serial No. 569,392. 5 Claims. (Cl. 280—52.)



1. A convertible carrier comprising a wheel supported invertible frame, a body supported on the upper side thereof and including a vertically disposed end-board and a bottom having one end abutting said board, links pivotally connected with said bottom and with the side bars of said frame to permit the bottom to be suspended in horizontal spaced relation below said board when the frame is inverted.

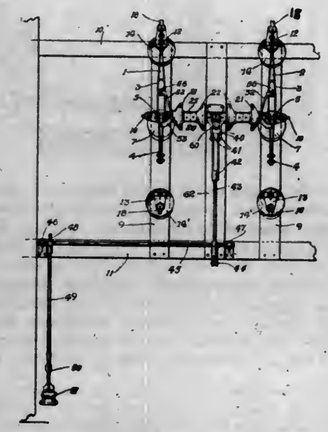
1,479,224. RELEASING DEVICE. ROLAND CHILTON and ALEXANDER H. KING, Keyport, N. J., assignors to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Nov. 23, 1922. Serial No. 602,768. 32 Claims. (Cl. 123—185.)



26. In a device for manually rotating a drive shaft to start an engine, in combination, a driving member, a driven member, means on the driven member to engage the drive shaft to rotate the same, a normally operative driving connection between the driving and the driven member comprising a latch, a notch and a roller resiliently held in said notch, means for automatically severing said

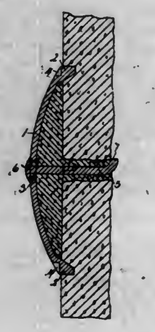
driving connection when the rotation of the drive shaft becomes opposed to that of the driven member and means

whereby the driving connection is automatically restored to an operative position when the relative rotational speed of the driven and the driving members is low.



1,479,225. ENGINE-ACCESSORIES UNIT. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Dec. 29, 1922. Serial No. 609,778. 20 Claims. (Cl. 123—195.)

1. An attachment for an internal combustion engine comprising, a bracket adapted to be secured to the engine and to suitably support a horizontal shaft for driving from said engine, a pair of side shafts each having a driven gear meshing with a common drive gear on said horizontal shaft, each end of each of said side shafts being adapted to drive an engine accessory supported by said bracket.

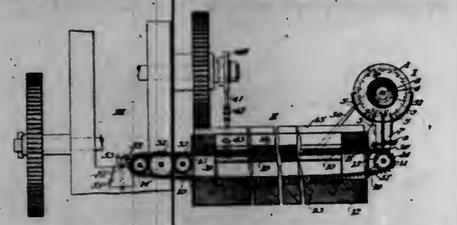


1,479,226. SWITCH. CHRISTEN CHRISTENSEN, Chicago, Ill., assignor to The Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1919. Serial No. 336,831. 24 Claims. (Cl. 200—48.)

1. In combination, a rotatable switch operating member, a switch having a movable switch member mounted independently of said operating member with its axis of rotation in axial alignment with the axis of rotation of said operating member and operated by rotation thereof and an operating lever for said rotatable operating mem-

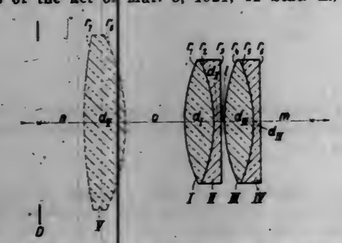
ber, said rotatable operating member forming an insulating barrier between said movable switch member and said operating lever.

1,479,227. TRAFFIC GUIDE. THOMAS G. CRETNEY, Madison, Wis. Filed May 18, 1923. Serial No. 639,982. 1 Claim. (Cl. 40—125.)



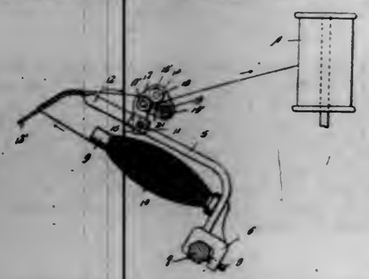
In a traffic guide, a hollow convexed segment of metal with a plurality of depending calks around the bottom thereof, said calks at right angles to the base on their face or right hand edge and diverging to their junction with the base, pockets over each of the calks, a hole through the top of the guide for disposing an attaching bolt and through which cement may be poured, in combination with the words Keep to right case in embossed letters on opposite sides of the guide, for directing traffic in the proper course.

1,479,228. APPARATUS FOR MAKING RIVETS. OTTO H. DE LAPOTTERIE, New Brighton, Pa., assignor to Roy H. Smith, Kent, Ohio. Filed Dec. 7, 1918, Serial No. 265,752. Renewed May 17, 1923. 2 Claims. (Cl. 10—11.)



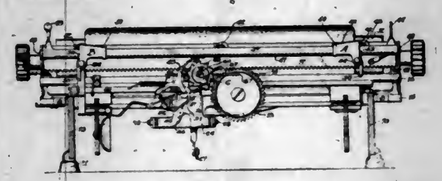
1. In apparatus for making headed articles the combination with a solid die heading machine, of a heating furnace, a conveyor, constructed to carry a number of

blanks, located at one side of the combustion chamber of the furnace, means for cooling the conveyor and the



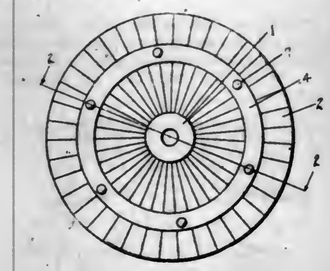
portions of the blanks which do not extend into the combustion chamber, and means for successively delivering the blanks to the heading machine.

1,479,229. EYELENS SYSTEM. HEINRICH ERFLE, Jena, Germany, assignor to the firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,112. 4 Claims. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



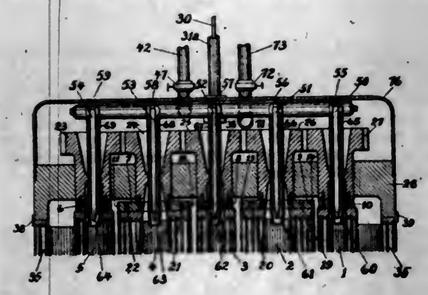
1. Eye-lens system consisting of four members, in which every two members, one of glass of smaller, and one of glass of greater refractive index, are joined in a cemented surface turning its concave side towards the incident light, and in which the cemented pairs of lenses are so disposed, that in each case the member consisting of glass of smaller refractive index faces the incident light, the radius of at least one of the cemented surfaces amounting to no less than six tenths of the whole focal length of the eye-lens system, and to no more than two and a half times that length.

1,479,230. TENSION DEVICE. JOHN R. FEDERLINE, Belton, S. C. Filed Jan. 10, 1923, Serial No. 611,705. Renewed Nov. 26, 1923. 1 Claim. (Cl. 242—151.)



In a tension device for bobbin holders, a supporting member mounted upon the bobbin holder, a pair of stationary spindles and an adjustable spindle carried by the supporting member, solid rollers carried by one of the stationary spindles and the movable spindle, and a shell roller carried by the other spindle for the purposes described.

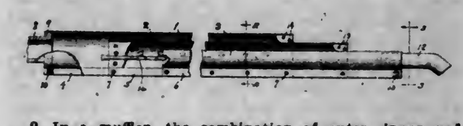
1,479,231. TYPEWRITING MACHINE. MAX GARBELL, Chicago, Ill., assignor to Garbell Typewriter Corporation, Chicago, Ill., a Corporation of Delaware. Filed Jan. 30, 1922. Serial No. 532,632. 13 Claims. (Cl. 197—109.)



1. In a typewriting machine, the combination with a main frame, a longitudinally movable platen-carrying frame, and escapement mechanism including a ratchet wheel and dog co-operable therewith; of a stop on said carrying frame; and means, located adjacent said dog and in the path of said stop, movable by said stop into the path of movement of said dog between the latter and the ratchet wheel to prevent operation thereof.

1,479,232. WHEEL. HERBERT B. GILLETTE, Grand Rapids, Mich. Filed Aug. 28, 1922. Serial No. 584,684. 6 Claims. (Cl. 301—5.)

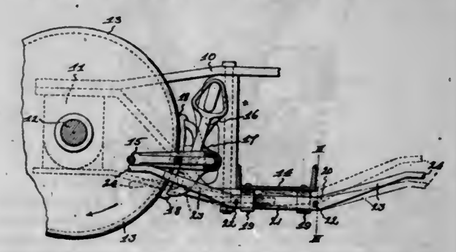
4. In a wheel structure, the combination with a suitable hub center, of wedge-shaped blocks of wood arranged radially from the said hub, and intermediate blocks with parallel sides disposed between said wedge-shaped blocks, an annular groove formed in one face of said blocks, and a ring disposed therein to hold the blocks in position.



1,479,233. MANUAL PAINTING MACHINE. EDWARD GOTTLIEB, New York, N. Y., assignor to Paradox Engineering Company, New York, N. Y. Filed July 26, 1922. Serial No. 577,735. 8 Claims. (Cl. 91—39.)

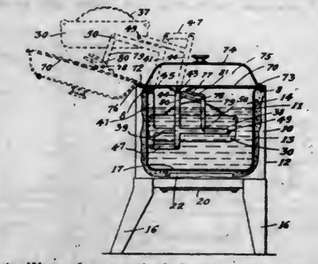
2. In a painting machine and a machine for cleaning surfaces to be painted, of the character described, a brush composed of several small rotatable brushes adjacent to each other and of such shape that when rotating, each other's painting areas overlap, producing a brush of any desired length and small width; means for detaching small rotatable brushes; a flexible wire transmitting a rotatory motion from some external prime mover to the small rotatable brushes; rotating flexible wire being protected in a flexible tube; a gear for each small brush meshing with adjacent gear from adjacent brush, and brushes so timed that they do not interfere when rotating and that their painting areas overlap; a stationary line of bristles around rotatable brushes to catch paint thrown centrifugally; means for detaching and replacing stationary line of bristles around rotatable small brushes; a paint supply using paint under pressure; separate paint nozzles and compressed air nozzles for each small rotating brush to force paint against surface to be painted; control valves to adjust the amount of air supplied to brush; control valves to adjust the amount of paint supplied to brush.

5. In manual painting machines or machines to clean surfaces, a brush so constructed that its length is greater than its width, and mechanical means for moving the bristles of brush, so that the linear speed of the bristles is great when compared with the linear speed possible with an ordinary plain painting brush; a paint supply line manually controlled; and paint nozzles infolded in compressed air nozzles to atomize and spray the paint against surface to be painted.



1,479,234. MUFFLER. EMMET P. GRAY, Detroit, Mich. Filed Aug. 30, 1920. Serial No. 406,918. 21 Claims. (Cl. 137—160.)

2. In a muffler, the combination of outer, inner and intermediate tubes, the intermediate tubes being within the outer and without the inner tube and being perforated and having a closed forward end, the opposite end of the intermediate tube being closed around the inner tube and the same end of the outer tube being closed around the intermediate tube, the front open end of the inner tube being a distance from the front end of the outer tube and the front end of the intermediate tube being between the front ends of the other two.

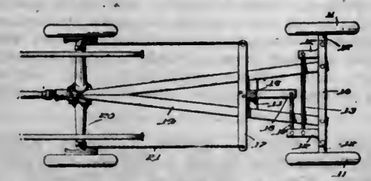


7. In a muffler, the combination of outer and inner members, the central portion of each member being curved and the edges of each member constituting parallel outwardly extending flanges, the flanges of the two members being nested and secured together.

1,479,235. BRAKE-BEAM SUPPORT. BRODERICK HASKELL, Franklin, Pa. Filed Oct. 4, 1922. Serial No. 592,292. 12 Claims. (Cl. 188—213.)

5. The combination of a spring plank, a third point brake beam supporting and counterbalance bar having its end extending on each side of said spring plank and oscillating on said spring plank as a fulcrum.

1,479,236. STERILIZER. JAY A. HEIDBRINK, Minneapolis, Minn. Filed July 23, 1919. Serial No. 312,738. 5 Claims. (Cl. 167—3.)

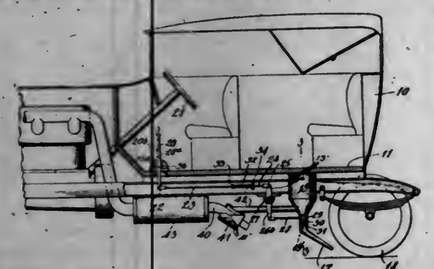


1. A sterilizer for surgical instruments comprising a receptacle, a cover for said receptacle hingedly connected to one side of the receptacle so that when the cover is open it will be held extended laterally outward from the receptacle, an instrument-holding tray, means for holding the tray within the receptacle or above the cover and for moving the tray from one position to the other, said means operative to positively hold the tray horizontal at all times.

3. A sterilizer for surgical instruments comprising a receptacle, a cover for said receptacle having a flat inner drainage surface, an instrument-holding tray within the receptacle, and means for moving the tray and lifting the cover simultaneously so as to bring the tray above the drainage surface of the cover whereby any drip from the tray will be directly drained back into the tank.

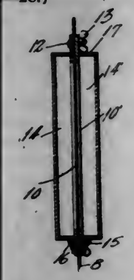
5. A sterilizer for surgical instruments comprising a receptacle, a cover for said receptacle having a flat inner drainage surface, an instrument-holding tray within the receptacle, a lever system for supporting said tray and moving it out of the receptacle and to one side thereof, a slotted cam member on the inner surface of said cover, and an arm connected with said lever system having a roller in the slot of said cam member for causing said cover to be lifted by the lever system and carried to one side so as to underlie the tray when in its elevated position to cause any drip from the tray to drain back into the receptacle.

1,479,237. TRAILER. JOHN HIPPE, Desiacs, N. Dak. Filed Apr. 10, 1922. Serial No. 551,107. 2 Claims. (Cl. 280—33.55.)



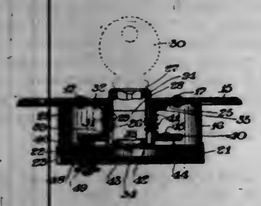
1. In a trailer, a tongue for connecting the trailer to a towing vehicle, knuckles pivotally connecting the wheels of the trailer to the trailer axle, a rod connecting the knuckles, a T-shaped operating member including a transverse bar and a longitudinally disposed bar, means for pivotally securing the longitudinal bar to the tongue, a rod connecting the longitudinal bar and one of the knuckles and means connecting the outer ends of the transverse bar with the towing vehicle upon opposite sides of the tongue.

1,479,238. SANDING DEVICE. EDWARD HIRSCH, New York, N. Y. Filed Oct. 4, 1922. Serial No. 592,247. 4 Claims. (Cl. 291—3.)



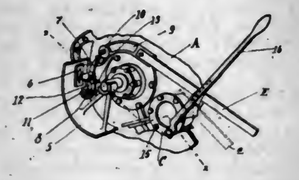
2. A sanding devire for motor vehicles comprising a sand container adapted to be secured to the vehicle, a delivery spout extending from said container and dis-

posed in front of the rear wheel of the vehicle, said container being of double walled construction so as to provide an air space, a connecting tube in communication at one end with said air space and at the other



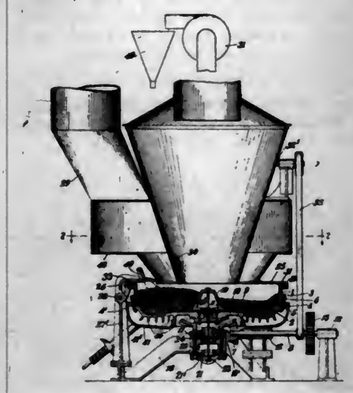
end with an air chamber surrounding the exhaust pipe of the exhaust manifold of the vehicle whereby the air in said air space is heated by the exhaust gases passing through said exhaust pipe.

1,479,239. MAIL BOX. AUGUSTUS M. HOWELL, Dallas, Tex. Filed Sept. 15, 1922. Serial No. 588,382. 5 Claims. (Cl. 232—28.)



1. In a mail box, the combination with a screen door having a portion of the screen cut out to provide an opening, of a pair of corresponding frame members mounted on opposite sides of the said opening and overlapping the marginal portion of the screen surrounding said opening, clamping elements penetrating said members and screen and securing the same together, and a closure mounted in each frame member having an inwardly directed marginal flange normally bearing against said member, both closures constituting a box adapted to swing outwardly in opposite directions to each other.

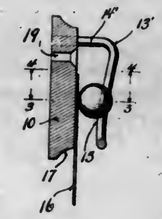
1,479,240. SWITCH. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 18, 1920. Serial No. 366,863. 14 Claims. (Cl. 200—44.)



1. In a switch, a turning member, an insulating ring surrounding the turning member and splined thereto, a sheet metal contact ring mounted on the insulating ring and having contact projections embossed therein, and a base having contacts engaged by the contact projections.

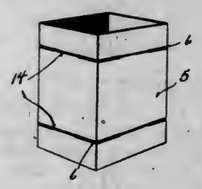
1,479,241. LOCKING DEVICE FOR TRACTOR CLUTCH MECHANISM. AXEL W. JOHNSON and ANDREW W. JOHNSON, Rock Creek, Minn. Filed Jan. 21, 1922. Serial No. 530,772. 1 Claim. (Cl. 74—81.)

The combination with the clutch lever of a tractor, said clutch lever being mounted to extend longitudinally of the tractor on the outside thereof, and adapted to be moved from a normal position downward to effect a certain desired change in the operation of the clutch; of a lever made of spring metal firmly secured at its lower end to the tractor and capable of being sprung outwardly, said lever extending outwardly across and upwardly to and beyond said clutch lever, a shoulder member on said lever, said shoulder member being disposed in the path traversed by said clutch lever when the latter is manually moved downward to effect a change of operation of the clutch, and means for arbitrarily securing said shoulder member at different points on said lever to fit different tractors, said means including a row of bolt holes extending longitudinally of the lever, and a block having a bolt hole in register with said row of bolt holes, whereby it may be bolted to the lever at different locations, said block having a downwardly facing end to form a shoulder, and being formed with a longitudinally disposed groove adapted to receive said lever to be slidable thereon, and an outer face extending from the outer edge of said downwardly facing end, upwardly and inwardly to the bottom of said groove to form a feather edge thereat, for the purpose set forth.



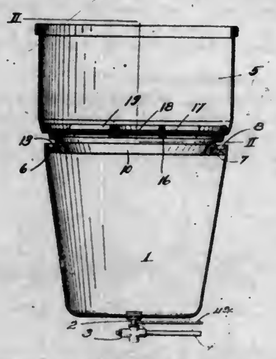
1,479,242. APPARATUS FOR GRINDING MATERIALS. NATHAN C. JOHNSON, Englewood, N. J. Filed Sept. 10, 1921. Serial No. 499,766. 5 Claims. (Cl. 83—9.)

1. In a grinding machine, the combination of an upright rotatable bowl rotatable at such speed as to subject the contents thereof to the action of centrifugal force, and one or more stationary mass deflecting devices positioned adjacent the sides of the bowl each having



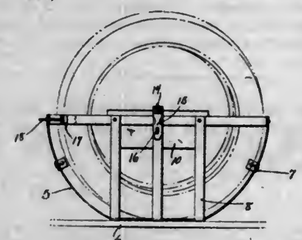
a mass entering edge extending upwardly towards the upper edge of the bowl, a concave mass deflecting face to the rear of said edge in the direction of movement of the material in the bowl, so as to engage the material adjacent the side of the bowl and deflect it inwardly and a bottom horizontal forwardly extending flange over which will flow material directed inwardly by said face.

1,479,243. FRICTION-GRIP HANGER. EMIL L. KAMRATH, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Herman J. Baerwald and one-half to Charles H. Baerwald, both of Milwaukee, Wis. Filed Mar. 23, 1923. Serial No. 627,062. 1 Claim. (Cl. 24—244.)



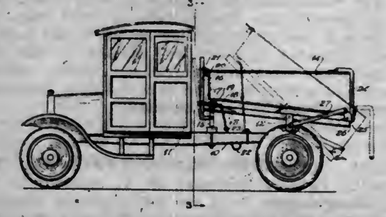
The combination of a flat base of material thickness, a gripping ball associated therewith, a wire U-shaped holder therefor, the arms of the U being slightly divergent upwardly, a leg continuous with one of the arms of the holder and bent away thereform at substantially a right angle, a second leg continuous with the other of said arms and bent away therefrom at substantially a right angle, said legs being imbedded in said base, and a ball retained by said holder and said base, said holder extending inwardly from the top thereof to a point slightly above the lower end thereof, the lower end being spaced from the base to facilitate the insertion of an article to be suspended, whereby an article may be detachably held between said base and ball and wedged directly against said base.

1,479,244. EGG CARTON. ALBERT T. KEIPPER, Milwaukee, Wis. Filed Dec. 30, 1922. Serial No. 609,928. 2 Claims. (Cl. 217—29.)



1. An individual cell for egg cartons having rectangular side walls and kerfs extending substantially horizontally from the vertical edges thereof near the upper and lower ends of the cell, upper and lower partitions having each a central opening for receiving one end of an egg, notches formed in the edges of said partitions and an elastic band extending thru the notches of each partition and through the corresponding kerfs in the walls to secure said partitions thereto.

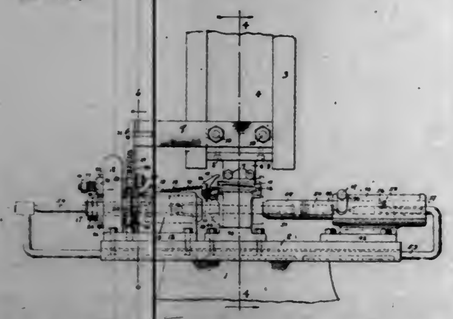
1,479,245. SEAL FOR VACUUM COFFEE URNS. HENRY D. KELLY, Kansas City, Mo. Filed Apr. 4, 1921, Serial No. 458,601. Renewed Mar. 12, 1923. 4 Claims. (Cl. 53—3.)



1. The combination of a beverage jar, a leacher bucket, a gasket interposed between the jar and bucket and resiliently supporting the latter; said jar and bucket having overlapping spaced portions adapted for contact when excessive weight is imposed on said leacher bucket.

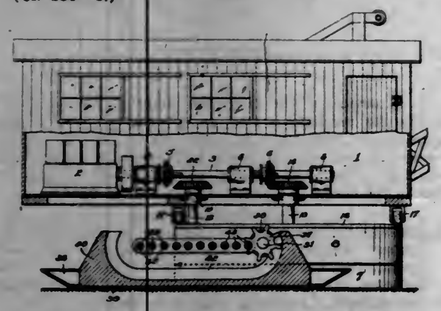
1,479,246. COMBINATION TIRE HOLDER AND RECEPTACLE. RICHARD E. KELM, Milwaukee, Wis. Filed Aug. 6, 1921. Serial No. 490,284. 3 Claims. (Cl. 224—29.)

1. A device of the character described comprising a cradle for receiving a tire, an adjustable block to compensate for variations in the diameter of the tire, a removable box having a cover and means for locking said cover in closed position and simultaneously locking the box in the cradle to prevent removal of the tire.



1,479,247. DUMP WAGON. ANDREW B. MCKINLEY and ALBERT HURLEY, Louisville, Ky., assignors to Continental Car Co. of America, Louisville, Ky., a Corporation of Kentucky. Filed Mar. 5, 1923. Serial No. 622,896. 2 Claims. (Cl. 298—19.)

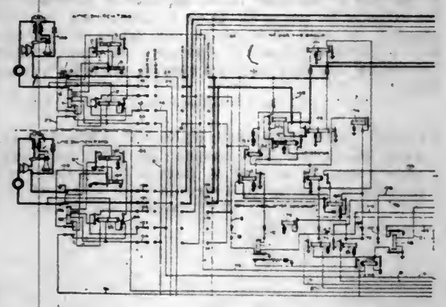
1. In a device of the kind described, a vehicle chassis, a dump body pivoted intermediate its ends thereto and arranged to have its rear swing downward and its front end swing upward to dumping position, and com-



bined shock absorbing and movement limiting means connecting the front end of the dump body with the vehicle chassis and comprising a pair of chains each having one end connected to the chassis and the other to the dump body and tending to straighten upon movement of the dump body to dumping position, and means to resist the straightening of said chains yieldably.

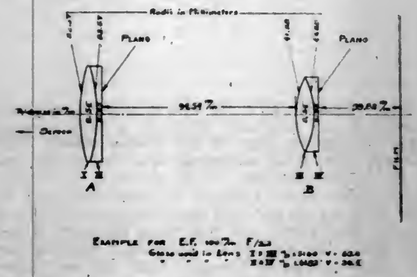
1,479,248. MACHINE FOR INSULATING ARMATURE WINDINGS. WILLIAM E. MOORE, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Sept. 12, 1921. Serial No. 500,136. 11 Claims. (Cl. 29—84.)

11. A device of the type described comprising a frame adapted to rotatably support an armature, a strip carrying means reciprocably supported by said frame and being adapted to wedge a strip of material into the slots of the armature, whereby the strips are firmly held in the slots.



1,479,249. PROPELLING MECHANISM FOR CONVEYING LOADS. PETER J. O'LEARY, Kansas City, Mo. Filed Feb. 18, 1918. Serial No. 217,940. 6 Claims. (Cl. 180—S.)

1. The combination, with a base carrying a load, of a pair of portable side traction rails, a roller track carried by each rail and propelling means in the form of pinions supported by said base adapted to ride over and under the track of each rail for tilting, carrying forward and setting down the base and rails alternately to establish a step by step movement.



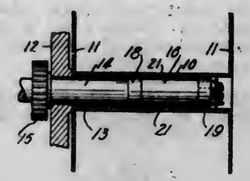
1,479,250. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. a Corporation of New York. Filed Dec. 4, 1920. Serial No. 428,224. 16 Claims. (Cl. 179—18.)

1. In a telephone system, a plurality of telephone lines arranged in groups, a plurality of link circuits and a plurality of bridge circuits arranged in groups, switches for hunting idle link circuits and idle bridge circuits in

said groups, and means for permitting the hunting operation of only one switch in each group simultaneously.

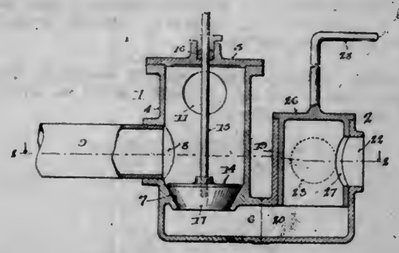
1,479,251. PROJECTING LENS. WILLIAM H. REPP, Rochester, N. Y. Filed July 31, 1922. Serial No. 578,695. 5 Claims. (Cl. 88—57.)

5. In a high aperture projection lens system, the combination of a pair of doublets made up of an equiconvex and a plano concave lens, the convex sides of said doublets facing the screen and the plano surfaces of said doublets facing the object to be projected on said screen by said projection lens system.



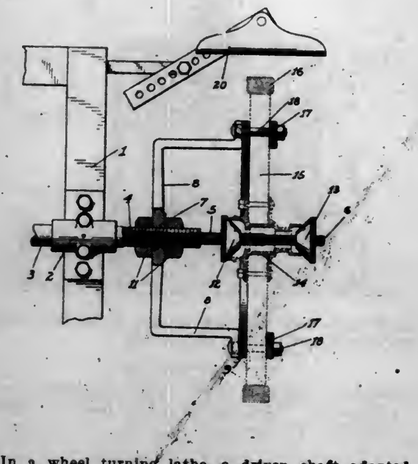
1,479,252. PINCUSHION. EDITH M. RICHARDS, Hartford, Conn. Filed Feb. 23, 1922. Serial No. 538,660. 1 Claim. (Cl. 223—60.)

In combination in a pin-cushion structure, a pincushion body of globular form, a core figure in the form of a doll extended along the axis of said body



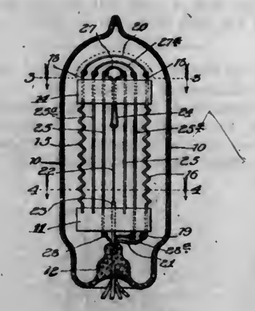
and having the head and the legs projected beyond the upper and lower surfaces, respectively, of the cushion body, and a ribbon serving as a suspension support for said structure, and said ribbon having the body portion positioned as a head-band around said head and having the end portions extended from said body portion at the rear of said head and united in loop form to provide the suspension support proper.

1,479,253. MOTION-PICTURE-CAMERA TAKE-UP-REEL MECHANISM. GIOVANNI RIVETTA, Paris, France, assignor to Sept Cinema Camera Distributors, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 17, 1923. Serial No. 619,542. 4 Claims. (Cl. 242—71.)



1. In a motion picture camera, a take-up reel having a cylindrical axial bore, a driven spindle supported at one end and extending through the bore, and having a slot parallel to its axis, a flexible wire in said slot having one end extending beyond the end of the spindle and its other end abutting against a part of the spindle, and means, carried by the spindle and arranged to press against the end of the wire to spring its central portion outward into contact with the take-up reel.

1,479,254. DISCHARGE-VALVE MECHANISM FOR USED LAUNDRY WATER. RICHARD ROOST, Milwaukee, Wis., assignor to Huebsch Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 20, 1919. Serial No. 318,627. 2 Claims. (Cl. 277—66.)

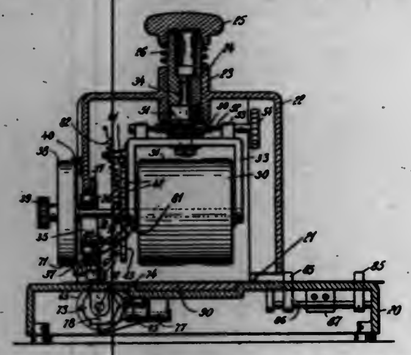


1. The combination of a cut-off valve for controlling the discharge of used laundry water comprising a case provided with a seat, a service port on the same side of the seat and an outlet port and coupling member on the opposite side of the seat, and a poppet valve head adapted to close in the direction of discharge flow tightly against the seat; and a selective valve comprising a cylindrical case provided with outlet ports and with an inlet port and coupling member registering with the outlet port and coupling member of the cut-off valve, and a hollow cylindrical gate rotatably fitted in the selective valve case in open communication at one end through its inlet port with the outlet port of the cut-off valve and provided with a port registrable with the outlet ports of the selective valve one at a time.

1,479,255. WHEEL-TURNING LATHE. OTTO SALBACH, Stockton, Calif. Filed Feb. 20, 1922. Serial No. 537,768. 2 Claims. (Cl. 142—1.)

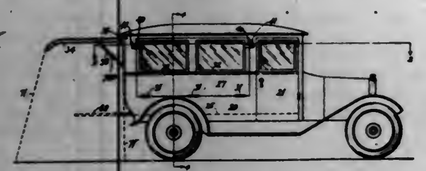
1. In a wheel turning lathe, a driven shaft adapted to receive the hub of a wheel thereover from one end, opposed and adjustable cones mounted on the shaft and adapted to enter and engage the opposite ends of the hub and a spider adjustably mounted on the shaft and adapted to be clamped in any position thereon, said spider having a facing ring adapted to bear against the spokes of the wheel and to be clamped thereto.

1,479,256. SPACE CURRENT DEVICE. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Aug. 28, 1919. Serial No. 320,500. 4 Claims. (Cl. 250—27.)



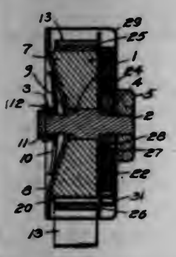
1. In a space current device, a supported block of insulating material, a plurality of electrodes mounted thereupon and non-conductive spacing means independent of said block supported by said electrodes.

1,479,257. CHECK WRITER. HARRY T. SCHERMERHORN, Hawthorne, N. J. Filed Nov. 17, 1922. Serial No. 601,625. 27 Claims. (Cl. 197—6.4.)



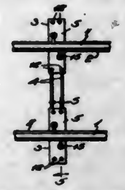
1. A check writer comprising a support for a check, an impression device movable to impress on the check

the amount thereof and means for effecting relative angular movement between the impression device and the



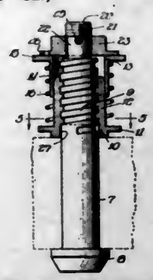
check upon each actuation of said device for changing the direction of the line of printing.

1,479,258. VEHICLE BODY. JOHN A. SIMONS, Montevideo, Minn. Filed Aug. 25, 1922. Serial No. 584,318. 4 Claims. (Cl. 296—23.)



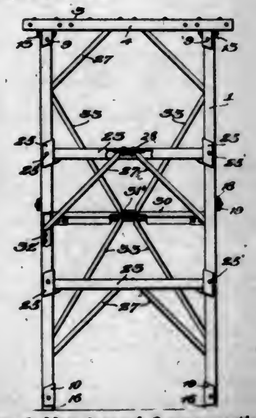
1. A car of the class described having hinged side sections each adapted to be folded out and held in horizontal position, a mattress adapted to rest on each of said sections, said mattress being framed and the frame being foldable longitudinally to about right angles so as to make about half of the mattress form a seat and the other half a back rest for the seat and means for holding the said back rest in raised position.

1,479,259. REBOUND CONTROLLER. FERDINAND H. SNYDER, Shenandoah Junction, W. Va., assignor, by mesne assignments, to The Star Rebound Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 23, 1920, Serial No. 392,409. Renewed Apr. 15, 1922. Serial No. 553,013. 17 Claims. (Cl. 267—10.)



1. In a rebound controller the combination of a rotatable frictionally-resisted durm constructed of self-lubricating material, a flexible connecting member coiled on said durm, a friction member having a face directly in contact with said drum, and means to maintain tension on the inner end of said flexible member.

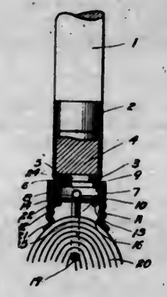
1,479,260. RAILROAD TIE. L. D. SPRATT, Chicago, Ill., assignor of one-half to Charles Schlotfeldt, Chicago, Ill. Filed Jan. 8, 1923. Serial No. 611,337. 5 Claims. (Cl. 238—48.)



1. A rail tie comprising a pair of side plates spaced apart throughout and open at the top and bottom, receptacles at the ends of said plates, covers for said receptacles, means for securing a rail to each of said covers, and means for yieldably maintaining said covers against seating on said receptacles.

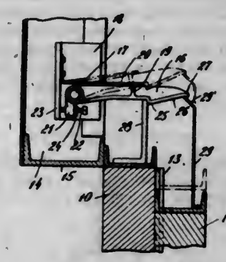
1,479,261. BEARING BOLT. MYLES STANDISH, Omaha, Nebr. Filed Jan. 26, 1922. Serial No. 531,910. 11 Claims. (Cl. 85—32.)

1. A bearing bolt assembly comprising a threaded bolt, a nut threaded on said bolt, a follower on the bolt, the nut and follower having overlapping sleeves extending therefrom, a spring having its opposite ends secured to the nut and follower and encircling the sleeves, and a member secured to the bolt beyond the follower and associated with the follower in such manner as to maintain the follower in adjusted circumferential relation to the bolt.



1,479,262. STEPLADDER. OTTO H. STEGEMAN, Stratford, Conn. Filed Jan. 17, 1923. Serial No. 613,150. 7 Claims. (Cl. 228—56.)

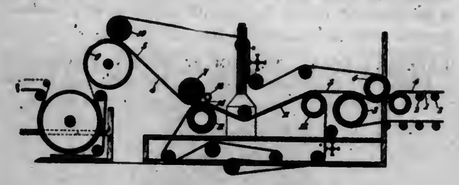
1. In a step ladder, legs of C-cross section, U-shaped reinforcing members secured to the legs and extending



across the open sides thereof, longitudinally corrugated steps of U-cross-section, angle clips secured to the interiors of the steps at the ends thereof and abutting said members, and means to secure the clips to the members.

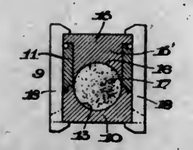
1,479,263. MOP. HERBERT M. STURGIS, Kansas City, Mo., assignor of forty-nine one-hundredths to Frank Hamilton, Kansas City, Mo. Filed May 26, 1922. Serial No. 563,776. 6 Claims. (Cl. 15—228.)

1. In combination, a mop stick, a socket member on one end of the mop stick having fingers projecting therefrom, a threaded collar on the socket member, and a threaded mop head receivable within the threaded collar and having openings into which the fingers project.



1,479,264. LOCKING MECHANISM FOR DOORS. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to John Edward Ogden, Mountainville, N. Y. Filed July 23, 1921. Serial No. 486,975. 15 Claims. (Cl. 20—19.)

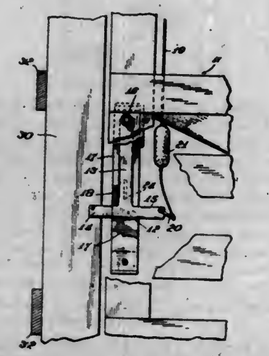
1. A door comprising a plurality of vertically and laterally movable sections, a latch for locking the upper section in closed position, and means carried by a low section for releasing the latch upon the opening movement of the said lower section said releasing means and latch being so relatively constructed and arranged that the latch will snap into closed position on the upper section when said section is closed and said releasing means will clear the latch as said latch is closed and upon return movement of said lower section.



1,479,265. PAPER-MAKING MACHINE. JOHN D. TOMPKINS, Valatie, N. Y. Filed Oct. 5, 1921. Serial No. 505,574. 9 Claims. (Cl. 92—49.)

1. A paper making machine comprising means forming a paper web, upper and lower press rolls, upper and lower felt aprons passing between said press rolls and adapted to carry the paper web thereto, and means located in ad-

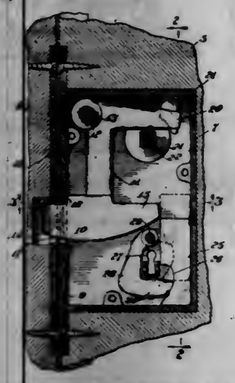
vance of said press rolls for forcing air under greater than atmospheric pressure through the paper web.



1,479,266. METHOD OF MAKING FELTED SOLIDS OF REVOLUTION. ALBERT O. TROSTEL, Milwaukee, Wis. Filed June 12, 1922. Serial No. 567,877. 4 Claims. (Cl. 28—5.)

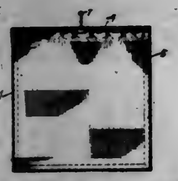
1. The method of forming solids of revolution, such as sphere and cylinders, from material capable of felting, which consists in felting the material with water in the presence of heat, roughly forming the material into articles of the desired shape, subjecting the roughly formed articles to a compacting operation, then subjecting each of the compacted articles to pressure in a die to compress it to its finished shape and then drying the formed article.

1,479,267. [WITHDRAWN.]



1,479,268. LATCH FOR GATES, ETC. WILLIAM S. WITTEN, Chicago, Ill. Filed Oct. 6, 1919. Serial No. 328,828. 6 Claims. (Cl. 70—29.)

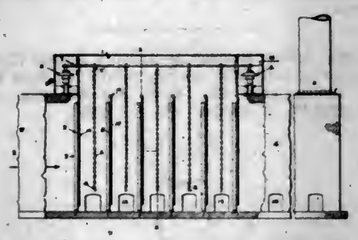
1. A latch comprising side plates spaced apart, a shank pivotally mounted between said side plates and hanging pendulous from its pivot, a rigid member projecting laterally from the lower portion of said shank beyond said side plates, counterbalancing means normally operating to project said member, a cross bar connected with said side plates in position to engage said shank and limit the ex-



tent of projection of said member, a rocking member pivoted to swing transversely of the path of said shank to engage the same and lock it in its operative position, and a key-operated device for actuating said rocking member.

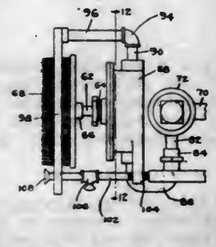
1,479,269. LOCK. WILLIAM S. WITTEN, Chicago, Ill. Filed Nov. 14, 1919. Serial No. 338,040. 10 Claims. (Cl. 70—29.)

1. A lock comprising a latch member, a bolt movable upward into position to lock said latch member in operative position and adapted to return to its inoperative position by gravity, and a pendulous catch movable normally by gravity into position to hold said bolt in operative position, the pivotal point of attachment of said catch being at a point laterally removed from the path of travel of said bolt.



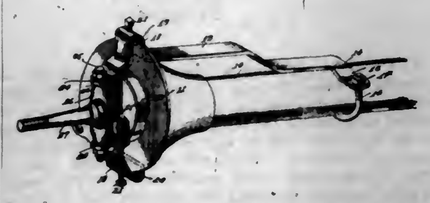
1,479,270. METHOD FOR THE REMOVAL OF SUSPENDED MATERIAL FROM GASES. EDSON R. WOLCOTT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 14, 1919. Serial No. 282,700. 3 Claims. (Cl. 183—114.)

1. The method of removing suspended material from gases, which consists in distributing water into such gases to humidify the same, then passing the gases through a wetted filtering medium to filter out part of the suspended matter and to further humidify the gases, and then subjecting the gases to the action of an electrical field to precipitate suspended material therefrom, the gases and the precipitated material being subjected to cooling action in such manner as to cause condensation of water from the water vapor present in the gases, and collection of such condensed water with the precipitated material.



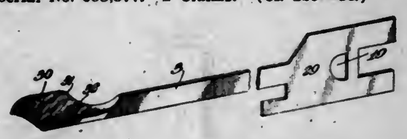
1,479,271. METHOD AND APPARATUS FOR SEPARATING SUSPENDED PARTICLES FROM GASES. EDSON R. WOLCOTT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 15, 1919. Serial No. 345,926. 7 Claims. (Cl. 183—7.)

1. An electrical precipitator comprising a flue adapted for passage of gases therethrough, grounded collecting electrodes, each consisting of a single row of vertical elongated flexible members of small transverse cross sections extending transversely in said flue, and insulated discharge electrodes each consisting of a single row of verti-



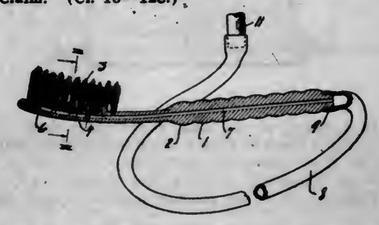
cal flexible members of small transverse cross sections extending transversely in said flue, between and in alternation with the collecting electrodes.

1,479,272. DEVICE FOR WASHING SURFACES. HAROLD E. YOUNG, Minneapolis, Minn. Filed Dec. 23, 1920, Serial No. 432,673. Renewed June 20, 1923. 1 Claim. (Cl. 15—29.)



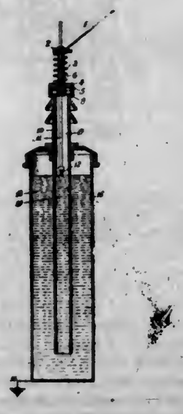
A device for washing surfaces comprising a casing, a water motor in said casing, a brush supported from said casing and adapted to be rotated by said motor, a main pipe for conducting water into said casing to operate said motor, an adjustable connection for said pipe which permits said brush to assume different positions relatively to said pipe, and means for spraying the water which has passed through said casing directly upon the device to be washed in proximity to said brush.

1,479,273. EMERGENCY AXLE SPINDLE. KINNEY ARMSTRONG, Fayetteville, Ark. Filed Mar. 27, 1923. Serial No. 628,098. 3 Claims. (Cl. 301—130.)



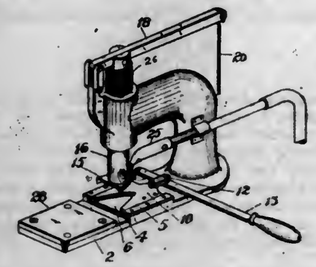
1. A replacement rear axle end comprising a substantially L-shaped member the longer arm of which is provided with means for clamping engagement with the rear axle housing of an automobile, the end of the shorter arm and the portion of the longer arm opposite thereto being formed with brake-band disk-receiving recesses, clamping means on the recessed portions, and a stub axle carried by the said shorter arm.

1,479,274. WARP-CUTTING DEVICE FOR USE IN PILE-FABRIC LOOMS. JOHN ASHMORE and GEORGE ASHMORE, Philadelphia, Pa. Filed Apr. 20, 1923. Serial No. 633,377. 2 Claims. (Cl. 139—44.)



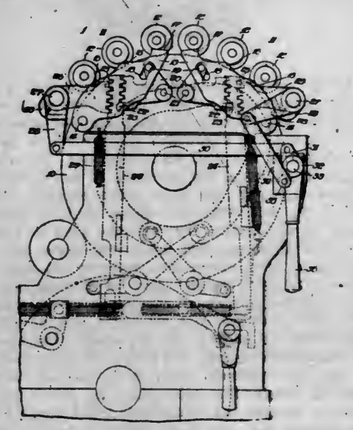
1. A pile-wire having a blade, the cutting edge of which extends in a rearwardly direction, said blade having a slotted portion the slot of which extends in substantially rearwardly direction and intersects said cutting edge.

1,479,275. TOOTHBRUSH. HENRY W. BEIL, San Francisco, Calif. Filed Apr. 24, 1923. Serial No. 634,310. 1 Claim. (Cl. 15—128.)



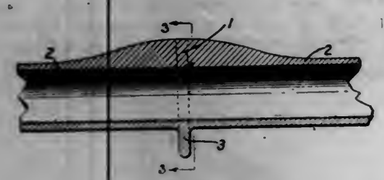
A tooth brush comprising an elongated rigid handle with a longitudinal hole having an outlet at the end of the handle adapted for a hose connection, a row of spaced ports extending from the hole through one side of the handle and each surrounded by a raised boss formed integral with the handle, a plurality of spaced tufts of bristles projecting from the handle arranged along all sides of the bosses and between the bosses.

1,479,276. CURRENT INTERRUPTER. CHARLES E. BENNETT, Atlanta, Ga., assignor, by mesne assignments, to Balt Manufacturing Company, Atlanta, Ga., a Corporation of Georgia. Filed Sept. 2, 1919, Serial No. 321,245. Renewed Mar. 18, 1922. Serial No. 544,974. 5 Claims. (Cl. 175—215.)



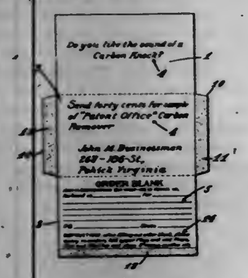
1. In an electric circuit interrupter, a liquid container, a tube dipping into the liquid and forming an expansion chamber, an electrode arranged in said expansion chamber, and a yieldable closure for the expansion chamber serving by its displacement to relieve excessive vapor pressure incident to the formation of an arc in the chamber.

1,479,277. MACHINE FOR MAKING INSOLES. GEORGE H. BLACK, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 28, 1918. Serial No. 268,639. 24 Claims. (Cl. 12—21.)



1. In an insole machine, the combination with a work support, of a shaping member formed and arranged to engage the inner face of the sewing rib at the end and sides of the toe and relieved on its bottom face to concentrate the bearing of that face upon the stock at the root of the rib, and means to operate said member and support relatively to depress the stock at the root of the rib to provide a low seat for the welt attaching seam.

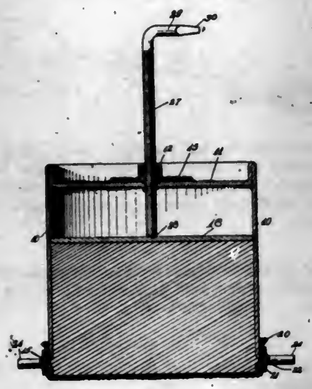
1,479,278. FORM-ROLL TRIP MECHANISM. JOSEPH R. BLAINE, Chicago, Ill., assignor to Miehle Printing Press & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1921. Serial No. 456,260. 1 Claim. (Cl. 101—352.)



In combination, a form cylinder, a pair of sets of inking rollers cooperating therewith, a pair of sets of frame members, each of said sets of frame members including two frame members mounted at the ends of said rollers, each of said frame members having projecting members engaging portions of said rollers, said frame members having cam slots, arms for operating said frame members, said arms being provided with projections adapted to ride in said cam slots, and rack trip bars for operating said arms, said bars having means for manually operating same.

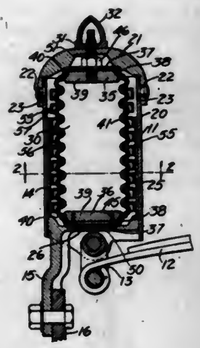
1,479,279. METHOD OF MAKING RETURN BENDS. BENJAMIN BROOO, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Sept. 15, 1922. Serial No. 588,498. 6 Claims. (Cl. 29—157.6.)

1. The method of making a return bend comprising the steps of giving a pipe additional thickness over an area at the point where the return bend is to be produced, the thickness being maximum near one point and decreasing longitudinally and circumferentially to the normal pipe thickness; providing a circumferential rib at the point of maximum thickness; suitably heating the pipe and bending it so that the point of maximum thickness lies on the outer side of the bend formed.



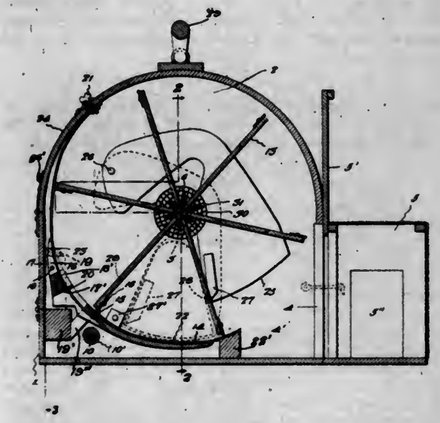
1,479,280. MONEY MAILER. CARL E. BROWN, Columbus, Ohio. Filed Sept. 26, 1919. Serial No. 326,545. 1 Claim. (Cl. 229—73.)

In an article of the class described, a body provided along its longitudinal edges with transverse lower and upper flaps, the lower flap being supplied on one side with an order blank so worded and formed as to convey from a buyer to a seller, when filled out, the wishes of the buyer relative to the purchase of merchandise, and the upper flap and the body being marked upon the corresponding side with advertising matter relating to the price of the merchandise and the need to which the merchandise ministers, the upper and lower flaps being unfoldable to an open position, whereby the order blank and the advertising matter may be exposed simultaneously, the opposite side of the upper flap carrying the address of the sendee, and the same side of the lower flap carrying the address of the sender, the upper flap being foldable to overlie the body, the body being provided on its transverse edges with tongues which are foldable to overlie the upper flap, the lower flap being foldable to overlie the tongues and the upper flap and having along its free longitudinal edge a quantity of adhesive material engaging the tongues and the upper flap, the tongues being provided along their transverse edges with a quantity of adhesive material engaging the upper flap.



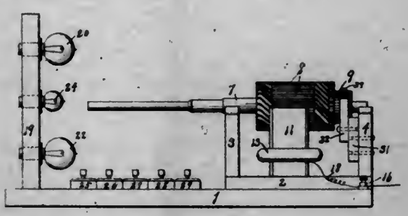
1,479,281. FLOOR WAXER. TYNE M. BUCK, Des Moines, Iowa. Filed Feb. 11, 1921. Serial No. 444,570. 6 Claims. (Cl. 91—43.)

1. In combination, a container having an open end, detachable means for securing a porous fabric across said opening, a disc slidably mounted within the container, means for forcing the said disc toward the fabric, and a handle pivoted near the open end of said container.



6. In a device of the class described, a contractable ring having a concave groove extending longitudinally in its inner face, means for contracting and locking said ring in its contracted position, and opposite and radial pins extending from the exterior surface of said ring.

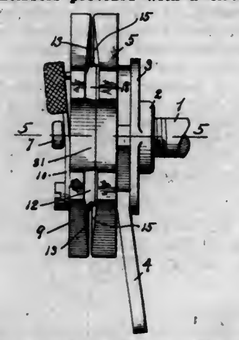
1,479,282. AIR-CUSHION SHOCK ABSORBER. BRUCE BURNS, Alhambra, Calif. Filed Sept. 3, 1921. Serial No. 498,219. 1 Claim. (Cl. 267—65.)



In a shock absorber, the combination of: a flexible member having corrugations about the outer surface thereof; means for applying pressure to each end of said flexible member; a rigid metal member surrounding said flexible member and rings fitting loosely inside said metal member, and engaging said corrugations in said flexible member at the base of said corrugations, said rings acting to accurately space said flexible member in said metal member and prevent wear on the outside of said flexible member due to its coming in contact with said metal member, the rings being of substantially L shaped cross section each consisting of a flange fitting down into said corrugations and a bearing portion fitting inside said metal member and rubbing against the internal surface thereof, the bearing portions of said rings forming an interrupted metal wall surrounding and protecting said flexible member and moving therewith.

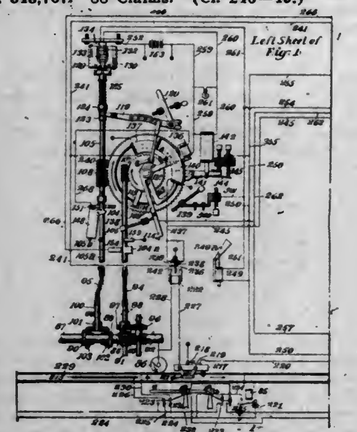
1,479,283. RAT TRAP. JAMES C. CONRAD, Washington, D. C., assignor to Edwin P. Conrad, Zionsville, Ind. Filed May 13, 1921. Serial No. 469,261. 2 Claims. (Cl. 43—74.)

1. A trap of the class described comprising a casing having a circular chamber therein and an inlet opening leading into the chamber and an outlet opening leading therefrom, a rotary member in the chamber including a number of blades, means for rotating said member, a spring actuated trigger member, a lip thereon for engaging each blade, a weighted door eccentrically arranged in relation to the rotary member for closing the inlet opening under the action of gravity and a pin on each blade for engaging the door to hold the same in open position when the member is at rest and to free the same as soon as the member starts to move.

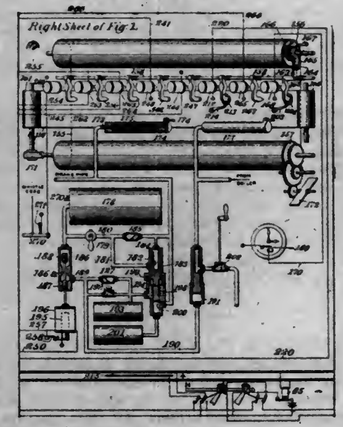


1,479,284. ARMATURE-WINDING-TESTING MECHANISM. JASPER F. CULLIN, Detroit, Mich., assignor, by mesne assignments, to William J. Hartwig, Detroit, Mich. Filed Jan. 7, 1920. Serial No. 349,859. 5 Claims. (Cl. 175—183.)

3. In a device for testing armatures, the combination of a pair of pedestals having V-grooves at their upper ends to receive the armature shafts, a series of electric lamps, a contact carrier and a series of contact pins slidably mounted therein and means to press the contacts into engagement with segments of the commutator, means to induce electric currents in the windings of the armature, and electric circuits connecting the lamps and contacts.



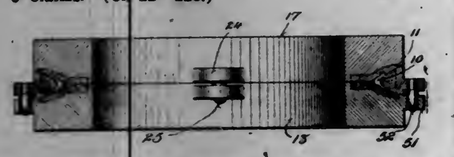
1,479,285. ARMATURE-COIL WINDER. JASPER F. CULLIN, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Sept. 2, 1920. Serial No. 407,708. 3 Claims. (Cl. 140—92.2.)



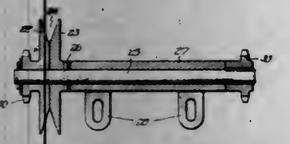
1. A winder for the coils of armatures for electric machines consisting of two members and means to secure them together, one of the members having a hub with inclined edges, said securing means comprising a pin on one of the members provided with a circumferential

groove and a latch pivoted on the other member and adapted to engage in the groove in the pin.

1,479,286. RAILWAY-TRAIN-CONTROL SYSTEM. ALBERT V. T. DAY, New Rochelle, N. Y., assignor to The Union Switch and Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 4, 1913, Serial No. 771,650. Renewed Mar. 14, 1922. Serial No. 543,767. 88 Claims. (Cl. 246—49.)

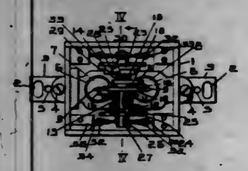


70. In combination, a railway vehicle, a rundown device thereon arranged to change from an initial to an



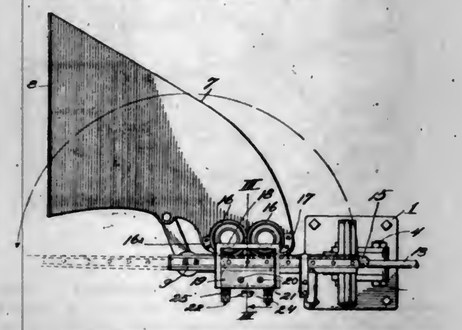
ultimate condition in a fixed distance of vehicle travel, speed-responsive means on said vehicle, vehicle governing apparatus on the vehicle controlled by said device and by said means, a railway track provided with a block longer than said fixed distance, traffic-controlled trackway means located adjacent the entrance end of said block for causing said run-down device to be restored to its initial condition, and other traffic-controlled trackway means located in said block at a distance from the exit end substantially equal to said fixed distance of vehicle travel for also causing said run-down device to be restored to its initial condition.

1,479,287. MOLDING MACHINE. JOHN W. DEARSLEY, Racine, Wis. Filed Dec. 12, 1921. Serial No. 521,751. 5 Claims. (Cl. 22—128.)



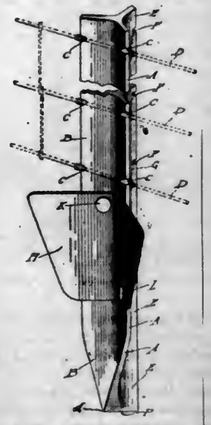
1. In a molding device, the combination of a drag and a cope having inner and outer members, and a cheek adapted to be positioned between said cope and drag, said cheek having a flange projecting towards the inner members of said cope and drag.

1,479,288. POWER-TRANSMISSION MECHANISM. FORREST V. DONALD, Minneapolis, Minn., assignor to Gilson Manufacturing Co., Port Washington, Wis., a Corporation of Wisconsin. Filed Oct. 24, 1921. Serial No. 509,873. 3 Claims. (Cl. 74—21.)



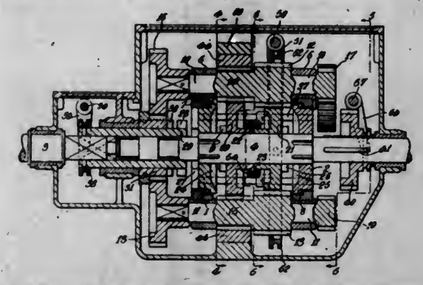
1. In a tractor, the combination of a plurality of traction wheels, an engine for propelling same, and power transmission mechanism interposed therebetween including a sheave having two parts for jointly receiving a power transmission belt, one of said sheave parts being operatively connected to one of said traction wheels and the other sheave part being operatively connected to another traction wheel, said sheave parts being capable of relative rotative movement when the belt is slackened to permit a turning movement of the tractor.

1,479,289. ELECTRIC SWITCH. JOHN J. DUCK, Toledo, Ohio. Filed Nov. 19, 1917. Serial No. 202,730. 3 Claims. (Cl. 200—156.)



1. In electric switch structures, a housing providing an oblong chamber, a push button mounted to operate in the chamber centrally of an end thereof, a driven member, actuating means from the push button to the member, a button guiding link between the button and member in addition to said actuating means, and mounting means for the driven member, said driven member being positioned by said housing on one side of a diameter of the housing through the button, whereby said structure may be placed in either of two positions in said housing, the button in one position being spaced from that of the other position, with the driven member oppositely disposed and aligned in one position as to the other position.

1,479,290. TARGET-THROWING TRAP. ROBERT S. ELLIOTT, Kansas City, Mo. Filed Aug. 24, 1921. Serial No. 494,813. 8 Claims. (Cl. 124—6.)



1. A target throwing trap comprising a table, a throwing arm arranged to sweep across the face of the table, means for latching the said arm in the same initial position preliminary to its throwing operations, and means carried by the table and projecting forwardly above said arm, when the latter is in said initial position, for retaining one or more targets against said arm.

1,479,291. METAL FENCEPOST. PERCY EDWIN EVANS, Chicago Heights, Ill. Filed Sept. 13, 1922. Serial No. 588,076. 1 Claim. (Cl. 256—57.)

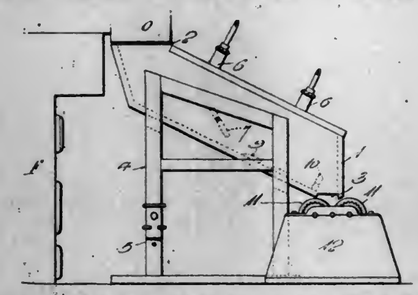
A fence post comprising a metal bar having webs joined together to form a structure of Y-shaped cross section, each web having notches spaced apart vertically at the edges thereof, the notches of one web being in horizontal alinement with the notches of the other webs, fence wires disposed in the notches of two adjacent webs, and a retaining wire secured to the fence wire outside of said adjacent webs and passing through the notch on the other web, said retaining wire being spaced from the surface of the webs between the outer edges thereof.

1,479,292. CHANGE-SPEED MECHANISM. JAMES FARLEY, Hertford, England. Filed Feb. 21, 1923. Serial No. 620,512. 16 Claims. (Cl. 74—34.)

1. Change speed mechanism having in combination a driver shaft, a driven shaft, a clutch adapted to directly connect said shafts, a lay shaft, gear connecting the driver shaft and lay shaft, frames carrying said lay shaft, bearings for rotatably supporting said frames, a pinion on said lay shaft, a toothed change wheel meshing with said pinion, means for detachably connecting said change wheel with said driven shaft as required for rotation therewith, and a stationary internally toothed ring member coaxial with the driven shaft meshing with said pinion on the lay shaft.

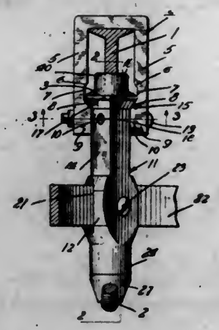
1,479,293. PRODUCT OF REDUCTION OF OXYCODEINON AND PROCESS OF PREPARING THE SAME. MARTIN FREUND, deceased, late of Frankfort-on-the-Main, Germany, by Walter Freund, administrator, Frankfort-on-the-Main, Germany, and Edmund Speyer, Frankfort-on-the-Main, Germany. Original application filed July 15, 1921, Serial No. 485,130. Divided and this application filed Mar. 15, 1922. Serial No. 544,010. 2 Claims. (Cl. 260—25.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The process of preparing dihydroxycodeinon, melting at 222° C., which consists in boiling oxycodeinon together with a solution of sodium hydrosulphite.



2. A new product of reduction, obtained by heating oxycodeinon together with a solution of sodium hydrosulphite, dihydroxycodeinon having the formula $C_{18}H_{23}NO_4$, which crystallizes from alcohol in long jagged columns, melting at 222° C., and yields well crystallized salts and forms an oxime, the hydrochloride of which is isolated in small sticks decomposing at 275 to 278° C.

1,479,294. SAFETY COLLAR AND CUFF BUTTON. MAX GONICK, New York, N. Y. Filed July 3, 1922. Serial No. 572,644. 2 Claims. (Cl. 24—90.5.)

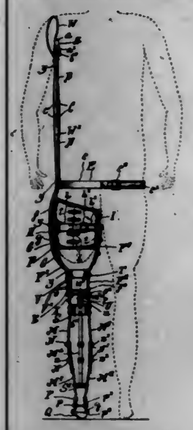


1. A collar and cuff button, comprising a post having on its ends a base member and a head member, said post having in spaced proximity to the base member two oppositely projecting substantially circular bosses, each having two spaced pairs of notches in its free edge at quadrants thereof, and a substantially U-shaped spring clamp having on the free ends of its arms protruding lugs pivotally seated in the sockets of the bosses whereby the clamp is adapted to be normally disposed in movable spanning position over the head of the post for being swung toward and from the base member and the arms of the clamp having teeth yieldingly engaging two pairs of the notches of said bosses when straddling the head member and also for yieldingly engaging the other two pairs of the notches when swung toward the base member.

1,479,295. MACHINE FOR MAKING GLASS SHEETS. EDWARD GREGORY, New Eagle, Pa. Filed Sept. 15, 1921. Serial No. 500,735. 3 Claims. (Cl. 49—33.)

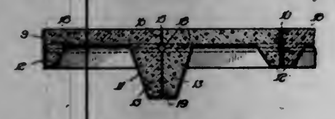
1. A machine for making sheet glass comprising a chute provided with an inlet and with an outlet, and spaced deflectors secured to the bottom thereof and inside of the same for spreading the molten glass over the entire surface of the bottom before it is discharged from the chute and onto the cooling rollers.

1,479,296. RAILROAD-BRAKE FULCRUM. WALTER A. HAHN and ESPY DEEMS SHERRILL, Hickory, N. C. Filed Mar. 24, 1923. Serial No. 627,517. 3 Claims. (Cl. 188—232.)



1. In a device of the class described, a yoke having parallel surfaces, a fulcrum member having parallel surfaces cooperating with the parallel surfaces of the yoke, the parallel surfaces of the fulcrum member being duplicated, to permit an axial adjustment of the fulcrum member, a securing element connecting the yoke with the fulcrum member, the fulcrum member having a plurality of openings for the reception of the securing element and permitting an axial adjustment of the fulcrum member, and a lever mounted to swing on the fulcrum member.

1,479,297. ARTIFICIAL LIMB AND HARNESS THEREFOR. RICHARD R. HARRIS, Ocean Beach, Calif. Filed May 19, 1923. Serial No. 640,278. 9 Claims. (Cl. 3—2.)



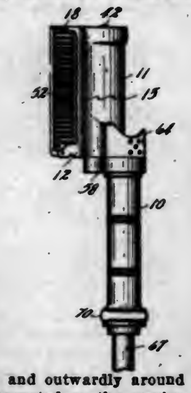
1. Apparatus of the character described, comprising a frame provided with a series of adjustable metal supporting strips hinged together to form a flexible crutch

extending substantially from the arm pit of the wearer to the ground, with a crotch piece connected to the head

of the upper strip by a universal joint, and a foot piece connected to the lower end of the lower strip, with means for connecting said frame to the body of the wearer.

1,479,298. FORM FOR CONCRETE BLOCKS AND METHOD OF REMOVING BLOCKS THEREFROM. ARTHUR G. HATCH, Duluth, Minn. Filed Nov. 2, 1921. Serial No. 512,207. 5 Claims. (Cl. 25—121.)

5. A mold for forming concrete blocks comprising fixed members and removable members, the latter comprising T-shaped sections adapted to form intersecting faces of each of two adjacent blocks, said sections having portions adapted to form grout grooves in the blocks.

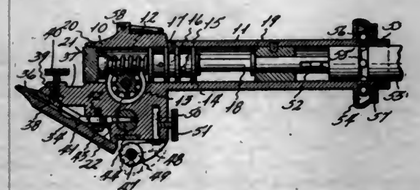


1,479,299. ROAD TAMPER AND STRIKE OFF. JOSEPH W. HELTZEL, Warren, Ohio. Filed Feb. 10, 1920. Serial No. 357,552. 7 Claims. (Cl. 94—45.)

1. The combination with a road finishing and making machine; of a tamper and strike off supported in an inclined position for oscillation at one end thereof, said device being pivoted at one edge and the other edge portion of the device being movable in a limited arcuate path so as to produce a tamping action from a maximum to a minimum elevation conforming to the surface of the road bed to be produced, and varying from a violent action to zero, at the other end.

1,479,300. SHAVING MACHINE. SIDNEY P. JONES, Waco, Tex., assignor to The Jones Electric Corporation, Waco, Tex. Filed Nov. 17, 1923. Serial No. 675,252. 14 Claims. (Cl. 30—12.)

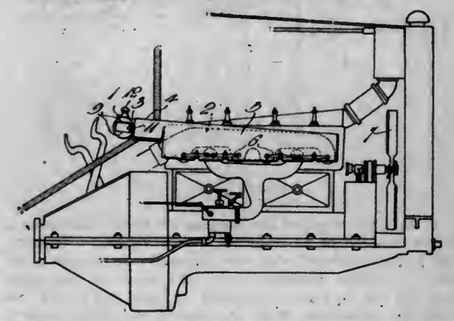
1. In a shaving machine, a support having a slot in its face, a blade carrier extending through the slot of the support from within the latter, operating means for shuttling the carrier mounted in the support, and a marginal flange on the carrier overhanging the face of the support contiguous to the slot and in close proximity to said face, whereby lubricants are prevented from passing



through the slot and outwardly around the carrier, and a shuttle blade mounted on the carrier.

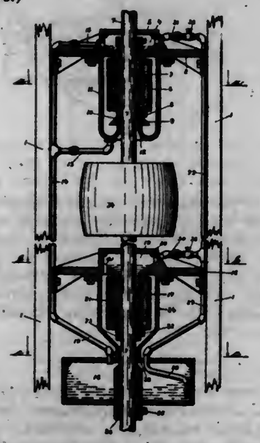
1,479,301. SHAVING MACHINE. SIDNEY P. JONES, Waco, Tex., assignor to The Jones Electric Corporation, Waco, Tex. Filed Feb. 8, 1923. Serial No. 617,756. 15 Claims. (Cl. 30—12.)

1. In a shaving machine, an elongated handle member, a support extending longitudinally from the handle member, a web extending radially from the support, open guards on each side of the outer portion of the web disposed in longitudinal relation to the handle member and support, a reciprocating cutting blade mounted on the outer face of the support and having its cutting edges between the guards, means in the support for imparting a shuttle motion to the blade, and a guard cover over a portion of the blade.



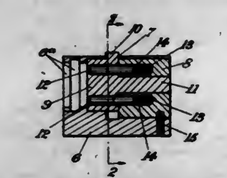
1,479,302. HAIR CLIPPER. SIDNEY P. JONES, Waco, Tex., assignor to The Jones Electric Corporation, Waco, Tex. Filed Nov. 17, 1923. Serial No. 675,253. 12 Claims. (Cl. 30—1.)

1. In a hair clipper, a tubular handle, a head secured to the handle and having its bottom offset an ample dis-



tance from the handle, a thumb grip on one side and a finger grip on the other side of the head, a cutter blade mounted on the bottom, a shuttle blade mounted in the head on the bottom blade, a drive shaft in the handle, and driving means for the shuttle blade connected with the driving shaft.

1,479,303. AUTOMOBILE HEAT DISTRIBUTOR. RALPH CHARLES KIRCH, Keokuk, Iowa, assignor to Weber-Kirch Mfg. Co., Keokuk, Iowa, a Corporation. Filed June 25, 1923. Serial No. 647,665. 2 Claims. (Cl. 98—49.)

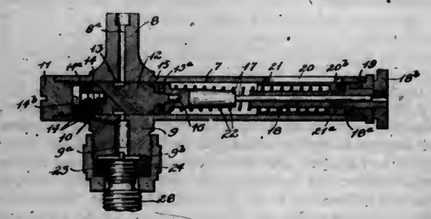


1. A motor vehicle heat distributor comprising a hollow elongated cylinder for transverse disposition in the front end of a vehicle body near one side of the latter, said cylinder having a restricted open end for choking down discharge of heat adjacent said one side of the body and having its other end open and relatively unrestricted for discharging a greater amount of heat toward the other side of the body, the front side of said cylinder having a hot air inlet and the rear and lower sides thereof being provided with heat escape openings substantially throughout its length.

1,479,304. LUBRICATING SYSTEM FOR VERTICAL SHAFTS. FERDINAND W. KROGH, San Francisco, Calif.; Mary L. Krogh, Fannie J. Clarke, C. A. Krogh, and Oscar Poulsen, legatees by court order of distribution of the estate of said Ferdinand W. Krogh, deceased, assignors to Krogh Pump and Machinery Company, San Francisco, Calif., a Corporation of California. Filed May 29, 1918. Serial No. 237,631. 3 Claims. (Cl. 64—56.)

1. An enclosed lubricating system comprising a fixed closed receiving tank and a rotating supply tank, an overflow rotating receptacle therebetween, a stationary cup surrounding said receptacle and a pipe for delivering lubricant from said cup to said supply tank.

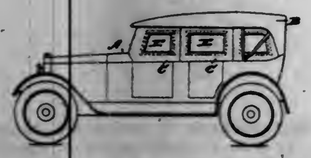
1,479,305. LOCK MECHANISM. HENRY JAMES LEE, Birmingham, England. Filed June 6, 1921. Serial No. 475,430. 3 Claims. (Cl. 70—47.)



1. A lock comprising in combination a body which contains the lock, a casing having a segmental slot, a fixed section, a rotary section, spring controlled plungers co-axial with the longitudinal axis of the lock and adapted to interlock the rotary section to the fixed section, and an eccentric section carried by the rotary section which upon rotation projects through the segmental slot in the lock casing and moves into locking or locating engagement with corresponding recesses formed in the body which contains the lock.

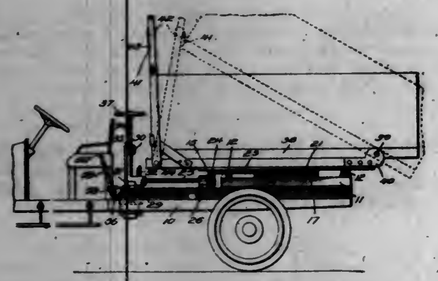
1,479,306. DETACHABLE END FOR AUGERS OR BITS. YVON P. LEGER, Memramcook, New Brunswick, Canada, assignor of one-fourth to Lucien Melanson, Moncton, New Brunswick, Canada. Filed June 9, 1922. Serial No. 567,227. 1 Claim. (Cl. 145—126.)

A device of the character described comprising a spiral member having a blank end, a separate spiral ribbon adapted for engagement on the end of said spiral member, said ribbon terminating in a cutting lip, and a screw point formed at the working end of said ribbon.



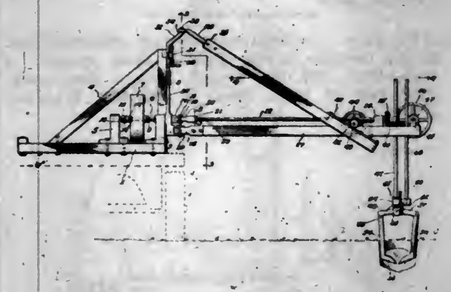
1,479,307. AIR-PRESSURE CONTROLLER FOR INFLATING PNEUMATIC TIRES. MICHAEL J. MCANENY, Denver, Colo. Filed Oct. 18, 1922. Serial No. 595,334. 4 Claims. (Cl. 50—8.)

1. A device for controlling the admission of air-pressure into a pneumatic tire undergoing inflation, comprising a tubular valve-casing provided with pressure inlet and outlet-ducts, a spring-pressed valve in the casing having a stem and an air-duct normally registering with said ducts, a duct connecting said outlet-duct with the casing in advance of the valve therein, a sleeve



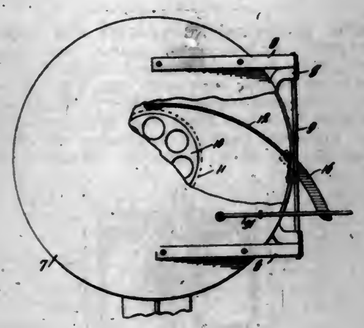
in the casing reciprocably confined against the valve-spring therein and provided with a nut, a hollow screw extending through the sleeve in engagement with the nut and confined against longitudinal movement and lengthwise through which the valve-stem works, and means for turning the screw to adjust the tension of the valve-spring.

1,479,308. WINDOW FOR VEHICLE CURTAINS. ARTHUR MAAKE, Detroit, Mich. Filed June 29, 1922. Serial No. 571,733. 4 Claims. (Cl. 296—145.)



1. In a device of the character described, the combination of a curtain provided with a window opening, a window frame secured to the curtain, a sheet of glass fitted to the frame, a plurality of corner members comprising two co-operating plates spaced apart to receive the corners of the glass, one of said plates having flanges adapted to overlap the edges of the glass and also a projecting tongue provided with an aperture for the passage of a bolt, one of said plates having also a plurality of lugs adapted to be bent to overlap its co-operating plate, whereby the glass may be secured between the plates of the corner members, and a bolt extending through the tongue and window frame to secure the glass against displacement.

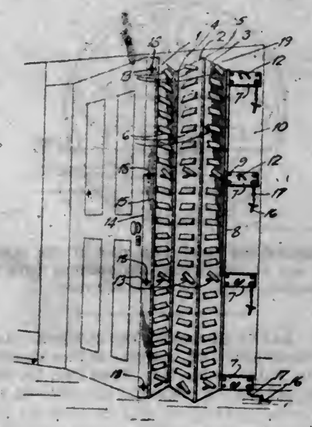
1,479,309. DUMPING TRUCK. CHARLES K. MATTIX, Hubbard, Ohio. Filed Apr. 21, 1922. Serial No. 555,829. 2 Claims. (Cl. 298—9.)



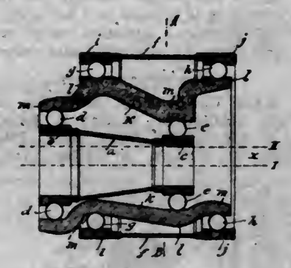
1. A dumping truck comprising a chassis, a rotatable supporting frame supported thereby, a turn table depending from said frame, a dumping body arranged for tilting movement on said frame, a rack and pinion mechanism for effecting the operation of said turn table to position said dumping body to dump the load from either side or rearwardly of the chassis, a drum and cable mechanism for effecting the tilting of said body for dumping after said body has been shifted by the turn table, and a manually actuated operating means common to said mechanisms and including a vertically movable bevel gear for meshing engagement with the rack and pinion mechanism and for seating engagement with the drum and cable mechanism and arranged for the independent actuation of the said mechanisms.

1,479,310. POSTHOLE DIGGER. ORAN D. MONSON, Celina, Ohio. Filed July 15, 1922. Serial No. 575,151. 6 Claims. (Cl. 255—22.)

1. An apparatus for the purpose set forth comprising a frame adapted to be mounted upon a vehicle, a supporting beam connected with the frame for universal movement, a digger mounted upon said beam at the outer end thereof, a shaft supported by said beam and operatively connected with the digger, a shaft mounted upon the frame and connected with the first-mentioned shaft by a universal joint, and means connecting the frame and the lateral beam whereby to maintain the beam in a horizontal position.



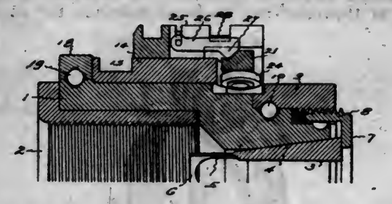
1,479,311. SWITCH FOR MOTION-PICTURE PROJECTORS. HARRY J. MUNSTER, San Diego, Calif. Filed Nov. 4, 1920. Serial No. 421,721. 1 Claim. (Cl. 200—52.)



A device of the character described including a casing equipped with an arm pivotally mounted in the casing and having one end thereof projected through the latter, an insulated block adjustably mounted on the projected end of said arm, a contact screw adjustably mounted in said block, and a contact for cooperation with said screw consisting of an oil containing cup mounted on the side of said casing.

1,479,312. SHUTTER ATTACHMENT FOR DOORS. LYDIA MARIAN O'HARROW, Philadelphia, Pa. Filed Mar. 13, 1922. Serial No. 543,374. 4 Claims. (Cl. 98—27.)

2. The combination with a hingedly mounted door and a frame for said door, of a foldable ventilating shutter comprising a plurality of plates hingedly mounted to one another and provided with ventilating openings therethrough, one of said plates being hingedly supported at one edge on said frame, and means for removably securing the opposite edge of said shutter to said door.



1,479,313. SHOCK-DEADENING BALL OR ROLLER BEARING. BELA PALLAVICINI, Vienna, Austria. Filed Sept. 2, 1921. Serial No. 497,964. 2 Claims. (Cl. 64—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

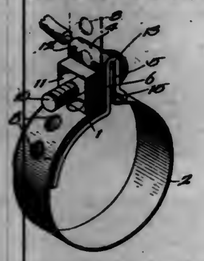
1. A shock deadening ball bearing for vehicles comprising a central sleeve having a plurality of ribs and constrictions formed on its inner and outer surfaces to provide a plurality of inner and outer ball races, eccentrically disposed with respect to the axis of said sleeve, each of said ball races being defined by a rib and a cooperating constriction in alignment therewith, and a ring of balls interposed between said inner races and the axle of the vehicle and a ring of balls interposed between each of the outer races and the wheel hub.

1,479,314. COLLET-CHUCK-OPERATING MEANS. EMIL L. PFUNDER, Windsor, Conn., assignor to The J. M. Ney Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 12, 1923. Serial No. 618,664. 12 Claims. (Cl. 279—59.)

1. The combination with a chuck of the character described of longitudinally movable means adapted to control the position of the collet, rotatable means for positioning said collet controlling means, and reciprocating means adapted to impart a step by step rotative movement to said rotatable means.

1,479,315. ELECTRICAL CONDENSER AND PROCESS FOR MAKING THE SAME. GREENLEAF WHITTIER PICKARD, Newton Center, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Jan. 12, 1921. Serial No. 436,650. 16 Claims. (Cl. 250—41.)

1. An electrical condenser element which comprises a dielectric sheet having two sheets of metal integrally united with the central portions of its two side surfaces, each metal sheet extending to a portion of the edge of the dielectric sheet, said extensions of the metal sheets being respectively to portions of the edge of the dielectric sheet which are spaced from one another.



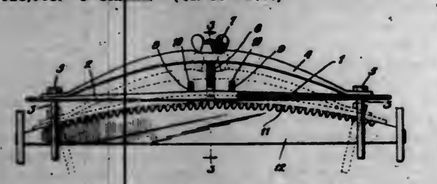
13. The herein-described method of making electrical condensers which consists in depositing electrically continuous layers of metal upon sheets of dielectric by the application of metal in a finely divided state to central parts of the sheets within their edges but extending to a certain portion of the edge of each sheet, while leaving free of metal a margin along the remaining portions of the edges of the dielectric sheets; building a stack of such metal-coated dielectric sheets; treating the stack with insulating material; and making connections between layers of metal, via the portions thereof which extend to the edges of the dielectrics, to form a condenser having two groups of metal layers respectively of opposite polarity, substantially as described.

16. An electrical condenser stack comprising dielectric sheets, each of which has a metal sheet integrally united with a part of its surface and extending to one portion of the edge thereof but not to another portion of such edge, said compound sheets being arranged in the stack in pairs whereof the extending metal portions of one pair lie in contact with the extending metal portions of the pairs on opposite sides of said given pair; and whereof said non-covered surfaces of the dielectric sheets of one pair lie adjacent to like surfaces of the dielectric sheets of the pairs on opposite sides of said given pair, and form spaces near the edges of and between successive pairs; insulating material in said spaces; said contacting extending metal portions being electrically connected together in two separate groups to constitute the two terminals of the condenser.

1,479,316. PIPE CLAMP. RALPH S. PHISCH, Hinsdale, Ill. Filed Oct. 11, 1920. Serial No. 416,166. 3 Claims. (Cl. 173—273.)

1. In a clamp, the combination with a bridge piece having an arcuate portion and a laterally extending outwardly projecting extension of U-shape joined at

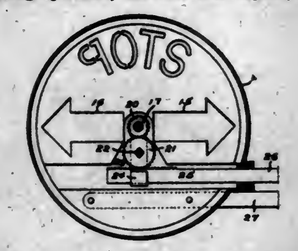
one end with one end of the arcuate portion of the bridge piece; of a circular band having two lateral outwardly projecting extensions, one between the sides of the U-portion and the other overlying the arcuate



bridge portion; and a clamping bolt passing through passages that are formed in the lateral extensions of said band and bridge piece, the free end of the U-shaped extension having an angular continuation for the attachment of wire thereto.

1,479,317. PIPE CLAMP. RALPH S. PRICE, Hinsdale, Ill. Filed Nov. 27, 1922. Serial No. 603,432. 3 Claims. (Cl. 24—19.)

1. In a clamp, the combination with a band that is oblong in cross section and has two outwardly extending lateral projections formed with bolt receiving passages therethrough; of a bolt passing through said passages having threads receiving an edge portion of the band and whose intercrown space is wider than the thickness of the band, the portion of the band that engages the thread of the bolt being of helical curvature at its thread engaging edge which conforms to the spiral of such thread.

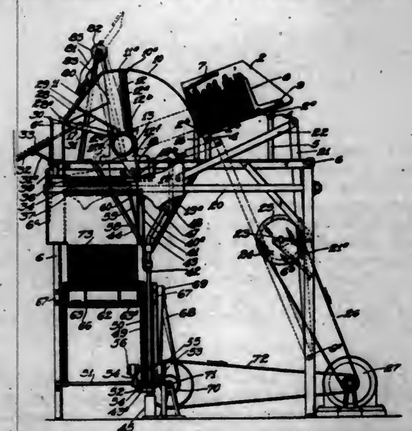


1,479,318. SAW-SETTING DEVICE. HENRY PIETEMAA, Poulsbo, Wash. Filed Feb. 9, 1923. Serial No. 618,063. 5 Claims. (Cl. 33—202.)

1. A saw gauge, comprising a flexible gauging plate, means for flexing said plate to conform to the curvature of the saw, and means carried by said plate for gauging cooperation with certain teeth.

1,479,319. SIGNAL DEVICE. ARTHUR GARFIELD REMHILT, Philadelphia, Pa. Filed July 18, 1921. Serial No. 485,591. 6 Claims. (Cl. 116—47.)

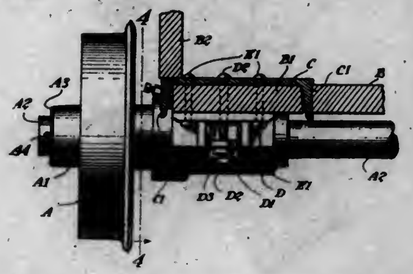
1. A device of the character described including a case having perforations in its front and rear indicating visible signal positions; and a member movable within said case having on its opposite parts portions of reflective and comparatively non-reflective character, said member being optionally movable into registry with said



perforations of the front and rear of the case to expose any one of said signal perforations with said reflective portion, substantially as described.

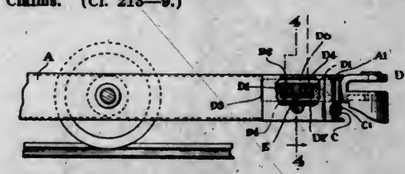
1,479,320. RIVET BREAKER OR CUTTER. ALBERT G. RICE, Indianapolis, Ind., assignor to Rice Manufacturing Company, Indianapolis, Ind. Filed Dec. 10, 1919. Serial No. 343,893. 2 Claims. (Cl. 121—21.)

1. A pneumatic implement of the class involving in operation a manually controlled alternating stroke, comprising an elongated barrel having an inlet provided at one side of the head of the barrel to admit a pressure fluid, a plunger reciprocally mounted therein for actuation by said fluid, a rotatable valve mounted in the head of the barrel communicating with said inlet and having an unobstructed curved wall free from shoulders to direct the full pressure at maximum velocity immediately into the barrel against an end of the plunger whereby the direction of movement of the fluid is changed into line with the movement of the plunger with a minimum loss of effective impact force, and means for operating said valve.



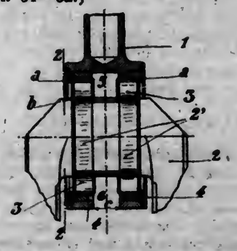
1,479,321. MAIL CANCELING, SORTING, AND DISTRIBUTING MACHINE. MARTIN S. RUNSVOLD and HARRISON G. SLOANE, San Diego, Calif. Filed Apr. 5, 1922. Serial No. 549,731. 57 Claims. (Cl. 101—2.)

1. In a machine of the class described, a feeding chamber, a means for singly extracting the contents from said chamber, a display member spaced and separated from



said feeding chamber for displaying the contents of said chamber and adapted to communicate with said extracting means and a distributing means adapted to receive said contents from the displayer member and distribute the same.

1,479,322. MINE CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed June 3, 1922. Serial No. 565,567. 36 Claims. (Cl. 295—42.)

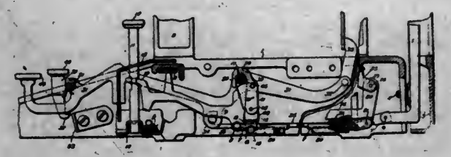


28. In a structure of the kind described, the combination with a car body, an axle, an axle box, means directly engaging the axle box for limiting movement of the axle box parallel to the length of the car body and permitting up-and-down movement, a trunnion-form ear at each side of the axle box in the middle upright transverse plane of said box, and springs extending downward from the car bottom and resting on said ears, substantially as described.

1,479,326. RAILWAY CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed May 10, 1921. Serial No. 468,253. 9 Claims. (Cl. 213—9.)

1. In a vehicle of the kind described, the combination of longitudinal sills formed of flanged irons having their ends bent to form arch-shape members and then bent backward in parallel relationship, the flange stiffening the sills and forming a housing with parallel upright walls for a draw-bar, substantially as described.

1,479,324. ROLLER BEARING FOR CRANK SHAFTS, CONNECTING RODS, AND THE LIKE. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Sept. 19, 1923. Serial No. 663,659. 10 Claims. (Cl. 64—62.)

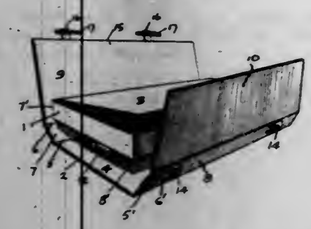


1. In a roller bearing, the combination of a crank shaft having inner roller races formed thereon, outer roller races comprising one-piece rings having internal diameters of sufficient size to provide for slipping the same into position over a crank of said shaft, and a plurality of rollers confined in rolling engagement with said inner races by said rings.

1,479,325. CHUCK. JOSEPH SCHUBNEL, North Adams, Mass. Filed Oct. 8, 1921. Serial No. 506,510. 2 Claims. (Cl. 77—66.)

1. A drill chuck comprising a body, and drill-gripping jaws protruding from the forward end thereof, said protruding ends of the jaw having countersinking cutting edges, a gage ring carried by the chuck body, and adjustable to project from the forward end of the chuck body, and having a diameter to encircle the protruding ends of the jaws, a shank carrying the chuck body, and having a threaded portion, a traveling nut on said threaded portion, rods carrying the gage ring and slidably supported by the chuck body, and a member swiveled to the nut and having a connection with the rods.

1,479,326. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Mar. 24, 1922. Serial No. 546,316. 7 Claims. (Cl. 197—176.)



1. In a typewriting machine, the combination of a cross bar having a peripheral bearing groove therein, a depending arm having a hook-like bearing portion seated in said peripheral bearing groove, and a retaining member carried by and straddling said arm and coacting with the periphery of the shaft outside and on opposite sides of said peripheral groove to prevent a displacement of the arm transversely of the cross bar, said retaining member being

movably mounted on the arm for movement into and out of retaining position whereby the arm may be readily dismounted when the retaining member is open by a displacement of the arm transversely of the cross bar.

1,479,327. METHOD OF TREATING STEEL. HUGH C. SICARD, Niagara Falls, N. Y., assignor to United States Ferro Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1921. Serial No. 513,768. 9 Claims. (Cl. 75—27.)

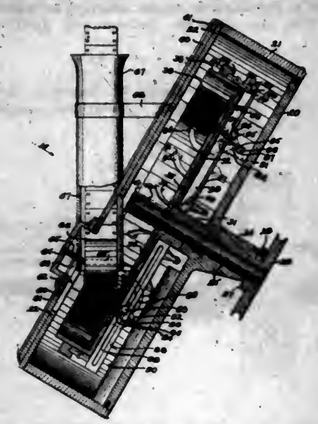
1. A process of treating steel comprising the addition to the molten metal of aluminum, and the addition of a metallic oxide which will combine with the alumina, formed by the reaction of the steel and aluminum, and lower the melting point of the alumina, whereby the impurities contained in the steel will escape with the slag and flow to the surface of the molten metal.

1,479,328. BOX. JOSEPH C. SINEL, San Francisco, Calif. Filed Nov. 3, 1921. Serial No. 512,554. 1 Claim. (Cl. 229—6.)

A device such as described, comprising, in combination, a container; projections on the under face of said container; a cover having means thereon adapted to detachably engage the projections of said container, said cover comprising a sheet of material creased and foldable into middle, intermediate and end sections which are engageable respectively with the bottom, sides and top of said container, the end sections being adapted to overlap each other on the top of said container; and latch means, on an end and intermediate section for engaging each other.

1,479,329. BEVERAGE. MARJORIE G. SNELLING, Allentown, Pa. Filed Sept. 10, 1921. Serial No. 499,681. 5 Claims. (Cl. 99—11.)

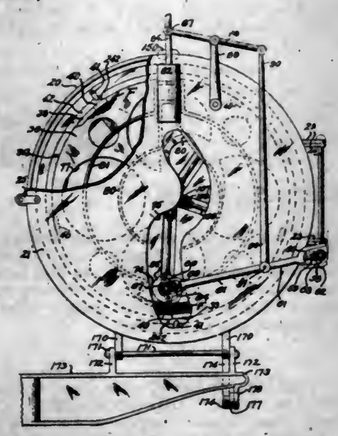
1. In the preparation of beverages the process which comprises treating the peel of a citrous fruit with an aqueous solution of lactic acid.



1,479,330. PLASTIC PRODUCT. WALTER O. SNELLING, Allentown, Pa. Filed Apr. 30, 1920. Serial No. 377,943. 3 Claims. (Cl. 99—16.)

2. The process which comprises vulcanizing an oil, depolymerizing the factis so obtained, repolymerizing the resulting material, and incorporating the products so obtained with a resin.

3. A chicle substitute compoising a vulcanized oil and a resin.



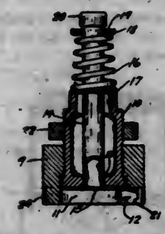
1,479,331. NON-REWIND REEL FOR MOTION-PICTURE FILMS. HARRY M. STEPHENSON, Denver, Colo. Filed Aug. 28, 1919, Serial No. 320,380. Renewed Aug. 11, 1922. Serial No. 581,261. 30 Claims. (Cl. 88—18.7.)

1. In combination a reel and a carrier therefor, and tension devices mounted on said structure and normally engaging the film as it builds up in the reel and yielding bodily inwardly during the film winding operation, and

means acting on the said devices to cause them to release the film at predetermined intervals.

1,479,332. INTERNAL-WIND REEL MECHANISM FOR MOTION-PICTURE MACHINES. HARRY M. STEPHENSON, Denver, Colo. Filed Dec. 22, 1919, Serial No. 346,540. Renewed June 4, 1923. 20 Claims. (Cl. 88—18.7.)

1. An internal-wind mechanism, comprising a casing, an internal-wind reel within the casing, means to drive the reel, means within the reel to engage a film, and power-driven means to positively feed the film into the reel, said film-engaging means comprising intermittently movable pressure devices adapted to be withdrawn from the film as the reel passes the incoming portion of the film.

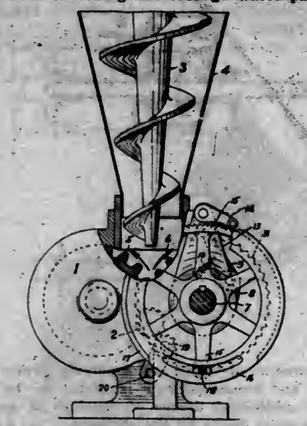


1,479,333. AUTOMATIC TAPE OR FILM REVERSING REEL. HARRY M. STEPHENSON, Denver, Colo. Filed Sept. 27, 1919, Serial No. 326,852. Renewed June 4, 1923. 14 Claims. (Cl. 88—18.7.)

1. An automatic tape- and film-reversing reel, comprising a support, a rotary reel carrier on said support, a reel for internal winding of the tape or film mounted to rotate with the carrier, a plurality of fingers slidably and pivotally mounted on the carrier and having one end of each projecting within the reel to engage the film being wound therein, and means tending to draw

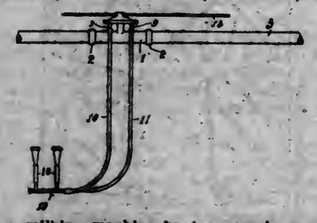
said fingers bodily outward, comprising a member mounted on the carrier for relative movement thereon, friction means on the support engaging said member, and means connecting said member with said fingers.

1,479,334. GREASE PLUG FOR LOCOMOTIVES. EDWIN WALTON STEVENSON, Cheyenne, Wyo., assignor of one-half to Charles D. Carey, Cheyenne, Wyo. Filed May 20, 1922. Serial No. 562,455. 5 Claims. (Cl. 184—38.)



5. A grease plug comprising, in combination, a tubular member having the upper portion of the opening threaded and the lower portion thereof of larger diameter than the upper; a plug threadedly engaging the upper portion of said opening, the lower end of the plug being larger than the upper end, but smaller than the lower portion of said opening, whereby the plug can be inserted into and removed from the tubular member from below only, said plug having an opening extending longitudinally therethrough; a plunger reciprocally mounted in said last named opening, said plunger having a head of substantially the same diameter as the root diameter of the lower threaded portion of the plug; and means comprising a spring operatively connected to the plug and plunger and adapted to move the latter upwardly so that the head of the plunger will engage the bottom of the plug.

1,479,335. TUBE FILLER. FRANCIS J. STOKES, Philadelphia, Pa. Filed July 12, 1921. Serial No. 484,105. 1 Claim. (Cl. 226—107.)



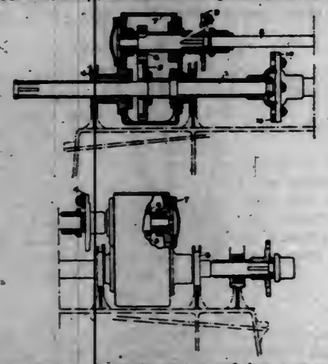
In a machine for filling containers with paste or the like the combination of a rotative feeder having intermeshing toothed wheels operating to suck paste or the like into the housing of the rotative feeder and to expel the same from the housing of the rotative feeder in quantity determined by the distance through which the wheels move, an outlet nozzle communicating with the interior of the housing of the rotative feeder and adapted

to receive paste or the like expelled by the toothed wheels and to discharge it into a container, an inlet provided for the housing and through which paste or the

like is sucked by the toothed wheels, and means for intermittently rotating said toothed wheels in the same direction through definite distances to eject definite and uniform quantities of paste or the like.

1,479,336. MILKING MACHINE. JOSEPH TAYLOR, Eltham, Taranaki, New Zealand. Filed Aug. 7, 1922. Serial No. 580,271. 4 Claims. (Cl. 31—99.)

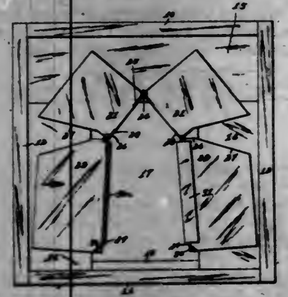
1. In a milking machine having a main vacuum milk pipe and into which the milk from the teat cups is drawn; single chambered teat cups connected with said main vacuum milk pipe which permits a small quantity of air to enter from the exterior of said cups, said teat cups divided into pairs, means whereby one pair of said cups communicate with said main vacuum milk pipe by one line, the other pair communicating by another line with the main vacuum milk pipe, means interposed between the said lines and the main vacuum milk pipe whereby communication is intermittently and alternately cut off between said main vacuum milk pipe and each line, substantially as described.



1,479,337. METHOD OF MAKING WATERMARKED STATIONERY. WILLARD M. TEMPLE, Mason City, Iowa. Filed May 28, 1923. Serial No. 642,108. 2 Claims. (Cl. 101—32.)

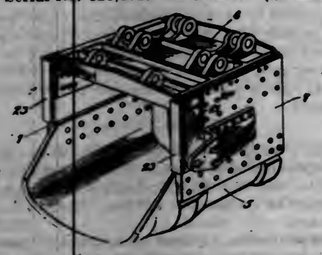
1. A process of making watermarked paper which consists in passing manufactured paper through a press and impressing thereon a mark clearly visible by both transmitted and reflected light by means of a marking fluid of a waxy nature containing a paper penetrating evaporable solvent.

1,479,338. METHOD OF TESTING GEAR WHEELS, UNIVERSAL JOINTS, AND OTHER POWER-TRANSMITTING MECHANISMS. JOHN G. P. THOMAS, Preston, England. Filed Feb. 4, 1920. Serial No. 356,183. 12 Claims. (Cl. 73—51.)



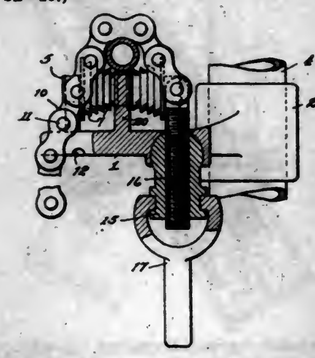
1. In combination, a circuit of mechanical power transmission elements each positively driving the next on

one side and positively driven by the next on the other side, at least one of said elements having an additional degree of freedom, means for imparting movement to



said transmission elements and supplying power to make up losses, and means for applying force to the element having an additional degree of freedom to move said element so as to strain all the elements.

1,479,339. HOG-HOUSE DOOR. CARL O. TORGERSON, Slater, Iowa. Filed Dec. 11, 1922. Serial No. 606,155. 6 Claims. (Cl. 20—16.)



2. A door frame having a door opening, a pair of upper door members for said opening, means for pivoting the upper and adjacent corners of said door members together so their lower ends may be free to swing from each other, a lower door member pivoted to the upper inner corner of each of said upper door members and means secured to one of the faces of each of said door members so arranged that the door members may be moved to an open position by being engaged by an animal's nose.

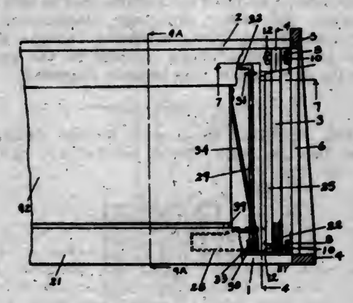
1,479,340. STEAM SHOVEL OR DREDGE DIPPER. JOSEPH A. TRAINOR, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Mar. 17, 1923. Serial No. 625,851. 11 Claims. (Cl. 214—145.)

1. A dipper embodying a front and back having confronting extensions, and side panels overlying said extensions and having a double tongue lock connection therewith to impart a degree of flexibility to the dipper to enable it to resist shocks and stresses.

1,479,341. PIPE VISE. JOSEPH TRICKEL, Reading, Pa. Filed Apr. 21, 1923. Serial No. 633,597. 3 Claims. (Cl. 81—19.)

1. In a pipe vise, the combination of a base, a pair of parallel, annularly serrated rolls of varied diameter mounted on the base for rotation, a vertical pipe supporting post located between the rolls, a chain for holding the pipe in contact against the rolls, and means for drawing said chain taut and means for holding the chain in position when so drawn.

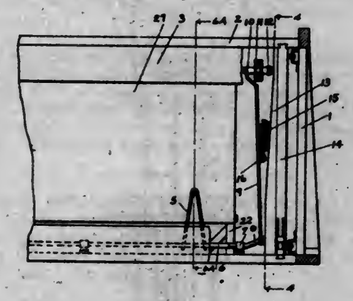
1,479,342. CAN OPENER. JOHN TRIMBLE, Philadelphia, Pa. Filed Oct. 3, 1922. Serial No. 592,014. 5 Claims. (Cl. 30—3.)



3. A can opener comprising a strip bent to form a frame; a hand grip secured to the ends of the strip; centering means on the frame, and cutting means on the frame.

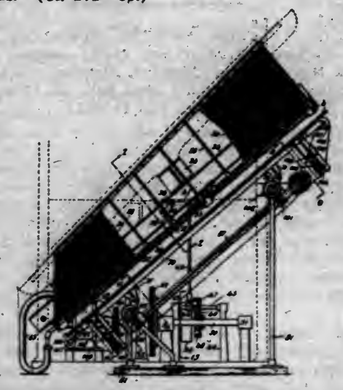
1,479,343. SURGICAL INSTRUMENT. SAMUEL A. VAN OSDEL, Johnson, Nebr. Filed Oct. 6, 1920. Serial No. 415,081. 11 Claims. (Cl. 128—309.)

11. A surgical instrument comprising an apertured member, means for clamping the part protruding through said aperture, and a severing blade movable adjacent to said clamp in a direction toward the operator to sever the protruding part.



1,479,344. BED COUCH. JERROLD F. WALTON, Sturgis, Mich. Filed May 5, 1922. Serial No. 558,555. 11 Claims. (Cl. 5—18.)

1. In a couch bed, the combination of a main section, an adjustable section slidably mounted on said main section to telescope therewith, a leg for said adjustable section, a leg supporting rod pivotally mounted on said adjustable section transversely thereof and having a crank arm, a spring acting to hold said leg normally collapsed, and a cam member on said main section coacting with the arm of said leg supporting rod, whereby the leg is erected when the adjustable section is moved to its extended position.

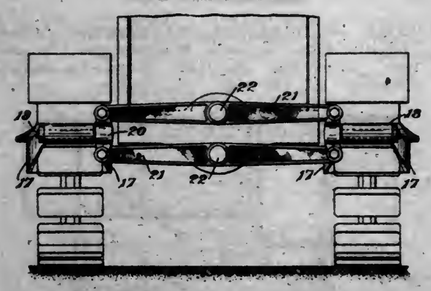


9. In a couch bed, the combination of a main section having a bottom for a portion thereof providing a receptacle adapted to receive bedding or the like, an adjustable section comprising a frame slidably mounted on said main section to telescope over the receptacle, and legs mounted on said adjustable section to collapse against the under side thereof at the outer side of the vertical walls of said receptacle.

1,479,345. COUCH BED. JERROLD F. WALTON, Sturgis, Mich. Filed May 5, 1922. Serial No. 558,554. 7 Claims. (Cl. 5—313.)

1. In a couch bed, the combination of a main section, an adjustable section slidably associated therewith, a rod having a crank at one end disposed longitudinally at the front of the adjustable section and journaled thereon, legs on said rod, an actuating lever pivotally mounted at the rear of said adjustable section, a link connecting said crank to said lever, a cam member on said main section with which said lever coacts, and a coiled spring connected to said link so that the legs are erected by the coaction of the lever and cam member when the adjustable section is extended and the legs are collapsed by the spring when the adjustable section is moved to collapsed position.

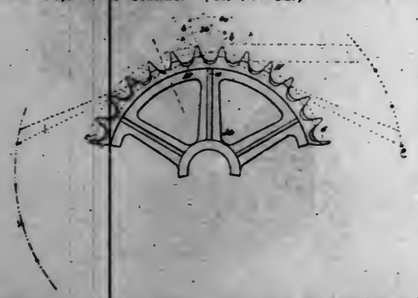
1,479,346. AUTOMATIC TAKE-OFF MECHANISM. JULIUS WEGNER, New York, N. Y., assignor to Spadone Machine Company, Inc., New York, N. Y., a Corporation of New York. Original application filed Mar. 12, 1921, Serial No. 451,856. Divided and this application filed Dec. 7, 1922. Serial No. 605,530. 6 Claims. (Cl. 271—88.)



1. A take-off comprising carrying means having an initial lineal movement and a subsequent pivotal movement out of the plane of said lineal movement and means for actuating said carrying means.

1,479,347. METHOD FOR THE HEATING OF MELTING FURNACES OR THE LIKE. EDUARD WEYMANN, Dortmund, Germany, assignor to Eisen- und Stohlwerk Hoesch Aktiengesellschaft, Dortmund, Germany. Filed Mar. 1, 1923. Serial No. 622,211. 1 Claim. (Cl. 263—1.)

The hereindescribed cyclic method which consists in generating the heat in melting furnaces by oxygenated air and fuel, generating steam by heating steam boilers by the gases escaping from said furnaces, utilizing the steam in the operation of an oxygen producing apparatus, adding to air the oxygen so produced and finally mixing the oxygenated air with fuel for again heating the furnaces.

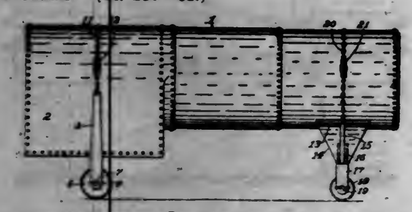


1,479,348. EQUALIZING MECHANISM FOR TRACTORS. ELMER E. WICKERSHAM, Oakland, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Jan. 26, 1921. Serial No. 439,981. 4 Claims. (Cl. 305—9.)

1. In a tractor of the self-laying track type, a main frame, a truck mechanism at each side thereof pivotally connected at one end to the main frame for rocking movement in a vertical plane and equalizing means be-

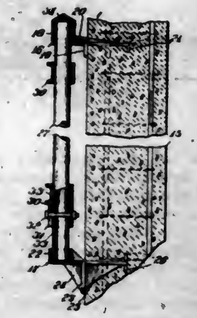
tween the opposite ends of the truck mechanisms and the main frame comprising parallel equalising bars centrally pivoted to the main frame and vertically disposed cross heads connecting the ends of said equalising bars together and a pivotal connection formed between each cross head and the adjacent truck mechanism.

1,479,349. TRACTOR DRIVING SPROCKET. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Feb. 12, 1919. Serial No. 276,524. 3 Claims. (Cl. 74—31.)



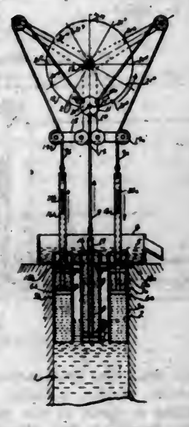
1. The combination with a chain track having cylindrical teeth of a driving sprocket therefor, said sprocket being formed with teeth having driving faces disposed at an angle of approximately 45° to each other and acting to wedge the pin teeth of the chain outwardly whereby to permit the chain to assume various pitch diameters on the sprocket, such diameters increasing in proportion with the elongation of the chain due to pitch or wear.

1,479,350. GAME ACCESSORY. ELI H. WIEL, San Francisco, Calif. Filed Jan. 3, 1923. Serial No. 610,426. 1 Claim. (Cl. 46—55.)



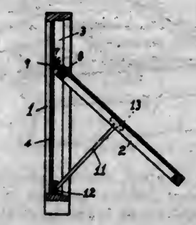
A device for use in playing a game employing tiles and counters comprising a counter tray, a movable cover on said tray and a tile rack consisting of an inclined shelf and an inclined back wall substantially perpendicular to the shelf, on said cover.

1,479,351. COMBINATION TRANSPORTING MEANS FOR BOILERS. RALPH F. WINTERBOTTOM, Waterloo, Iowa. Filed Mar. 13, 1922. Serial No. 543,271. 2 Claims. (Cl. 280—61.)



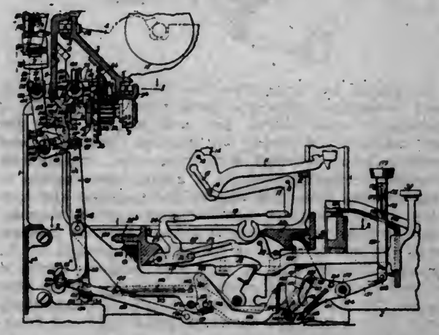
1. Combination transporting means for boilers, comprising a caster-wheel, a frame in which said caster-wheel is rotatably mounted, a saddle on which said frame is pivotally mounted and removably supporting one end of a horizontal boiler which has a fire-box at its opposite end, chain sections passed around the boiler and end-connected to opposite ends of said saddle, an adjustable separable linking-connection between the chain sections, screws mounted on opposite ends of said saddle to engage the boiler adjustingly, independent clips mounted under and fitting depending opposite sides of the fire-box, carrying wheels mounted on the clips and means for securing said clips in place releasably.

1,479,352. HINGE. WILLIAM S. WITTEN, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,861. 3 Claims. (Cl. 16—128.)



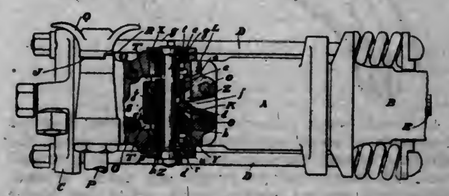
1. A hinge bracket comprising an arm adapted to be embedded in a gate post, a vertical face plate at the outer end portion of said arm and adapted to bear against the gate post, a vertical web extending along said arm from said face plate in position to be embedded in the gate post, and means extending outward beyond said face plate for engaging a cooperating hinge member.

1,479,353. PUMP. GEORGE M. ASK, San Jose, Calif. Filed Mar. 20, 1923. Serial No. 626,347. 1 Claim. (Cl. 103—206.)



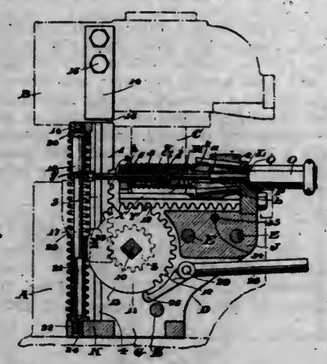
In a pump, a revoluble driving element, an element pivotally mounted thereon in eccentric relation thereto, a cable attached to said last mentioned element a distance from the center thereof, a support for said cable arranged a distance from said driving element, a lift pump operatively connected to said cable, and counterbalancing means connected to said second mentioned element and arranged at the apices of an equilateral triangle.

1,479,354. SWINGING WINDOW. HENRY T. ATKINSON, Oakland, Calif., assignor to John J. Donovan, Oakland, Calif. Filed Nov. 11, 1919, Serial No. 337,193. Renewed June 11, 1923. 5 Claims. (Cl. 20—42.)



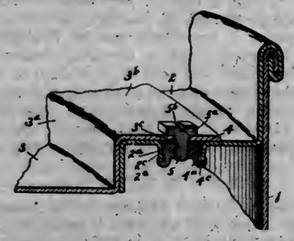
1. In a swinging window, a frame, tracks in said frame, including side flanges, U-shaped slides in said tracks, a sash, and hinges connected to said sash and to said slides, the flanges of said slides being sprung outwardly into frictional engagement with the side flanges of said tracks.

1,479,355. TYPEWRITING MACHINE. JOHN H. BARR, New York, and EDWIN E. BARNEY, New Rochelle, N. Y., assignors to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 10, 1921. Serial No. 499,682. 78 Claims. (Cl. 197—177.)



1. In column selecting mechanism for typewriting machines, the combination of a plurality of column stops, a co-operative stop, and key actuated means for moving certain of said stops first differentially in one direction to select the column and thereafter by the same key in another direction to arresting position.

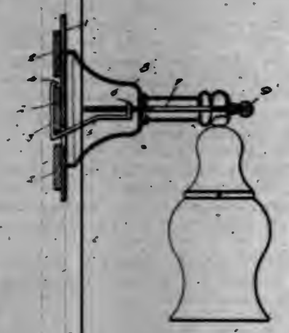
1,479,356. SPOOL VALVE FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 29, 1922. Serial No. 547,872. 4 Claims. (Cl. 121—29.)



1. In a fluid actuated rock drill of the hammer type, the combination of a cylinder and a reciprocating piston, a valve chest connected to said cylinder, inlet ports and a central exhaust port between said inlet ports at one side of the chest, admission ports in the cylinder corresponding to and supplied from the said valve chest inlet ports, exhaust ports in the cylinder between the said admission ports and leading to the central portion of the chest, valve bushings in the chest spaced apart at their inner opposed faces to form an exhaust passage through the chest, supply passages in the bushings connecting the valve chest inlet ports and the corresponding cylinder admission ports, a cylindrical valve movable in said bushings and having an enlarged central flange controlling the exhaust passage between the bushings and also having reduced and hollowed or recessed end faces controlling the said supply passages through the bushings, stops within the bushings projecting into the valve against which the bottom portions of the recessed end faces of the valve are adapted to abut for limiting the movement of the valve, and a bolt passing through the bushings, the stops and the valve for holding the parts together, whereby the valve is also guided on the bolt and actuated in one direction or the other by pressure built up through the admission ports of the cylinder and the supply passages of the bushings behind the end faces of the valve, due to compression in the cylinder.

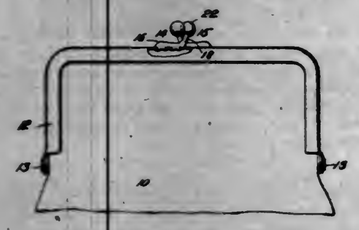
1,479,357. PIN PULLER. LEWIS C. BAYLES, Easton, Pa., and HOWARD W. MORROW, Phillipsburg, N. J., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 3, 1923. Serial No. 616,730. 20 Claims. (Cl. 29—86.1.)

1. A pin puller for a drill sharpener having a stationary base and a movable cross-head, said pin puller comprising means for holding the drill steel, clamping means adapted to securely grasp the pin, and rack and pinion mechanism actuated by the cross-head for effecting movement of said clamping means relative to the steel to withdraw the pin from the steel.



1,479,358. METALLIC RECEPTACLE. GROVER F. BEHRINGER, Defiance, Ohio. assignor to The American Steel Package Company, Defiance, Ohio, a Corporation of Ohio. Filed Mar. 18, 1922. Serial No. 544,731. 2 Claims. (Cl. 220—55.)

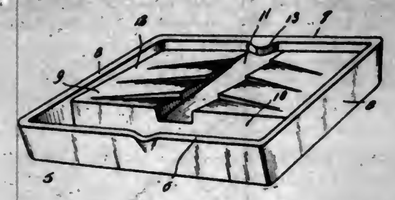
1. In combination with the wall of a receptacle provided with an opening surrounded by an inwardly extending flange, a fastening element having an irregular



shaped head embedded in and interlocking with said flange, said fastening element including a tubular portion extending from said head within said flange and beaded over the end of the latter.

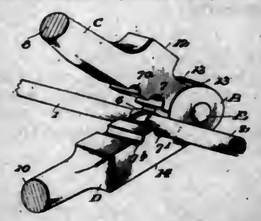
1,479,359. HANGER. FRANK REDMOND BLAKE, Bangor, Me. Filed Dec. 6, 1921. Serial No. 520,332. 1 Claim. (Cl. 240—73.)

A means for supporting a fixture from a lathed and plastered wall, comprising a hook adapted to be inserted through the wall to engage with a lath of the wall structure, said hook having its outer end formed with an angle ear having a threaded opening therethrough, a headless bolt threaded through said opening, an element thereon for contacting the wall, said bolt designed to pass through a fixture which surrounds the hook, and a nut screwed on the bolt for contacting the fixture to force the same against the wall.



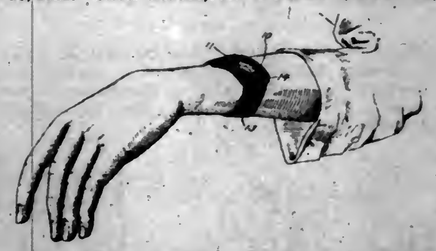
1,479,360. KNOB LOCK FOR POCKETBOOKS AND THE LIKE. MAX BLANSHAFT, ROBERT TOW, and HENRY WETSTEIN, New York, N. Y. Filed July 9, 1920. Serial No. 394,878. 3 Claims. (Cl. 292—70.)

1. A knob locking device for attachment to the frames of handbags and the like in one integral piece of sheet metal comprising a lower body portion having securing lugs on its lower edge and an upwardly projecting stem formed on its upper end with a knob having an upper body portion and leaf sections at the edges thereof folded together in edge to edge relation and completing and closing the surfaces of said knob, one of said leaf sections being integral with the upper end of said stem.



1,479,361. SOAP DISH. CHARLES P. BLEVENS, Evansville, Ind. Filed Feb. 16, 1923. Serial No. 619,341. 1 Claim. (Cl. 25—28.)

In a soap dish wherein the bottom wall is raised for the major portion of its area for providing a water receptacle at the front end of the dish, said raised portion of the bottom wall sloping away from said reservoir and

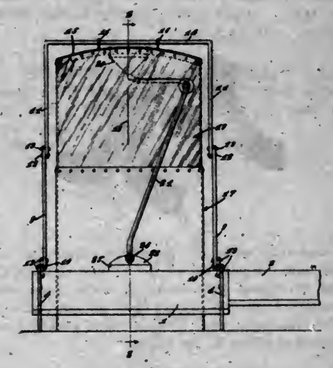


provided with a central channel sloping towards said reservoir and being further provided with transversely extending rearwardly and inwardly sloping channels.

1,479,362. TOOL FOR SPLICING CABLES. NEWTON K. BOWMAN, Canton, Ohio. Filed Feb. 3, 1920. Serial No. 356,072. 1 Claim. (Cl. 81—15.)

A splicing tool comprising two lever handle members, each including a cylindrical shank and a head portion of rectangular cross section, said head portions being pivoted together and having flat opposing faces, said head portions being provided with transverse, substantially semicircular mating passages of graded sizes opening in said opposing faces and adapted to fit around and compress splicing elements, said flat faces abutting throughout their area on both sides of and between said passages when the tool is closed to limit the compression of the splicing elements, one of said head portions having a projection forming an anvil head and the other head portion having an anvil base; whereby a substantially solid anvil is produced on which preliminary and finishing work of splicing may be performed.

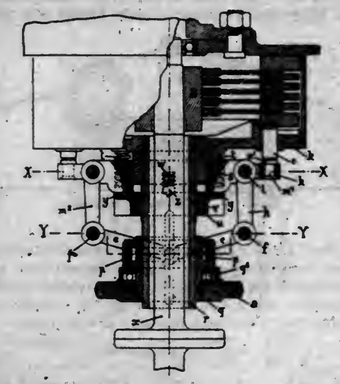
1,479,363. SAFETY-POCKET WRIST-WATCH GUARD. MARGARET ALLBEE BROWN, Muscatine, Iowa. Filed May 15, 1922. Serial No. 560,972. 5 Claims. (Cl. 224—4.)



1. A wrist-watch protector of the character described comprising a pocket adapted to receive the watch and having a central opening upon its outer face smaller than the diameter of the watch and having a longitudinal slit on its back through which the watch may be inserted into the pocket, the margin of the observation opening having a rigid ring disposed therein to which the material of the pocket is attached, and a wrist band attached to the pocket.

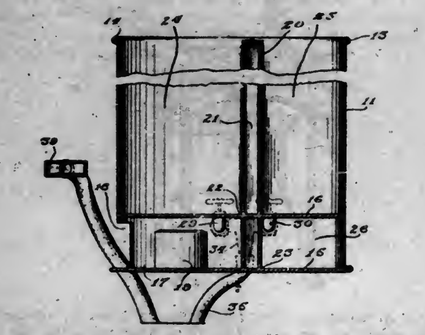
1,479,364. DENTAL FLOSS HOLDER. WALDO RALPH BROWNE, Wyoming, N. Y. Filed Oct. 10, 1921. Serial No. 506,822. 4 Claims. (Cl. 132—92.)

2. A device of the character described, comprising a tubular member terminating at its one end in a curved hollow extension finger, a semi-circular member terminating at its one end in a curved extension finger and of substantially the same length as the first named member, means for fulcruming the second member upon the first named member, said second member being adapted to fit upon the first named member, the fingers of said members extending in diverging relation, and the first named member having an opening in the free end of its finger adapted to permit the passage of thread or the like and the finger of the other member being bifurcated to receive a thread.



1,479,365. VAPOR-TREATMENT APPARATUS. THOMAS BUCK, Casper, Wyo. Filed Sept. 4, 1923. Serial No. 660,827. 3 Claims. (Cl. 4—164.)

1. A vapor treatment apparatus including a portable casing, a foldable frame adapted to be carried within the casing, means for holding the frame in set up position outside the casing to support said casing at one side, legs movably connected to the casing for supporting the opposite side thereof, a vapor generator within the casing, a flexible enclosure detachably supported by the frame and foldable into the casing, and means for conveying vapor from the generator into the enclosure.

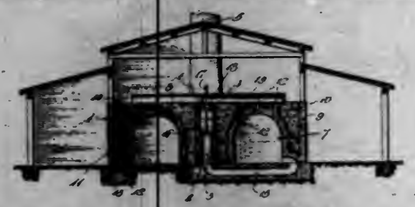


1,479,366. ADJUSTABLE ARTICULATED OPERATING MECHANISM FOR CLUTCHES, BRAKES, AND OTHER DEVICES. ETTORE BUGATTI, Molsheim, Alsace, France. Filed Oct. 27, 1920. Serial No. 419,948. 1 Claim. (Cl. 192—111.)

An adjustable articulated operating mechanism for clutches comprising a casing, a disk elements contained in the casing, push pieces adapted to act through the wall of the casing, two pivoted symmetrically disposed bell-crank levers adapted to press upon the push pieces, a hollow shaft, an adjustment ring screwing upon the hollow shaft, articulation shafts for the bell-crank levers, a sleeve carrying the articulation shafts carried with the ring during the movement of the latter, elastic means provided between the casing and the sleeve, links adapted

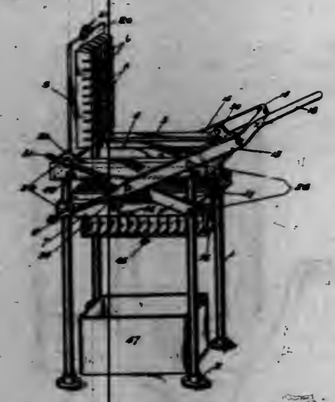
to act upon the other ends of the bell crank levers, a ring serving as an attaching point for the links, and a sleeve supporting the ring for the operation of the clutch.

1,479,367. PORTABLE SHOWER BATH. SAMUEL S. CAMPBELL, Maryville, Tenn. Filed Aug. 4, 1922. Serial No. 579,693. 1 Claim. (Cl. 4—26.)



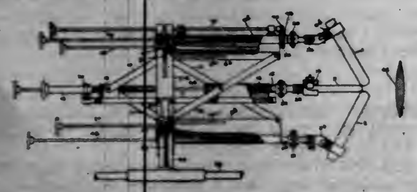
A cistern of substantially semicylindrical contour and a flat back wall, a flat bottom, a double partition extending from said flat bottom to the upper open end of the cistern dividing the cistern into compartments, a second flat bottom spaced above said first bottom and sealing from each other the chambers formed above and below said second bottom, one of the lower chambers having an opening in the semicylindrical wall for the insertion of a heating element for heating the chamber directly above the same, a faucet for each of said chambers above said second bottom and a common spout connecting said faucets, whereby said upper chambers may be emptied simultaneously or separately.

1,479,368. BRICKKILN. BAPTISTE F. CANAVERA, St. Louis, Mo. Filed Jan. 2, 1923. Serial No. 610,283. 2 Claims. (Cl. 25—134.)



1. A kiln comprising a central wall whose upper portion is hollow and forms a horizontal flue leading to a stack, the lower portion of said wall having vertical passages in valved communication with the flue and the upper portion of the wall having inlet passages; a continuous tunnel surrounding said central wall and having down-draft flues in its bottom discharging into said vertical passages, the outer wall of said tunnel having

temporary fire openings while the crown of said tunnel is formed with fuel feeding openings; and arched transversely disposed conduits resting removably on and extending between the crowns of said tunnel and said hori-



zontal flue, said conduits being in communication with said fuel feeding openings and the upper inlet passages of said horizontal flue whereby to establish communication between the upper portion of the tunnel and the horizontal flue when said conduits are in place.

1,479,369. VEGETABLE CUTTER AND SLICER. JAMES S. CHOUNIS, Charleston, W. Va. Filed Sept. 17, 1923. Serial No. 663,139. 10 Claims. (Cl. 146—160.)

1. A vegetable cutter comprising a plurality of vertical standards, an open top frame fixed upon the top of said standards, a cross-slotted block hinged to the open frame, and a knife-carrying frame adapted to reciprocate upon the standards.

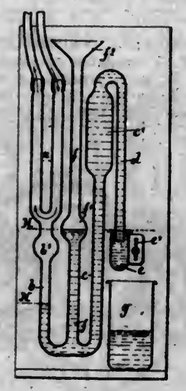
1,479,370. ELECTRIC ARC LAMP. LESLIE R. COFFIN, Bellingham, Wash., and REUBEN W. MASTICK, Jr., San Francisco, Calif. Filed June 8, 1917. Serial No. 173,583. 3 Claims. (Cl. 176—51.)

1. In a projector type of arc-lamp, the combination of a lens, three movable electrodes, a means for holding said three electrodes in substantially the same plane, the central one of the electrodes being in substantial alignment with the axis of the lens, the outer two inclined with respect to the central electrode, so as to cause the three electrodes to converge toward a common point substantially coincident with the axis of the lens, and a manually operable means for moving individually each of the three electrodes axially toward and away from the lens.

1,479,371. STRIKER PLATE FOR LOCKS. LOUIS MOSKOWITZ, Brooklyn, N. Y., and BENJAMIN J. COHON, Westwood, N. J. Filed Aug. 6, 1920. Serial No. 401,571. 1 Claim. (Cl. 292—340.)

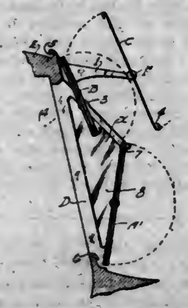
A striker plate comprising a body having a projection extending substantially at right angles thereto from one face thereof adjacent one end of same to engage the face of a supporting frame, said body having an opening therethrough between said end and said projection, and webs uniting both ends of the projection to the body above and below said opening, said projection and the portion of the body on the side of the web opposite the opening having holes to give passage to fastening members.

1,479,372. NONSKID DEVICE. LEROY C. COOK, Deer River, Minn. Filed Oct. 11, 1922. Serial No. 593,789. 2 Claims. (Cl. 152—14.)



1. A non-skid shoe of the class described including a curved body, a pair of plates at the ends of the body including diverging extensions at their inner ends, and a rib mounted on the outer face of the body between the plates, the outer edge thereof being straight and flush with the outer edges of the plates.

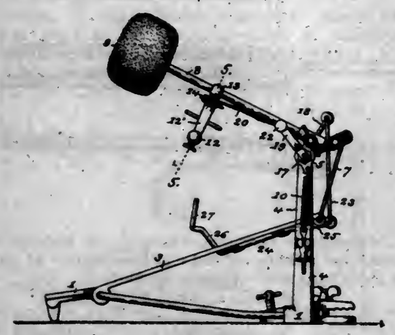
1,479,373. CAR WHEEL. THOMAS M. COOK, Philadelphia, Miss. Filed May 2, 1923. Serial No. 636,224. 1 Claim. (Cl. 295—20.)



A car wheel of the class described including a body having a periphery beveled and provided with an annular recess, a rim having its outer periphery provided with a flange and its inner periphery provided with another flange and a tapered or beveled surface corresponding with the periphery of the body, said inner flange adapted to be seated in the recess of the body, and a plurality of bolts passing transversely through the body and the rim so as to cross the beveled periphery of the body and the tapered surface of the rim within their marginal edges and to be spaced therefrom for holding the body and rim together in the manner and for the purpose specified.

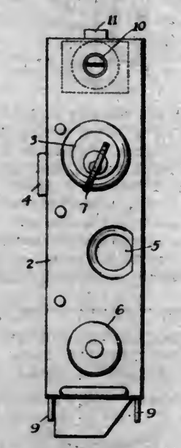
1,479,374. LOW-PRESSURE AUTOMATIC GAS CUT-OFF. JAMES TIBURCE FELIX CONTI, Paris, France. Filed Jan. 25, 1922. Serial No. 531,724. 5 Claims. (Cl. 67—115.)

1. A safety apparatus for piping used for gaseous fluids, comprising a U-tube interposed in the piping of the gas to be controlled, a siphon leading from the bottom of the said U-tube, liquid contained in the said siphon, a vessel communicating with the downwardly extending discharge branch of the said siphon, and means for effecting the automatic unpriming of the siphon when the gas pressure falls below a stated value.



1,479,375. CLEAR-VISION WINDSHIELD. WILLIAM DE FORREST CROWELL, St. Louis, Mo. Filed Mar. 16, 1920. Serial No. 366,248. 5 Claims. (Cl. 296—91.)

1. A clear vision slot wind shield composed of two upper parts mounted so that they can be arranged in an upright position wherein they form the front and rear walls of an updraft flue open at its sides and upper end, or in a position wherein the front part constitutes a forwardly-inclined sun-shade or rain visor that is disposed at an angle to said rear part, and a baffle constituting the lower part of the shield and adapted to be arranged in a forwardly-inclined position with its top edge positioned intermediate the bottom edges of said upper parts but below the same when said upper parts are being used to form an updraft flue.

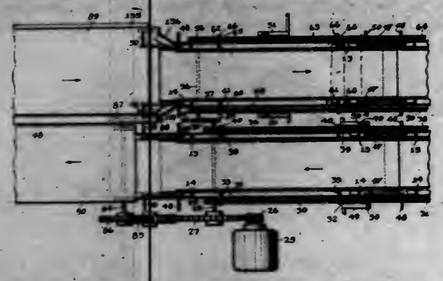


1,479,376. DRUM AND CYMBAL BEATER. ROBERT C. DANLY, Chicago, Ill., assignor to Ludwig & Ludwig, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1922. Serial No. 548,750. 10 Claims. (Cl. 84—422.)

3. In a drum and cymbal beater mechanism, the combination of a floor base having an upstanding post, a main pedal pivoted on said base, a main rock shaft journalled at the upper end of said post and operatively connected to said pedal, a carrying stem for a drum beater head fixedly connected to said shaft, an auxiliary rock shaft mounted in close relation to said main shaft,

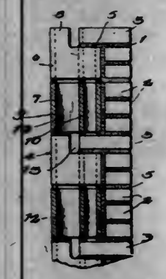
an auxiliary pedal mounted on the main pedal and operatively connected to the auxiliary rock shaft and a carrying arm for a cymbal beater head movably mounted on said carrying stem of the drum beater head and having operative connection with said auxiliary rock shaft.

1,479,377. LOCK. AUGUSTINE DAVIS, Jamaica, N. Y., assignor to American Locker Company, Boston, Mass., a Corporation of Delaware. Filed May 12, 1922. Serial No. 560,287. 1 Claim. (Cl. 70—14.)



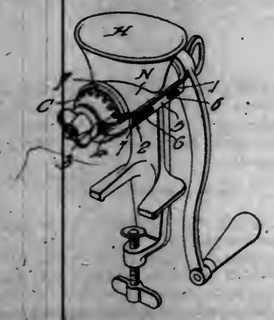
A lock comprising a plate adapted to be placed in an opening and carrying a lock mechanism having a bolt for locking a closure, in combination with a second key lock carried by the plate and having a bolt for locking the plate in its opening.

1,479,378. MEANS AND METHOD FOR TRANSPORTING LOOSE MATERIAL. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed June 23, 1919. Serial No. 306,154. 58 Claims. (Cl. 198—181.)



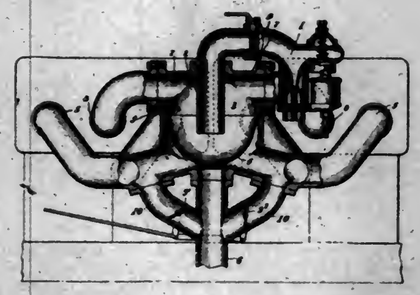
1. A transporting mechanism for loose material in bulk including in combination a plurality of concatenated transporting units, a trackway along which they travel,

another plurality of concatenated transporting units, a trackway along which they travel in the opposite direction,



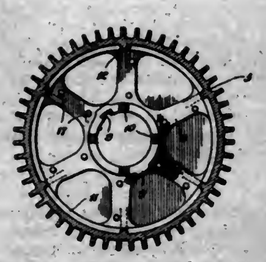
and automatically operating means at the ends of the trackway for shifting the end unit transversely of itself from the coming units to the going units.

1,479,379. COMPOSITE BRICK AND TILE WALL CONSTRUCTION. WILLIAM GUSTAVUS DEMAREST, Metuchen, N. J. Original application filed Sept. 2, 1920, Serial No. 407,642. Divided and this application filed Aug. 2, 1922. Serial No. 579,310. 1 Claim. (Cl. 72—41.)



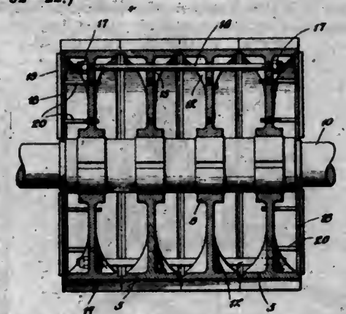
A composite brick and tile wall construction comprising, in combination with a brick facing having ordinary courses and header courses, a plurality of complementary courses of tile arranged behind each group of ordinary courses comprehended between adjacent header courses, certain of the tile having reduced extensions disposed behind said header courses, the tile and the reduced extensions having continuous vertical openings therein constituting suitable vertical air passages through the wall and serving to dissipate the moisture finding its way in through the wall.

1,479,380. CUTTER CLEANER FOR FOOD CHOPPERS. LOUIS C. EDWARDS, Ellington, Conn. Filed Apr. 12, 1923. Serial No. 631,639. 4 Claims. (Cl. 146—188).



3. A cutter cleaner comprising a block-like portion, and cleaner including a curved finger and a shank, the latter engaging said portion and being provided with elongated slots, and binding screws carried by said block-portion and extending through said slots.

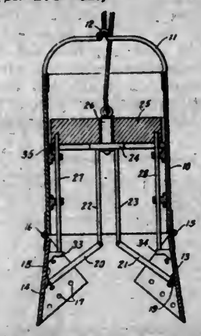
1,479,381. LIQUID-FUEL VAPORIZER. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed May 1, 1918, Serial No. 231,808. Renewed June 8, 1923. 7 Claims. (Cl. 123—122.)



1. A method of operating engines on low grade liquid fuels which consists in producing, in a carburetor connected to the engine intake ports, a mixture of air and liquid fuel in engine-operating proportions, the liquid fuel being suspended in or carried along by the air, delivering said mixture through a spout against an exhaust-heated wall of a vaporizing chamber which forms part of the suction intake, with an entering velocity adapted to cause the suspended liquid therein to separate from the gaseous flow and adhere to said heated wall, simultaneously causing the gaseous part of said mixture to flow reversely around the exterior of the spout and along and over said heated wall with a reduced velocity adapted to spread and maintain the so-deposited liquid in the form of a film thereon without permitting said liquid to become resuspended in said gaseous part whereby the heat is directly applied to the liquid part and only indirectly and slightly transmitted to said gaseous part, and conducting the resulting gaseous mixture from the chamber and delivering it in a relatively cool and dry state to the engine.

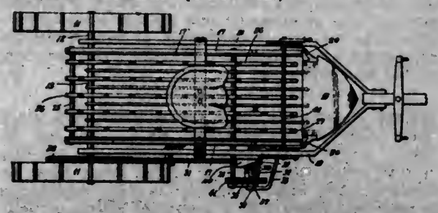
1,479,382. INTEGRAL BEATER ROLL. GEORGE R. HANKS and STANLEY APGAR, High Bridge, N. J., ALFRED R. BENCH, Easton, and GEORGE L. BIDWELL, Riegelsville, Pa., assignors to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Mar. 2, 1923. Serial No. 622,384. 13 Claims. (Cl. 92—22.)

1. A beater roll embodying a hollow cylinder with integral knives and with integral radial supports formed, with shaft openings.



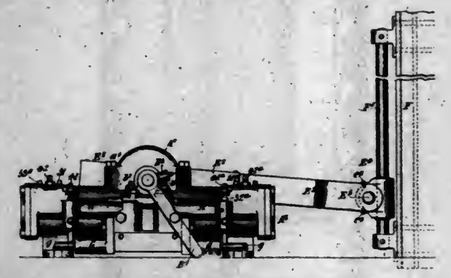
1,479,383. SECTIONAL BEATER ROLL. GEORGE R. HANKS and STANLEY APGAR, High Bridge, N. J., ALFRED R. BENCH, Easton, and GEORGE L. BIDWELL, Riegelsville, Pa., assignors to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Mar. 2, 1923. Serial No. 622,385. 12 Claims. (Cl. 92—22.)

1. A beater roll embodying ground seated roll sections with integral knives and spokes with shaft receiving elements and means for justifying and maintaining the alinement of the knives.



7. A beater roll embodying a shaft, and a series of roll sections each of which is independently locked to the shaft.

1,479,384. GRAB BUCKET. PATRICK J. HEALEY, Jersey City, N. J. Filed Mar. 4, 1922. Serial No. 540,949. 3 Claims. (Cl. 294—71.)

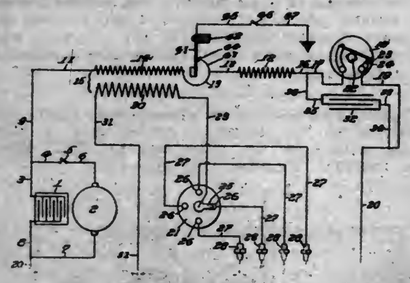


1. A grab bucket having jaws, a weight within said bucket for urging said bucket downward guides for said weight and brackets upon said jaws, upon which said rods rest to prevent the closing of the jaws during the downward movement.

1,479,385. PEANUT HARVESTER. CHARLES M. HURST, Robersonville, N. C. Filed Nov. 3, 1921. Serial No. 512,494. 2 Claims. (Cl. 55—51.)

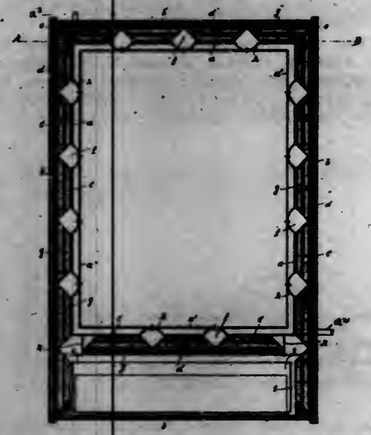
1. In a machine of the character described, a wheeled support, an inclined frame pivoted to said support a scraper fixed to the lower extremity of said frame, a plurality of stationary bars provided with upwardly extending teeth secured to said frame, a plurality of toothed reciprocating bars and means to reciprocate said last named bars.

1,479,386. FLUID-PRESSURE ENGINE. LEE P. HYNES and JOHN W. CONWAY, Albany, N. Y., assignors to Consolidated Car Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Oct. 18, 1918. Serial No. 258,704. 13 Claims. (Cl. 121—44.)



1. A stroke-work engine comprising a double-acting cylinder, independent adjusters for the pressure-flow and the checking flow at each end of the cylinder, two sets of spring-actuated valves one set for each end of the cylinder, a manually controlled valve-operator acting to lift each set of valves against the force of its springs, and means to automatically release a lifted valve-set at the end of the stroke.

1,479,387. METHOD FOR THE PRODUCTION OF MANGANESE STEEL. RICHARD D. JORDAN and JOHN H. HALL, High Bridge, N. J., assignors to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed June 5, 1922. Serial No. 566,142. 27 Claims. (Cl. 204—64.)

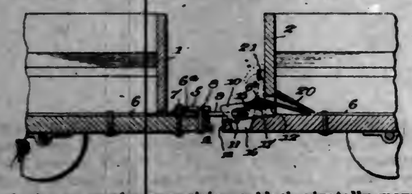


1. The herein described method for the rapid production of maganese steel in the electric furnace, which consists in introducing the necessary charge and priming it at or in the vicinity of the electrodes to insure quick contact and, having guarded against oxidizing conditions, applying full current density and maintaining it for the duration of the heat.

1,479,388. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ARTHUR ATWATER KENT, Rosemont, and WILLIAM A. EVANS, Fort Washington, Pa.; said Evans assignor to said Kent. Filed July 27, 1917. Serial No. 183,025. 7 Claims. (Cl. 123—148.)

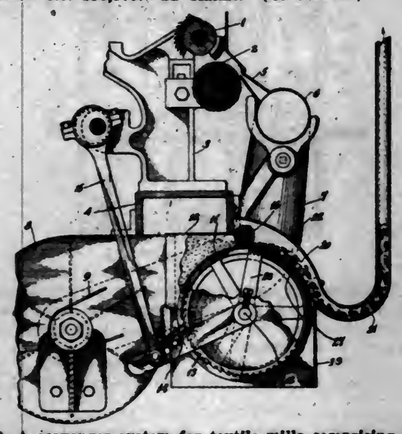
1. In an ignition system, the combination of a primary circuit including a timer, a secondary circuit including a distributor, a normally open shunt circuit around said timer having a less resistance than the resistance of the shunted portion of said primary circuit, a current interrupter in said shunt circuit, and means for closing said shunt circuit.

1,479,389. REFRIGERATING CHAMBER. FRIEDRICH KÖNIG, Munich, Germany. Filed Aug. 27, 1921. Serial No. 496,574. 4 Claims. (Cl. 62—89.)



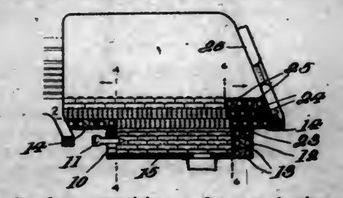
2. In a refrigerator, the combination of a provision chamber with hollow walls through which water is circulated, of flexibly mounted stoneware slabs disposed about said walls, an air circulating space being provided between the adjacent edges of the slabs and the walls, said air spaces being arranged by the edges of the slabs which are bevelled at an angle to the faces thereof attached to the flexible material, an inlet pipe and outlet pipe for the hollow walls, and a cooling chamber at one end of said refrigerator and in communication with said air spaces, substantially as described.

1,479,390. TYPEWRITING MACHINE. RICHARD J. LEWIS, Mohawk, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 3, 1922. Serial No. 572,453. 22 Claims. (Cl. 197—88.)



1. In escapement mechanism for typewriting machines, the combination of a dog carrier, a dog mounted thereon and movable independently thereof, a stop for said dog composed of spring wire normally out of contact with said dog, and adjusting means for affording compression and expansion of said stop.

1,479,391. CAR COUPLING. GRANVILL E. LILLY, Glen Morgan, W. Va., assignor of one-half to J. A. Lilly, Glen Morgan, W. Va. Filed May 14, 1923. Serial No. 638,791. 2 Claims. (Cl. 213—179.)

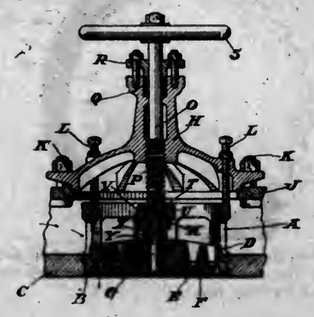


1. A car coupler comprising a block pivotally mounted on the car, to swing laterally, a link pivotally mounted in said block to swing freely vertically upward, a stop for preventing said link from swinging downward below a horizontal position, and a hook adapted to cooperate with said link.

1,479,392. SCAVENGING SYSTEM FOR TEXTILE MACHINERY. JAMES J. MCGOWAN, Pawtucket, R. I., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed July 22, 1921. Serial No. 486,879. 11 Claims. (Cl. 19—65.)

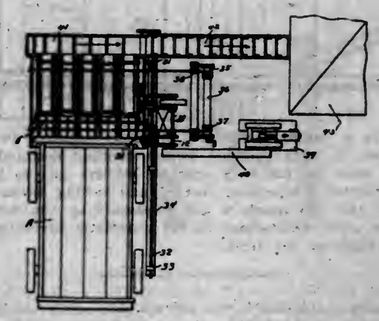
3. A scavenger system for textile mills comprising the combination with a plurality of textile machines, of suction scavenger apparatus including suction fans having large volume air flow with reference to the fibre removed and fibre-screening means, such scavenger apparatus being incorporated in said machines and pneumatic conveyor apparatus comprising collector piping associated with said local screening means and having relatively small volume of air flow with reference to the fibre moved therein and adapted to conduct such fibre to a remote place of deposit.

1,479,393. FIRE-BOX LINING. JESSE C. MARTIN, Jr., San Francisco, Calif. Filed June 20, 1922. Serial No. 569,579. 8 Claims. (Cl. 110—86.)



1. A fire box comprising a fire pan having a shelf and a depressed portion, a fluid fuel burner projecting through an end wall of said depression, a lining for said depression including bricks on edge in the wall opposite said burner exposing end edges to flame from said burner, a layer of bricks on edge upon said shelf terminating adjacent the inner surface of said depression and presenting end edges only of bricks about the opening into said depression.

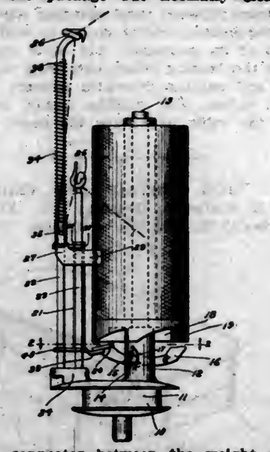
1,479,394. MANUFACTURE OF RUBBERIZED FABRIC. JAMES MEADE, Stoughton, Mass. Filed Jan. 30, 1923. Serial No. 615,968. 5 Claims. (Cl. 18—63.)



1. The method of producing a fixed glossy finish on rubberized fabric which comprises the steps of preparing the rubberized fabric with a dusting of starch, partially curing the fabric in a sulphur chloride vapor, and completing the cure with a solution of sulphur chloride in the liquid phase.

1,479,395. PLATE-VALVE LIFTER. CHESTER W. METZGAR, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1922. Serial No. 562,372. 3 Claims. (Cl. 251—119.)

1. A plate valve lifter, comprising a valve cage adapted to lie in a valve opening in the cylinder wall of a compressor, a plate valve including its seat, stop plate and stud seated in said cage, a bonnet adapted to be secured to the compressor outer casing over the said cage, means on the bonnet bearing upon the cage for holding the cage in position, and manual means carried by the bonnet and connected to the plate valve structure, for lifting said plate valve and its associated parts relatively to the said cage.

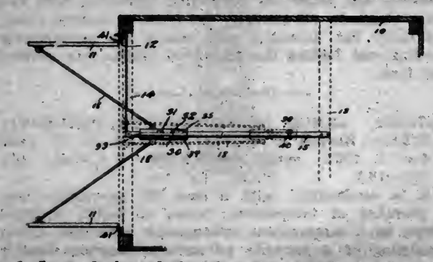


1,479,396. CORN HUSKER. JOHN A. MEYER, Malcom, Iowa. Filed Apr. 10, 1923. Serial No. 631,131. 1 Claim. (Cl. 130—5.)

In a corn husker of the class described, a frame, pairs of husking rolls journaled within the frame, the rolls of each pair rotating in reverse directions, driving connections between certain of the rolls of each of the pairs, means for driving said certain rolls, longitudinal rods supported in an elevated position between adjacent pairs of rolls, presser boards in position above said pairs of rolls and spring arms carried by the presser boards the ends of which are eyed for receiving the longitudinal rods.

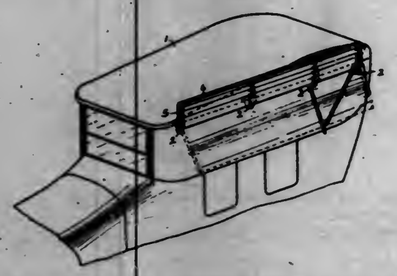
1,479,397. CARRIER FOR BRAIDING MACHINES. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1923. Serial No. 659,105. 6 Claims. (Cl. 96—15.)

6. A carrier for braiding machines having a package spindle, a weight guiding standard, a compression spring on said standard acting upon said weight, a pivoted package feed controlling latch having a portion extending beneath the package but normally clear of the same, and a connector between the weight and latch whereby an excessive upward movement of the weight moves the latch to raise the package from its seat.



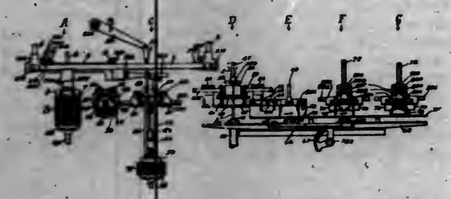
1,479,398. COMBINED DOOR CATCH AND BUFFER. JAMES C. OLLARD, Chester, Pa. Filed Oct. 28, 1920, Serial No. 420,228. Renewed May 1, 1923. Serial No. 513,552. 8 Claims. (Cl. 292—340.)

1. A combined door catch and buffer comprising a casing composed of inner and outer walls and a connecting wall or portion, said casing being provided at the inner wall with an opening and having an attaching member arranged at an angle to the inner wall; a catch or keeper located at the said attaching member and adapted to be engaged by the catch of a door, and an anchored door engaging member extending through the opening of the front wall and arranged to be placed under tension by the door for holding the latch of the latter in engagement with the catch or keeper.



1,479,399. OPERATING AND LATCH DEVICE FOR DOORS. RICHARD OLSON, Superior, Wis. Filed June 3, 1921. Serial No. 474,620. 2 Claims. (Cl. 268—9.)

1. In a device of the character described, the combination of hinged door elements, means acting to close the doors yieldingly, a rectilinear guide adjacent the



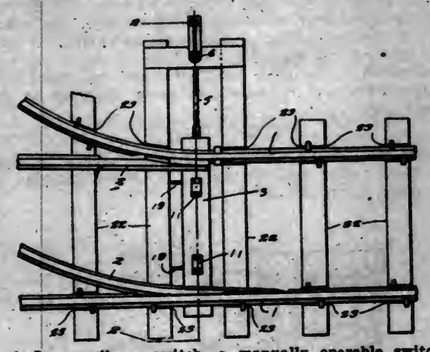
swinging edges of and vertical to the plane of the closed doors, a slide thereon, link elements connected to respective doors adjacent their swinging edges and to the slide, spring-pressed holding means to hold the slide at the limits of its movement, and cable operated means to release the holding means extending forwardly from the slide and engaged therewith whereby draft on the cable will release said holding means, and continued draft on the cable will move the doors toward open position.

1,479,400. SIDE CURTAIN FOR VEHICLE TOPS. LONNY H. SAMMONS, Houston, Tex. Filed Sept. 15, 1921. Serial No. 500,924. 4 Claims. (Cl. 296—99.)

3. The combination with a vehicle top, of arms pivoted to the side of said top to swing in vertical planes, spring joints at the pivots of said arms to retain said arms automatically at any adjusted angle relative to said top, each arm being separately adjustable, and a curtain supported on said arms.

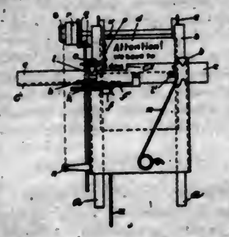
1,479,401. MACHINE FOR MAKING COVERED PAPER BOXES. HARRY BRIDGEMAN SMITH, Brooklyn, N. Y., assignor to Bridgeman Smith Patents Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 16, 1921. Serial No. 501,088. 237 Claims. (Cl. 93—36.)

1. A box making machine comprising means for associating and adhesively connecting individual body and cover blanks in substantially flat form to produce a substantially flat assembly, and means for subsequently bending and folding the associated blanks into covered box form.



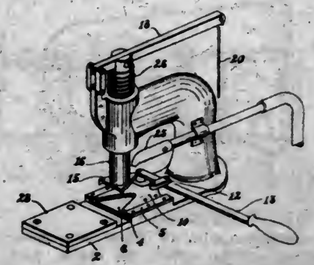
1,479,402. ARMOR PROTECTOR FOR PNEUMATIC TIRES. SANDOR J. SOLTESZ, New York, N. Y. Filed Jan. 2, 1923. Serial No. 610,178. 7 Claims. (Cl. 152—18.)

6. In combination with a shoe for pneumatic tires, a plurality of independent layers of textile material joined by a cementitious substance, a protecting armor consisting of a plurality of metallic members flexibly connected together and embedded in a thick layer of rubber, the said armor and its rubber layer being incorporated between layers of the textile material and extended from bead-to-bead of said shoe, and the said armor having along its marginal edges anchoring de-



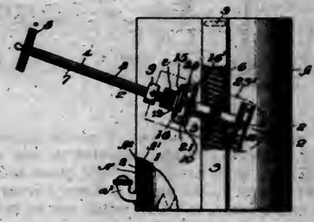
vices connecting it to the beads of the shoe and incorporated in the material of the shoe between the beads thereof and its body layers.

1,479,403. RAILWAY SWITCH. JOHN A. VEASEY, Youngstown, Ohio. Filed Mar. 31, 1923. Serial No. 629,029. 4 Claims. (Cl. 246—448.)



1. In a railway switch, a manually operable switch member, a train operable switch member mounted to move with the manually operable member and to have a movement independent thereof, and locking means between the two members and releasable by the weight of the train preliminary to the automatic throwing of the switch by the train.

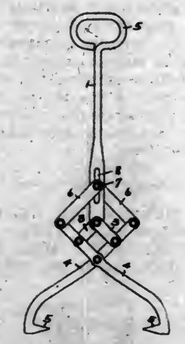
1,479,404. PROJECTING APPARATUS FOR ADVERTISING PURPOSES. HERMANN BENDMANN, Frankfort-on-the-Main, Germany. Filed June 6, 1921. Serial No. 475,487. 9 Claims. (Cl. 88—28.)



1. In a projecting apparatus for advertising purposes, the combination with a sign having superposed lines of letters of a slide normally covering said lines, and means for moving said slide in two directions at right angles to each other.

1,479,405. METHOD OF MAKING INSOLES. GEORGE H. BLACK, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 28, 1918, Serial No. 268,639. Divided and this application filed Mar. 5, 1921. Serial No. 449,669. 9 Claims. (Cl. 12—146.)

9. That improvement in the art of making insoles having a channel formed by turning a lip outwardly and upwardly to form a sewing rib which comprises positioning an insole with the bottom face of its toe portion against a work support, applying concentrated pressure to the insole thus supported throughout the length of a line extending around the toe at the inner base of the sewing rib sufficient to depress the surface of said base relative to the surface at the outer base of the rib, and thereafter molding the rib by transverse pressure.

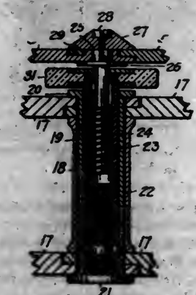


1,479,406. OIL BURNER. HENRY W. BRENT, Baltimore, Md. Filed Aug. 10, 1920. Serial No. 402,607. 5 Claims. (Cl. 67—65.)

1. In an oil burner, the combination of a burner tube, a wick-holder, a rack-and-pinion for operating the holder, means for operating the pinion, wick-controlling means having the capacity of positively stopping the elevation of the wick during a complete movement thereof in one direction so as to set the wick at a fixed and predetermined maximum height above the top of the burner tube, and for returning the wick to said predetermined height after movement in the opposite direction, said wick-controlling means comprising a shaft, a sleeve loose thereon and provided with a lug, a resilient member interposed in the path of movement of said lug and movable thereby, a stop for said member adapted to limit its movement, and a sliding member on the shaft adapted to engage and disengage the sleeve to thereby connect and disconnect the latter to the shaft.

1,479,407. TONGS. CHARLES T. DAVIS, Park Place, Tex. Filed Aug. 29, 1921. Serial No. 496,457. 2 Claims. (Cl. 294—115.)

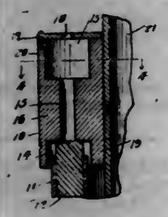
1. A device of the character described including a handle, a pair of jaws pivoted together, two pair of links, the links of each pair being pivoted at one end to the respective jaws at homologous points, respectively, and at their other ends being pivoted to the handle at



common points, one of said last mentioned connections being also slidable on said handle.

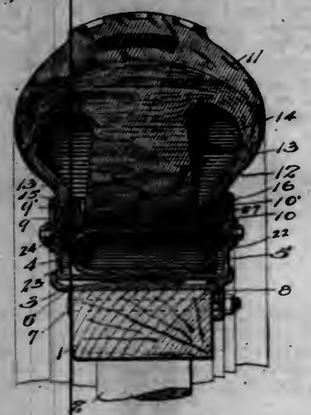
1,479,408. ENDLESS-TRACK VEHICLE. LEWIS K. DAVIS, Washington, D. C. Filed Mar. 22, 1923. Serial No. 626,800. 6 Claims. (Cl. 305—9.)

1. An endless track vehicle comprising a vehicle body, laterally flexible tracks and body supporting devices comprising flanged track engaging rollers held against any substantial lateral movement movable vertically and connected with the vehicle body and having treads materially wider than the portions of the tracks which they engage to allow the tracks to move laterally across the treads to an extent sufficient for steering purposes without moving the rollers sidewise or laterally.



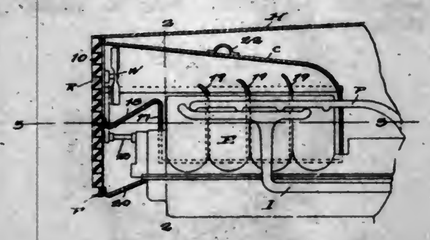
1,479,409. BINOCULAR. KARL A. EDSTROM, Denver, Colo. Filed Apr. 8, 1920. Serial No. 372,239. 1 Claim. (Cl. 88—34.)

In a binocular telescope, the combination with a pair of casings, eye pieces having arms, said casing having arms, a sleeve engaged between the casing arms, a tubular pintle engaged in the sleeve and passing through the adjacent ends of the casing arms to pivotally connect



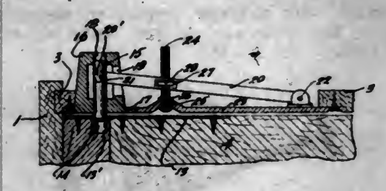
the same, an elongated nut rotatably mounted in the pintle and having one end projected from the pintle, a thumb wheel fixed to the projected end, a headed screw plug in threaded engagement interiorly with the pintle at one end, said plug having a screw bolt formed integral therewith for threaded engagement in said nut the head of said plug bearing against an adjacent casing arm, a pin pivotally connecting the arms of the eye pieces, a screw carried by the pin for threaded engagement in the nut, said screw and screw bolt having oppositely threaded engagement with said pintle, as and for the purpose set forth.

1,479,410. GAS BURNER FOR HEATING DEVICES OF THE TUBULAR-WICK TYPE. JESSE S. HALSTEAD, Oakland, and JOHN F. MORA, Pittsburg, Calif. Filed Oct. 26, 1922. Serial No. 597,039. 6 Claims. (Cl. 158—94.)



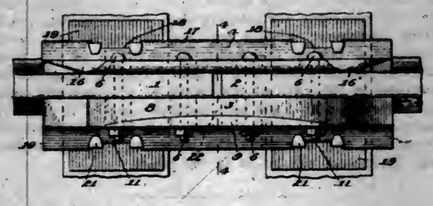
1. A burner for central draft oil heaters consisting of a movably mounted cap adapted to rest on the wick, the wick having a mixing chamber provided and burner means associated therewith and connected with the wick zone by vaporizing passages of flame excluding dimensions.

1,479,411. RESILIENT WHEEL. MORTON HARLOR, Winchester, Va. Filed Feb. 24, 1919, Serial No. 278,825. Renewed Oct. 29, 1923. 1 Claim. (Cl. 152—10.)



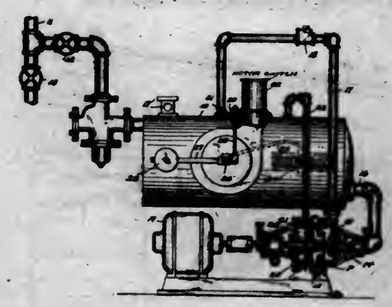
The combination with a sectional channel rim having opposed transverse flanges and opposed angular abutment flanges, of spaced, lateral threaded bosses on the rim sections, a resilient flexible ring retained by the transverse flanges, a flexible tire having a central web and an inner metallic resilient band vulcanized thereto supported on the resilient ring, said tire having side walls supported on the transverse flanges against the outer faces of the abutment flanges, clincher rings engaging the outer edges of the side walls and provided with perforations fitting over the bosses, and securing bolts in the clincher rings engaging the rim sections.

1,479,412. COOLING MEANS FOR INTERNAL-COMBUSTION ENGINES. HENRY N. HARPER, Ruston, La. Filed May 25, 1922. Serial No. 563,660. 2 Claims. (Cl. 123—171.)



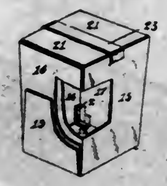
2. In combination with an engine of a motor vehicle, a housing adapted to enclose the engine, said housing comprising a pair of bottom sections adapted to extend about the sides of said engine and also to form a perforated bottom wall beneath said engine, a top section adapted to form with said bottom section a cover for said engine, said bottom sections and top section being also formed to provide a mouth for the housing at the forward and upper end thereof, whereby air may be injected into said housing.

1,479,413. DOOR HINGE. CARL HEDMAN, Spokane, Wash. Filed Feb. 25, 1922. Serial No. 539,092. 3 Claims. (Cl. 16—176.)



1. The combination of a slotted pintle-support in a door casing, a pintle slidably supported in said support, a casing plate, a lever pivoted on said plate and having its free end pivoted to the pintle, a screw having a bearing in the casing plate, and a traveling nut on said screw retained in a slot in said lever.

1,479,414. RAILROAD CHAIR AND PLATE. JAMES HOGAN, Centralia, Pa. Filed Aug. 30, 1923. Serial No. 660,199. 8 Claims. (Cl. 238—218.)

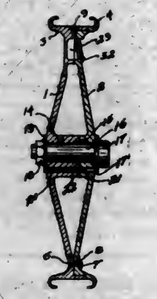


1. A rail joint comprising in combination with the adjacent ends of rails having transverse openings, inner and outer clamping plates, one of said plates being formed with an elevated tread portion, a wheel guide carried by the plate, and tie spacing means.

1,479,415. PUMPING APPARATUS. IRVING C. JENNINGS, South Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a Corporation of Connecticut. Filed Jan. 13, 1921. Serial No. 437,007. 5 Claims. (Cl. 103—111.)

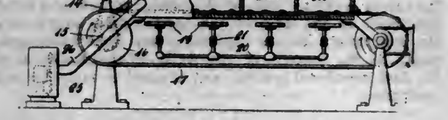
1. In a pump, in combination, a casing, a rotatable shaft journaled in the casing and means for deflecting upwardly air leaking into the casing between the rotatable shaft and its bearing.

1,479,416. REENFORCED PAPER VESSEL. ELIE W. LABOMBARDE, Nashua, N. H. Filed Sept. 2, 1921. Serial No. 497,886. 6 Claims. (Cl. 229—49.)



1. An angularly creased blank having reinforcing patches extending across the intersecting creases which define the corners when the blank is folded to container form.

5. The method of producing a blank for a water-proof paper receptacle, consisting in applying a water-repellent material progressively in one direction to a portion of one surface of the blank and then applying water-repellent material progressively in another direction to a predetermined portion of the same surface of the blank, whereby one surface is partially coated and the other surface is left entirely uncoated.



1,479,417. DISK WHEEL. WILLIAM C. LEONARD, Lewiston, Idaho, assignor to Leonard Roller Gear Drive Thresher Company, Lewiston, Idaho. Filed Sept. 23, 1922. Serial No. 590,014. 7 Claims. (Cl. 301—63.)

2. The combination in a disk wheel comprising concavo-convex disks of resilient metal and means for locking said disks near their peripheries, of complementary, inner hub sleeves on said disks, a bolt having a head and a hub cap for clamping said sleeve, said sleeves having

alined openings and a spring pressed locking pin in said openings engaging said head and hub cap.

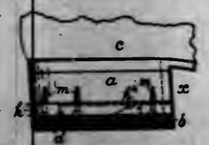
1,479,418. FOOD PRODUCT AND PROCESS OF MAKING THE SAME. NATHAN MININBERG, Minneapolis, Minn. Filed Feb. 20, 1922, Serial No. 537,996. Renewed June 14, 1923. 3 Claims. (Cl. 99—10.)

1. The process of making a food product rich in vitamines from the whole grain, which consists in segregating the starchy portions of said grain from the vitamine carrying portions; cooking said starchy portions sufficiently to preserve them; adding the uncooked vitamine carrying portions to the cooked starchy portions; and drying the mixture at a temperature too low to destroy the vitamines present, substantially as described.

1,479,419. METHOD OF PRESERVING BAGASSE FIBERS AND A BALE THEREOF. TREADWAY B. MUNSON, Chicago, Ill., assignor to C. F. Dahlberg, Minneapolis, Minn. Filed Aug. 12, 1921, Serial No. 491,750. Renewed Feb. 5, 1923. 7 Claims. (Cl. 92—14.)

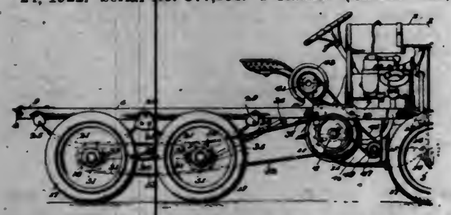
1. The process of preventing the natural deterioration, for pulp making purposes, of a mass of bagasse fibers while softening the same, which consists in applying to the interior of said mass a heat generating compound in a quantity sufficient to soften said fibers; and forming said mass into a bale under pressure, substantially as described.

4. A baled mass of bagasse fibers having caustic lime on its interior, substantially as described.



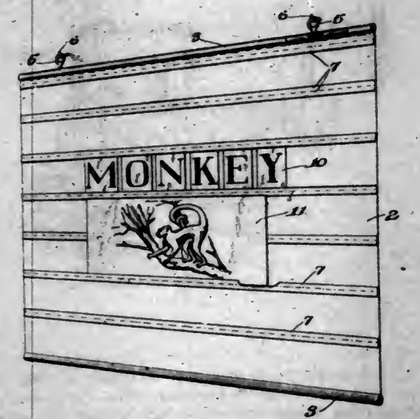
5. A baled mass of bagasse fibers, the interior of which consists of partially softened fibers, and the exterior of which is provided with a layer of compacted substantially air impervious, substantially as described.

1,479,420. DECORATIVE LIGHTING. HERBERT JOSEPH NENNO, Rochester, N. Y. Filed Nov. 20, 1923. Serial No. 675,861. 4 Claims. (Cl. 171—97.)



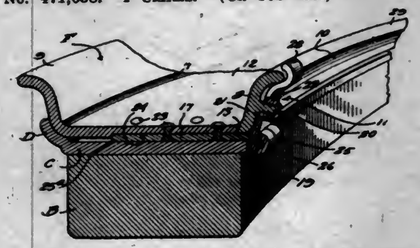
3. The combination set forth in claim 2 in which the connecting means for successive lamp conductors are arranged along the arc of a circle within the block and in which a switch member is provided within the block, adapted in operation to bridge successive pairs of connectors for successively short-circuiting the lamps in order to locate a defective lamp.

1,479,421. SHOE HEEL. ARTHUR POWELL, Cobridge, Stoke-on-Trent, England. Filed Oct. 5, 1920. Serial No. 414,844. 1 Claim. (Cl. 36—36.)



A pad or rubber lift holder for boots and shoes comprising a U-shaped rigid member for attachment to a boot or shoe, the inner edge of which member is beveled, said rigid member having apertures, the walls of which are inclined longitudinally of the member for a distance at the rear edges of said apertures and terminate in walls at right angles to the length of the said member, in combination with a complementary pad or rubber lift having raised portions with beveled sides and end, and studs positioned at the sides of the beveled sides of the pad, the said studs having inclined edges conforming generally to the contour of the walls of the apertures of the first mentioned member and adapted to enter the said apertures.

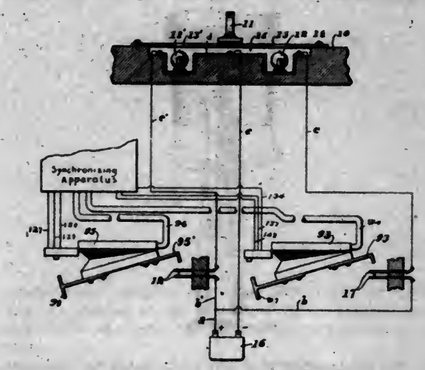
1,479,422. DEMOUNTABLE ATTACHMENT FOR TRACTORS. JAMES F. BAILEY, Columbia, S. C. Filed July 24, 1922. Serial No. 577,153. 4 Claims. (Cl. 180—16.)



1. A demountable attachment for tractors comprising a frame including side members having forward end portions adapted to extend forwardly of the rear portions of a tractor and converging toward each other at their forward ends, means conecting with the forwardly extending portions of the side members of the frame at the forward ends thereof for detachably securing such forwardly extending portions to a fixed part of the tractor, an axle housing extending transversely of the frame substantially intermediate of the length of the latter, spring suspension means connecting the axle housing with the side members of the frame, an axle journaled in the housing and having the end portions thereof projecting beyond the ends of the housing, wheels secured to the end portions of the axle for movably supporting the frame to track with the tractor, a transversely extending shaft rotatably supported upon the frame of the attachment, a power transmission device secured to the shaft, and other transmission means having connection with the shaft and being adapted for engagement with a driven part of the tractor to effect rotation of the shaft.

1,479,423. EDUCATIONAL DEVICE. ALMA DE B. BARTON, Los Angeles, Calif. Filed Nov. 16, 1922. Serial No. 601,294. 5 Claims. (Cl. 35—9.)

1. An educational device consisting of a pliant, backingless display sheet provided with a plurality of spaced elements forming pairs of spaced upper and lower horizontal channels or grooves into which may be slipped objects to be exhibited.



1,479,424. DEMOUNTABLE RIM. TOM MOORE BENNETT, New York, N. Y. Filed May 23, 1921. Serial No. 471,638. 4 Claims. (Cl. 301—35.)

1. A demountable rim for vehicle wheel tires comprising in combination, two separable annular members each including a flange, said flanges adapted to engage opposite sides of a tire adjacent its internal periphery, hinge members, each including two leaves, one leaf being fixedly secured to one of said annular members and the other leaf swingable to engage the outer portion of the flange of the second annular member, and devices carried by the flange of the second annular member for detachably securing the swingable leaves of said hinge members to the same.

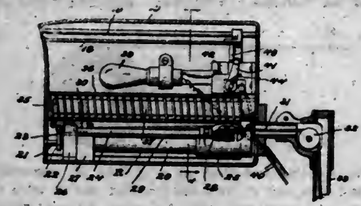
1,479,425. TEMPO SIGNAL FOR SYNCHRONIZERS. HEINRICH BOCKISCH, deceased, late of Poughkeepsie, N. Y., by George W. Gittins, administrator, New York, N. Y., assignor to Welte-Mignon Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1920. Serial No. 375,578. 6 Claims. (Cl. 84—5.)

6. In combination the tempo lever of a record controlled musical instrument to be synchronized with another device, speed-up and slow-down mechanisms of a synchronizer, signals adjacent the tempo lever, signal control connections between the respective signals and the speed-up and slow-down mechanism whereby the

position to which the tempo lever should be moved is indicated by the operation of the signals by the respective speed change mechanisms.

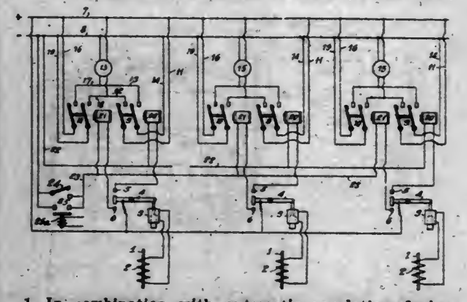
1,479,426. DOUBLE-DECK BUS. EDWARD R. BRAINERD, Los Angeles, Calif. Filed Aug. 22, 1921. Serial No. 494,093. 2 Claims. (Cl. 296—28.)

1. A passenger vehicle comprising a body including vertical sides curved at their upper ends inwardly and downwardly toward each other to provide seats on opposite sides of the body, and then upwardly to form seat backs, a roof spanning the space between the seat backs, and foot platforms extending laterally from the vertical sides below their upper ends.



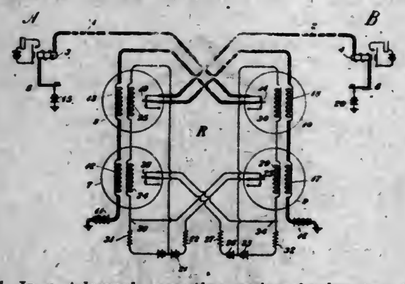
1,479,427. MATCH STRIKE. WILLIAM CHALMERS, Lovelocks, Nev. Filed Sept. 21, 1921. Serial No. 502,203. 1 Claim. (Cl. 44—48.)

In a match scratcher, a pipe having a bowl with a flat bottom, and an abrasive material directly cemented onto the under surface of said bottom.



1,479,428. TRAFFIC SIGNAL FOR VEHICLES. ARTHUR J. COON, Providence, R. I. Filed Apr. 20, 1920. Serial No. 375,302. 10 Claims. (Cl. 116—50.)

1. A traffic signal for vehicles comprising, in combination, a casing adapted to be secured to the vehicle, an indicator normally housed within said casing, means projecting said indicator without the casing, and means for retracting the same, said means including a movable

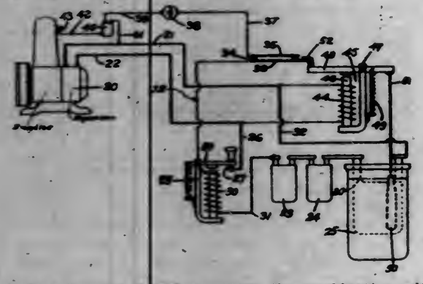


guide member and a cord passing over said guide and having one end attached to the indicator and the other end attached to the casing.

1,479,429. REGULATION OF ELECTRIC FURNACES. WALDEMAR DYRSSEN, New York, N. Y. Filed Jan. 12, 1921. Serial No. 436,634. 10 Claims. (Cl. 204—64.)

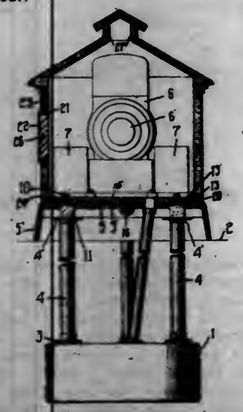
1. In combination with automatic regulating devices for moving the electrodes of an electric furnace, manually controlled means for preventing the automatic devices from effecting the upward movement of the electrodes.

1,479,430. TELEGRAPH REPEATER SYSTEM. JOHN M. FELL, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 26, 1921. Serial No. 455,714. 5 Claims. (Cl. 178—71.)



1. In a telegraph repeating system having two line sections, a repeater comprising two pairs of relays interconnecting each section, each relay of a pair having a double winding serially connected with the corresponding winding of its associate, a line circuit for each pair of relays normally in control thereof, a local circuit for each pair of relays normally opposed to the electro-magnetic action of the line circuit thereon, and means responsive to the opening of the line circuit at one section whereby each pair of relays is controlled by its respective local circuit and upon the subsequent closure of the line circuit whereby electrical impulses are repeated over the opposite line section.

1,479,431. COILED TIE WIRE. ALBC J. GERRARD and PARVIN WRIGHT, Chicago, Ill. Filed June 14, 1922. Serial No. 568,304. 3 Claims. (Cl. 24—27.)

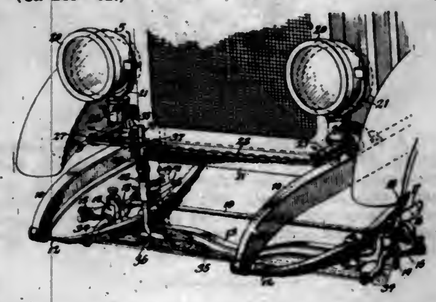


1. The herein described new article of manufacture consisting of a coil of wire adapted for use in wire tying machines and provided with deformed integral portions adapted to fit said machines at predetermined intervals in its length substantially as described.

1,479,432. BATTERY-CHARGING SYSTEM. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 11, 1918. Serial No. 216,466. 10 Claims. (Cl. 290—35.)

1. In a battery charging system, the combination with an engine driven generator and a storage battery to be charged thereby; a charging circuit connecting the battery and generator; means dependent on the voltage of the charging circuit for stopping the engine; and means dependent on the condition of the electrolyte for rendering the first named means inoperative.

1,479,433. POWER UNIT. JOHN M. LEA and JONATHAN P. B. FISKE, Detroit, Mich., assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 8, 1919. Serial No. 322,598. 17 Claims. (Cl. 123—195.)

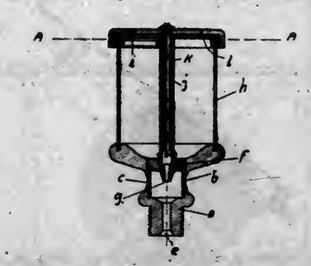


1. In a power plant, a fuel tank, posts resting on the tank and projecting upwardly therefrom, and an internal combustion engine supporting structure mounted on the projecting ends of said posts.

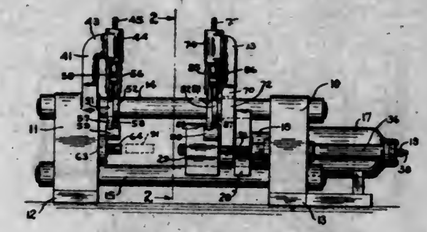
1,479,434. TOOL FOR HOLDING PISTON RINGS IN THEIR SEATS. VICTOR A. NELSON, Portland, Oreg. Filed Oct. 6, 1921. Serial No. 506,876. 5 Claims. (Cl. 29—36.4.)

1. The combination in a tool of the character described, of jaws each provided with a holding-lip on its exterior face at its tip, the opposed faces of the holding-lip and the jaw being spaced to provide a slot between them for the insertion of a supplemental tool element, said holding-lip being adapted to be compressed against the underlying surface of the jaw, means for compressing the lip against the underlying surface of the jaw, means applied to the handle end of the tool for securing the jaws in compression.

1,479,435. LAMP-OPERATING MECHANISM FOR AUTOMOBILES. AMICO MICHAEL PURCHIO, Buffalo, N. Y. Filed Apr. 3, 1922. Serial No. 548,996. 4 Claims. (Cl. 240—62.)



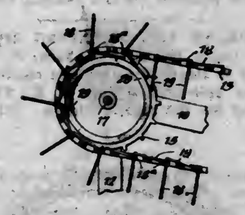
1. A lamp operating mechanism for automobiles comprising a main frame, lamp brackets pivoted on the main frame, steering knuckles pivoted on the main frame, and means for connecting and disconnecting said steering knuckles and lamp brackets comprising bracket arms arranged on said brackets, knuckle arms arranged on said knuckles, an upper bar connecting said bracket arms and provided with an opening, a lower bar connecting said knuckle arms, a standard mounted on said lower bar, a coupling rod composed of upper and lower pivotally connecting sections, said upper section being adapted to engage with said opening and said lower section being slidable vertically on said standard, and a screw nut arranged on said coupling rod and adapted to move lengthwise thereof for locking the same against folding or permitting the same to fold.



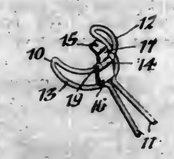
1,479,436. GREASE CUP FOR FLUID LUBRICANTS. EMILE PIGUERRE, St. Ursanne, Switzerland. Filed May 1, 1920. Serial No. 378,245. 6 Claims. (Cl. 184—79.)

3. A grease cup comprising a tubular body provided with a lubricant outlet, a tube arranged within the body

portion and provided near its lower end with an aperture, a flap-valve controlling said aperture and having its axis intersecting the axis of the tube, a stem arranged within the tube and provided with an eccentrically arranged finger designed to engage said valve for controlling the opening of the same, and means located on the exterior of the body for controlling movements of said stem.

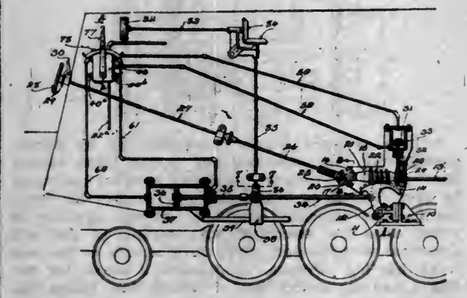


1,479,437. METHOD OF AND MEANS FOR EXTRUDING BRASS AND LIKE MATERIAL. WILLIAM B. WEBSTER, Bridgeport, Conn. Filed June 6, 1922. Serial No. 566,214. 34 Claims. (Cl. 207—9.)



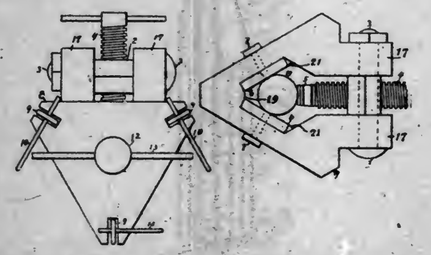
1. In a metal extruding machine, a frame, a billet container movably mounted thereon, means to limit the movement of the billet container in one direction, said means being capable of being rendered inoperative to permit movement of the container.

1,479,438. CURRENT MOTOR. GOTTFRIED H. WENDE, Buffalo, N. Y. Filed Apr. 17, 1922. Serial No. 553,991. 3 Claims. (Cl. 170—89.)



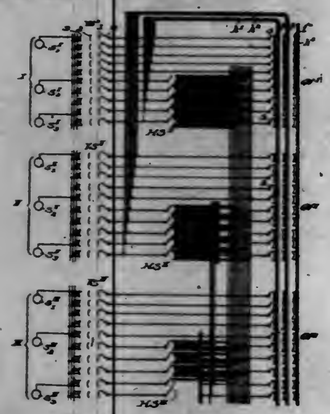
3. A current motor, comprising supporting wheels, an endless belt passing around said wheels, one of said wheels being provided with an annular flange projecting from its side, and paddles hinged to said belt and provided at their hinged edges with trip arms arranged substantially at right angles thereto, each paddle arm being arranged to engage said flange for swinging said paddles from their folded to their unfolded position in traveling in one direction and to abut against the hinged inner portions of adjoining paddles in traveling in the opposite direction.

1,479,439. DENTAL CLASP. REGINALD V. WILLIAMS, Buffalo, N. Y. Filed Sept. 9, 1922. Serial No. 587,042. 6 Claims. (Cl. 32—12.)



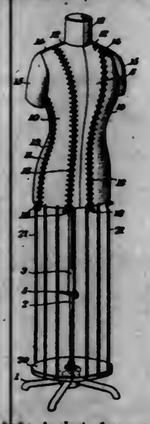
1. A dental clasp, comprising a band, and an occlusal rest laterally adjustable on said band and having means for slidably connecting the same with the band.

1,479,440. CONTROL MECHANISM. HENRY E. ABELE, Milwaukee, Wis. Filed Nov. 22, 1920. Serial No 425,787. 4 Claims. (Cl. 121—38.)



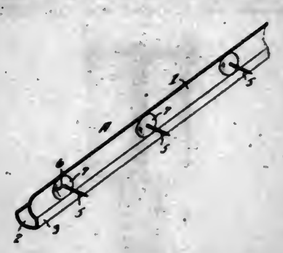
1. In combination, a pivoted member, a gear segment thereon concentric with its pivot, a manually operable worm engageable with said gear segment for oscillating said pivoted member, means operable by fluid pressure for disconnecting said worm from said gear segment, means operable by fluid pressure for oscillating said pivoted member, and valves for controlling the admission of fluid pressure to each of said pressure operated means successively.

1,479,441. VISE. WILLIAM F. ANDERSON, Torrington, Wyo. Filed Feb. 24, 1923. Serial No. 621,045. 8 Claims. (Cl. 81—19.)



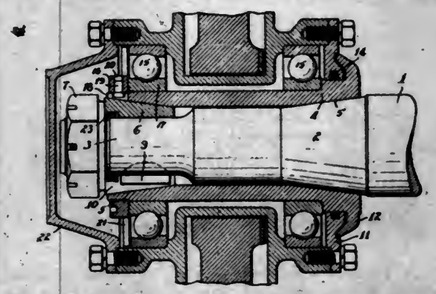
7. In a vise of thec lass described, in combination, a body adapted to be disposed horisontally on the bed of a pressure press, said body having substantially a V groove running vertically therein and two lugs thereon; a block, having a threaded hole therethru, rotatably mounted between said lugs; and a threaded bolt screwed thru said threaded hole in said block; for the purposes set forth.

1,479,442. METERING TELEPHONE SYSTEM. FRITZ ALDENDORFF, Wilmersdorf, Berlin, Germany. Carved out of application on which Patent No. 1,319,031 was granted Oct. 14, 1919, and filed after grant of that patent. This application filed June 21, 1920. Serial No. 390,320½. 23 Claims. (Cl. 179—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a system for interconnecting lines by electro-mechanically controlled switches, calling lines, wanted lines, switch controllers, numerical switches controlled by said controllers, trunk hunting switches for hunting for idle numerical switches, two-way switches of which some are associated with certain of the said numerical switches and others with certain of the said trunk hunting switches, non-numerical means for setting a two-way switch onto a calling line, means controlled by said controllers for setting a two-way switch onto a called line, a meter associated with each line, and circuits in said two-way switches for actuating said meters.

1,479,443. ADJUSTABLE DRESS FORM. ANNA DEANE BAILEY, New York, N. Y. Filed Jan. 7, 1922. Serial No. 527,662. 4 Claims. (Cl. 223—18.)

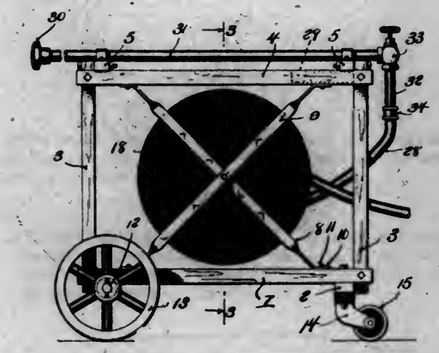


2. A sectional fabric jacket for compressible garment forms divided vertically into three sections along two lines extending from the front lower edge to the rear lower edge of the jacket and passing over the shoulder portions of said jacket, and means for lacing the sections of the jacket together along said two lines of division.

1,479,444. DRIP MOLDING. JAMES L. BANCROFT, Cleveland, Ohio. Filed Nov. 8, 1922. Serial No. 599,644. 2 Claims. (Cl. 296—137.)

1. A drip molding comprising a wall strip of channel form and a trough extending along the lower edge of the wall strip, attaching elements suitably spaced apart longitudinally of the wall strip and having heads disposed within the channel of the wall strip, and suitable material within said channel and wherein the said heads of the attaching elements are embedded.

1,479,445. BEARING BOX. JOHN H. BANINGER, Jamestown, N. Y. Filed Jan. 26, 1922. Serial No. 532,028. 9 Claims. (Cl. 64—36.)



1. In a bearing box of the character set forth, the combination with a shaft having a tapered seat thereon, of a bearing sleeve detachably mounted on said shaft and having a tapered bore at each end thereof, one of said bores being adapted to engage said tapered seat, a tapered sleeve mounted on said shaft and engaged with the other of said tapered bores, said sleeve being adapted to secure said bearing sleeve to said shaft against rotation, bearing elements carried by said bearing sleeve, and a box rotatably mounted on said bearing elements.

1,479,446. MEANS FOR MOUNTING MULTIGRAPH PLATES. LOUIS BAUER, New York, N. Y., assignor of one-third to Henry J. Bauer and one-third to Frederick Turner, both of New York, N. Y. Filed Mar. 15, 1923. Serial No. 625,246. 6 Claims. (Cl. 101—384.)

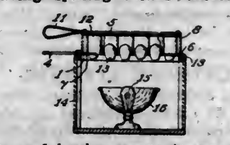
1. In a printing plate, means for mounting and retaining said plate in connection with a cylinder comprising substantially T-shaped members, the shanks of said members being adapted to be passed through apertures in said plate at spaced intervals, and the shanks of said members being fashioned to retain said members in connection with said plate with the crossheads of said members positioned at a predetermined distance from the rear face of the plate.

1,479,447. COMBINATION SPRINKLER AND HOSE CARRIER. WALTER L. BRATTIN, Milwaukee, Wis. Filed Nov. 23, 1922. Serial No. 602,800. 2 Claims. (Cl. 299—53.)

2. A hose reel comprising a framework, a plurality of supporting wheels therefor, diagonally arranged crossed braces secured to said framework, a reel mounted between said braces, a shaft for supporting said reel and having bearing relation with said braces at their points of crossing, said reel comprising end disks and diagonally arranged bracing members secured thereto, and transverse bars having bevelled edges secured to said bracing members.

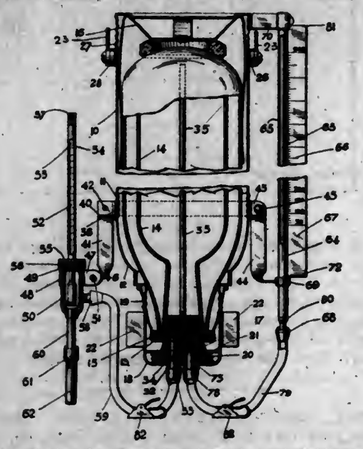
1,479,448. QUILL. JOHN G. BENTLEY, Paterson, N. J. Filed May 25, 1923. Serial No. 641,400. 3 Claims. (Cl. 242—120.)

1. A quill of multi-sided form in cross section along its winding portion.



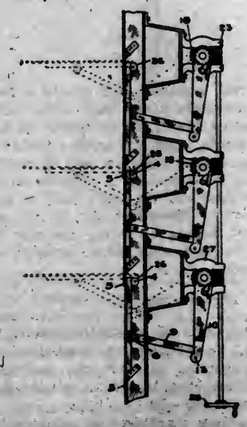
1,479,449. WOUND PACKAGE. JOHN G. BENTLEY, Paterson, N. J. Filed June 15, 1923. Serial No. 645,609. 6 Claims. (Cl. 242—161.)

4. A metal filament wound shuttle package comprising a quill multi-sided in cross section along its winding portion and a transverse wound interlocked mass of the metal filament thereon, the said mass having a substantial thickness between its ends as compared to the diameter of the quill in the corresponding cross sectional plane.



1,479,450. EGG-CANDLING DEVICE. CHRISTIAN NIELSEN BRUHN, Cedar Falls, Iowa. Filed Sept. 25, 1922. Serial No. 590,441. 1 Claim. (Cl. 99—6.)

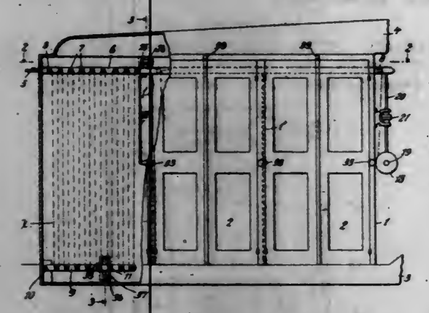
A device of the character described, comprising a flat scoop-plate having orifices therein corresponding in position to the cells of an egg-crate section to be placed thereon, and a like clamping orificed plate to be positioned thereover, having spacing means thereon to surround



such a section and having means to separably connect it with said scoop-plate.

1,479,451. FLUID-ADMINISTERING DEVICE. JACOB BUCKSTEIN, New York, N. Y. Filed Feb. 14, 1923. Serial No. 618,898. 16 Claims. (Cl. 128—227.)

14. A device for the administration of fluids comprising in combination, an inverted vacuum bottle, a closure for the mouth thereof at the lower end, an outlet connection through said closure, and indicating means connected to the closure and acted upon by the charge of fluid in said bottle.



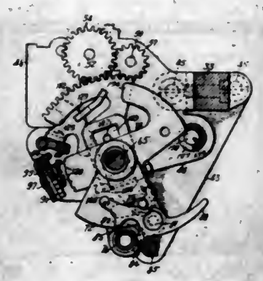
1,479,452. SAFETY CLOSURE FOR WALL OPENINGS. WILLIAM FREDERIC CANAVAN, Montreal, Quebec, Canada. Filed Apr. 11, 1923. Serial No. 631,289. 9 Claims. (Cl. 268—18.)

1. In safety closures for wall openings, a hinged closure, pawl and ratchet mechanism for holding said

closure to its open position and worm and wheel mechanism for opening and closing said closure independently of an emergency movement.

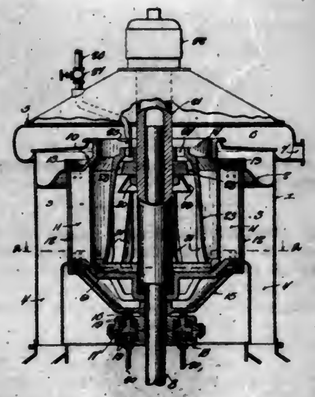
1,479,453. FILM-DRYING APPARATUS. GIDEON W. CARLETON and HERBERT O. CARLETON, New York, N. Y.; said Gideon W. Carleton assignor to said Herbert O. Carleton. Filed Oct. 22, 1920. Serial No. 418,839. 3 Claims. (Cl. 34—48.)

3. In a drier for films, means for feeding the film including upper and lower series of rollers between which the film is looped back and forth, a hinged arm carrying one series of rollers, a contact member carried by said hinged arm, and a pair of vertically spaced contact members adapted to be engaged by said first contact member when the said arm swings from normal position.



1,479,454. MOVING-PICTURE-FILM REEL. MICHAEL CARR, New York, N. Y. Filed Jan. 26, 1922. Serial No. 531,900. 6 Claims. (Cl. 242—74.)

4. In a film reel, a hollow hub having a pair of slots spaced circumferentially apart, said slots being adapted for selective use to admit the extremity of a film strip endwise therethrough, a pair of anchor teats on one side of each slot disposed to engage a pair of perforations in the film, one pair of anchor teats projects relative to one slot in one direction, and the other pair of anchor teats projecting relative to the other slot in the opposite direction, each slot having bordering the side thereof opposed to the anchor teats associated therewith an inwardly projecting deflecting lip.

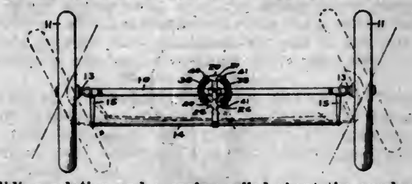


1,479,455. CALCULATING MACHINE. JOHN J. CHAPIN, New York, N. Y., assignor to Remington Accounting Machine Corporation, Ilion, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 469,881. 24 Claims. (Cl. 235—59.)

1. In a calculating machine, the combination with a set of digit keys, of a shaft, a series of key pieces pivoted on said shaft and connected with said keys, a set of differential pieces pivoted on said shaft and each having lost motion connection with one of said key pieces, and a differential bail swinging concentrically with said shaft and operated by said differential pieces.

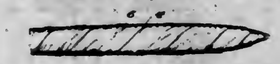
23. In a calculating machine, the combination of a set of numeral keys, a universal bar situated at the front of the actuating mechanism of the calculating machine and readily removable, and actuating brackets mounted on said universal bar in accessible positions and removably secured thereto.

1,479,456. DEWATERING MACHINE. HENRY BURDETT CLEVELAND, East Schodack, N. Y. Filed May 23, 1921. Serial No. 471,796. 6 Claims. (Cl. 233—7.)



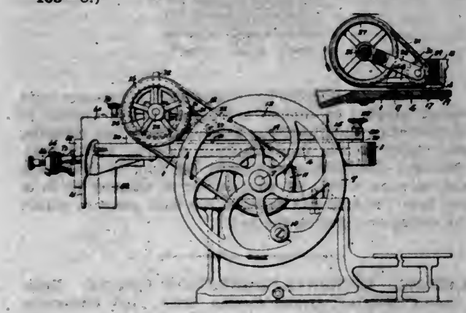
1. A machine of the character and for the purpose set forth comprising a main rotary drum, an auxiliary rotary drum mounted within said main drum, said auxiliary drum being opening at its bottom and having its side wall flared outwardly and terminating adjacent the bottom of the main drum, and means for supplying material to the top of the auxiliary drum.

1,479,457. TENSION DEVICE FOR VEHICLE STEERING MECHANISM. EDWARD A. COMMISKEY, Indianapolis, Ind. Filed Apr. 29, 1921. Serial No. 465,533. 2 Claims. (Cl. 280—94.)



1. In a device of the character described, an axle, a tie-rod, a segmental plate rigidly mounted on the axle, a second segmental plate concentric with the first and

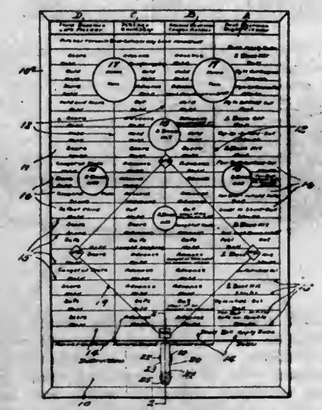
movable with the tie-rod said segmental plates having a portion of their periphery overlapping each other in



sliding relation and a spring coiled about the overlapped portions to resist relative movement between the said segmental plates, substantially as set forth.

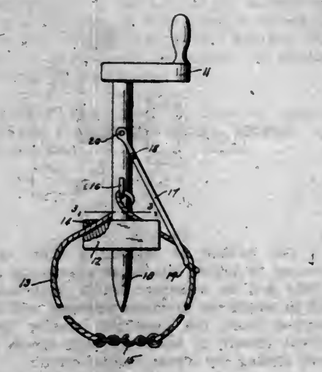
1,479,458. CIGAR AND METHOD OF MAKING THE SAME. FRANCISCO ESPAILLAT DE LA MOTA, La Vega, Dominican Republic. Filed May 10, 1920. Serial No. 380,335. 3 Claims. (Cl. 131—52.)

3. As a new article of manufacture, a cigar comprising a filler of relatively small pieces of tobacco, a paper wrapper enclosing the filler, a portion of the particles of the filler at one end being removed and the paper wrapper being formed with a tip at said end, a wrapper of leaf tobacco of one quality enveloping the paper wrapper of the filler, and a wrapper of tobacco of a superior quality enveloping the whole.



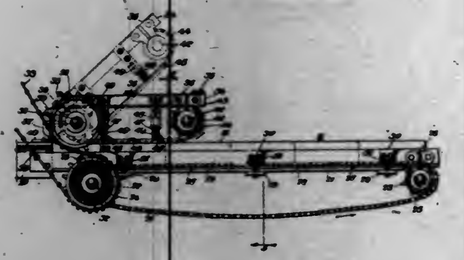
1,479,459. COUNTING MACHINE. EDWARD P. DONNELLAN, Brooklyn, N. Y., assignor to Standard-Johnson Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 6, 1922. Serial No. 527,438. 4 Claims. (Cl. 133—8.)

3. In a counting machine the combination with a bedplate of a rotatable feed table, a guide ring having a horizontal flange parallel to and spaced above said table to form a circular article runway arranged over the marginal portions of said table, said guide ring having an outlet passage communicating with said runway, and a rotatable article propelling means having an operative portion thereof disposed in said outlet passage to extend transversely across said runway to successively grip and propel outward the articles moved around said runway to said outlet passage.



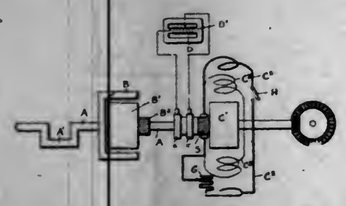
1,479,460. GAME. ARTHUR P. DRAPER, Lebanon, Mo. Filed Feb. 18, 1922. Serial No. 537,432. 2 Claims. (Cl. 46—59.)

1. A game comprising a board provided with a plurality of play directing marks arranged in parallel groups, individual marks arranged on said board adjacent to each group whereby each group is referable to a definite player, there being a playing field of conventional baseball form arranged on said board and containing a plurality of stations whereon a plurality of players are operatively associated, play-recording counters arranged to be placed on said field in accordance with the progress of the play,



a lever pivotally mounted on said board and having one end provided with a seat, and a flat member adapted to be placed on said seat, whereby when said lever is actuated said flat member is discharged onto said board and the play is determined in accordance with the mark at which said member comes to rest.

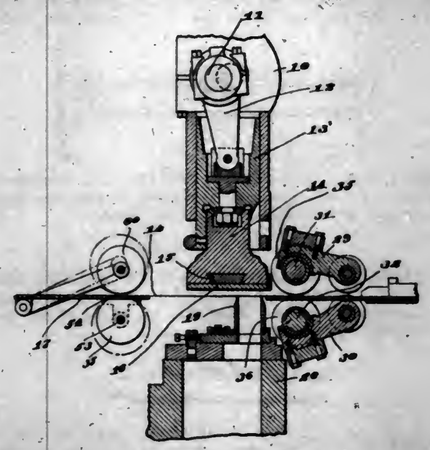
1,479,461. BUNDLE OR SHOCK COMPRESSOR AND HOLDER. THOMAS J. DRAKE, Sadieville, Ky. Filed Nov. 12, 1921. Serial No. 514,778. 2 Claims. (Cl. 100—31.)



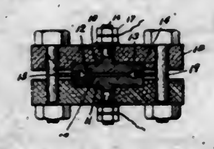
1. A device of the character described including a rotatable shank having a handle whereby it may be rotated, a block through which said shank rotates and slides, a rope extending through the block and formed to provide a loop inward of the block, means to detachably connect the ends of the rope outwardly of the block, a hook on the shank inward of the block and adapted to engage said loop, and a latch rod pivoted at one end to the shank and having a hook at its other end whereby it may be engaged with the rope to hold the shank from rotation relative to the block and rope.

1,479,462. BLOCK-FEEDING MECHANISM FOR MATCH MACHINES. WILLIAM J. ELDER, Oswego, N. Y., and EDGAR A. ALLEN, Chico, Calif., assignors to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1922. Serial No. 565,742. 4 Claims. (Cl. 144—242.)

1. In block feeding mechanism for match machines, the combination with block-feed rolls, supporting and operating elements therefor, and a block-supply trough leading to said rolls, of block-impelling means including an endless conveyer, having its active run extending longitudinally of the bottom of the trough, a vertically-movable frame overhanging the trough in advance of said rolls, other block-impelling means including an endless conveyer mounted on said frame and having its active run extending longitudinally of the trough, means for yieldingly pressing the latter conveyer against the blocks when the frame is in down position, and means for concurrently actuating the said conveyers to impel their active runs in a direction toward the feed rolls.



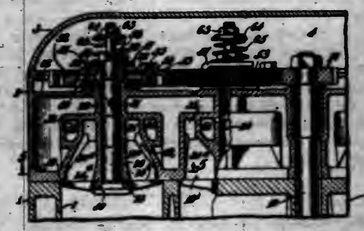
1,479,463. ELECTRIC BRAKE. JUSTUS B. ENTZ, New York, N. Y. Filed Nov. 5, 1920. Serial No. 421,990. 7 Claims. (Cl. 172—179.)



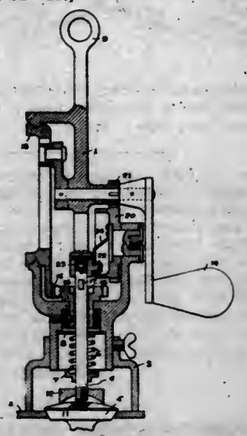
1. The method of braking a shaft carrying means arranged to deliver direct and alternating current having a field and an armature which comprises exciting the field in which the armature operates with direct current obtained from the armature, closing the alternating current circuit at relatively high speeds and at lower speed closing the direct current circuit.

1,479,464. PROCESS AND APPARATUS FOR BLANKING ARTICLES FROM SHEET MATERIAL. CLARENCE B. FULLER, Jr., Bridgewater, Mass., assignor to Geo. O. Jenkins Company, Bridgewater, Mass., a Corporation of Massachusetts. Filed June 26, 1922. Serial No. 570,859. 4 Claims. (Cl. 164—22.)

1. An improved system or process for blanking articles from sheet material which consists in first measuring the sheet of material to a length equal to the sum of the lengths of a plurality of the articles to be blanked, trimming off said sheet to such length to eliminate waste of material, feeding said sheet step by step past a relatively reciprocating block and die to blank out therefrom the measured plurality of articles and without waste of material.

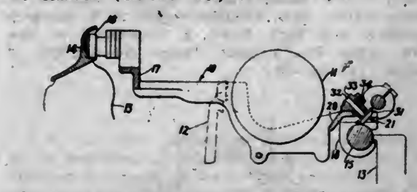


1,479,465. CONTROL OF ELECTRIC CIRCUITS. TALMA T. GREENWOOD, East Templeton, Mass., assignor to Sears B. Condit, jr. Filed Jan. 19, 1918. Serial No. 212,551. 4 Claims. (Cl. 175—30.)



1. A circuit interrupter comprising a pressure-tight casing adapted to confine a relatively small volume of an insulating fluid normally at a relatively low pressure, said casing having two relatively massive, highly heat-absorbent electrodes separated by the fluid in the casing and between which an electric arc is adapted to form and heat the fluid and increase the fluid pressure within the casing and quench the arc.

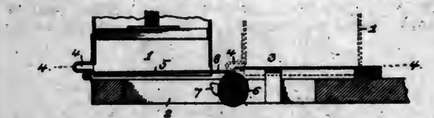
1,479,466. INTERNAL-COMBUSTION ENGINE. FREDERICK M. GUY, Grand Rapids, Mich., and FREDERICK R. SUNDERMAN, Newburgh, N. Y. Filed May 9, 1919. Serial No. 295,959. 26 Claims. (Cl. 123—59.)



1. In an internal combustion engine the combination of an engine cylinder and piston, a removable valve port casing having intake and exhaust ports, a rotary valve for opening and closing said ports, a spindle extending through said casing for rotating said valve, a gear on said valve and spindle, a thrust bearing on said casing, a spider having arms extending loosely down through said gear and engaging said bearing and a spring interposed between said spider and the end of the spindle tending to keep the valve seated on its valve seat.

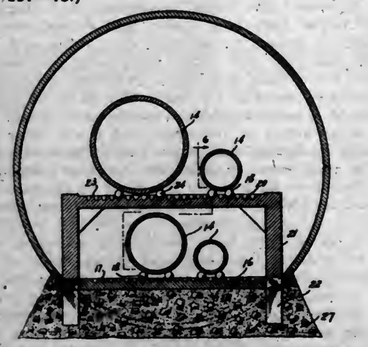
1,479,467. AUTOMATIC VALVE GRINDER. ROBERT H. HAZELTINE, Bordeaux, France, assignor to Specialty Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 11, 1920. Serial No. 423,278. 4 Claims. (Cl. 51—29.)

1. A valve grinder comprising a frame to be held against a motor, a main shaft held in said frame and adapted to be attached to a valve, a power operated counter-shaft in said frame, a crosshead driven by a crank on said counter-shaft, means for transmitting the oscillating movement of said crosshead to said shaft to move said shaft in equal arcs in each direction, and means for rotating said shaft periodically to change the position of said valve.



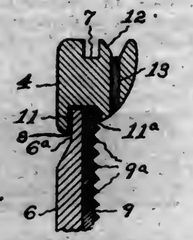
1,479,468. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1921. Serial No. 520,830. 7 Claims. (Cl. 197—69.)

1. In a typewriting machine, the combination of a carriage, and guiding means for said carriage, said guiding means comprising a rail, carriage-supporting devices to slide on the top of said rail, and a distant carriage-supporting device to roll on the top of said rail, said sliding device and said distant rolling device forming the entire support of said carriage upon said rail.



1,479,469. FRUIT AND VEGETABLE SLICER. MICHAEL KIRNBAUER, Forest Park, Ill. Filed May 26, 1923. Serial No. 641,794. 3 Claims. (Cl. 146—168.)

1. In a slicing machine, the combination of a cutter carrying frame and a holding hopper connected together for movement in relation one to the other, a platform hinged to the carrying frame and forming a support for the material in the hopper, a transverse cutter blade fixedly secured to the carrying frame in adjacent relation to the movable end of said platform, and means

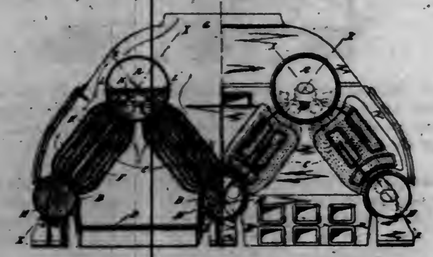


for effecting a vertical adjustment of the movable end of said platform, the hopper having at its remote lower end an offset return bend forming a receiving channel for the cutting point of the blade aforesaid.

1,479,470. CONDUIT AND MOUNTING. WILLIAM GEORGE KUEHN, New York, N. Y., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Nov. 4, 1921. Serial No. 512,753. 7 Claims. (Cl. 137—75.)

4. A conduit for pipe lines comprising the combination of a series of tubular sections, certain of which have openings in their under sides intermediate of their ends, a monolithic base of concrete set in each such opening and lying partly within and partly outside of said tubular section, a flat plate having a plurality of grooves on its upper face parallel to the axis of the conduit set in said base and a plurality of balls adapted to roll in any of said grooves, whereby suitable ball bearings for pipes of different diameters can be secured by placing the said balls in the proper grooves.

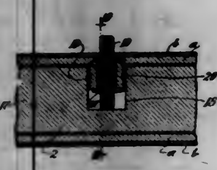
1,479,471. WASHBOARD. NEIL D. LENNER, Akron, Ohio. Filed Sept. 19, 1922. Serial No. 589,066. 11 Claims. (Cl. 68—29.)



1. In a washboard, the combination with a frame and a rubber rubbing surface, of metal clips for securing the rubbing surface to the frame.

1,479,472. GLUE AND METHOD OF PREPARING THE SAME. WILLIAM R. LONG, St. Louis, Mo. Filed Apr. 17, 1922. Serial No. 553,985. 2 Claims. (Cl. 87—17.)

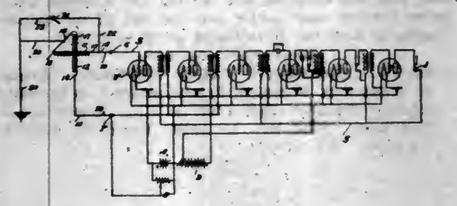
1. A glue consisting of glue and kaolin in equal amounts by weight.



1,479,473. STEAM GENERATOR. HENRY JOHN SUTHERLAND MACKAY, Rowemount, Isle of Wight, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Sept. 4, 1918. Serial No. 252,515. 3 Claims. (Cl. 122—325.)

1. A water tube boiler comprising two steam and water drums and three spaced mud drums, means for creating a circulation between said steam and water drums, and said mud drums comprising two partitions within the middle mud drum extending longitudinally thereof and dividing the same into three unconnected chambers, a bank of tubes connecting each of said steam and water drums to the outer mud drum, other banks of tubes connecting said steam and water drums to the middle mud drum, some of the tubes of each of the last mentioned banks being connected to separate chambers of the middle mud drum and other tubes being connected to a common chamber.

2. A water tube boiler comprising an upper steam and water drum, two lower mud drums, banks of tubes connecting the steam and water drum to the respective mud drums, the steam and water drum being provided with baffles extending longitudinally of the drum and at least as high as the water line, and forming a plurality of chambers therein, and means for introducing feed water to the chambers without said baffles, the lower drums being provided with imperforate diaphragms dividing each drum into two unconnected chambers to each of which a part of the tubes of the associated bank are connected, part of the tubes which communicate with one of the chambers of the mud drum being connected to the associated chamber of the steam and water drum without the baffles, and the other part of said tubes being connected to the chamber between said baffles, and downcomers connecting the middle chamber of the steam and water drum to the other chamber of each of said mud drums.



1,479,474. BOOTH OR COMPARTMENT. GEORGE R. MEYERCORD, Chicago, Ill., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Feb. 16, 1922. Serial No. 436,955. 10 Claims. (Cl. 20—4.)

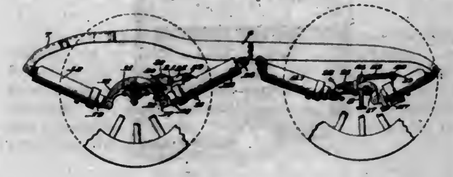
1. A post having a groove therein, and a laminated sheet having an outer layer of metal bent around and forming a facing for the post and having a marginal portion projecting into said groove.

1,479,475. RADIO RECEIVING APPARATUS. OGDEN MINTON, Greenwich, Conn. Filed Jan. 19, 1923. Serial No. 613,576. 3 Claims. (Cl. 250—20.)

1. Radio receiving apparatus, comprising the combination with a detecting system, of a circuit connecting the in-put terminals of said system and containing two inductance coils connected in series and mounted for

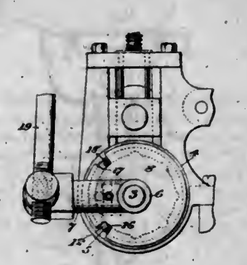
relative movement to vary the inductance linkage between them, and a connection from a point of said circuit between said coils to the ground.

1,479,476. CLAMP. ALBERT B. MUELLER, Chicago, Ill. Filed Sept. 9, 1921. Serial No. 499,525. 1 Claim. (Cl. 296—84.)



A clamp structure including a body portion having two clamping jaws located thereon abreast; an additional clamping jaw pivoted upon said body portion and complemental to one of the first aforesaid clamping jaws; another additional clamping jaw also pivoted upon said body portion and complemental to the other one of the first aforesaid clamping jaws; and a clamping screw for each pair of complemental clamping jaws, one of the pivoted clamping jaws being formed with wings upon its sides that project toward the other clamping jaw and said body portion having an extension adjacent this other clamping jaw that receives the screw pertaining to these two jaws and which extension is receivable between said wings in the clamping operation.

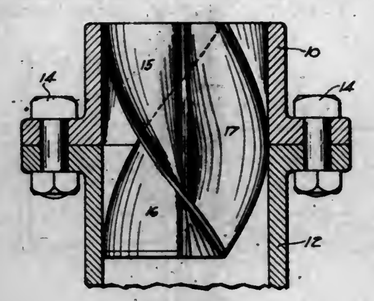
1,479,477. UNIVERSAL-JOINT DISK. NEWTON S. NOBLE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 442,999. 8 Claims. (Cl. 64—96.)



1. A coupling disk for a universal joint, said disk comprising a continuous, flat strip of rubberized fabric folded into the form of an annulus having polygonal inner and outer peripheries and having approximately twice as many thicknesses of the strip in some of its parts as in substantially all of the rest of its parts.

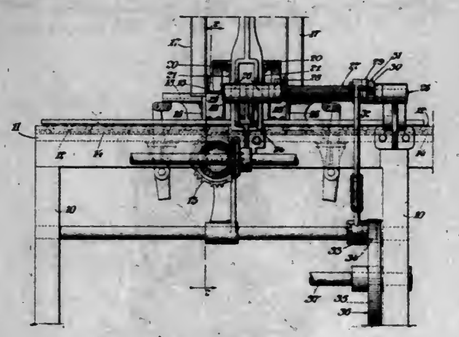
1,479,478. SPRING SUPPORT FOR VEHICLES. HERBERT OLOF OLSON, Rockford, Ill., assignor to The Bedwells, a Copartnership consisting of Thomas A. Bedwell and Clarence A. Bedwell, Rockford, Ill. Filed Feb. 26, 1921. Serial No. 447,961. 14 Claims. (Cl. 267—60.)

1. A spring support for vehicles comprising in combination with a body-supporting member and an axle, of a spring toggle, betwen said axle and said member supporting the latter on the former, said spring toggle comprising a front and a rear unit, each unit consisting of a pair of telescoping tubes and an interposed coil compression spring, the tubes of each unit being pivotally connected at its ends to said member and axle, and a tie-bar acting between said axle and member in a plane substantially coincident with the pivot axis of the front unit on said member.



1,479,479. ROLL-FEED MECHANISM FOR POWER PRESSES. HERMAN OSSWALD, Glendale, N. Y. Filed Jan. 26, 1922. Serial No. 531,929. 4 Claims. (Cl. 192—48.)

1. A roll feed mechanism comprising driving and driven members, a friction clutch for converting the oscillating movement of the driving member into an intermittent rotary movement of the driven member, said clutch comprising a cam carried by the driving member, a normally contracted split ring, a roller located between the face of the cam and the ends of the split ring whereby the movement of the cam away from its normal position will cause the roller to expand the split ring into clutching engagement with the driven member, and a lost motion connection between the split ring and driving member.



1,479,480. TWISTER FOR LOCOMOTIVE EXHAUST NOZZLES. FRANCIS E. OWEN, Thistle, Utah. Filed Aug. 4, 1920. Serial No. 401,252. 6 Claims. (Cl. 162—4.)

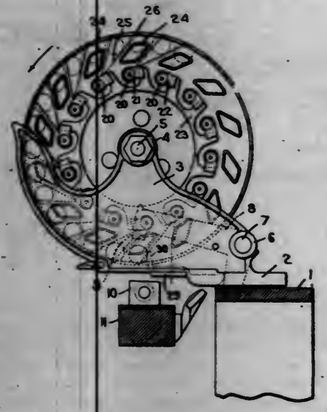
1. In a twister for locomotive exhaust nozzles, the combination with a nozzle portion, of a plurality of vanes inside the said nozzle portion, the said vanes having a curved cross-section and being inclined, relatively to

the longitudinal axis of the said nozzle portion, for the purpose of imparting a twisting motion to fluids discharged from the said nozzle portion.

1,479,481. MACHINE FOR MAKING MATCH BOOKS. MICHAEL PARIDON, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1921. Serial No. 479,305. 3 Claims. (Cl. 93—7.)

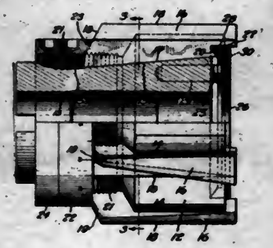
1. In a machine for making match books, the combination with a carrier comprising a succession of cover holders, of means for folding cover blanks and inserting them into said holders, said means including a folding blade, a rocker-shaft, operative connection between said shaft and blade, a positively actuated rocker element loose on said shaft, means whereby the motion of the said element in one direction is positively transmitted to the shaft, and a spring connection through which the motion of the said element in the other direction is transmitted to the shaft.

1,479,482. WHEEL. SIDNEY I. PRESCOTT, New York, N. Y., and FRANCIS J. RUMMLER, Lyndhurst, N. J. Filed Feb. 13, 1922. Serial No. 536,043. 8 Claims. (Cl. 301—63.)



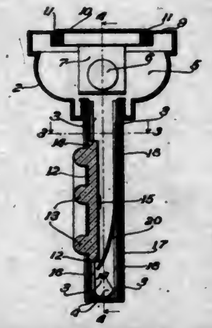
8. The combination with a disc wheel body provided with an integral rim engaging section having inboard and outboard rim supporting surfaces of substantially equal angularity and an intermediate surface of lesser angularity, of a rim seated on said section and having

bearing surfaces of corresponding angularity, said rim also having an inboard tire supporting surface of sub-



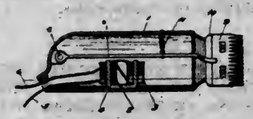
stantially the same angularity as said intermediate surface and an outboard tire supporting surface of equal but reversed angularity.

1,479,483. AUTOMATIC FILLING-REPLENISHING LOOM. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 16, 1923. Serial No. 619,498. 2 Claims. (Cl. 139—248.)



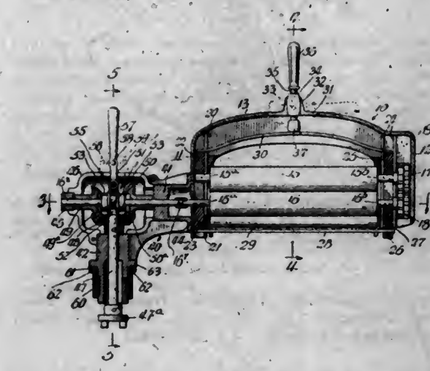
1. An automatic filling replenishing loom comprising a hopper stand, a hopper rotarily mounted in the stand, a circular series of seats at the interior of the hopper to receive and support the fresh filling carriers, a circular series of filling end holders on the exterior of the hopper, and separating positioning wings projecting from the hopper exterior, between the periphery and the circular series of end holders, and located to ensure that each run of filling from the hopper periphery to its end holder shall extend in the direction of rotation of the hopper and shall form a substantial angle with that radius of the hopper passing through the point where the run of filling crosses the hopper periphery whereby the filling end extending from the end holder after transfer of the corresponding filling carrier will be carried well forwardly out of the way.

1,479,484. REAMER. EDWARD C. SCHMELEKOPF, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Nov. 13, 1922. Serial No. 600,771. 2 Claims. (Cl. 77—75.5.)



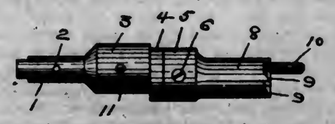
1. In a reaming tool, the combination with a body formed with longitudinal blade slots, of blades fitting said slots and formed with beveled end walls, each of said slots and its blade having contacting walls that are inclined lengthwise relatively to the axis of the body whereby endwise adjustments of the blades are accompanied by radial adjustments thereof, a ring threaded on said body and formed with a beveled inner side fitting and embracing the rear beveled end walls of said blades, and a transversely elastic disc clamp opposite and adjustably secured to the forward end wall of said body and having an inwardly directed peripheral flange formed with a beveled side fitting and embracing the forward beveled end walls of said blades.

1,479,485. ILLUMINATED SIGN. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to The Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1922. Serial No. 593,588. 4 Claims. (Cl. 40—133.)



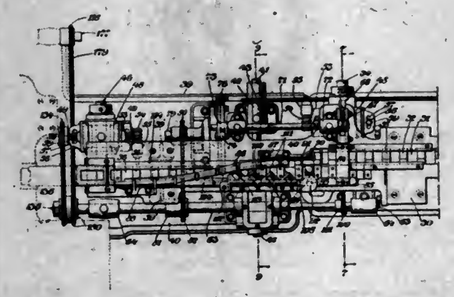
1. An illuminated sign comprising a narrow hollow body part having an open horizontal end and closed light tight at all of its other ends, a hollow ornamental molding entirely surrounding and connected to the open horizontal end of the body part the said molding forming a light chamber opening into the hollow body part throughout substantially the length of said body part, an electric lamp removably mounted in the light chamber having an opening therein adapted to give access to the lamp, a movable light tight closure for the said opening, an opaque stencil plate forming one wall of the body part, transparent sign characters mounted in said stencil plate, a reflector mounted in the body part spaced rearwardly from the stencil plate and substantially parallel thereto and adapted to divert the light rays outwardly through the sign characters, and parallel guides within the body part through which the stencil plate and the reflector are adapted to be withdrawn edgewise in the same direction.

1,479,486. ELECTRIC CLIPPER. LEO J. WAHL, Sterling, Ill. Filed Oct. 14, 1919. Serial No. 330,547. 2 Claims. (Cl. 175—338.)



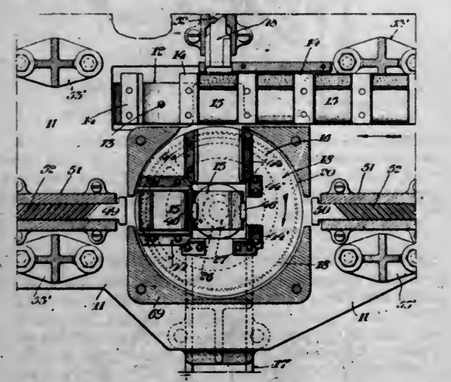
1. In a mechanism of the character described the combination of an alternating current electro-magnet, an armature for the electro-magnet, and vibrating at the rate of alternations of the operating current, and a mounting for the armature imparting thereto vibratory characteristics different from the alternations of the operating current to prevent overrunning.

1,479,487. CLOTHES WRINGER. SAMUEL T. WHITE, Davenport, Iowa, assignor to White Lily Manufacturing Company, Davenport, Iowa, a Corporation of Iowa. Filed June 26, 1922. Serial No. 570,889. 4 Claims. (Cl. 68—32.)



1. In a clothes wringer, the combination of a frame having a top member, wringer rolls mounted in said frame, a tension bar for imparting tension to the wringer rolls, a fulcrum block pivoted in fixed parts of said top member, a lever threaded through said block and having an arm adapted to engage said tension bar, said arm being adjustable in length, and means operable at the power arm end of said lever for adjusting the length of the first named arm.

1,479,488. ADJUSTABLE COUNTERBORER. LOUIS ZIDAKOVITS, Cleveland, Ohio. Filed Nov. 24, 1922. Serial No. 603,004. 3 Claims. (Cl. 77—58.)

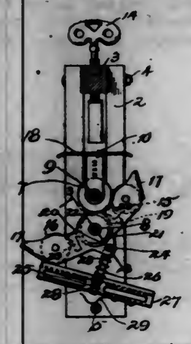


1. A counter borer comprising a shank adapted to be gripped by the jaws of a chuck, a pilot pin associated with and having the same center line as the shank, a sleeve surrounding the pilot pin and the outer surface having an eccentric relation thereto, a rotatable member mounted upon said sleeve and having an eccentric relation thereto and provided with a cutting edge, the eccentric relation of the sleeve pilot pin and rotatable member serving to permit the adjustment of the cutting edge for drilling holes of different sizes.

1,479,489. MACHINE FOR ASSEMBLING BOOK MATCHES. JOSEPH E. ZOMNIR, New York, N. Y., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1922. Serial No. 580,551. 24 Claims. (Cl. 226—4.)

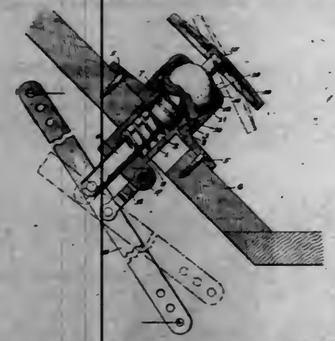
1. In a machine for assembling match books and the like, the combination with means for impelling a succession of flat-lying articles with their head portions primarily located adjacent to and longitudinally of one side of the path of travel, of means for bodily inverting the alternate articles during their travel and thereby positioning their head portions adjacent to and longitudinally of the opposite side of the said path.

1,479,490. MACHINE FOR ASSEMBLING BOOK MATCHES. JOSEPH E. ZOMNIR, Springfield, Mass., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 7, 1923. Serial No. 617,500. 9 Claims. (Cl. 226—7.)



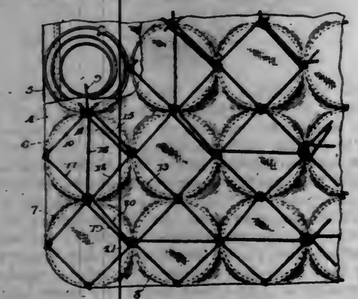
1. The combination with means for intermittently impelling a row of flat-lying articles with their head portions located at one side of the path of travel, of means for ejecting each succeeding article from the row, a rotary element having guides in angular relation to each other and having a central throat to which said guides lead, means for oscillating said element to position its guides alternately for the reception of the ejected articles, oppositely-acting means at the respective sides of the axis of oscillation of said element for shifting into the central throat the articles positioned in the respective guides, and means for depressing the articles through said throat and in flatwise position.

1,479,491. WRINGER. GUSTAF E. ANDRE, Chicago, Ill. Filed Apr. 2, 1921. Serial No. 457,878. 13 Claims. (Cl. 68—32.)



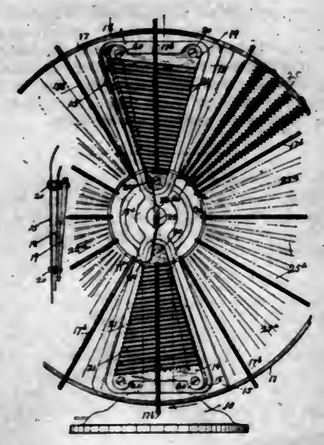
1. In a clothes wringer, the combination with the wringing rollers thereof; of two feeding rollers; and

a frame upon which said feeding rollers are mounted and itself adjustable to bring either feeding roller into



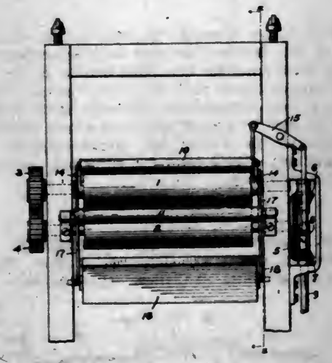
clothes gripping relation with a wringing roller and the other feeding roller out of cooperative relation.

1,479,492. ACCELERATOR FOR MOTOR VEHICLES. GEORGE BAILHE, Fort Wayne, Ind. Filed Jan. 16, 1923. Serial No. 612,978. 4 Claims. (Cl. 74—81.)



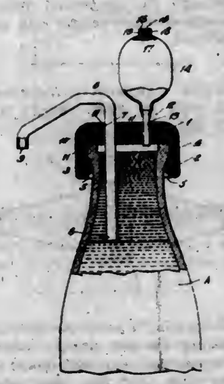
2. A foot-pedal, one end of which is a recessed ball.

1,479,493. MATTRESS OR THE LIKE. FRED W. BAUER, Milwaukee, Wis. Filed Jan. 19, 1921. Serial No. 438,478. 12 Claims. (Cl. 5—267.)



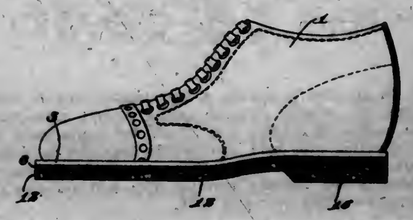
1. A resilient cushion comprising covering members, a series of rows of helical springs interposed between said covering members, a flexible member for each of the covers stitched thru the corresponding cover and knotted around a terminal convolution at a plurality of points, and a knot formed by said flexible securing means and around adjacent attached portions thereof to take up slack in the attached portions of said flexible securing means, said flexible securing means extending from said last mentioned knot to the next terminal convolutions thruout the entire series.

1,479,494. COMBINED ELECTRIC FAN AND HEATER. MICHAEL BECK, Minneapolis, Minn. Filed Dec. 10, 1920. Serial No. 429,770. 9 Claims. (Cl. 219—42.)



1. The combination with a motor-driven fan, of a heat-reflecting and an electrical heating element applied to a blade thereof.

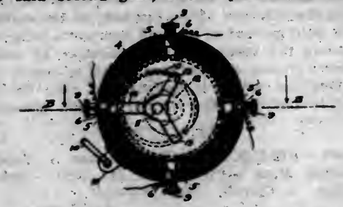
1,479,495. CLOTHES WRINGER. HERBERT H. BRADFORD, Pittsburgh, Pa. Filed Feb. 16, 1922. Serial No. 536,885. 1 Claim. (Cl. 192—133.)



In a power-driven wringer the combination, with a pair of wringer rolls and means for rotating them alternately in opposite directions, of a safety attachment consisting of two pairs of guard rollers arranged pair by pair on opposite sides of the wringer rolls, above and below the roll-pass, the lower of each pair of guard rollers being borne in a fixed support and the upper in a movable support, and the movable rollers of the two pairs being integrated and movable in alternation to cooperating position with respect to its stationary companion, and means for shifting the movable guard rollers in coordination with reversal of the wringer rolls.

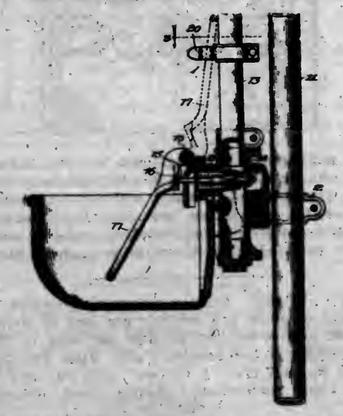
1,479,496. CREAM REMOVER FOR MILK BOTTLES. WALTER L. CONWELL, Upper Montclair, N. J. Filed July 20, 1922. Serial No. 576,233. 2 Claims. (Cl. 215—3.)

1. In a cream remover, a closure adapted to be engaged over the open end of a milk bottle to constitute a pressure closure therefor, a discharge tube passing through the cap with its intake end at approximately the line of division, between the cream and milk, and a device connected to the cap for creating pressure in the bottle and thereby causing ejection through the discharge tube of a quantity of the cream in the bottle.



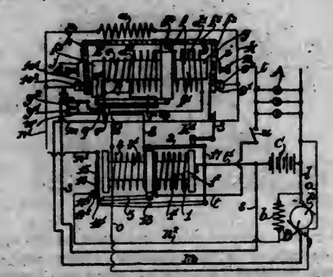
1,479,497. PROCESS OF ATTACHING RUBBER SOLES TO BOOTS AND SHOES. DAVID A. CUTLER, Atlantic, Mass. Filed Oct. 4, 1922. Serial No. 592,430. 1 Claim. (Cl. 36—14.)

The improved process of attaching to footwear two layers of unvulcanized rubber unified into a single outsole, which consists in providing two sole-like layers, each of less thickness than that or the combined outsole, first applying one layer to the footwear and securing the same thereto by mechanical fastenings, then partially dissolving either or both of the contacting surfaces of the layers to be united, and then applying and holding the outer layer to the surface of the mechanically attached layer, until the partially dissolved surfaces become unified, whereby a complete solidified outersole of unvulcanized rubber is produced, having the mechanical attachments concealed therein.



1,479,498. TIMER FOR ELECTRICAL CONTACTS. ISAAC S. DEMENT, Dayton, Ohio. Filed Apr. 7, 1919. Serial No. 288,136. 3 Claims. (Cl. 200—26.)

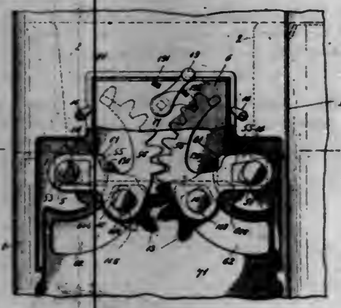
1. In a device of the character described, an internal gear, a plurality of contacts spaced about said gear and each comprising a pair of yieldable fingers, a second gear meshing with said internal gear and arranged eccentrically thereto, means for imparting bodily movement to said second gear, and a plurality of contact



fingers rigidly connected with said second gear and arranged to engage the respective pairs of yieldable fingers as said second gear travels about said internal gear.

1,479,499. WATER BOWL. HENRY L. FERRIS, Harvard, Ill., assignor to Hunt, Helm, Ferris & Company, Harvard, Ill., a Corporation of Illinois. Filed Mar. 8, 1922. Serial No. 542,027. 2 Claims. (Cl. 119—75.)

1. In combination, a water bowl, a valve for supplying water thereto, an animal operated member extending into said bowl and hingedly mounted for operating said valve, said member being movable about its pivot to a non-operable position outside said bowl, and a spring clip for holding said member in said position.

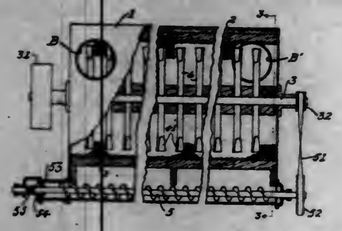


1,479,500. INSTALLATION FOR REGULATING AN ELECTRIC-CURRENT NETWORK SUPPLIED WITH CURRENT FROM A GENERATOR RUNNING AT VARIABLE SPEED. JEAN GMESLINGER, Carouge, near Geneva, Switzerland, assignor to James Thum, Geneva, Switzerland. Filed Oct. 4, 1922. Serial No. 592,198. 7 Claims (Cl. 171—313.)

1. In an installation for regulating the electric system supplied with current derived from a generator running at variable speed in combination two automatic and ad-

justable regulators of which one is being operated by the influence of the tension of said generator, and the other by the influence of the intensity of the current supplied by said generator, the said regulators being adapted to regulate the tension of the generator by connecting and disconnecting a resistance which is comon to both regulators and which is designed to vary the current flowing in the excitation circuit of said generator.

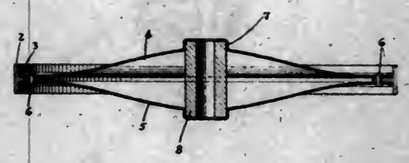
1,479,501. FIRE-BOX GRATE. OSSIAN A. HEDENGREN, Taunton, Mass. Filed Aug. 31, 1921. Serial No. 497,218. 4 Claims. (Cl. 126—177.)



1. A rocking and dumping grate for fire boxes comprising suitable supports, two side bars pivotally mounted in said supports and provided with arms extending inward towards each other and with intermeshing segment gears, and grate bars pivotally mounted in said arms and also provided with intermeshing segment gears.

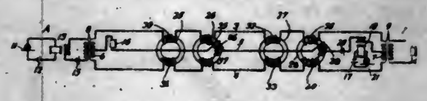
1,479,502. YEAST. GUSTAV HEFFELE, Riverside, Calif., assignor of seven and one-half per cent to Herman J. Theroff and seven and one-half per cent to William Levers, both of Los Angeles, Calif. Filed Feb. 5, 1923. Serial No. 617,177. 5 Claims. (Cl. 99—10.)

2. A yeast composition including yeast, onions, and starch.



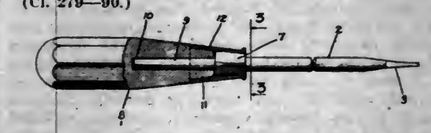
5. The process of forming a yeast composition which consists of mixing a dough of malt, water, and starch and allowing said dough to stand for spontaneous fermentation; boiling onions in water and adding the mixture to said dough and allowing the latter to stand for further fermentation; and boiling hops in water with the addition of salt and sugar and mixing said liquid with a starch and adding the resulting mixture to said dough.

1,479,503. COTTON CLEANER. NELSON B. HENRY, Atlanta, Ga., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Nov. 11, 1922. Serial No. 600,297. 2 Claims. (Cl. 19—90.)



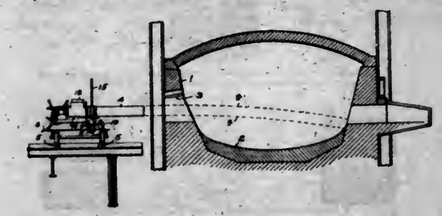
1. The cotton cleaner above described, made up of an air-tight casing; a screen chamber within the casing; beater arms mounted for rotation about the longitudinal axis of the screen chamber and casing; an air and cotton inlet opening, at one end, through the casing side wall to the interior of the screen chamber, directed tangentially to the circular path of the beater arms and in the direction of the rotation thereof; an air and cotton exit opening, at the other end from the interior of the screen chamber, through the casing side wall; a fan to create an air current through the tangential inlet opening and through the screen chamber to the exit, substantially as shown and described.

1,479,504. WHEEL. ARTHUR O. HUBBARD, Minneapolis, Minn. Filed Sept. 22, 1922. Serial No. 589,801. 2 Claims. (Cl. 301—63.)



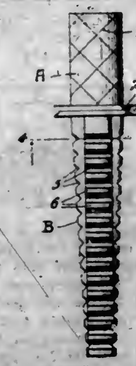
1. A wheel comprising a non-expansible rim having an inwardly projecting annular flange, sheet metal discs provided upon opposite sides of said flange and of slightly greater diameter than said rim, their edges when said discs are pressed into the rim being outwardly turned by such pressure adapting the discs to variations in the diameters of the rims, said discs being seated on said flange, the edges of the discs bearing snugly against the inner face of said rim and transmitting the load from the hub to said rim, means for clamping said discs and flange together and a suitable hub centrally mounted in said discs.

1,479,505. TRANSMISSION CIRCUITS. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1920. Serial No. 351,944. 11 Claims. (Cl. 178—45.)



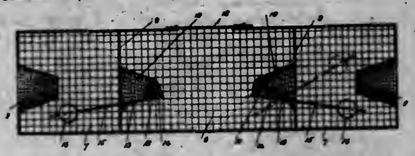
1. In an electric system, a transmission circuit comprising two outside branches and a central conducting path, means for loading said circuit for transmission in one direction over said two outside branches in series relation, and means for loading said circuit for transmission in the opposite direction over said branches in parallel returning over said path.

1,479,506. SCREW DRIVER. HENRY FRANCIS KELLEMEN, Duluth, Minn., assignor to Marshall-Wells Company, Duluth, Minn., a Corporation of New Jersey. Filed Jan. 7, 1922. Serial No. 527,720. 2 Claims. (Cl. 279—90.)



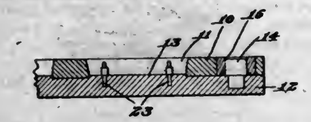
1. A tool comprising a shank, having a block thereon forming a shoulder surrounding the shank, said block being rectangular in cross-section, and having tapered external bearing surfaces, said shank extending beyond said block, and a handle having a socket to receive said shank, the end of said handle engaging said block and limiting the movement of said shank into said socket, the end of said handle being rectangular in cross-section and having tapered bearing surfaces forming continuations of the surfaces of said block, and a tapered ferrule having internal faces to fit the surfaces of said block and bearing.

1,479,507. FURNACE CHARGING. ROBERT B. KERNOHAN and MORGAN W. HALL, Pittsburgh, Pa. Filed Nov. 8, 1922. Serial No. 599,647. 4 Claims. (Cl. 266—43.)



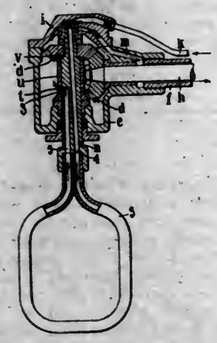
1. The method herein described of replenishing a furnace lining which consists in projecting lining material across the furnace chamber in aggregated units inaccessible to the stream of gas through which they are projected.

1,479,508. POST FOR ARTIFICIAL TEETH. FREDERICK MAEULEN, Rahway, and GEORGE L. VAN ALLEN, Newark, N. J., assignors to Baker & Company, Inc., a Corporation of New Jersey. Filed Oct. 8, 1921. Serial No. 506,283. 7 Claims. (Cl. 32—9.)



1. A post for artificial teeth having a plurality of radially projecting longitudinal ribs forming longitudinal grooves between them, certain of said ribs being formed with transverse grooves communicating with the adjacent longitudinal grooves between said ribs, whereby the cement in all of transverse grooves is joined with the cement in adjacent ones of said longitudinal grooves when the post is cemented in a root.

1,479,509. ANIMAL TRAP. ROY J. MEYER, Lenora, Kans. Filed Dec. 28, 1921. Serial No. 525,426. 2 Claims. (Cl. 43—66.)



1. In a trap, a single, rigid and continuous body portion formed of wire work and provided with two transverse partitions which divided it into a single main chamber and two ante-chambers, the said main chamber being adapted to contain the bait and to receive animals from both ante-chambers and being provided with a door for the removal of the animals, conical inlet members which project within the ante-chambers from the opposite ends of the said body portion and converging inlet members provided with automatically-closing outlet doors, said inlet members being secured to the said partitions and projecting within the said main chamber.

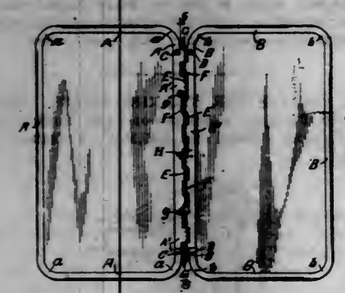
1,479,510. COMBINED DIE AND MOLD. WILLIAM H. MORGAN and JOHAN FREDRIK BRUNSELL, Dorchester, Boston, Mass. Filed Sept. 20, 1922. Serial No. 589,483. 1 Claim. (Cl. 18—42.)

An improved combined die and mold comprising a bottom plate, an upstanding member formed integral therewith and of any desired shape, an intermediate member provided with a mold cavity of a shape and size similar to the upstanding member on the bottom plate and registering with said btotom plate to define a mold of suitable depth, a top plate cooperating with the intermediate plate and provided with a downwardly extending member formed integral therewith and of a size and shape similar to the upper edge of the mold cavity in the middle plate, the downwardly extending member movable toward the bottom plate to compress molded or moldable material held in the mold cavity in the middle plate and to cause a flow of excess material outwardly therefrom, the edge of such downwardly extending portion cooperating with the upper edge of the mold cavity in the middle plate to cut or shear excess material from the molded or moldable material as the members are brought into association with each other.

1,479,511. MEANS FOR STIRRING GLASS. CHARLES ALGERNON PARSONS, Newcastle-on-Tyne, England. Filed Oct. 17, 1922. Serial No. 595,129. 4 Claims. (Cl. 49—14.)

1. For use in the manufacture of glass, a stirrer with means for giving thereto a rotary motion about its own axis and an orbital movement, substantially as and for the purposes described.

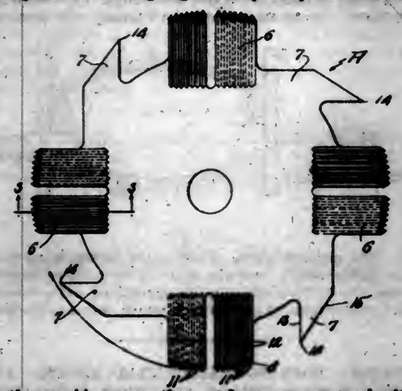
1,479,512. STAPLING TOOL. GEORGE W. PERKINS, Boston, Mass., assignor to Heaton Peninsular Button Fastener Company, Boston, Mass., a Corporation of Maine. Filed Jan. 17, 1922. Serial No. 529,909. 1 Claim. (Cl. 1—50.)



A hand stapling tool consisting of two jaw-members pivotally connected together, one of said jaws being provided with an anvil which has two depressed portions with an intermediate rib for clinching the staple, the other of said jaws being provided with a cooperating

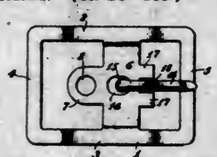
staple driving member formed with two parallel apertures, a U-shaped staple holder having two parallel legs which pass loosely through the apertures in said driver, said legs having longitudinal grooves to hold a staple, said driving member being formed with a transverse groove in its lower end intermediate the legs of the staple holder, the portions of the driving member on

the opposite sides of the transverse groove engaging the head of the staple to drive the legs of the staple through the material to which the article is to be attached when he jaws are brought together, and a spring which engages the staple holder and normally causes the lower end of the legs to project below the driver to clamp the said material to the anvil during the driving of the staple.



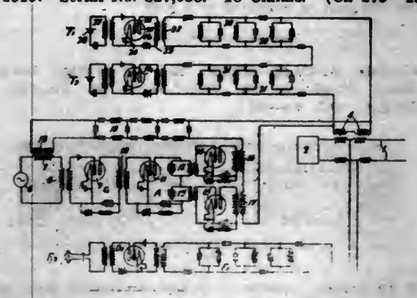
1,479,513. HOLDER FOR MENUS AND BILLS OF FARE. ADOLPH B. RANIG, Chicago, Ill. Filed Aug. 21, 1922. Serial No. 583,191. 2 Claims. (Cl. 129—26.)

2. A holder consisting of covers hinged together, said holder comprising a spring member mounted on the pintle of the hinge and arranged to tend to open the covers from a closed position, and each of said covers comprising a plurality of frame members U-shaped in cross section, one thereof extending around three sides of a rectangle and portions of the remaining side, and having round corners thereto, and the other of said frame members having interlocking parts arranged to permit a pintle to pass therethrough and through said spring, in combination with a wire arranged to form said pintle, and projections on said wire adapted to extend through a menu contained in said holder.



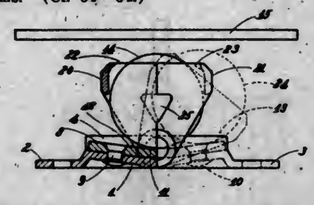
1,479,514. GROOVER SAW. ALFRED M. REMINGTON, Fitchburg, Mass., assignor, by mesne assignments, to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1922. Serial No. 589,184. 5 Claims. (Cl. 144—222.)

1. A groover saw comprising a blade having integral cutters disposed in the planes of the faces of the blade respectively to mark the outside dimensions of the groove to be made, said cutters tapering arcuately from the the cutting edges thereof to the full width of the blade, the curving sides of said cutters being ridged transversely as respects the cutting edge to rasp away the wood dur-



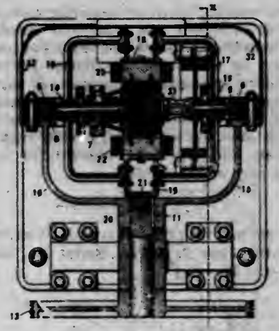
ing the marking operation, and means arranged alternately with said cutters along said blade to rake the material between the marks made by said cutters.

1,479,515. TONGUE BUCKLE. THEODORE RUSSELL, Naugatuck, Conn. Filed Nov. 6, 1922. Serial No. 599,262. 2 Claims. (Cl. 24—188.)



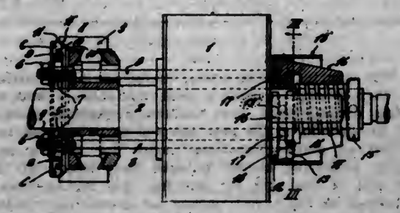
1. A buckle comprising a frame, a crosspiece integral therewith between the ends of the frame, said crosspiece having a perforated ear at one side to receive means for securing the buckle to a strap, and a tongue secured to said crosspiece, said tongue and perforated ear being in alinement in order to maintain said buckle in alinement with said strap, and means on the opposite side of said crosspiece from said ear for engaging the tongue to prevent lateral displacement thereof.

1,479,516. SIGNALING BY HIGH-FREQUENCY WAVES. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,038. 18 Claims. (Cl. 179—15.)



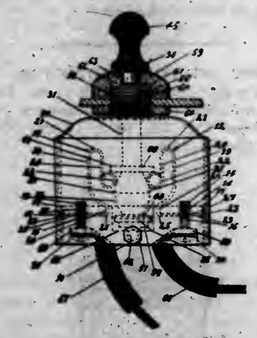
16. A common transmission path, a plurality of channels each adapted to transmit currents of different frequency from those transmitted by the other channels, and a separate band filter connecting each channel to said path, the terminations of said filters electrically adjacent said path being connected in series.

1,479,517. ROLLER SIDE BEARING. ARTHUR B. SEVERN, Pittsburgh, Pa., assignor to A. Stucki, Pittsburgh, Pa. Filed Oct. 2, 1922. Serial No. 591,721. 4 Claims. (Cl. 64—64.)



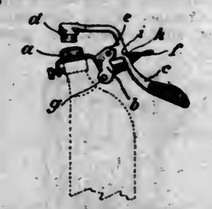
3. A side bearing for railway cars comprising a supporting base provided with a lower bearng surface upstanding flanges adjacent said bearing surface, trunnions projecting from the said flanges, an oscillating retaining frame pivoted to said trunnions, the distace between the transverse bars of said frame being less than the diameter of said roller.

1,479,518. ELEVATOR. EDWARD A. SMITH, West Englewood, N. J. Filed Oct. 11, 1921. Serial No. 507,002. 9 Claims. (Cl. 74—7.)



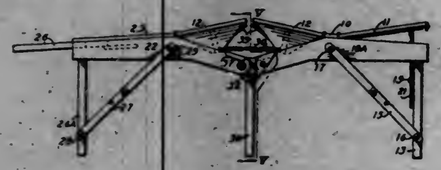
1. In an electric elevator, a stationary post, an electric motor having its frame fixed to said post and thereby held stationary, said motor having drive pinions at the opposite ends of its armature shaft, ring gears spaced in opposed relation and engaged respectively by the pinions on the opposite ends of the motor shaft and an elevator sheave directly connected with and operated by said ring gears.

1,479,519. SHORT-CIRCUITING DEVICE FOR ELECTRIC MOTORS. JOSEPH C. STEINER, St. Louis, Mo. Filed June 3, 1921. Serial No. 474,709. 5 Claims. (Cl. 172—279.)



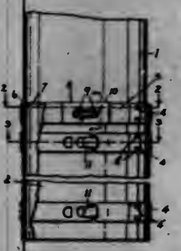
2. A motor having a commutator including contact members, and a short-circuiting device comprising a rotary holder movable with said commutator, short-circuiting contact members carried by said rotary holder, said short-circuiting contact members having on their peripheral edges initial contact faces slidable on the first mentioned contact members and final contact faces on their side edges adapted to be engaged subsequent to said initial contact faces, and speed-responsive means for shifting said rotary holder to successively engage said initial and final contact faces with the first mentioned contact members, said short-circuiting contact members being movable toward and away from the axis of said rotary holder so as to slide on the first mentioned contact members, and said holder being movable in a direction parallel with said axis to engage said final contact faces, said initial contact faces being at an angle to said final contact faces.

1,479,520. ELECTRIC SWITCH. JOSEPH A. TERBECK, Cincinnati, Ohio. Filed Feb. 21, 1921. Serial No. 446,587. 4 Claims. (Cl. 200—163.)



1. In an electric switch, a plurality of resilient conducting contacts, a stem, an insulating member on said stem adapted to be interposed between said contacts, a conducting member on said stem adapted to establish electrical connection between said resilient contacts and said insulating member and said conducting member together forming a reversible spheroid for the purposes set forth herein.

1,479,521. AUTOMATICALLY-OPERATING LEVER LOCK FOR ETHYL-CHLORIDE FLASKS OR TUBES. JULIUS THILO and MARTIN GRUBUSCH, Mainz, Germany, assignors to the Firm Dr. Thilo & Co., Mainz, Germany. Filed Apr. 28, 1923. Serial No. 635,398. 3 Claims. (Cl. 215—63.)



1. An automatically operating lever lock for ethyl chloride containers, comprising a head arranged for fixture to the neck of a container and having a restricted outlet for the container, whereby the contents are ejected in a jet, an action lever pivotally mounted on the head and having a lock cap to close against the head and close the outlet when the action lever is in closed position and means coacting with said lever to cause the latter to hold said cap in spaced relation to said head and opposite the outlet thereof when the said lever is in open position and thereby cause the ethyl chloride jet from the container to strike in the cap and fall therefrom in drops.

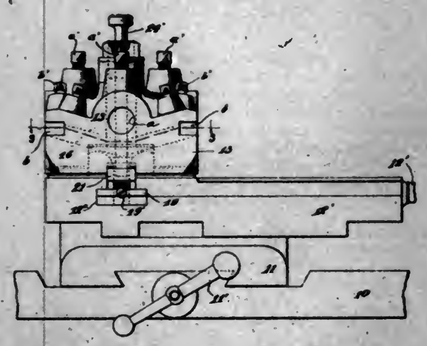
1,479,522. CHIROPRACTIC TABLE. OLE H. THORFINNSSON, Baltimore, Md. Filed Apr. 4, 1922. Serial No. 549,405. 9 Claims. (Cl. 128—73.)

1. The table whose top includes two rigid portions and two elastically supported portions, the latter being hinged to the said rigid portions, respectively, and elastic means extending from one to the other of these elastically supported portions and engaging with them in such manner that each exerts an upward pressure which is equal to that of the other.

1,479,523. POST AND POLE PROTECTOR. MONTGOMERY C. TOWNLEY, Jackson, Mich.; the Peoples National Bank executor of said Montgomery C. Townley, deceased. Filed Dec. 26, 1922. Serial No. 608,926. 7 Claims. (Cl. 20—100.)

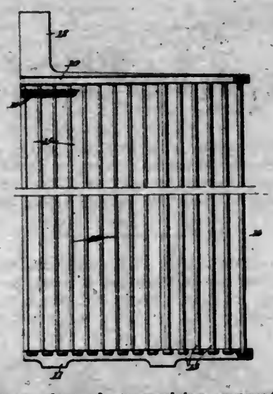
7. In a post protector, the combination with a post, of a sheet metal casing wrapped around said post, a clamping band embracing the casing, and having an inwardly projecting flange at its upper edge engaging the post above the casing providing a cap therefor, and means for applying clamping stress to said band whereby the edge of its flange is engaged with the post under clamping stress.

1,479,524. GALVANOMETER. WALTER VAN GUILDER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 26, 1921. Serial No. 495,617. 4 Claims. (Cl. 171—95.)



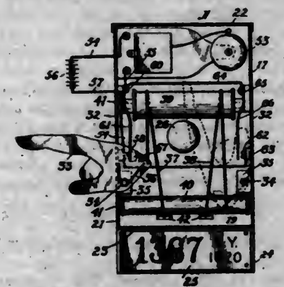
1. In combination with the permanent magnet and biased coil of a galvanometer, an electromagnet, whose coil is in circuit with the galvanometer coil and whose magnetized core is positioned with respect to the galvanometer coil and magnet poles for deflecting the flux of the permanent magnet out of the path for influencing the galvanometer coil, whereby variations of voltage of the current are compensated and prevented from affecting the galvanometer reading.

1,479,525. FABRIC-RUBBING MACHINE. WILLIAM H. WHITEHEAD and THOMAS W. KENYON, Paterson, N. J. Filed Feb. 15, 1923. Serial No. 619,285. 5 Claims. (Cl. 26—2.)



1. A fabric rubbing machine including means for holding the fabric stretched and a movable rubber confined to move in substantial parallelism with the plane of the stretched part of the fabric, the rubber having rubbing blades extending crosswise of the path of movement of the rubber and projecting toward and arranged on opposite sides of the stretched part of the fabric with each blade on one side out of registry with each blade on the other side and coacting therewith to maintain a bend in said part of the fabric.

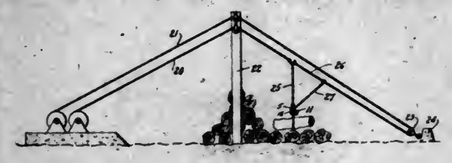
1,479,526. TOOL TURRET. JULIUS C. WILKIE, Winona, Minn. Filed June 7, 1922. Serial No. 566,653. 6 Claims. (Cl. 29—48.)



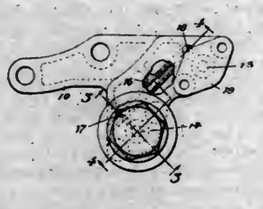
1. The combination of a tool turret having a vertical bore therethrough, a hollow post mounted in and extending through said bore, means projecting radially from the bottom of the post adapted to be entered into the slot of a tool carriage, means for locking said radially projecting means in said slot, means at the other end of the post for drawing said means toward the bottom of the turret, means for preventing relative rotation between the turret and said projecting means, said locking means comprising a key slidably mounted on said post and adapted to enter a slot in the bottom of the turret, and a stem in said post for displacing said key.

1,479,527. BATTERY ELECTRODE. HARLAND D. WILSON, Indianapolis, Ind., assignor to The Prest-O-Lite Co., Inc., Indianapolis, Ind., a Corporation of New York. Filed Mar. 20, 1923. Serial No. 626,387. 10 Claims. (Cl. 204—29.)

1. A battery electrode comprising supporting means and a plurality of elements of polygonal cross-section, each of said elements having two adjacent faces which lie at different angles to the central plane of the electrode and which meet in an edge which provides a rib at the face of the electrode.



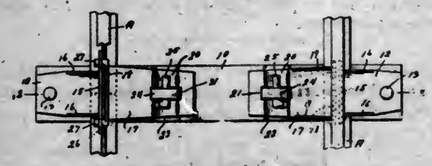
1,479,528. DIRECTION INDICATOR FOR VEHICLES. WELLINGTON WILSON, Brooklyn, N. Y. Filed Apr. 23, 1920. Serial No. 376,040. 4 Claims. (Cl. 116—47.)



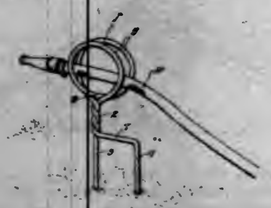
1. In a direction indicator for vehicles, a casing including side walls having longitudinally extending slots formed therein, and a rear wall having spaced transversely extending aligned slots formed therein below the longitudinally extending slots, a pair of indicating pointers pivotally mounted within the casing at their lower ends and arranged to extend through the longitudinally extending slots and out of the casing when in their lowered positions, means for normally holding the pointers in their raised position in said casing, a single guide roller disposed in the casing above the pivot points of the pointers, a single guide roller disposed in the casing below the pivot points of the pointers and adjacent to the transversely extending slots, and flexible cables secured to the pointers at one side of the pivot points thereof and strained about the said guide rollers and extended through said transverse slots.

1,479,529. TRIP HOOK. CHARLES WILLIAM ANDERSON, Anacortes, Wash. Filed July 5, 1922. Serial No. 572,937. 3 Claims. (Cl. 294—83.)

1. A trip hook comprising a shank having a bill, a trip member including a plurality of radiating arms rotatably mounted on the bill, one of said arms being arranged to form a part of the bill, an adjacent arm being arranged to close the bill with respect to the shank, and means engaged with the last mentioned arm for rotating the trip member relative to the bill and shank.



1,479,530. LUBRICATOR. HENRY F. BICKEL, Plainfield, N. J., and BLYTHE J. MINNIS, Watertown, N. Y., assignors to The New York Air Brake Company, a Corporation of New York. Filed May 8, 1922. Serial No. 559,392. 3 Claims. (Cl. 184—58.)



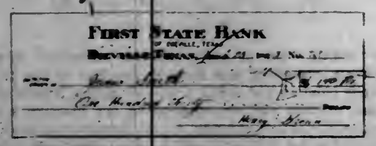
3. The combination of a plurality of cylinders having corresponding working spaces in each of which fluctuations of fluid pressure occur; a plurality of lubricators, one for each cylinder, each lubricator having an oil reservoir, a jacket surrounding said reservoir, a mounting seat and separate ports extending from said seat to said reservoir and to said jacket respectively; a bracket having seats for supporting and connecting respective lubricators and formed with oil ports each registering with the reservoir port of a corresponding lubricator, and a manifold port registering with the jacket ports of the various lubricators; and connections from respective working spaces to the corresponding oil ports in the bracket and from one working space to the manifold port in the bracket.

1,479,531. TIE FOR MINE TRACKS. EDWARD A. BOOHER, West Austintown, Ohio. Filed July 28, 1923. Serial No. 654,390. 4 Claims. (Cl. 238—61.)

1. A metallic tie of the character described having downwardly extending side flanges, the face of the tie at a distance from an end being provided with a transversely depressed portion and an upstanding eye beneath which the depressed portion extends, a rail clamping member attached to the end of the tie and having a vertical portion adapted to bear against the web of a rail, a clamping member including a vertical portion adapted to confront the vertical portion of the first named clamp and having a base adapted to rest upon the tie, this base having a transversely depressed portion, a slot intersecting said depressed portion and adapted to receive the eye, and a locking member adapted to pass across said depressed portion of the clamping member and beneath said eye.

1,479,532. HOSE HOLDER. EDWARD COLEMAN, Salt Lake City, Utah. Filed July 13, 1922. Serial No. 574,674. 2 Claims. (Cl. 248—38).

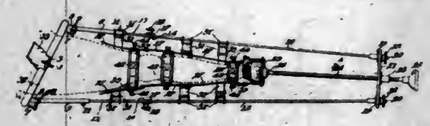
1. A hose holder formed from a single length of resilient wire bent between its ends to provide companion members constituting a clamping head and occupying approximately parallel planes, a portion of the wire extending diagonally between the lower portions of the said members and constituting a continuation of said portions common to the two, the strands of the wire being united to each other from a point immediately below the said portion and a short distance of their length to provide a relatively short shank, one strand of the wire being extended downwardly from the lower end of the shank in alinement therewith to form a relatively long prong, the other strand of the wire being bent to extend laterally from the lower end of the said shank and thence substantially parallel to the first-mentioned prong to provide a shorter prong laterally displaced with relation to the first-mentioned prong.



1,479,533. INK PASTE. FRANK B. COONEY, Minneapolis, Minn. Filed June 9, 1922. Serial No. 567,168. 8 Claims. (Cl. 134—8.)

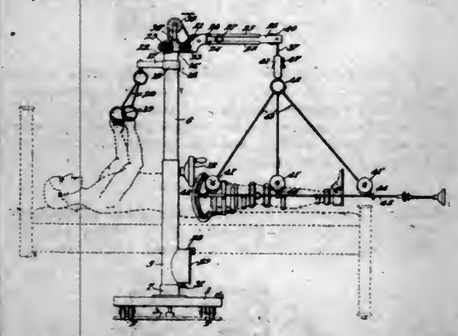
8. That method of compounding an ink in paste form, which consists of the mixing of 2 ounces of cold water and 1 ounce of white potato dextrin, heating the same slowly to a temperature of 172° F., thoroughly mixing the same, permitting the mixture to cool to approximately 85° F., at which temperature the following ingredients and their respective proportions are separately added and mixed:—

Gallic acid	336 grains.
Ferrous sulphate	252 grains.
Hydrochloric acid	130 minims.
Carbolic acid	1½ drachms.
Glycerine	2 drachms.
Indigotin	68 grains.



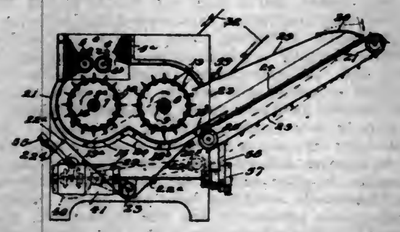
permitting the resultant composition to be thoroughly heated to 95° F., and permitting the mixture to stand twenty-four hours.

1,479,534. CHECK. VAN VINCENT CURTIS, McAllen, Tex. Filed Apr. 6, 1923. Serial No. 630,313. 1 Claim. (Cl. 283—9.)



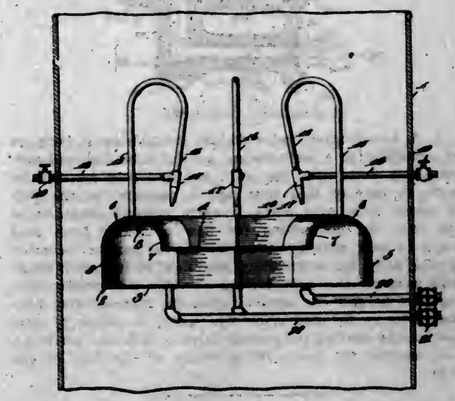
In a check, a body portion having an integral section formed of relatively thin material, a transparent protecting strip having connection with the body portion at one end of the protecting slip, said protecting slip having its under surface formed with adhesive material to secure the protecting strip to the relatively thin section of the check, and said protecting strip being formed of transparent material.

1,479,535. FRACTURE-SETTING APPARATUS AND SPLINT. SALVATORE FERRAGAMO, Santa Barbara, Calif. Filed Nov. 3, 1921. Serial No. 512,611. 28 Claims. (Cl. 128—85.)



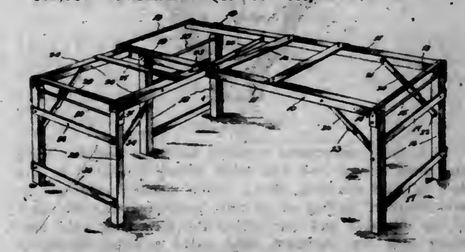
9. Fracture setting apparatus comprising a stretching frame, connected elements forming a limb frame, limb gripping bands carried by said elements, and means connecting said limb frame and said stretching frame.

1,479,536. APPARATUS FOR SUPPORTING INJURED LIMBS. SALVATORE FERRAGAMO, Santa Barbara, Calif. Filed Nov. 3, 1921. Serial No. 512,612. 6 Claims. (Cl. 128—94.)



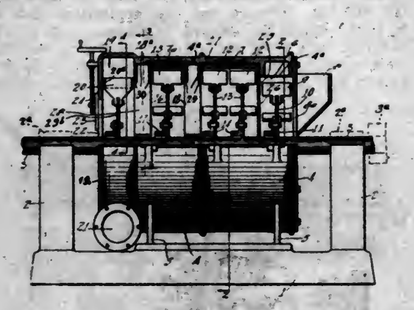
1. An apparatus of the class described comprising a standard, means including a lateral arm for supporting a limb of a patient from said standard, a second lateral arm loosely pivoted on said standard and a hand grip carried by said arm, said second arm being freely movable to position said hand grip within reach of the patient.

1,479,537. COTTON BREAKER AND SEPARATOR. JAMES C. GARNER, Houston, Tex., assignor, by mesne assignments, to The Garner Gin Company, Inc., Houston, Tex., a Corporation of Texas. Filed Feb. 3, 1920, Serial No. 355,930. Renewed Apr. 21, 1923. 2 Claims. (Cl. 19—87.)



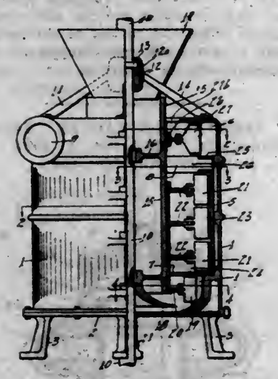
2. In a mechanism for breaking and opening up compacted masses of cotton, the combination of variably speeded feed rolls adapted to grip, advance and temporarily hold such masses, a parti-cylindrical screen below the rolls, a hollow drum on an axis immediately below the gripping rolls and having a closed peripheral wall of long radius adjacent and parallel to said screen, and breaking and tearing teeth secured to said wall and crossing the space between the wall and the screen, a second drum having a closed peripheral wall and teeth similar to those aforesaid and adapted to move rapidly downward on lines adjacent the first drum, a second curved screen below the second drum, an elongated duct extending outward from the second drum, an apron conveyor at the bottom of said duct, and means for checking the cotton elevated by the said conveyor.

1,479,538. OIL BURNER. LEO E. HEROD, East Chicago, Ind. Filed Feb. 24, 1923. Serial No. 621,014. 4 Claims. (Cl. 158—66.)



1. In a device of the class described, a drum comprising a bottom, a top, a side wall connected to the bottom and provided with an inwardly extended crown having a depending flange which is joined to the top, the crown and the flange forming a gas pocket within the drum, the pocket extending upwardly above the plane of the top, the flange and the top forming a recess, means for supplying fuel to the drum, and upwardly extended gas conduits carried by the crown and communicating with the pocket, the conduits having depending portions provided with burner nozzles discharging into the recess.

1,479,539. FOLDING WASHBENCH. AARON C. HINES, Tucumcari, N. Mex. Filed Dec. 1, 1922. Serial No. 604,363. 3 Claims. (Cl. 68—35.)

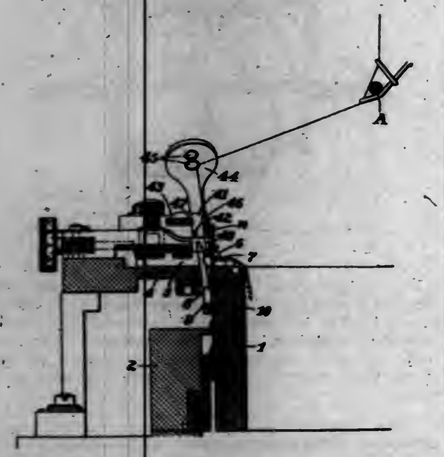


1. A bench for wash tubs comprising a main frame, end supports for the frame and hinged braces between the main frame and the supports permitting the folding of the latter under the main frame, an auxiliary frame having hinged connection with the upper side of the main frame, a hinged support at the end of the auxiliary frame and folding braces between the auxiliary frame and the hinged support, said frames including side runners and slats connecting said runners, holding the latter in parallel spaced relation, said slats being spaced to form a base for a tub and permitting the housing of the auxiliary frame between them when said auxiliary frame is folded over the top of the main frame.

1,479,540. PULVERIZER. PAUL ARTHUR HIRSCH, Erie, Pa., assignor to Furnace Engineering Company, New York, N. Y., a Corporation of New York. Filed July 3, 1922. Serial No. 572,531. 26 Claims. (Cl. 83—11.)

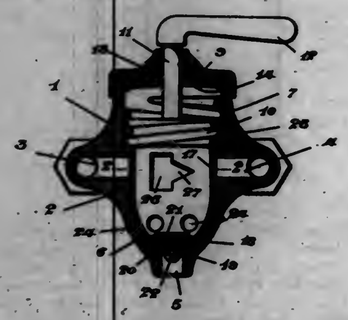
1. In a pulverizer, the combination of a pulverizer chamber having an axial discharge from the chamber; rotary heaters in the chamber; and wide thin vanes arranged for obstructing a rotary movement of the material during its discharge from the chamber without at the same time materially increasing the axial speed of flow.

1,479,541. PULVERIZER. PAUL ARTHUR HIRSCH, Erie, Pa., assignor to Furnace Engineering Company, New York, N. Y., a Corporation of New York. Filed July 3, 1922. Serial No. 572,532. 16 Claims. (Cl. 83—11.)



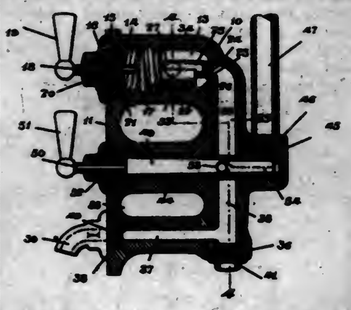
1. In a pulverizer, the combination of a vertical pulverizer chamber; rotating beaters in said chamber having a vertical axis; and a delivery tube within the beaters extending from the top of the chamber and delivering the material to the beaters at the bottom of the chamber; and whirl-obstructing vanes above said beaters, extending substantially horizontally across the annular space between the chamber casing and the delivery tube.

1,479,542. PROCESS FOR RECOVERY OF METALS FROM THEIR ORES. WILHELM HIRSCHKIND, Los Angeles, Calif., assignor of one-half to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 2, 1922. Serial No. 540,565. 5 Claims. (Cl. 75—185.)



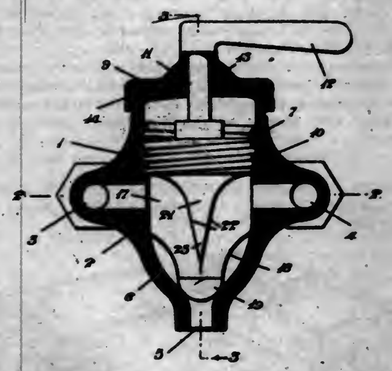
1. The process which consists in precipitating gold, silver or other metal from cyanide solution thereof by adding to such solution sodium hydrosulfite.

1,479,543. YARN-FEEDING MEANS FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, and WILLIAM O. TAYLOR, Limerick, Pa., assignors to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Original application filed Feb. 21, 1920, Serial No. 360,440. Divided and this application filed Aug. 8, 1921. Serial No. 490,648. 8 Claims. (Cl. 66—12.)



1. In combination in a knitting machine, needles, cams for operating the needles, a yarn guide pivotally supported and having a portion extending in front of the needles, and in a direction, from its pivot, along the needle row, and an upper portion extending upwardly and having its upper end turned to overhang the lower portion with a yarn guide eye through the said turned portion, substantially as described.

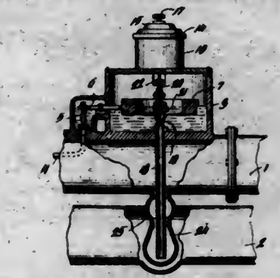
1,479,544. COMBINATION FAUCET. JACOB T. JOHNSON, Atlanta, Ga. Filed Oct. 1, 1921. Serial No. 504,584. 4 Claims. (Cl. 251—106.)



1. A faucet comprising a casing having a chamber, a pair of inlet passages leading to said chamber, and a valve seat and discharge outlet at one end of said chamber, and a valve member movable rotatably and longitudinally within said chamber including a shell fitting the wall of said chamber and having inlet openings to register with said passages for controlling the flow from either or both passages into the shell, said shell having a portion to bear on said seat over the outlet and having apertures surrounding said portion for the flow from within the shell to the space between the shell and seat when the valve member is moved away from said seat.

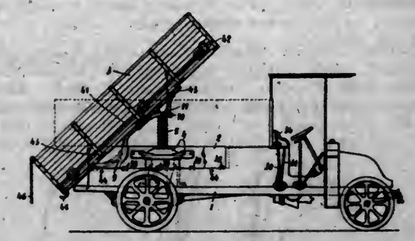
1,479,545. COMBINATION VALVE FIXTURE. JACOB T. JOHNSON, Atlanta, Ga. Filed Nov. 25, 1921. Serial No. 517,553. 6 Claims. (Cl. 277—18.)

1. A combination valve fixture comprising a body to be embedded in a wall having a face to be disposed substantially flush with the wall, hot and cold water inlet ports in rear of said face, and a passage for the flow of water from said ports, a valve member mounted in the body for controlling the flow of water from said ports to said passage, a second valve member mounted in the body for controlling the flow of water through said passage, the body having portions for making connections beyond the second valve, the second valve having passages for delivering the water to either of said portions by moving the second valve to different positions, and handles for the valve members at the face of the body.



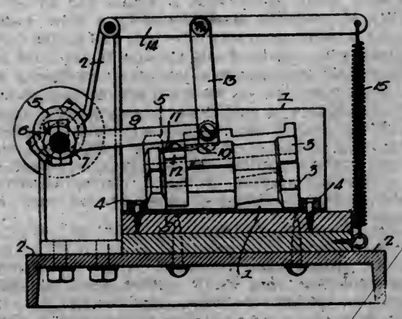
1,479,546. COMBINATION FAUCET. JACOB T. JOHNSON, Atlanta, Ga. Filed Jan. 4, 1922. Serial No. 526,942. 4 Claims. (Cl. 251—106.)

1. A valve comprising a casing having a chamber with an outlet at one end and inlet passages leading to the wall of said chamber, and a valve member rotatable in said chamber having an arcuate portion fitting the wall of the chamber and controlling the flow from said passages into the chamber, said valve member having a baffle opposite to said arcuate portion fitting snugly against said wall to prevent the head-on collision of the streams entering said chamber from said passages and for directing said streams toward the outlet before they meet.



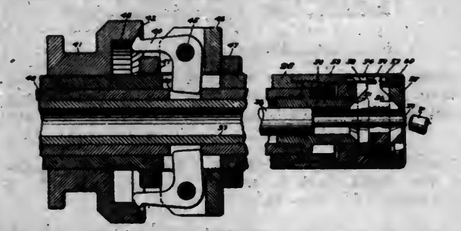
1,479,547. CARBURETOR. ROBERT W. KAMRAK, Highmore, S. Dak. Filed Apr. 6, 1920. Serial No. 371,580. 2 Claims. (Cl. 123—122.)

1. The combination with an exhaust and an intake manifold disposed one above the other in vertical alignment, of a carburetor including a fuel chamber, means for controlling the flow of fuel into the chamber, means connecting the chamber with one side of the intake manifold, an enlarged heating chamber disposed in the exhaust manifold and communicating with the intake manifold at a point adjacent the means connecting the



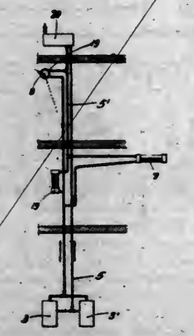
fuel chamber with the intake manifold, a supply tube leading from the fuel chamber through the intake manifold and into the heating chamber, and valve means for controlling the flow of fuel from the fuel chamber into said heating chamber through said pipe.

1,479,548. DUMPING VEHICLE. EUGÈNE KLIFOUSS, Paris, France. Filed Feb. 9, 1921. Serial No. 443,546. 4 Claims. (Cl. 298—21.)



1. In a dumping vehicle, the combination with a chassis, a frame capable of rotating horizontally on said chassis, and a body pivoted in said frame; of a lifting screw on the chassis, a curvilinear guide on said body having sliding bearing on the end of said screw, motor-operated mechanism mounted on said chassis and means on said frame actuated by said motor mechanism, to either rotate said frame and body or to operate said screw.

1,479,549. MACHINE FOR FITTING TURBINE BLADES. FERDINAND H. KLOIDT, Collingswood, N. J. Filed Aug. 4, 1921. Serial No. 489,730. 4 Claims. (Cl. 51—26.)



1. In a machine of the type specified, the combination with a support adapted to hold a pair of turbine bladea in the same contacting relation assumed in the assembled rotor, said support comprising a pair of flat parallel guide plates between which the blades neatly fit, means for holding one of the blades fixed, and mechanism for longitudinally reciprocating the other blade over the surface of the fixed blade.

1,479,550. CHUCK FOR TAPER PINS AND THE LIKE. MARX C. KRISTEK, Worcester, Mass. Filed Mar. 5, 1921. Serial No. 450,017. 3 Claims. (Cl. 279—57.)

1. In a machine of the character described, the combination of a constantly rotating external hollow shaft, an inner hollow shaft having a fixed head thereon provided with an internal slanting surface at its end, a series of independent jaws held in the end of the first named shaft and arranged around it, said first named shaft having surfaces engaging the outer walls of said jaws, the inner inclined walls of said jaws engaging said internal slanting surface, each jaw having a notch, a flat spring supported by the external shaft loosely engaging in each notch to force its jaw outwardly with a yielding action, and coil springs supported by the external hollow shaft beyond the jaws for engaging them at points opposite the flat springs to hold the jaws against the flat springs.

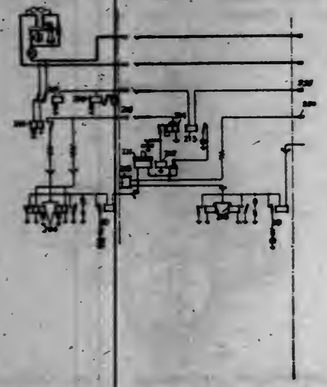
1,479,551. COOLING INSTALLATION. GEORGES LABOLLE, Paris, France. Filed May 31, 1922. Serial No. 565,003. 6 Claims. (Cl. 62—101.)

1. A temperature exchanging system including an upper and lower tank, a pipe for conveying a temperature changing medium from the lower tank to the upper tank, a second pipe for conveying the medium from the upper tank to the lower tank, temperature exchangers associated with one of said pipes, a pump for circulating the medium through said pipes, and regulating means associated with one of said tanks for controlling the operation of said pump.

1,479,552. METAL ROLLING MILL. FRITZ MAGNET, Iserlohn, Germany. Filed July 18, 1921. Serial No. 485,765. 1 Claim. (Cl. 80—47.)

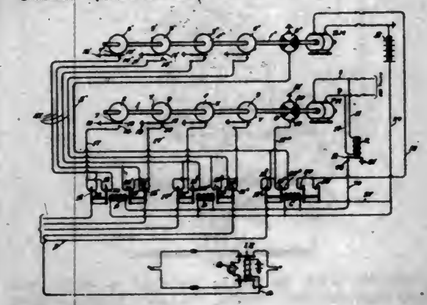
In a mechanical lifting device for the front and rear tables on either side of rolling-mills, comprising an upper and a lower roll, the combination of ropes, chains

and levers for lifting both tables to such inclined positions that the metal plate to be rolled is automatically



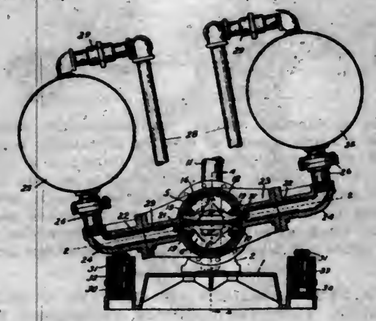
returned over the upper roll from the back to the front table, and means for driving said device by the rolling-mill itself, substantially as and for the purpose set forth.

1,479,553. TROLLEY POLE. MATS PARLOW, Coello, Ill. Filed June 8, 1923. Serial No. 644,077. 5 Claims. (Cl. 191—64.)



3. A trolley pole including a pair of telescopic sections, and means carried by one section for co-operation with the other section to normally hold said sections in extended relation, said means being disengageable upon impact of the members in line therewith to permit the sections to telescope.

1,479,554. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, New York, N. Y., and WILLIAM H. MATTHIAS, Hackensack, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,704. 6 Claims. (Cl. 179—27.)

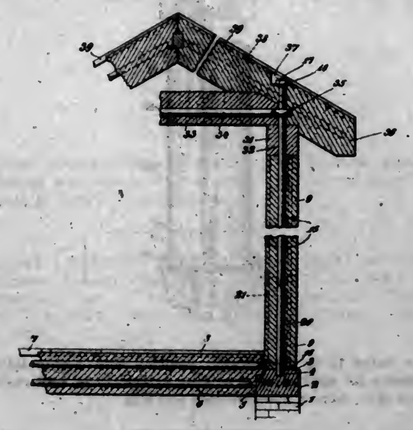


1. In a telephone system, a calling line, a selective switch, a multiposition auxiliary switch for controlling the operation of the selective switch, a plurality of called lines of different types, a register controlling mechanism comprising a plurality of registers, means for variably setting said mechanism, means controlled by said mechanism for operating said selective switch to extend the calling line to any of the said called lines, said auxiliary switch arranged to assume different positions when the calling line is extended to different called lines, means controlled by the calling subscriber for releasing the selective switch when said auxiliary switch is standing in a certain position, and means for removing the control of said releasing means from the calling subscriber when said auxiliary switch is in another of its positions.

1,479,555. TELEPHONE SYSTEM. EARL F. POTTER, Glencoe, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 26, 1921. Serial No. 439,901. 10 Claims. (Cl. 179—84.)

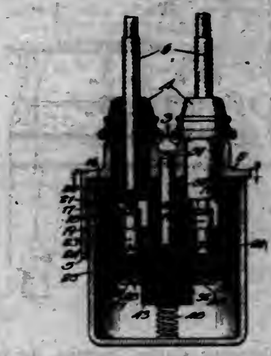
9. In a telephone system, in combination with a plurality of relays for supplying signaling current to connected stations, of interrupter mechanism common to said relays to energize and de-energize them and switch means automatically effected to alter the connections of said relays when said mechanism is disabled and restore them when said mechanism again becomes operative.

1,479,556. STEAM TRAP. THOMAS G. RAKESTRAW, Detroit, Mich., assignor to Richard O. Brandenburg and Ralph S. Moore, both of Detroit, Mich. Filed Feb. 27, 1922. Serial No. 539,400. 4 Claims. (Cl. 137—101.)



1. A steam trap comprising a base, a hollow elongated valve body fixedly mounted on said base and having a plurality of separated passages therein, a valve casing journaled to oscillate on said valve body and having ports registrable with certain of said passages in oscillated positions of said casing, a pair of tanks mounted directly on said casing to oscillate the same and having passages controlled in common by said ports to communicate therethrough with certain of the passages of said valve body in limiting positions of oscillations of said casing, and cushioning means limiting the oscillating movement of said casing and reacting to impart reverse movement thereto to effect the closing of certain of said ports and passages.

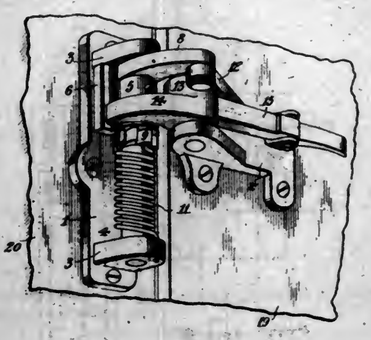
1,479,557. BUILDING CONSTRUCTION. WORLEY ROY RAYMOND, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,539. 7 Claims. (Cl. 72—1.)



7. A shop-made reinforced concrete construction, comprising in combination, shop-molded reinforced plates, shop-molded reinforced spandrel beams, shop-molded reinforced grooved posts with main reinforcements, shop-

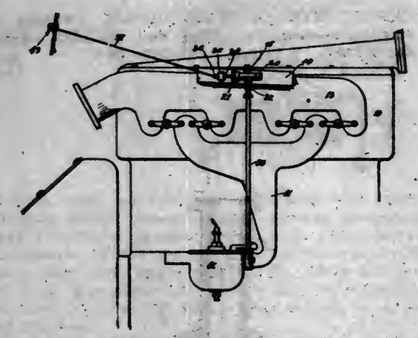
molded reinforced wall slabs, engaging said posts at their grooves and having beveled bottom or resting edges, shop-molded reinforced ceiling, floor and roof beams, shop-molded ceiling, floor and roof slabs, engaging their respective beams, said main reinforcements of

the posts tying said roof and ceiling beams, the plates, the spandrel beams and said posts, a field molded base having a sloping upper surface intersected by recesses for receiving parts and serving as erecting base for the shop-molded units.



1,479,558. FUSED CUT-OUT. EDMUND O. SCHWEITZER and ALFRED HERZ, Chicago, Ill. Filed Oct. 1, 1919. Serial No. 327,659. 22 Claims. (Cl. 200—120.)

1. In combination, a tank, a cover for the tank, means for holding the cover on the tank, a pair of contacts mounted on the under side of the cover, a pair of terminals mechanically independent of said contacts, a fuse between said terminals, means for supporting the fuse and the terminals and yielding means for holding the terminals in electrical connection with the contacts.

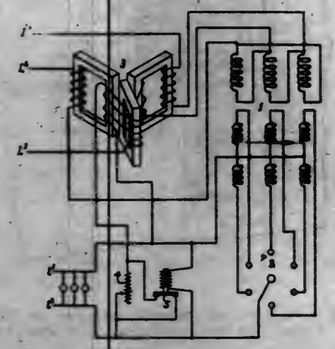


1,479,559. REFRIGERATOR-DOOR LOCK. WILLIAM S. STAIR, Brooklyn, N. Y., assignor to Shipley Construction and Supply Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 14, 1922. Serial No. 543,721. 8 Claims. (Cl. 292—198.)

7. A locking means for doors comprising, in combination, an arm pivoted to the door and having a cam portion, and a movable member on the door jamb having a projecting part thereon, which by the engagement of

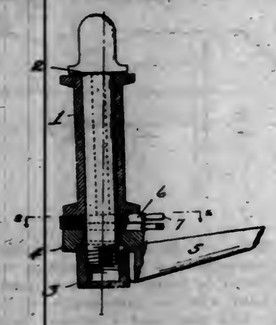
the said cam with the movable member on the door jamb is forced into locking engagement with the said arm.

1,479,560. DILUTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. WATSON B. STOCKMAN, Chester, Pa. Filed Dec. 30, 1920. Serial No. 434,167. 2 Claims. (Cl. 123—119.)



1. A device of the character described including a heater, a distributer, a pipe connecting the heater with the distributer, a valve casing interposed in said pipe and provided with an atmospheric air port and passages for said pipe, and a tubular valve slidable in said casing and provided with corresponding ports and passages for controlling communication with the distributer from the atmospheric air and the heater respectively, and a control member slidable for shifting the valve and adapted to be locked for sustaining the valve in either of said controlling positions selectively.

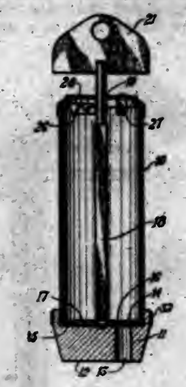
1,479,561. REGULATING MEANS FOR DIRECT-CURRENT CIRCUITS. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 18, 1920. Serial No. 389,903. 5 Claims. (Cl. 171—242.)



1. The combination with an electric circuit, of a double wave converted to receive electrical energy from a polyphase alternating current source for supplying direct current to said circuit and means for regulating an electrical condition of said circuit comprising a number

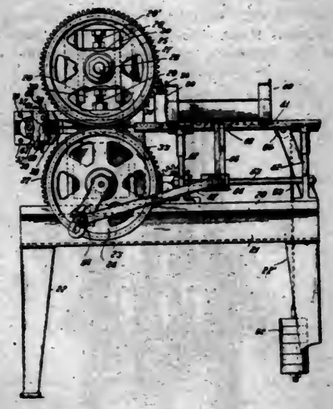
of reactors equal to the number of phases of said supply source, said reactors having means rendered sensitive to such electrical condition of said circuit and coils

subjected to control by said means for regulating a like condition of the electrical energy supplied to said converter.



1,479,562. AXLE-ADJUSTING DEVICE. WALTER R. STRUNK, Reading, Pa. Filed Mar. 24, 1923. Serial No. 627,386. 2 Claims. (Cl. 267—66.)

2. In a device of the character described, an axle, a radius rod, a bolt and nut for securing the radius rod to the axle, and a pair of tapered discs interposed between the axle and the end of the radius rod, and surrounding the bolt, whereby the turning of the discs will change the angle of the axle with relation to the radius rod.



1,479,563. CLEANSING UTENSIL. JOHN HAROLD THOMAS, Orange, N. J. Filed Aug. 12, 1922. Serial No. 581,370. 2 Claims. (Cl. 51—183.)

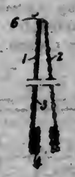
1. The combination of a casing for containing cleansing material, a valve for said casing, a scouring block, means for securing said scouring block to one side of said casing, said scouring block being provided with a discharge passage controlled by said valve, said valve comprising a plate having an opening arranged to be brought into register with said discharge passage when

the valve is in discharging position and manipulating member for said valve extending exteriorly of said casing on a side thereof opposite said one side.

1,479,564. APPARATUS FOR SHAPING TUBULAR STOCK LENGTHS. CHARLES S. TILDEN, Cleveland, Ohio, assignor to The Elyria Iron & Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1920. Serial No. 415,777. 13 Claims. (Cl. 153—54.)

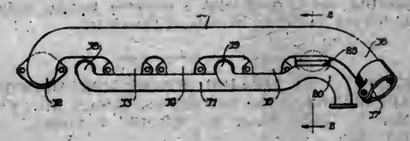
1. In a tubular-blank shaping machine, the combination of a pair of opposed rotary members having coacting arcuate die-portions on their peripheries, means to drive them, a blank magazine close to said members and having a bottom-slotted delivery trough; reciprocatory means below said trough extending into said trough through said slot for feeding blanks singly from said trough to said dies, and positive, direct driving connections from one said member to said feeding means positively synchronizing their operations.

1,479,565. COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed Nov. 16, 1921. Serial No. 515,609. 6 Claims. (Cl. 112—67.)



1. An article of wearing apparel made in whole or in part of separate layers or plies of fabric secured together

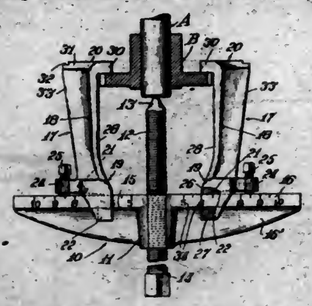
by an intermediate layer or layers of binding material, at least two layers or plies of fabric extending beyond



the main united portion of the fabric, said layers being untreated with the binding material, and turned in and secured to form the edge binding.

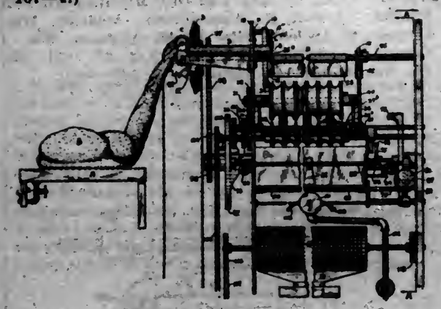
1,479,566. FOLDING COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed Nov. 16, 1921. Serial No. 515,610. 4 Claims. (Cl. 2—67.)

1. A folding or turn-down collar made up of a neckband portion and a folding or turn-down portion, one of said portions having a relatively thick and stiff coating layer in intimate contact with and firmly adhering to the threads on the inner surface of the said portion, the said coating being insoluble in water and serving materially to stiffen and support the collar, the outer exposed surface of the coated portion of the collar being unaltered in appearance and untouched by the coating layer.



1,479,567. INTAKE MANIFOLD. HARRY LE VAN HORNING, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed July 28, 1917. Serial No. 183,226. 2 Claims. (Cl. 123—122.)

2. In combination, an intake and an exhaust manifold, the former having a curved portion, the convex side whereof is arranged close to the exhaust manifold, said manifolds having aligned openings adjacent the curved portion of the intake manifold, a hot plate consisting of a sheet metal body arranged between the manifolds and having a plurality of oppositely disposed heat conducting and radiating ribs struck therefrom, said ribs being alternately disposed in said intake and exhaust manifolds.



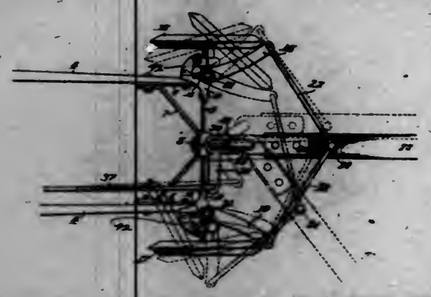
1,479,568. WHEEL PULLER. FREDERICK G. WACKER, Chicago, Ill. Filed Apr. 30, 1921. Serial No. 465,743. 8 Claims. (Cl. 29—85.)

1. In a wheel puller, the combination of a frame providing a plurality of radiating rails and a pressure applicator, of hooks respectively mounted on said rails each having a base arranged for rail-engagement and a

head complemental to the base and adapted to engage the base of a similar hook.

1,479,569. CANDY MACHINE. FRANK WAIDA, Chicago, Ill., assignor to Mary A. Waida, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 520,007. 15 Claims. (Cl. 107—4.)

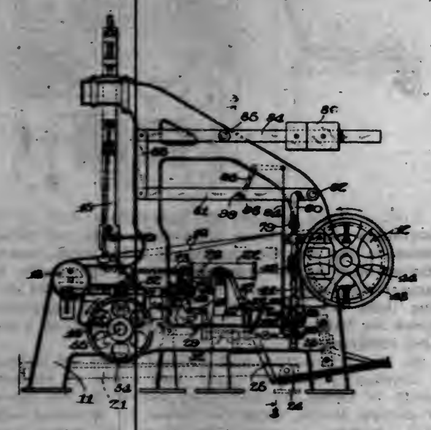
2. In a candy machine, the combination with cutter controlling means, means operated by said controlling means to cut the incoming candy into sticks, means also operated by the controlling means temporarily to support each stick, means receiving the sticks and cutting them into pieces of uniform size, of adjustable means for flattening the pieces, after cutting, to a desired thickness.



12. The combination with yielding means for cutting a constant stream of candy into sticks of uniform length, of means for subdividing said sticks into pieces of uniform length, adjustable means for flattening said pieces endwise to remove the burrs, and means connected with a prime mover and capable of actuating the aforenamed means in the proper time relation.

14. In a candy machine, means depositing sticks of candy from a batch outside the machine, three sets of cutting wheels intergeared for simultaneous rotation and arranged in triangular form, the lower set of wheels fixed to rotate in the machine frame, the two upper sets supported on swinging arms, a power driven eccentric connected to swing said upper wheels out and in to receive and cut said sticks into uniform pieces, and adjustable means pressing said pieces to a desired thickness.

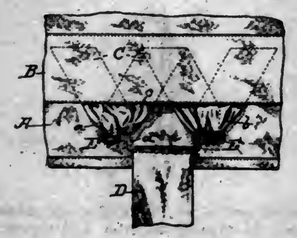
1,479,570. POLE TRUCK AND STEERING DEVICE. LEWIS E. WATERMAN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed June 9, 1919. Serial No. 302,661. 6 Claims. (Cl. 280—103.)



1. The combination of a frame, steering wheels therefor, a pole, a draft member pivotally connected to the frame and to the pole at longitudinally spaced points,

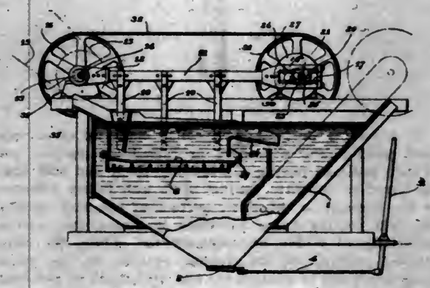
means connecting the wheels to the pole for steering, and means for adjusting said draft member about its

pivotal connection with the frame to give the wheels an up-hill lead without swinging the forward end of the pole laterally.



1,479,571. TAKE-UP AND LET-OFF MECHANISM FOR LOOMS. ALBERT B. WEISSENBORN, Appleton, Wis., assignor to Appleton Wire Works, Appleton, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1921. Serial No. 496,127. 36 Claims. (Cl. 139—99.)

27. In a loom, the combination, with the warp-beam and receiving-roll, of let-off mechanism for the warp-beam and take-up mechanism for the receiving-roll, a reciprocating member operatively connected to both of said mechanisms, means for varying the stroke of said member to vary the operation of the take-up mechanism, and means independent of said member for varying the operation of the let-off mechanism.

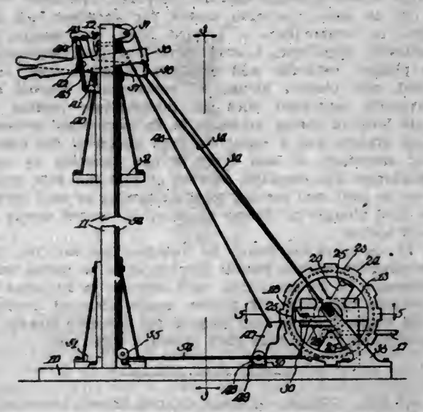


1,479,572. GARMENT SUPPORTER. BIRDORA H. WHITE, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,256. Renewed Dec. 2, 1921. Serial No. 519,547. 3 Claims. (Cl. 241—1.)

1. The combination with an article of wearing apparel, of a strap secured to said article, a fastener detachably secured to said strap and including a U-shaped portion, portions extending outwardly from said U-shaped portion, said outwardly extending portions being returnbent to provide hooks, the ends of said returnbends terminating short of the sides of said U-shaped portion to permit the insertion of said strap for con-

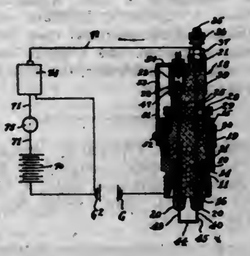
fined engagement with the outward extending portions of said hooks and a member adapted to be secured to the U-shaped portion of said fastener.

1,479,573. JIG-PAN SUPPORTING AND VIBRATING MEANS. GEORGE W. WILMOT, Hazleton, Pa., assignor to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1921. Serial No. 514,164. 8 Claims. (Cl. 83—80.)



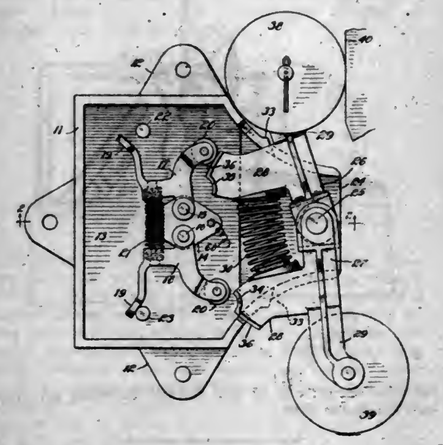
1. In a jig, the combination of a jig pan, horizontally extending means situated above and extending across the said jig pan for supporting the same, means including an eccentric for supporting one end of said horizontally extending means, and means for supporting the opposite end of said horizontal means, the said last mentioned supporting means comprising a revoluble member adjustable toward and from its axis of revolution.

1,479,574. CONTROLLING MEANS FOR HOISTING APPARATUS. CARL ZETTERLUND, Chicago, Ill. Filed Mar. 1, 1923. Serial No. 622,015. 5 Claims. (Cl. 187—28.)



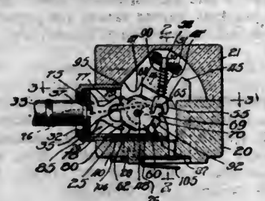
3. In an apparatus of the class described, the combination with a main frame having an upright frame work providing guide-ways for a pair of elevators or cages, of an elevator or cage located in each of said guide-ways for vertical movement therein, a driven shaft transversely journaled on the main frame in front of said upright frame work, means to drive said shaft, a pair of drums loosely mounted on said driven shaft and each having a peripheral toothed rack and inwardly extended spaced lugs, a pair of pulleys journaled on the main frame in front of said drums, a pair of pulleys journaled on the upper portion of said upright frame work, a pair of pulleys journaled on the lower front portion of said frame work, a cable extended around the first named pair of pulleys and wound on each of said drums and extended therefrom around the pulleys at the lower portion of said frame work and over the pulleys at the

top thereof and one reach of said cable being secured to one of the elevators and the other reach thereof to the other elevator, a supporting arm keyed to said driven shaft adjacent each drum and extended therefrom to near the inner ends of said lugs, a spring actuated clutch arm pivotally mounted on said supporting arm and having a lug engaging arm extended from its pivot and adapted for engagement with a lug on the drum, a



gravity actuated safety dog pivotally mounted to engage the peripheral rack of each drum, a lever fulcrumed on the upper portion of said upright frame work near each corner thereof, a cable connecting the front end of each lever to each of said clutch arms, and another cable connecting the front end of each lever to one of said dogs.

1,479,575. SPARK PLUG. CHARLES ADAMS, JR., and WALTER A. ADAMS, Weehawken, N. J. Filed Sept. 4, 1919. Serial No. 321,543. 6 Claims. (Cl. 123—169.)

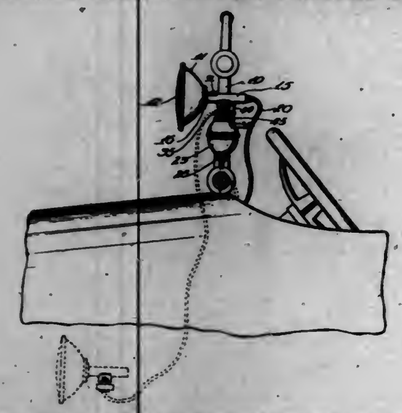


1. In a spark plug, a metallic base; an insulating member disposed in said base provided with a spark gap chamber open at one end, said chamber having a translucent wall portion; means supported by and grounded on said base for connecting the base and insulating member and closing the open end of the spark gap chamber and permitting view of the translucent wall portion of the spark gap chamber from the exterior of the spark plug; a spark-point plug operatively arranged in the spark gap chamber; and a sparking pin operatively connected to said connecting means for cooperating with said spark-point plug for providing a spark gap in said chamber.

1,479,576. ELEVATOR CONTROL. CARL J. ANDERSON, Chicago, Ill. Filed Jan. 19, 1923. Serial No. 613,591. 9 Claims. (Cl. 187—29.)

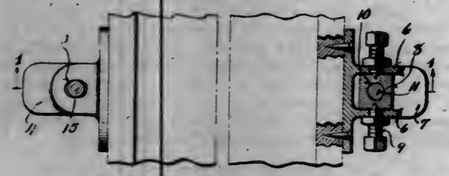
5. The combination with an elevator car, and a cam thereon, of a lever composed of sections yieldingly connected together, a pivotal support for the lever, a circuit closing device for each section, the open or closed condition of which device is determined by the position of the section, and means by which upon a car passing said lever the cam on the car will move one section to open its electrical connection and later permit the other section to move so as to close its electrical connection, said last movement being by action of the yielding connection put under strain by the movement of the first section.

1,479,577. ELECTRIC SWITCH. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed June 30, 1919. Serial No. 307,650. 14 Claims. (Cl. 200—68.)



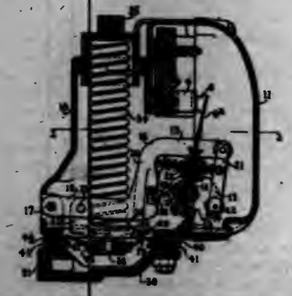
1. In an electric switch, the combination with a swinging switch member and its cooperating fixed terminal, a rocking reversing device, a spring controlled plunger operatively connected between said reversing device and said swinging switch member, and a single actuating device normally disconnected from and adapted for alternate operation on opposite side of said reversing device for giving alternate rocking movement thereto.

1,479,578. ADJUSTABLE EXTENSION SPOTLAMP. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1920. Serial No. 432,662. 11 Claims. (Cl. 240—7.)



1. An electric extension lamp device comprising a lamp structure to receive lamp bulb contacts and two

circuits separately including said contacts and provided with sockets separately to receive a connection of an

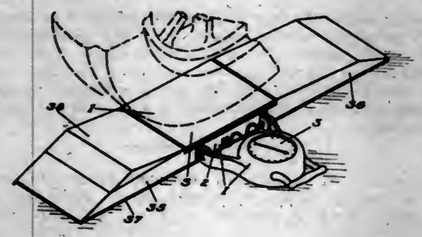


external circuit, one of said circuits including an extension conductor cord.

1,479,579. FLASK PIN. FRANK C. ARENZ, Milwaukee, Wis. Filed Dec. 23, 1922. Serial No. 608,628. 4 Claims. (Cl. 22—110.)

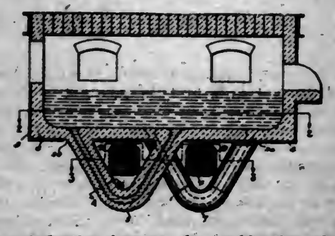
1. The combination of a cope and drag, said drag being provided with upwardly projecting dowel pins, brackets carried by said cope and having apertures through which said dowel pins may pass, one of said brackets having a pivotally mounted apertured block adapted to receive the corresponding dowel pin and the other of said brackets having means for permitting relative angular motion between such bracket and the corresponding pin.

1,479,580. PRESSURE-RESPONSIVE CIRCUIT CONTROLLER. THOMAS E. BARNUM, Wauwatosa, and CLARENCE T. EVANS, Milwaukee, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 27, 1921. Serial No. 465,065. 19 Claims. (Cl. 200—68.)



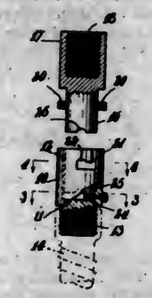
1. In snap operating means for switches and the like, in combination, an oscillatory cam having angularly related faces meeting in an abrupt crest, a roller to coact with said cam and supporting means for said roller comprising a pivoted lever, a support pivoted to the free end thereof and carrying said roller at its free end, a spring associated with said lever and said support to bias said roller against said cam, means to exert upon said lever opposing forces tending to move the same against the force of said spring, the faces of said cam being so disposed with reference to the center of oscillation of said lever as to effect greater opposition to movement of the lever in one direction than in the other direction.

10. In snap operating means for switches and the like, in combination, a pivoted lever, a pressure responsive diaphragm, a stud carried by said diaphragm, a plunger centrally and pivotally mounted upon said stud, said plunger having an eccentrically located lug pivotally connected with an intermediate portion of said lever, a spring arranged to be compressed between said plunger and a relatively fixed abutment for opposing movement of said lever in one direction by said diaphragm the eccentric relation of said lug with reference to said stud serving to effect bowing of said spring by said plunger to thereby augment the stored energy of said spring.



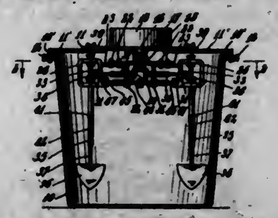
11. In operating means for switches and the like, the combination with a flexible diaphragm to be moved with reference to an associated rigid element in response to pressure variations, of flexible means clamped between said diaphragm and said element for reducing strains in said diaphragm due to such pressure variations.

1,479,581. SCALE. HERMAN CLAUDE BERRY, Lansdowne, Pa. Filed May 15, 1922. Serial No. 561,096. 8 Claims. (Cl. 265—47.)



1. A scale comprising a base, a platform mounted above the base, a hydraulic pressure cell interposed between the base and the platform upon which the platform is tiltably supported, and a gauge associated with the pressure cell for indicating the weight of a load passing over the platform.

1,479,582. INDUCTION FURNACE. CHARLES A. BRAYTON, Jr., Cleveland, Ohio, assignor to The Induction Furnace Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 24, 1920. Serial No. 412,549. 12 Claims. (Cl. 204—64.)

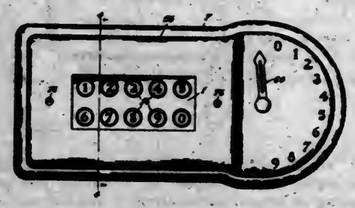


1. In an induction furnace, the combination of a bath, a closed channel of uniform cross section thereunder and connected therewith and leading to and from the bath, said channel having a comparatively thin wall of substantially even thickness thruout its length and surrounded by a pervious metallic jacket, whereby said wall may be maintained at a relatively cool temperature to prevent permeation of the molten metal through the channel wall.

1,479,583. FLEXIBLE-SHAFT COUPLING. JAMES P. CAREY, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,299. 4 Claims. (Cl. 287—103.)

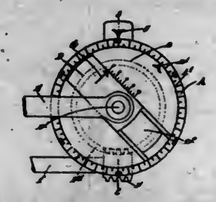
1. A coupling for flexible shafts comprising plug and socket members having interlocking parts, and a rotary element carried by the socket member and presenting a cam adapted to move the said interlocking parts into engagement with one another, said rotary element forming an abutment holding the said interlocking parts engaged with one another.

1,479,584. BEATER AND MIXER. FRANK W. CONKLIN, Brooklyn, N. Y. Filed May 9, 1923. Serial No. 637,922. 4 Claims. (Cl. 259—112.)



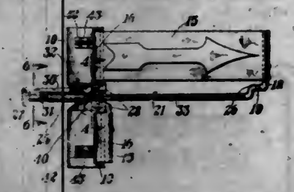
1. A device of the class described comprising a receptacle, a rotary spider therein, a vertical shaft on which said spider is fixed, radially extensible frame elements carried by said spider, radially extending shafts supported partly by said spider and partly by said frame elements,, vertical beater shafts supported by said frame elements, gear connections between the said radially extending shafts and vertical beater shafts, a second shaft passing axially through the shaft on which the said spider is fixed, gear connections between said last named shaft and the said radially extending shafts, and a motor adapted to drive the first named and said last named shafts at relatively different speeds.

1,479,585. SPUR ROLL FOR SHINGLE MACHINES. LEONARD H. CRAWFORD, Inglewood, Wash. Filed Oct. 16, 1922. Serial No. 594,784. 2 Claims. (Cl. 101—3.)



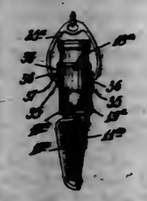
1. An article of manufacture comprising a spur roll body portion, spur teeth arranged in spaced apart ring formation on said body portion, dies between said teeth disposed around said body portion, and said dies being positioned in different planes both longitudinal and vertical with respect to the axis of said body portion.

1,479,586. TELEPHONE SYSTEM. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 5, 1918. Serial No. 257,052. 3 Claims. (Cl. 179—99.)



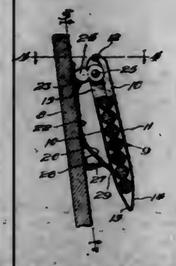
1. A device of the character described, including a plurality of groups of passive contacts arranged to form a bank of contacts, each group of contacts comprising a separate unitary structure, a mounting member for securing said bank of contacts in position, a spindle carrying a plurality of active contacts for engaging said passive contacts when said spindle is rotated, other groups of contacts arranged to form a bank and to be continuously in engagement with said active contacts, a key device including a plurality of plungers associated with said active and passive contacts, a contact controlled by each of said plungers connected with an active contact of said group of active contacts, a manually operated member secured to the end of said spindle for rotating said group of active contacts over groups of said passive contacts, to rest in engagement with a certain group of said groups of passive contacts, and also for manually restoring said active contacts to their normal position, means for then operating one of said plungers to select a desired passive contact in the elected group of passive contacts, mechanical mechanism whereby when one of said plungers is operated, one previously operated plunger will restore, and a cover-cap for enclosing said key device and said banks of contacts, said cover-cap provided with an opening through which said plungers extend, and also provided with an orifice for receiving the other end of said spindle to provide a bearing for said spindle to maintain said spindle and active contacts carried thereby in operative relation with said groups of passive contacts.

1,479,587. MEANS FOR USE IN THE LAYING OF ORDNANCE. ARTHUR TREVOR DAWSON, GEORGE EDWIN WATT, and ARTHUR LEONARD PERHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Oct. 31, 1919. Serial No. 334,736. 7 Claims. (Cl. 89—41.)



3. Apparatus for use in laying a gun subject to errors due to the position in train of the gun and the deviation of the position of the gun from a reference line, comprising an instrument in accordance with which the gun is laid, a device movable in unison with the training movements of the gun, means for adjusting the device in accordance with the deviation of the position of the gun from the reference line, means for adjusting the device to agree with the training angle of the gun at which the maximum error occurs and means associated with the device for imparting a correctional movement to the instrument.

1,479,588. VEHICLE SIGNAL. FRANCISCO DIAZ, Winslow, Ariz. Filed Mar. 9, 1923. Serial No. 623,883. 4 Claims. (Cl. 116—50.)

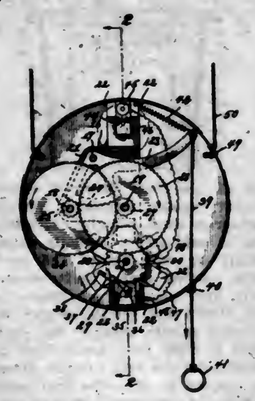


1. A vehicle signal comprising a casing, a pair of flexible signal strips adapted to be wound into rolls in said casing or projected therefrom, a slidable bar on said casing, and devices carried by said signal strips adapted to be selectively engaged by said bar to project the desired strip from the said casing, said bar remaining in slidable engagement with the casing while being engaged with the said devices.

1,479,589. PENCIL SHARPENER. ANDREWS DUDAS, Homestead, Pa. Filed Jan. 25, 1922. Serial No. 531,623. Renewed Nov. 14, 1923. 3 Claims. (Cl. 120—7.)

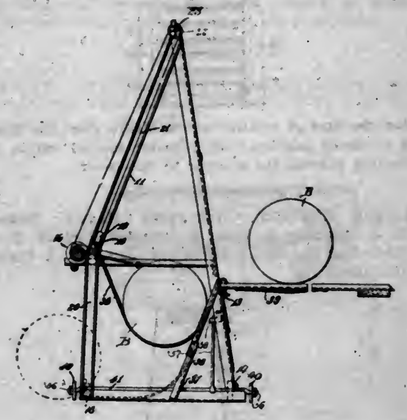
3. In a device of the class described, a tubular member, a plug frictionally engaged in one end of said tubular member, a suspension bail connected to said tubular member, said bail having inturned ends provided with disk-heads, said tubular member presenting recesses in the inner face of the wall thereof receiving said heads and having slots entering from the end thereof to the said recesses for the passage of the said inturned bail ends, the said plug engaging the said disk-heads to prevent withdrawal of the same from the said recesses.

1,479,590. CIGARETTE HOLDER AND THE LIKE. LEONARD EMERICH, Elgin, Ill., assignor to Elgin American Manufacturing Co., Elgin, Ill., a Corporation of Illinois. Filed Jan. 8, 1923. Serial No. 611,378. 2 Claims. (Cl. 206—30.)



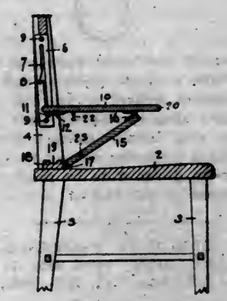
1. As a new article of manufacture, a cigarette holder or the like comprising in combination a pair of leaves pivoted together at their upper edges, the lower edges of the leaves curving toward each other to establish a point of contact at their lower edges when the leaves are folded together, and there being central recesses in the lower edges of the leaves to accommodate the fingers of a band, spring means tending to move the leaves together, and a bracket for the cigarette holder adapted for attachment to a substantially vertical surface, said bracket including a flat plate for attachment to the said surface, a pair of forwardly extending lugs at the upper end thereof, a pivotal connection between said lugs and the upper side portions of the back leaf, and a resilient forwardly projecting stop on the lower portion of the bracket adapted to contact the back surface of the back leaf when in lowered position, substantially as described.

1,479,591. METHOD OF MAKING POCKETBOOKS OR HAND BAGS. CHARLES L'ENFANT, New York, N. Y. Filed June 29, 1922. Serial No. 571,744. 5 Claims. (Cl. 150—32.)



1. The method of making pocket-books and the like which consists in first securing an inner lining upon an outer sheet of flexible material to form a body blank and then inserting a reinforcing member between the intermediate sections of said outer sheet and the lining sheet of the blank to render the portions thereof forming the outer side walls of the pocket-book relatively rigid, then folding the opposite reinforced portions of the blank towards each other, and subsequently folding the end portions of the blank inwardly between said reinforced portions.

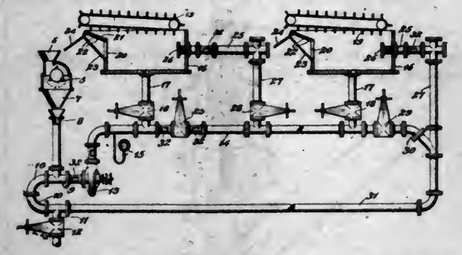
1,479,592. FLASH LIGHT. FRED EVANS, Summit, N. J., assignor to Louis V. Aronson, Newark, N. J. Filed Mar. 22, 1920. Serial No. 367,928. 1 Claim. (Cl. 240—8.5.)



A flash light comprising in combination with a drum having an incandescent lamp disposed to project light rays through the face of said drum, said lamp being near the periphery of the drum on one side thereof, a current generator in said drum diametrically opposite said lamp, and electrical connections between said generator and lamp, of a gear train in said drum adapted to impart rotary motion to said generator in one direction, said gear train including a pawl and ratchet device permitting the gears to return to initial position without affecting the generator, means for causing the gear train to normally assume its initial position, means for manually actuating said gear train, said means consisting of a sector and lever, and a flexible cord extending through said drum for actuating said sector and lever.

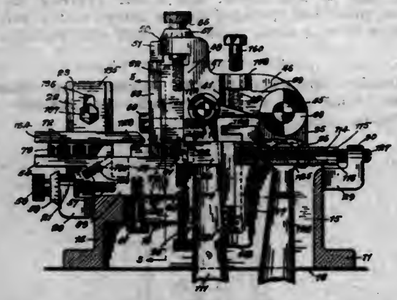
1,479,593. BARREL-HOISTING APPARATUS. FRED C. FANTZ, Port Arthur, Tex., assignor to The Texas Company, a Corporation of Texas. Filed Dec. 13, 1919. Serial No. 344,510. 21 Claims. (Cl. 214—95.)

1. A hoist comprising a supporting structure, a hoisting cradle affixed thereto at the height to which the load is to be elevated and means for raising and lowering the opposite end of the cradle to permit a load to be introduced at the level of the floor on which the hoist is mounted and elevated to the upper level.



1,479,594. CHAIR. LEWIS H. FENNELL, Greensburg, Pa. Filed Sept. 13, 1922. Serial No. 588,052. 4 Claims. (Cl. 155—132.)

1. A chair having the usual seat and having a back comprising spaced upright rails, slotted plates secured to the inner surfaces of said upright rails, an auxiliary seat having projections engaging the slots in said plates, a supporting member hinged to the said auxiliary seat near its front edge, and a transverse rail extending between said upright rails and having a groove in its upper side adapted to receive and support the lower edge of said auxiliary seat.

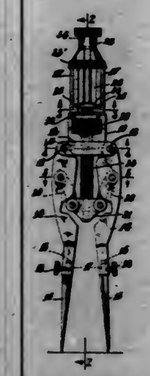


1,479,595. APPARATUS FOR CONVEYING AND DISTRIBUTING ICE. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 372,047. 2 Claims. (Cl. 302—14.)

1. In a conveying apparatus, a plurality of spaced collecting receptacles, distributing and return conduits connected for the continuous circulation of a material conveying liquid therethrough, a pump for maintaining such circulation under pressure, means for feeding the material into the circulating fluid at the intake side of said pump, supply and return pipes connecting each of the collecting receptacles to said distributing conduit,

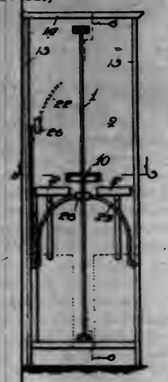
and means associated with each of said receptacles to discharge the material collecting therein without interrupting the continuous circulation of the fluid.

1,479,596. MACHINE FOR MOLDING TYPE AND THE LIKE. AUGUST L. N. FLEMING, Lyndhurst, N. J., assignor to Automatic Uno Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1921. Serial No. 513,643. 46 Claims. (Cl. 199—94.)



1. In a machine for molding type and the like, in combination, a base having a recessed top, a lower jaw in the recess, molding matrices removably arranged in the recess, an upper jaw, a side jaw, said upper jaw and side jaw being adapted to be raised and lowered toward and from the lower jaw to positions for cooperating with the lower jaw and with the matrices to provide a mold therebetween, and a feeder having spaced inlets detachably fastened on the base so that one of its inlets is in register with the mold for receiving molten metal to be fed into the mold formed by the jaws and matrices.

1,479,597. SMOOTHING IRON FOR ASPHALT ROADS. CHARLES A. FOUST, Glendale, N. Y. Filed Dec. 21, 1921. Serial No. 523,946. 24 Claims. (Cl. 219—21.)



1. In a smoothing device, the combination of, a heatable head; and a member located within the head comprising heat generating means; said member being provided with a plurality of bores for receiving the heat generating means therein and a plurality of bores cooperating with the heat generating means for distributing heat therefrom to the head.

1,479,598. DRAWING AND CALIBRATING INSTRUMENT. JOSE GARCIA, Philadelphia, Pa. Filed Dec. 29, 1922. Serial No. 609,698. 4 Claims. (Cl. 33—148.)

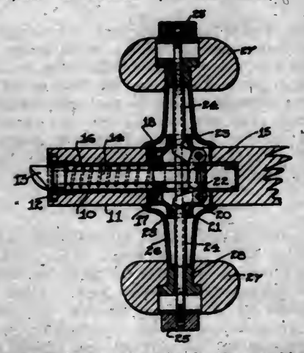
1. An instrument of the class described comprising a frame piece provided with graduation, a pair of legs pivotally attached thereto, a screw extending freely through the frame piece, a pair of links connecting said legs to said screw, and a nut swiveled in the frame piece and threaded on the screw, and a pointer carried by said screw in registry with said graduations.

1,479,599. TOWEL CABINET. ALBERT GRUB, Chicago, Ill. Filed Dec. 28, 1918. Serial No. 268,603. 14 Claims. (Cl. 45—32.)

1. In a device of the character described, a support for a pile of towels, a rod arranged above said support in position to extend through registering openings in the towels, said rod having a part at its lower end bent laterally in the vicinity of the towel-supporting surface of said support, and means extending from the front end of said part to the front end of said support for retaining the towels after they have been drawn laterally.

1,479,600. RADIATOR HEATER. ARTHUR W. HARPER, Toledo, Ohio. Filed Sept. 20, 1920. Serial No. 411,511. 1 Claim. (Cl. 263—5.)

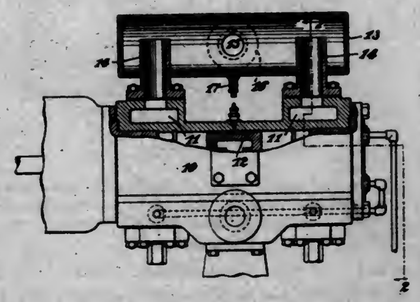
In a radiator heat protector, a cover for enclosing the radiator and covering the front end thereof, a frame connected to the cover and having a plurality of blades pivoted to the frame, a rod connecting the blades and a latch bolt and perforated bracket for securing the blades at different angles with respect to the frame, the blades each having a downwardly curved outer edge adapted to make contact with portions of the blades along the upper edge of the next adjacent blade and



below the axes of rotation of the blades when the blades are in closed position, and a heater located within the cover for heating the interior of the cover.

1,479,601. IGNITER. ALEXANDER HARRIS, Newark, N. J., assignor to Louis V. Aronson, Newark, N. J. Filed Mar. 2, 1921. Serial No. 449,107. 2 Claims. (Cl. 67—6.1.)

1. An igniter of the class described, comprising a handle made from a single piece of suitable material, a scratching element secured to one end of the handle, a tubular member slidably disposed upon the other end of said handle, said tubular member provided with a cavity, and a spark producing element frictionally located within said cavity designed to be pressed against said scratching element by the end of said handle.

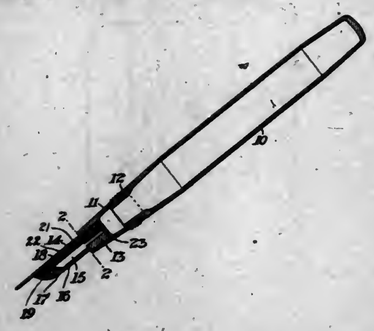


1,479,602. PUSH-BUTTON DOORKNOB. MYRON T. HAYER, Worcester, Mass. Filed Sept. 1, 1921. Serial No. 497,486. 5 Claims. (Cl. 292—166.)

1. In a push button door knob, the combination of a pair of knobs located opposite each other, a pair of bolts connecting said knobs and extending through the door,

each bolt having a head at one end and a thread at the other, said bolts extending through the door in opposite directions, each bolt being connected with one knob by its head and with the other knob at its opposite screw threaded end, whereby the knobs cannot be released from each other from one side of the door alone.

1,479,603. COMPRESSOR. NICOLAI H. HILLER, Carbondale, Pa. Filed Jan. 15, 1923. Serial No. 612,583. 7 Claims. (Cl. 230—32.)

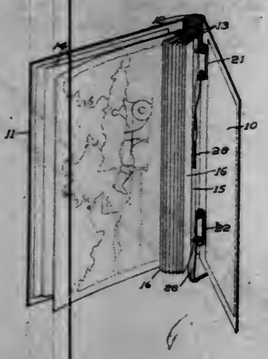


1. A compressor having a plurality of compression chambers provided with separate intakes, a chamber disposed closely adjacent to said compressor, separate nipples extending from said intakes into said chamber, and terminating above the bottom of the latter, and an intake to said chamber.

1,479,604. CHUCK. SIDNEY E. HORTON, Windsor Locks, Conn., assignor to The E. Horton & Son Company, Windsor Locks, Conn., a Corporation of Connecticut. Filed July 3, 1920. Serial No. 393,988. 5 Claims. (Cl. 279—118.)

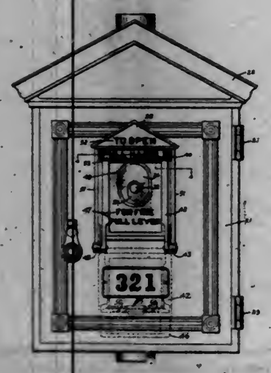
1. A chuck comprising, in combination, a body, a plurality of jaws, an oscillatory part, spring means urging said oscillatory part in one direction relative to the chuck body, brake means permitting movement of said oscillatory part in the opposite direction relative to the chuck body, and changeable connections operatively interposed between said oscillatory part and said spring, said connections permitting oscillation of said oscillatory part in spring-actuated direction to actuate said jaws toward the axis of the chuck for external chucking, or from the axis of the chuck for internal chucking.

1,479,605. FOUNTAIN PEN. ANDREW B. HYDE, New York, N. Y. Filed Feb. 5, 1921. Serial No. 442,600. 7 Claims. (Cl. 120—50.)



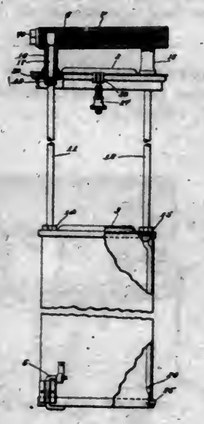
1. In a fountain pen, a pen section comprising a pen, a plug having an ink reservoir therein, and a feeder member extending beneath the pen and across an opening in the wall of the reservoir to provide a passage for surplus ink from the feeder to the reservoir and also for the flow of the ink from the reservoir to the pen.

1,479,606. DENTAL HANDPIECE. JOHN R. IMPEY, San Francisco, Calif. Filed Sept. 21, 1922. Serial No. 589,522. 7 Claims. (Cl. 32—15.)



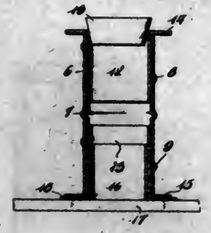
1. A dental hand-piece including a sheath, a hollow spindle rotatable therein, an implement holding chuck in one end of said spindle and adapted for extending to release an implement, a lineally slidable stem projecting axially from the other end of the spindle, an operating connection between the stem and chuck whereby on pressure being applied to said stem said chuck will be operated to release and a spring for acting on said chuck through said stem to retain the implement locked within the chuck on the release of pressure on said stem.

1,479,607. TEMPORARY BINDER. HERBERT D. INMAN, Foxboro, Mass., assignor to Sales Folio Company, Foxboro, Mass. Filed Aug. 13, 1921. Serial No. 492,051. 5 Claims. (Cl. 129—19.)



1. A loose-leaf binder comprising, in combination, a cover, a binder string adapted to be passed through removable leaves to secure them to the cover, and means for removably securing an end portion of the string to the cover to hold the leaves bound to the cover, comprising a plate secured to the cover by rivet-eyelets, the eyelets forming apertures adapted to have the string threaded therethrough, and a second plate pivotally mounted to be swung into gripping engagement with a portion of the string protruding from one of said eyelets.

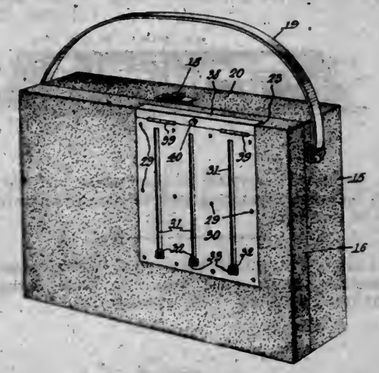
1,479,608. ATTACHMENT FOR SIGNAL BOXES. GEORGE ALFRED JACKSON, Waltham, Mass., assignor to The Gamewell Fire Alarm Telegraph Company, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1922. Serial No. 609,350. 21 Claims. (Cl. 177—360.)



9. In an attachment for a signal box; suitable enclosing structure for a manually operable member, said structure comprising a hinged section, spring latch mechanism for maintaining said section in normal closed condition and a handle whereby said hinged section may be readily opened, and a nonfrangible transparent panel carried by said hinged section.

1,479,609. PORTABLE ACETYLENE GENERATOR. ALEXANDER F. JENKINS, Baltimore, Md. Filed Jan. 24, 1920. Serial No. 353,864. 7 Claims. (Cl. 48—22.)

5. A portable acetylene generator, having a vent pipe consisting of a hollow stud extending through a wall of the generator, a pipe leading from the gas space of the generator into said stud, the same being of less diameter than the hollow in the stud, so as provide an annular chamber, surrounding the pipe, an opening in the pipe leading into said hollow chamber, and an opening leading from said hollow chamber outside the generator.

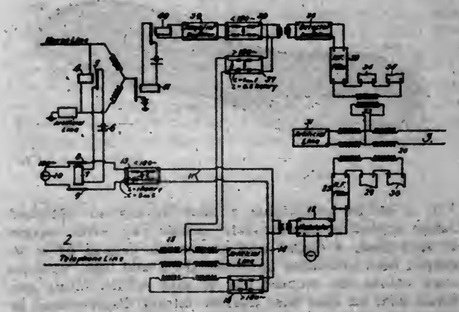


1,479,610. COMBINED MOLD AND LINER FOR PIPE OPENINGS, ETC. CHARLES E. JOHNSON and WILLIAM W. FIELDS, Cleveland, Ohio. Filed Sept. 7, 1923. Serial No. 661,493. 3 Claims. (Cl. 126—314.)

1. A device of the character described, comprising a metal sleeve having a substantially centrally arranged annular rib upon its outer surface, a pair of centrally opened cap members arranged within and snugly fitting the sleeve to permit variance of its length, and connections between the cap members and sleeve to retain them in any adusted position.

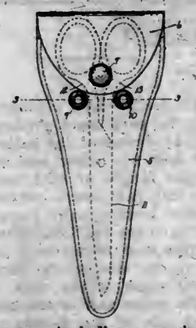
1,479,611. HAND-CARRIED RECEPTACLE. EDWARD T. JONES, San Francisco, Calif. Filed June 25, 1923. Serial No. 647,652. 5 Claims. (Cl. 183—5.)

1. The combination with a receptacle to be carried in the hand, embodying a side member adapted to be shifted to opened and closed positions, of a coin holding receptacle mounted upon the inner side of said side member and having a plurality of compartments for receiving coins of different denominations, feeding elements slidable longitudinally within said compartments, elements to advance the feeding elements and extending



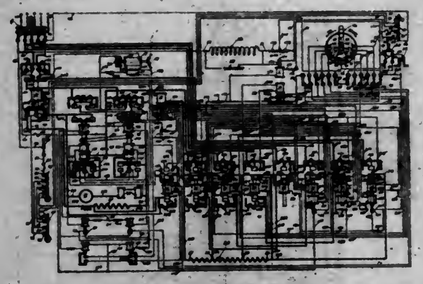
to the exterior of said side, friction means to hold each feeding element in a selected position, and means to cover and uncover the open ends of said compartments.

1,479,612. SAFETY WAREHOUSE TRUCK. DANIEL WRIGHT JOYNER, Kansas City, Mo. Filed Dec. 22, 1921. Serial No. 524,289. 2 Claims. (Cl. 214—65.)



1. A safety warehouse truck, comprising an underslung rear axle provided with bearing wheels, a bed supportingly engaged by the underslung portion of said axle, a pivotally mounted bearing wheel connected with the front end of said bed and adapted for holding with said axle the bed in a horisontal plane, a plurality of rollers revolubly mounted transversely of said bed and arranged to turn therein by objects moved thereon, pulling means mounted on said bed and adapted for pulling objects over said rollers thereon, and a bumper arranged on said bed to limit the forward movement of objects on said rollers.

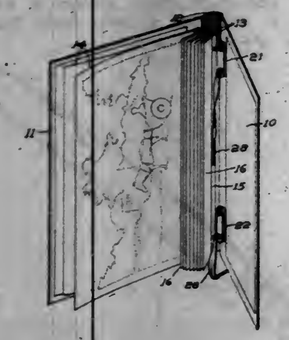
1,479,613. MULTIPLEX SIGNALING. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1917. Serial No. 181,581. 49 Claims. (Cl. 179—15.)



30. The method of signaling which comprises transmitting simultaneously in both directions over a transmission channel carrier waves each of which is continuously modulated in accordance with both telegraph and telephone signals, and receiving said telegraph and telephone signals separately.

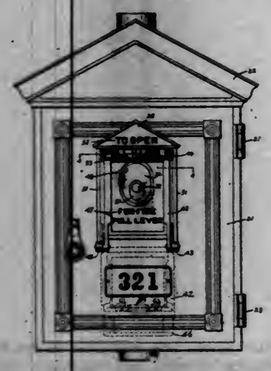
1,479,614. SCISSORS CASE. OTTO J. KORHUMMEL, Chester, Conn., assignor to C. J. Bates & Son, Chester, Conn., a Firm composed of Carlton J. Bates and Hamilton C. Bates. Filed Jan. 26, 1923. Serial No. 614,980. 3 Claims. (Cl. 150—52.)

1. A scissors-case, including a pocket and two stops respectively located on opposite sides of and closely adjacent to a central, vertical line and adapted to limit the inward movement of a pair of scissors into the case.



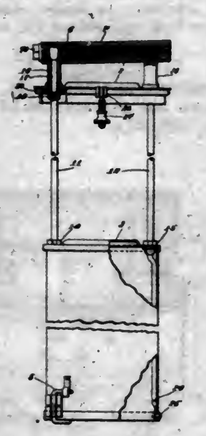
1,479,615. MULTIVOLTAGE SYSTEM OF CONTROL FOR ELEVATORS. GEORGE WILLIAM LAUTRUP, Yonkers, N. Y., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 1, 1920. Serial No. 370,429. 26 Claims. (Cl. 172—152.)

1. In a multi-voltage system of control, in combination with an electric motor, units forming a source of electrical supply for the motor, circuits to connect the motor with any desired number of the said units, a sectional resistance, certain of said circuits each including a section of the said resistance, speed controlling switches operable successively to close the said circuits to effect a step by step increase in voltage supply for the motor, and accelerating switches operable successively to short-circuit the resistance sections from their respective circuits and to open certain of the said first named motor circuits subsequently to their being closed by the speed controlling switches.



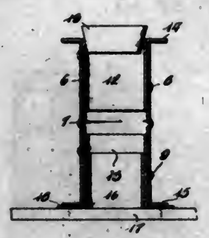
19. In a system of control for elevators, in combination with the car, a car switch, a hoisting motor, a reversing switch, an electro-magnet to operate the reversing switch, a by-pass resistance, an electro-magnet to control the said resistance, an electro-magnet having a circuit controlled by the car switch, to control a circuit for the second named electro-magnet, a holding magnet operatively associated with the reversing switch, and contacts operated by the said second named electro-magnet, controlling a circuit for the holding magnet.

1,479,607. TEMPORARY BINDER. HERBERT D. INMAN, Foxboro, Mass., assignor to Sales Folio Company, Foxboro, Mass. Filed Aug. 13, 1921. Serial No. 492,051. 5 Claims. (Cl. 129—19.)



1. A loose-leaf binder comprising, in combination, a cover, a binder string adapted to be passed through removable leaves to secure them to the cover, and means for removably securing an end portion of the string to the cover to hold the leaves bound to the cover, comprising a plate secured to the cover by rivet-eyelets, the eyelets forming apertures adapted to have the string threaded therethrough, and a second plate pivotally mounted to be swung into gripping engagement with a portion of the string protruding from one of said eyelets.

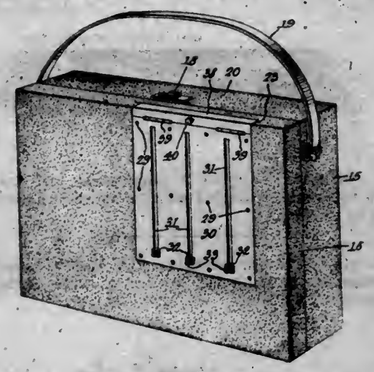
1,479,608. ATTACHMENT FOR SIGNAL BOXES. GEORGE ALFRED JACKSON, Waltham, Mass., assignor to The Gamewell Fire Alarm Telegraph Company, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1922. Serial No. 609,350. 21 Claims. (Cl. 177—360.)



4. In an attachment for a signal box; suitable enclosing structure for a manually operable member, said structure comprising a hinged section, spring latch mechanism for maintaining said section in normal closed condition and a handle whereby said hinged section may be readily opened, and a nonfrangible transparent panel carried by said hinged section.

1,479,609. PORTABLE ACETYLENE GENERATOR. ALEXANDER F. JENKINS, Baltimore, Md. Filed Jan. 24, 1920. Serial No. 353,864. 7 Claims. (Cl. 48—22.)

5. A portable acetylene generator, having a vent pipe consisting of a hollow stud extending through a wall of the generator, a pipe leading from the gas space of the generator into said stud, the same being of less diameter than the hollow in the stud, so as provide an annular chamber, surrounding the pipe, an opening in the pipe leading into said hollow chamber, and an opening leading from said hollow chamber outside the generator.

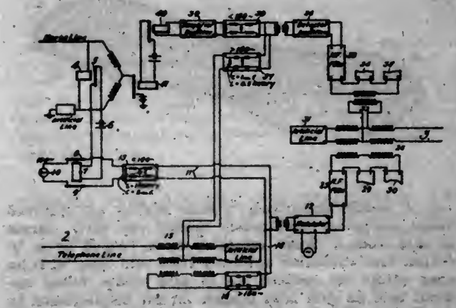


1,479,610. COMBINED MOLD AND LINER FOR PIPE OPENINGS, ETC. CHARLES E. JOHNSON and WILLIAM W. FIELDS, Cleveland, Ohio. Filed Sept. 7, 1923. Serial No. 661,493. 3 Claims. (Cl. 126—314.)

1. A device of the character described, comprising a metal sleeve having a substantially centrally arranged annular rib upon its outer surface, a pair of centrally opened cap members arranged within and snugly fitting the sleeve to permit variance of its length, and connections between the cap members and sleeve to retain them in any adusted position.

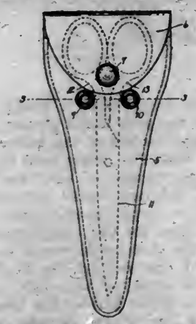
1,479,611. HAND-CARRIED RECEPTACLE. EDWARD T. JONES, San Francisco, Calif. Filed June 25, 1923. Serial No. 647,652. 5 Claims. (Cl. 183—5.)

1. The combination with a receptacle to be carried in the hand, embodying a side member adapted to be shifted to opened and closed positions, of a coin holding receptacle mounted upon the inner side of said side member and having a plurality of compartments for receiving coins of different denominations, feeding elements slidable longitudinally within said compartments, elements to advance the feeding elements and extending



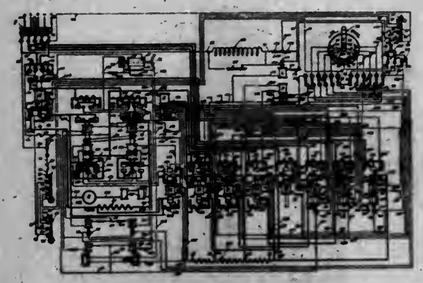
to the exterior of said side, friction means to hold each feeding element in a selected position, and means to cover and uncover the open ends of said compartments.

1,479,612. SAFETY WAREHOUSE TRUCK. DANIEL WRIGHT JOYNER, Kansas City, Mo. Filed Dec. 22, 1921. Serial No. 524,289. 2 Claims. (Cl. 214—65.)



1. A safety warehouse truck, comprising an underslung rear axle provided with bearing wheels, a bed supportingly engaged by the underslung portion of said axle, a pivotally mounted bearing wheel connected with the front end of said bed and adapted for holding with said axle the bed in a horizontal plane, a plurality of rollers revolubly mounted transversely of said bed and arranged to turn therein by objects moved thereon, pulling means mounted on said bed and adapted for pulling objects over said rollers thereon, and a bumper arranged on said bed to limit the forward movement of objects on said rollers.

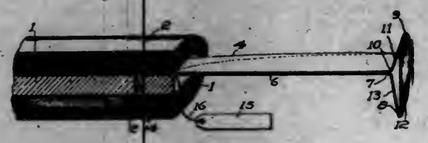
1,479,613. MULTIPLEX SIGNALING. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1917. Serial No. 181,581. 49 Claims. (Cl. 179—15.)



30. The method of signaling which comprises transmitting simultaneously in both directions over a transmission channel carrier waves each of which is continuously modulated in accordance with both telegraph and telephone signals, and receiving said telegraph and telephone signals separately.

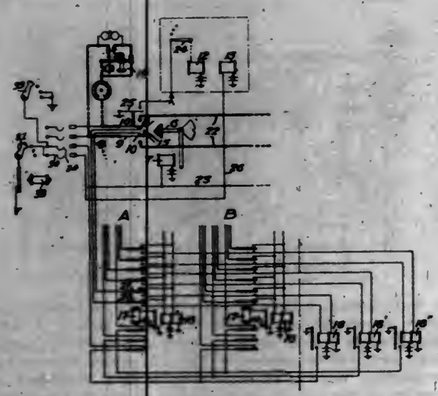
1,479,614. SCISSORS CASE. OTTO J. KORHUMMEL, Chester, Conn., assignor to C. J. Bates & Son, Chester, Conn., a Firm composed of Carlton J. Bates and Hamilton C. Bates. Filed Jan. 26, 1923. Serial No. 614,980. 3 Claims. (Cl. 150—52.)

1. A scissors-case, including a pocket and two stops respectively located on opposite sides of and closely adjacent to a central, vertical line and adapted to limit the inward movement of a pair of scissors into the case.



1,479,615. MULTIVOLTAGE SYSTEM OF CONTROL FOR ELEVATORS. GEORGE WILLIAM LAUTRUP, Yonkers, N. Y., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 1, 1920. Serial No. 370,429. 26 Claims. (Cl 172—152.)

1. In a multi-voltage system of control, in combination with an electric motor, units forming a source of electrical supply for the motor, circuits to connect the motor with any desired number of the said units, a sectional resistance, certain of said circuits each including a section of the said resistance, speed controlling switches operable successively to close the said circuits to effect a step by step increase in voltage supply for the motor, and accelerating switches operable successively to short-circuit the resistance sections from their respective circuits and to open certain of the said first named motor circuits subsequently to their being closed by the speed controlling switches.



19. In a system of control for elevators, in combination with the car, a car switch, a hoisting motor, a reversing switch, an electro-magnet to operate the reversing switch, a by-pass resistance, an electro-magnet to control the said resistance, an electro-magnet having a circuit controlled by the car switch, to control a circuit for the second named electro-magnet, a holding magnet operatively associated with the reversing switch, and contacts operated by the said second named electro-magnet, controlling a circuit for the holding magnet.

1,479,616. LABEL FOR WOUND OR ROLLED FABRICS. STEPHEN C. LONERGAN, Pawtucket, R. I., assignor to Sayles Finishing Plants, Inc., Saylesville, R. I., a Corporation of Rhode Island. Filed Jan. 27, 1922. Serial No. 532,098. 1 Claim. (Cl. 40—28.)

A label for cloth wound upon a holder, comprising in its construction a flat card board portion adapted to be inserted between one surface of the holder and the adjacent cloth wound upon the holder, and an exposed label bearing portion also formed of card board and flexibly connected to the flat card board portion back of the label bearing surface longitudinally along a line of fold unequally distant from the two longitudinal edges of the label bearing portion that the narrower part of the label bearing portion at one side of the flexible connection may cover exposed edges of the cloth at one side of the holder, and the wider part of the label bearing portion at the other side of the flexible connection may cover the end of the holder and edges of the cloth at the other side of the holder.

1,479,617. TELEPHONE-EXCHANGE SYSTEM. JAMES L. MCQUARRIE and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,329. 8 Claims. (Cl. 179—18.)

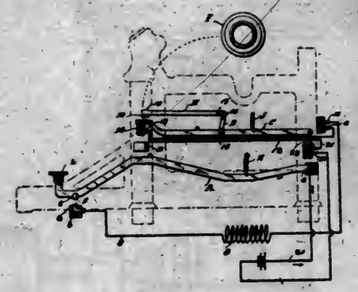
1. In a telephone system, a subscriber's line, a trunk, a switch for connecting said line to said trunk, operating means for said switch normally connected to said line, a single member operable when a call is initiated on said line for disconnecting the line from said operating means, and for extending said line to said trunk, and means for controlling said member to effect the disconnection of said line and operating means only, when said line is called.

1,479,618. DISPLAY TURNTABLE. FRITZ P. MANSBENDEL, Brooklyn, N. Y. Filed Mar. 31, 1921. Serial No. 457,441. 9 Claims. (Cl. 211—20.)

1. A rotatable display support, including a stationary base, a rotatable top, an electric motor device contained between the base and top for rotating the latter, and a train of gears between said motor device and the

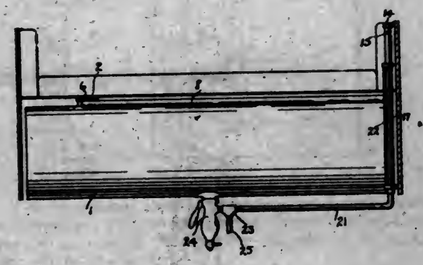
top, the latter carrying a gear wheel and the said train including a swinging gear for engagement with the gear of said top.

1,479,619. POWER-DRIVEN FAN. JOSE MARTINEZ, Palmdale, Calif. Filed Sept. 20, 1922. Serial No. 591,421. 3 Claims. (Cl. 230—33.)



1. A fan comprising a series of blades, a support on which said blades are rotatably mounted, a pair of rubber straps attached at one end to said blades, a rotary member to which the other ends of said straps are attached, and a device reciprocable along said support and adapted to impart rotation in the same direction to said rotary member as the device is reciprocated.

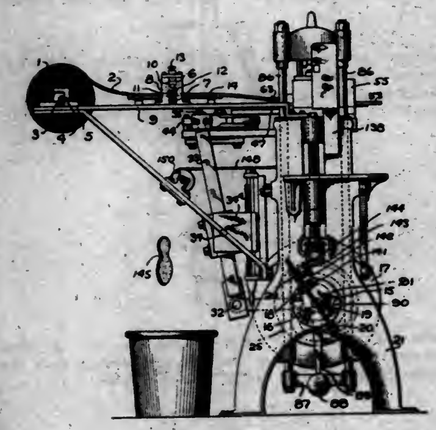
1,479,620. SADDLE. FREDERICK MESINGER, New York, N. Y. Filed Mar. 14, 1922. Serial No. 543,616. 2 Claims. (Cl. 208—15.)



1. A saddle comprising a base having an upturned flange extending continuously around the outer margin of said base, a closed central portion defined by a V-shaped bead extending upwardly from said base, with its apex within the reduced end of said saddle, filling material held on said base against lateral displacement by said bead embedded in said filling material and a covering for said filling material secured at its outer margin to said base.

1,479,621. MAGNETIC TYPEWRITING MACHINE. WASHINGTON FLETCHER NICHOLS, Munfordville, Ky. Filed Sept. 5, 1922. Serial No. 586,148. 6 Claims. (Cl. 197—13.)

1. In a typewriting machine, in combination type bars, a movable magnet bar for each type bar and operatively connected to a type bar to actuate same, a magnet carried by each magnet bar, a control bar spaced from and located within the field of said magnet to cause attraction thereof when a magnet is energized, means to energize any desired magnet.



1,479,622. FUEL-TANK ATTACHMENT FOR AUTOMOBILES. STEPHEN I. OATES, Jr., and CHARLES H. CHEVES, Houston, Tex. Filed July 10, 1922. Serial No. 573,888. 5 Claims. (Cl. 220—86.)

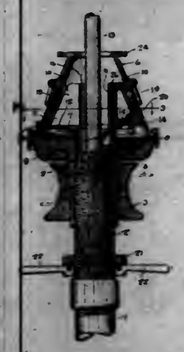
1. In a device of the character described, an automobile fuel tank having a filling opening therein, a filling pipe having its end flattened and provided with an opening corresponding to said filling opening, a cap adapted to screw in said openings and secure said pipe to said tank, said cap having a lateral slot registering with said pipe whereby liquid fuel may enter said tank through said pipe and slot while said cap is in place, and an upturned outer end on said pipe.

1,479,623. MACHINE FOR CUTTING BLANKS. JOHN H. OVERTON, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Apr. 12, 1919. Serial No. 289,719. 38 Claims. (Cl. 164—21.)

1. In a machine for cutting blanks of a sheet of material in a condition approaching a plastic state, the combination of reciprocatory feeding means engaging a portion of said material of sufficient area to prevent substantial distortion of the material during the feeding operation, cutting means operating alternately with the

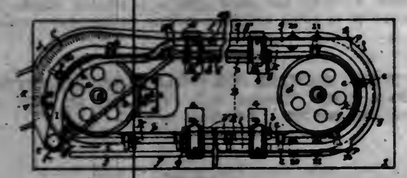
feeding means, and constantly acting feeding means arranged to draw the sheet from a source of supply and deliver it in slack condition to the reciprocatory means.

1,479,624. LIGHTER FOR CIGARS AND CIGARETTES. PAUL FABIAN, Trenton, N. J. Filed Nov. 28, 1922. Serial No. 603,739. 3 Claims. (Cl. 67—7.1.)



1. A device of the type described comprising a casing adapted to hold a combustible liquid, a tube extending completely through said casing, a wick inserted in said tube, said tube having a contracted portion near its upper end formed with an aperture, a hook attached to the wick, and a plug element carried by the hook and adapted to fit in the said tube, and spark producing means mounted on said casing.

1,479,625. CASING HEAD AND BLOW-OUT PREVENTER. WILLIAM LEE PALMER and MARSHALL MITCHELL, Long Beach, Calif., assignors of one-third to George Kammerer, Los Angeles, Calif. Filed Feb. 19, 1923. Serial No. 619,933. 7 Claims. (Cl. 166—15.)



1. In oil well apparatus, the combination of an outer casing, a substantially conical head mounted over the outer casing, an inner casing passing upwardly through the outer casing and through the conical head, a plurality of slips within the conical head normally held in

a retracted position with respect to the inner casing and means for producing a relative movement between the

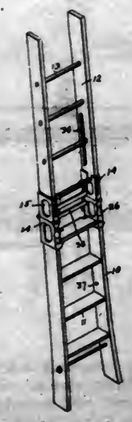
slips and the conical head operating to jam the slips toward the small end of the head and thereby close the outlet from the outer casing.

1,479,626. DRYING MACHINE. CARL G. PFEIFFER, Peekskill, N. Y. Filed June 12, 1920. Serial No. 388,479. 6 Claims. (Cl. 91—55.)

2. In combination with drying pads, pivoted axles for supporting and carrying the pads, the axles attached to an endless belt driven upon horizontal pulleys, means for driving one of the pulleys, a guide-path below the belt in which the pads travel, the traversing causing the pads to revolve, a groove above the belt as a guide to the top of the pads, the guide-path diverging and the upper guide converging near the point of delivery, the guide-path merging into an inclined plane, the inner edge of the plane lifting the carrier to separate it from the pad.

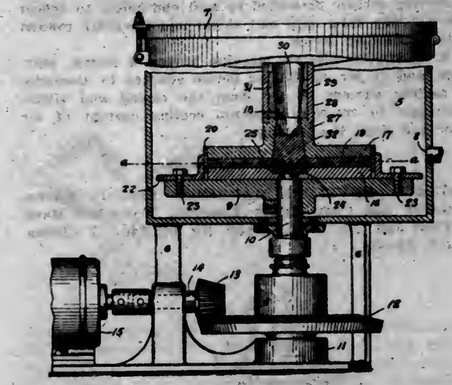
5. In a drying machine as described, means for carrying the drier pads comprising a slotted hub, a base to the hub for attachment to the carrier belt, an axle, a hub on the axle to fit in the slot in the hub, a pivot through the hub and the axle head, the upper corner of the axle head chambered away to a radius with the pivot.

6. In a drying machine as described, endless horizontal belt driven upon horizontal pulleys, with guides above and below the belt, means for tightening the belt and adapting the guides thereto, comprising slots in the base of the forward pulley whereby the base is slidable upon its foundation, and extensible means upon the top guide comprising a separable half-circular end of the frame with arms extended tangentially with the frame, with flange parts on the main frame extended to embrace said arms, slots through the said arms and extensions, and fastening bolts through the slots.



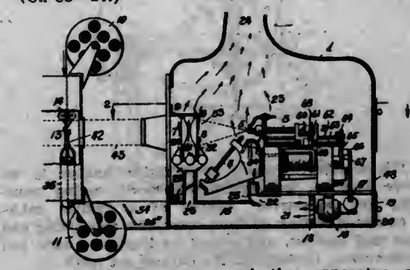
1,479,627. CASE FOR STEM-WINDING AND STEM-SETTING AUTOMOBILE CLOCKS. WILSON E. POSTE, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Sept. 12, 1922. Serial No. 587,662. 3 Claims. (Cl. 58—56.)

1. In a stem-winding and stem-setting automobile clock, the combination with a case provided at its forward end with internal screw-threads, of a removable clamping-ring provided with external screw-threads for engagement with the said internal screw-threads of the case, and also with internal screw-threads, and a removable bezel having external screw-threads for engagement



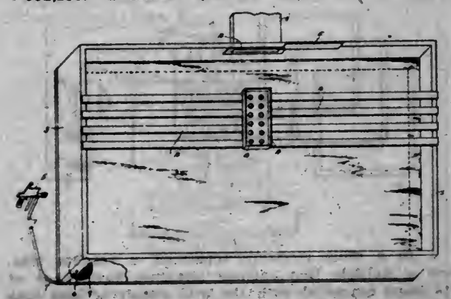
with the said internal screw-threads of the clamping-ring, whereby the bezel may be removed for regulating the clock from the front thereof without demounting the clock from the automobile.

1,479,628. HINGE LOCK. LUDWIG SEGER, Edgewater, N. J. Filed May 12, 1922. Serial No. 560,340. 3 Claims. (Cl. 228—23.)



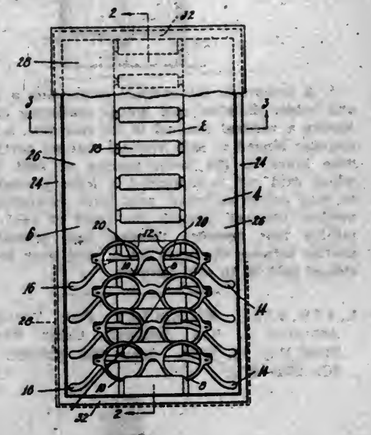
1. In a sectional combination step and extension ladder, hinged members, adapted to engage the meeting ends of the side bars of said ladder, and to be secured thereto, shoulders formed at one end of one of said members for supporting the uppermost step of the step ladder, hinge locks combined with said members for locking the side bars of said ladder sections in their adjusted positions as an extension ladder, clamps for holding said hinge locks in their locking position, a hooked bar pivotally secured to one of the side bars of one of the step ladder sections and to engage a pin on the other section, and a platform adapted to be attached to the rungs of one section and to rest on top of the uppermost step of the other section.

1,479,629. MOLD. ERNEST GAIDLEY SICARD, New York, N. Y. Filed Oct. 15, 1921. Serial No. 507,966. 8 Claims. (Cl. 22—65.)



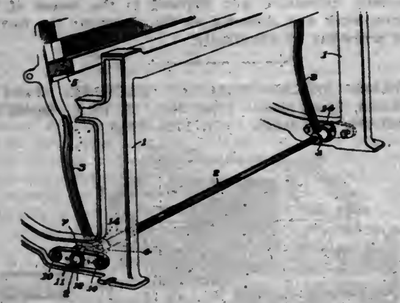
1. A mold comprising a central opening or gate, means situated at the bottom of the gate, made of material having a high fusing point and low conductivity, and a series of radial slots communicating with the bottom of the gate.

1,479,630. COOLING MOTION-PICTURE PROJECTORS AND FILMS. ELMER A. SPERRY, Brooklyn, N. Y. Filed Apr. 13, 1920. Serial No. 373,496. 9 Claims. (Cl. 88—17.)



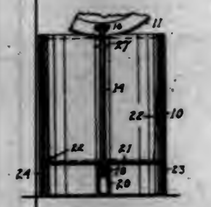
1. In a motion picture projecting apparatus, means for carrying a film, and means for directing parallel currents of a cooling fluid against opposite sides of the film and longitudinally.

1,479,631. SPRAY TANK. EDWARD M. STEPHENSON, Hartford, Conn. Filed Sept. 29, 1922. Serial No. 591,255. 1 Claim. (Cl. 91—45.)



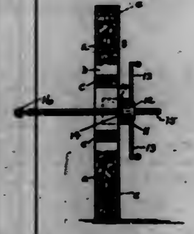
The combination with an open spray tank provided in its bottom with an outlet, a strainer over said outlet, a tube connected with the lower end of said outlet, a spray gun connected with said tube, and a rack supported upon the upper edge of said tank.

1,479,632. DISPLAY DEVICE. FREDERICK A. STEVENS, Providence, R. I., assignor to Stevens and Company, Inc., Providence, R. I., a Corporation of Rhode Island. Filed June 5, 1922. Serial No. 565,811. 11 Claims. (Cl. 211—28.)



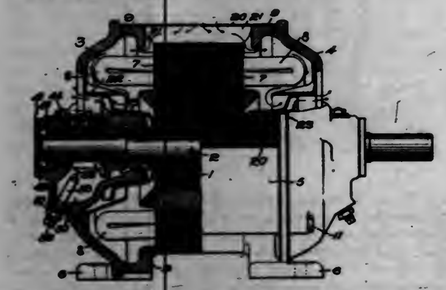
1. A device of the class described adapted to hold folded spectacles having, in combination, a pocket having walls, the width of the pocket being such that a portion of the rims of the folded spectacles may be received between the walls, and spaces on both sides of the pocket, the spaces being large enough to receive the ends of the temples of the folded spectacles.

1,479,633. LAY ROCK-SHAFT BEARING FOR LOOMS. WALLACE I. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 6, 1922. Serial No. 605,188. 5 Claims. (Cl. 64—10.)



1. In a loom, the combination of the lay rock-shaft, lay swords having hubs secured to the lay rock-shaft, a rocker head having a bushing mounted on the lay rock-shaft and provided with a recessed face for receiving the hub of a lay sword and with a plurality of notches constructed and arranged to engage the lay sword and hold the rocker head and bushing in adjusted position on the lay rock-shaft, and a holding plate having a sleeve into which the bushing extends.

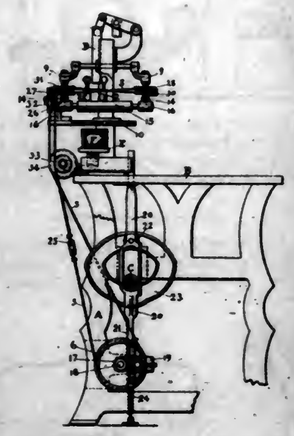
1,479,634. RECEPTACLE FOR GARBAGE AND SCRAP CANS. JAMES E. TOSCAN, Clarendon, Pa. Filed Dec. 2, 1921. Serial No. 519,505. 3 Claims. (Cl. 220—36.)



1. A receptacle for garbage comprising a garbage can and holder therefor, said holder consisting of a cylinder having a vertical channel in its rear side, a lid for said cylinder hinged to said vertical channel portion, a crosswise brace in the lower portion of said cylinder, by which said can is supported, a lever pivotally attached to said crosswise brace, said lever extending from said vertical channel through the front of said cylinder to receive foot pressure thereon, and pivotal link connection between the inner end of said lever and the under side of said lid in said channel.

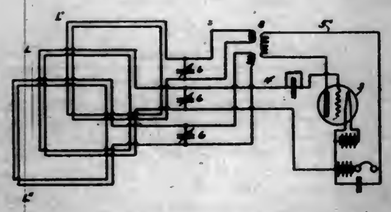
1,479,635. STRETCHER FOR WOVEN WIRE. ABGIDIUS J. VAN ACKEREN, Cedar Rapids, Nebr. Filed May 11, 1923. Serial No. 638,222. 4 Claims. (Cl. 254—67.)

1. In a device for stretching woven wire to be secured to fence posts, a bearing-block provided with a cylindrical recess and adapted to be mounted on a post, a screw-bar connected with the wire and traversing the post, the bearing-block and cylindrical recess, and a revoluble, cylindrical nut disposed in the recess of the bearing-block and threaded on the screw-bar for moving said screw-bar longitudinally.



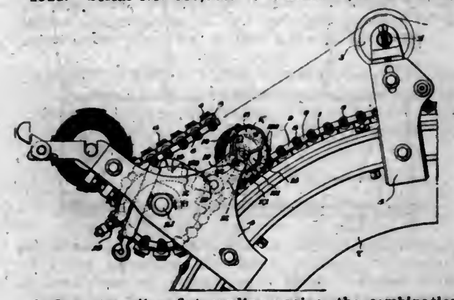
1,479,636. DYNAMO-ELECTRIC MACHINE. JOHN B. WIARD, Lynn, Mass. Filed Sept. 15, 1919. Serial No. 323,854. 4 Claims. (Cl. 172—120.)

1. A dynamo electric machine having a rotor, a stator, a casing and end shields, an air admission opening in the casing, an air discharge passage in an end shield, a ventilating device adapted to force a current of air into said casing and out through said end shield, air ducts causing said air to pass about the stator parts, a deflecting surface presented by said end shield to deflect the air way from said end shield and inwardly toward said ventilating device.



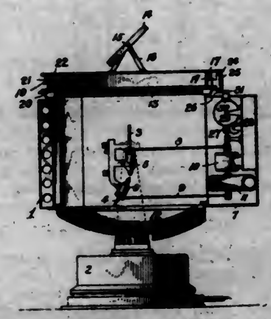
3. A dynamo electric machine having a casing, bearings, and an air ventilating device adapted to discharge a cooling current of air from the casing and simultaneously to create a separate cooling current of air over and about the bearings.

1,479,637. ENVELOPE MACHINE. EZRA P. WATERHOUSE and CARL HENRY LEKBERG, Worcester, Mass. Filed Jan. 20, 1923. Serial No. 613,846. 7 Claims. (Cl. 93—68.)



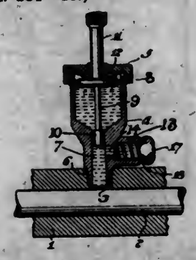
1. The combination with gumming mechanism in an envelope machine, including a reciprocally acting transfer-roll, and roll-carrier means; of a flexible cable-form carrier-operating element, means for supporting and guiding said element, and means for imparting back and forth movement thereto, for the purpose set forth.

1,479,638. MULTIPLE REGENERATIVE LOOP ANTENNA AND CIRCUIT. VLADIMIR K. ZWORYKIN, Kansas City, Mo. Filed Aug. 28, 1922. Serial No. 584,717. 4 Claims. (Cl. 250—20.)



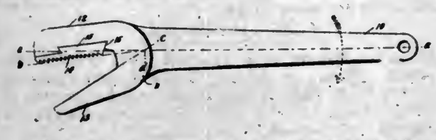
1. In a radio receiving apparatus, a vacuum tube, and a multiple loop antenna structure having one of its loops connected with the grid circuit of said tube and coupled with two or more loops in the plate circuit of said tube.

1,479,639. TRAVELING-FLAT CARDING ENGINE. GEORGE F. ALBRECHT, Woonsocket, R. I., assignor to Woonsocket Machine & Press Co., Inc., Woonsocket, R. I., a Corporation of Rhode Island. Filed May 10, 1923. Serial No. 638,069. 7 Claims. (Cl. 19—111.)



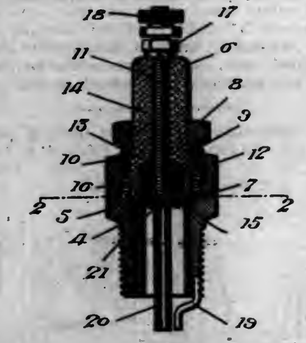
1. In a traveling flat carding engine, the combination with a clearer-brush for removing lint from the end-portions of the traveling flats, and a brush-support movable relatively to the chain of traveling flats, of means actuated through the movement of the said support to rotate the said brush.

1,479,640. LIGHT-PROJECTING APPARATUS. PRESTON R. BASSETT, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,193. 5 Claims. (Cl. 240—41.)



1. In combination with a searchlight, means at the rear of said searchlight for projecting a beam of light in a given direction, a rotatable reflecting means at the front of the searchlight in the path of only a portion of said beam, and power means for simultaneously rotating said reflecting means and ventilating said searchlight.

1,479,641. LUBRICATOR. JOHN ROMB BATTLE, Ardmore, Pa. Filed July 7, 1922. Serial No. 573,325. 5 Claims. (Cl. 184—45.)



2. A lubricator comprising a reservoir having a passage connected therewith provided with inlet and discharge ports, a valve operable in said passage to vary the resistance to flow of lubricant from said inlet port to said reservoir, said inlet port communicating with said passage between the limits of movement of said valve, and means responsive to flow of lubricant to said reservoir for varying the position of said valve so as to bypass lubricant from said inlet to said discharge port.

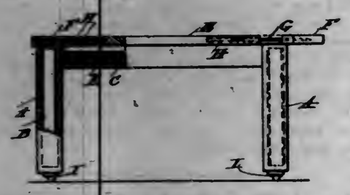
1,479,642. PIPE WRENCH. JAMES A. BIZZELL, Baltimore, Md. Filed Sept. 23, 1922. Serial No. 590,060. 1 Claim. (Cl. 81—120.)

A fixed jaw wrench having a head and a handle or shank, a pair of divergently disposed jaws formed in said head with their operative faces arranged on the same side of a prolongation of the medial longitudinal line of the shank, said jaws arranged at an acute angle to each other and inclining away from said medial line, and said jaws arranged in planes which intersect at a point on said medial line and within said head, the dragging jaw being toothed.

1,479,643. SPARK PLUG. JOEL BLOMSTER, Hobarton, Iowa. Filed July 8, 1920. Serial No. 394,776. 1 Claim. (Cl. 123—169.)

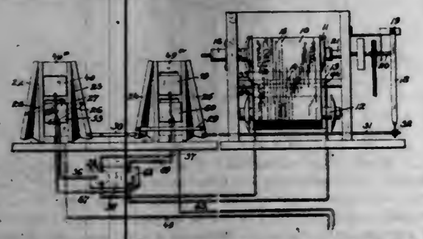
A spark plug comprising a shell having a shoulder therein, an insulating bushing secured within the shell with the inner end of the bushing seated against said shoulder and provided with a recess, an electrode rod of substantially uniform diameter throughout its length extending through said bushing, a collar on said rod fitted in said recess, packing within the recess around the rod between said collar and bushing, a nut threaded on the outer terminal of the rod and bearing against said bushing to draw said collar into the recess, the rod having a bore extending from its inner end to a point adjacent to said collar and opening laterally within the shell adjacent to said shoulder and inner end of the bushing for the circulation of gas therethrough, the inner terminal of the rod projecting from the shell, and an electrode carried by the inner end of the shell and projecting toward one side of the inner terminal of said rod to provide a spark gap.

1,479,644. FOOT SCRAPER. FRANK E. BROWNE, Long Beach, Calif. Filed Mar. 1, 1922. Serial No. 540,245. 2 Claims. (Cl. 280—169.)



1. A foot scraper capable of being sustained in an upright position and comprising a sole scraping member having apertures, and a toe scraping member hingedly

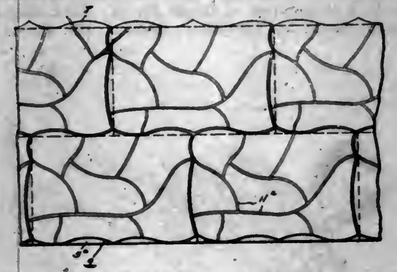
associated with the first member which is adapted to be moved relatively thereto for the removal of dirt from



beneath said apertures, said first member being provided with spring returning means.

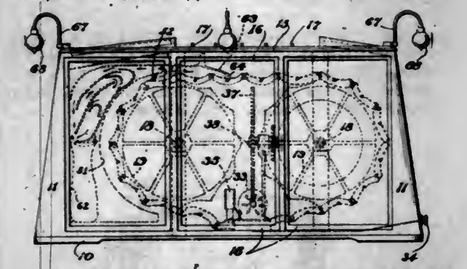
1,479,645. BENCH FOR PLAYER AND OTHER PIANOS. HENRY B. BRUCK, Cleveland, Ohio, assignor to The H. B. Bruck & Sons Company, a Corporation of Ohio. Filed July 15, 1921. Serial No. 485,129. 4 Claims. (Cl. 45—64.)

1. In a bench for a player piano, the combination with a horizontal receptacle, of hollow legs supporting the same, the aforesaid legs comprising pockets or compartments within which music rolls for a player piano may be stored, a hinged cover for the body of said receptacle, horizontal supports embedded in the ends of said hinged cover, and separate covers for the aforesaid legs, said covers slidingly movable in said supports.



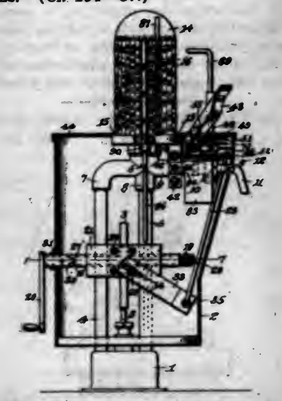
1,479,646. POSITION-RECTIFYING DEVICE FOR THE ROLLS OF PLAYER PIANOS. CHARLES E. CAMERON, Newark, N. J. Filed June 16, 1922. Serial No. 568,700. 4 Claims. (Cl. 84—140.)

1. A position rectifying device for the rolls of player pianos and the like comprising a player roll supporting device including a lateral positioning means for the roll, a tracker bar having guide openings at its ends, pneumatics, valves disposed so as to control said pneumatics under varying closures of said guide openings, a connection between said pneumatics, and a single connection from said pneumatics to the positioning means, the valves and the connection between such pneumatics being disposed so that the pneumatics operate to align the roll through control of one guide opening when the other of said guide openings is closed.



1,479,647. WALL AND BLOCK FOR FORMING THE SAME. HUGH C. CARROLL, McKeesport, Pa. Filed Oct. 28, 1922. Serial No. 597,535. 1 Claim. (Cl. 72—25.)

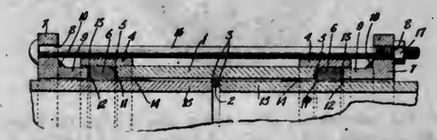
A block of the character described comprising an inner portion and an outer portion, the inner portion having its edges straight and rectangular and the outer portion having its face irregularly channeled in imitation of the joints between a plurality of irregularly formed stone, the edges of the outer portion of the block



being irregularly shaped and matching the contacting portions of adjacent blocks and producing joints between adjacent blocks corresponding in appearance to the imitation joints formed on the face of the block.

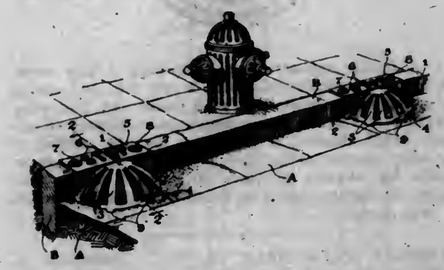
1,479,648. FLYCATCHER. CHARLES J. CASTERA, Los Angeles, Calif. Filed Oct. 31, 1921. Serial No. 511,630. 8 Claims. (Cl. 43—111.)

1. In a fly trap, a housing, portions of the walls and top thereof being provided with removable panels, there being an opening in the top of said housing, and means within said housing for attracting and catching flies.



1,479,649. GASOLINE DISPENSER. MARCUS C. CHISM, WILLIAM T. FLETCHER, CARROLL E. LORD, and VICTOR H. FUTCH, Nashville, Ga.; said Fletcher assignor to said Chism. Filed Dec. 7, 1922. Serial No. 605,403. 19 Claims. (Cl. 194—87.)

1. A dispensing apparatus for fluids comprising a measuring element, a pumping element for supplying fluids to said measuring element, a normally closed outlet valve mechanism associated therewith, a normally

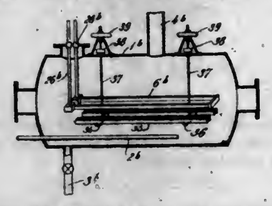


locked actuating element for opening and closing said valve mechanism, a carrier overlapping said actuating element and adapted to be coupled therewith to release the same, to permit of the operation thereof, to open said valve mechanism to cause a discharge of fluid from the measuring element, and means actuated by said carrier when coupled to said actuating element to discontinue the operation of said pumping element.

1,479,650. PIPE COUPLING. JAMES CLARK, Bradford, Pa., assignor to S. R. Dresser Manufacturing Company, Bradford, Pa., a Corporation of Pennsylvania. Filed Apr. 13, 1921. Serial No. 461,036. 11 Claims. (Cl. 285—132.)

1. The herein described coupling for thick wall and high pressure plain end pipes, formed of wrought metal and comprising among its members a middle ring consisting of a central sleeve, separately formed end sleeves surrounding the end portions of the central sleeve and projecting beyond the same to form packing recesses, a filet engaging each end of the central sleeve and the inner face of the adjacent end sleeve and provided with a conical packing engaging face extending from the adjacent end of the central sleeve outwardly, and forming the inner end of the adjacent packing recess, packings in said packing recess having annular beveled portions to engage the conical face of said filets, clamping rings comprising annular flanges provided with bolt holes and annular portions adapted to engage the packing rings and clamping bolts.

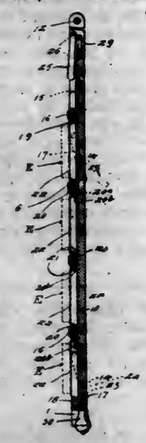
1,479,651. DEVICE FOR MARKING PARKING LIMITS FOR VEHICLES. EVERETT G. CLEMENTS, Washington, D. C. Filed June 29, 1923. Serial No. 648,562. 14 Claims. (Cl. 40—125.)



14. A device for indicating the limits of zones prohibiting parking of vehicles adjacent the curbing of street highways comprising slightly elevated means fixed against lateral movement at the limits of said zones and adapted, while in operative position, to permit passage of a vehicle thereover.

1,479,652. FISH LURE. CHARLES CRANSTONE, Newport News, Va. Filed May 2, 1922. Serial No. 557,824. 4 Claims. (Cl. 43—35.)

1. A device of the character described, comprising a hollow body having an opening therein, pivotally mounted hooks normally within the body and movable through said opening to project the hooks, elastic means exerting pressure on the hooks to swing them outward through the opening, a device operated by the fish line and holding the hooks against the action of the elastic means within the body.

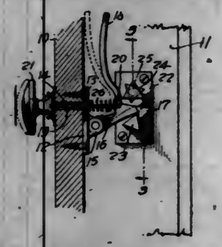


1,479,653. METHOD OF CRACKING OILS. JOSEPH GEORGE DAVIDSON, Pittsburgh, Pa., assignor to Charles H. Conner, New York, N. Y. Filed June 10, 1920, Serial No. 387,967. Renewed Oct. 24, 1922. Serial No. 596,685. 11 Claims. (Cl. 196—25.)

2. The method of cracking oil, which comprises immersing in a relatively large body of oil a plurality of resistors of massive construction connected with sources of poly-phase alternating current and heating the oil by means of such resistors to the cracking temperature and pressure.

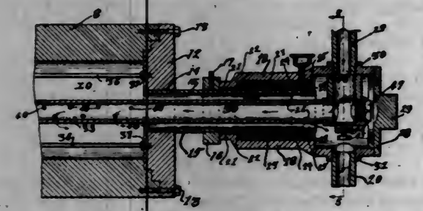
7. The method of cracking oils, which comprises immersing in a body of the oil massive electric resistors heated by alternating current to the cracking temperature and periodically removing the carbon deposit from said resistors without removal thereof from the still.

1,479,654. ERASER-CLEANING APPARATUS. GEORGE WASHINGTON EMMONS, Ontario, Wis. Filed Oct. 21, 1921. Serial No. 509,378. 8 Claims. (Cl. 35—15.)



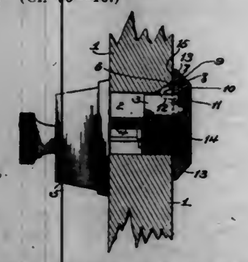
1. An eraser holding and cleaning rack having relatively slidable base and frame members and transverse holder bars between which the erasers may be arranged, the terminal bars being carried respectively by said members and the intermediate bars being loose for movement to suit the length of the interposed eraser.

1,479,655. DOOR LATCH. ROSCOE BERYL EVANS, Dermott, Ark. Filed Sept. 18, 1922. Serial No. 588,865. 3 Claims. (Cl. 292—108.)



3. A door latch comprising a fulcrumed latch bar, a strike plate provided with spaced triangular abutments, one of said abutments being rigid and positioned to interengage with the latch bar, and the other adapted to be

manually rotated to vary the interval between the proximate portions of the abutments, the greater interval permitting the unlatching of the latch but limit-



ing its movement, the lesser interval preventing such unlatching, and manual means for applying unlatching stress to the latching member.

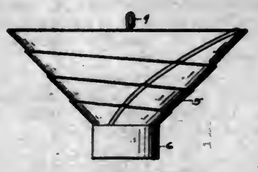
1,479,656. COMBINED MILL TEE AND STUFFING BOX. RALPH FETTERLEY, Akron, Ohio. Filed July 29, 1920. Serial No. 399,735. 2 Claims. (Cl. 285—22.)

1. In a device of the class described, the combination with a mill roll having an enclosed cavity, of a tube coaxially secured thereto so as to extend outwardly therefrom with the bore of the tube communicating with said cavity, a casing surrounding the outwardly projecting portion of said tube, a packing gland in said casing, a supply pipe leading to said casing, an outlet leading therefrom, a pipe extending from said casing through said tube and into said roll, pipe supporting means in said roll, said means adapted to rotate with said roll about said pipe, a tee on the outer end of said pipe and means within said casing to detachably secure the stem of said tee against the wall of said casing with the bore in the tee communicating with the bore in said inlet pipe, substantially as and for the purpose herein set forth.

1,479,657. FACING RING FOR CYLINDER LOCKS. JOHN B. FREYSINGER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 10, 1922. Serial No. 593,489. 4 Claims. (Cl. 70—46.)

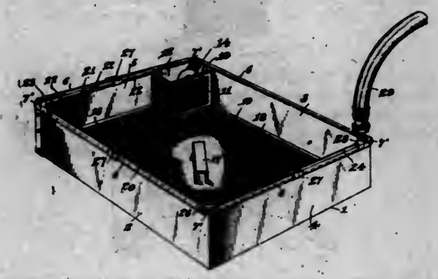
1. A facing ring for a cylinder lock formed in a single piece of hard sheet metal bent upon itself and providing at its inner edge portion a recessed seat for the flanged or headed end of a cylinder lock.

1,479,658. FACING-RING STRUCTURE FOR CYLINDER LOCKS. JOHN B. FREYSINGER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 30, 1922. Serial No. 597,937. 4 Claims. (Cl. 70—46.)



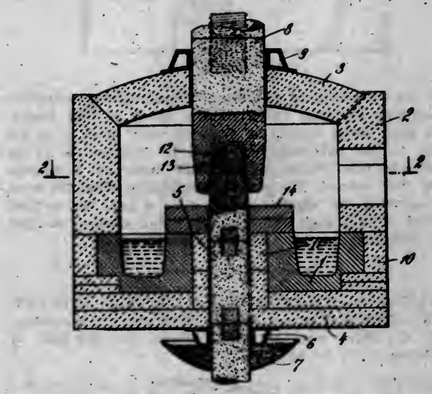
2. The combination of a facing ring having its body made of hard metal solid throughout and having a recess, a spring annulus carried in the recess of said ring, and a plurality of spring fingers, projecting forwardly from said annulus within said facing ring.

1,479,659. FACING-RING STRUCTURE FOR CYLINDER LOCKS. JOHN B. FREYSINGER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 30, 1922. Serial No. 597,938. 2 Claims. (Cl. 70—46.)



1. A facing ring structure, comprising a body member having an annular recess in its rear face, an annulus of spring metal located in said recess and projecting inwardly beyond the same, said annulus having an annular flange disposed in said recess, an edge portion of the body member overlying a portion of said flange to retain the annulus in place, and spring fingers projecting forwardly from the inwardly projecting portion of said annulus.

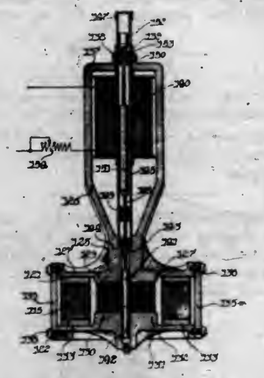
1,479,660. COLLAPSIBLE FUNNEL. FREDERICK F. FULLER, Govert, S. Dak. Filed July 10, 1923. Serial No. 650,663. 4 Claims. (Cl. 226—38.)



1. A funnel of the character described formed of a single spiral strip, interengaging means between the end of the inner convolution of the strip and the inner face of the next succeeding convolution, interengaging ribs and grooves upon the contacting convolutions and a ring-like base with which the lower convolution is engaged.

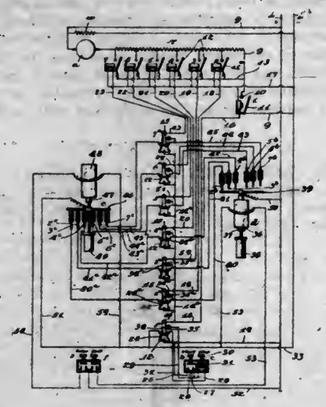
1,479,661. WASHING APPARATUS. CHARLES C. GATES, Clare, Mich. Filed Sept. 26, 1922. Serial No. 590,695. 5 Claims. (Cl. 95—97.)

1. A washing apparatus for the purpose set forth comprising a receptacle, angle shaped supporting means arranged therein, a siphoning element extended within said receptacle, a gdard surrounding said element, a foraminous support mounted on said means and cut away to provide a clearance for said guard, spray pipes arranged within the receptacle and communicating with a water supply, and a support carried by the bottom of said receptacle and arranged below the center of the foraminous element.



1,479,662. SMELTING ORES OF LOW-VOLATILE METALS AND MELTING SUCH METALS. JAMES H. GRAY, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,620. 20 Claims. (Cl. 204—64.)

1. The method of providing a heat for smelting ores of low volatile metals and similar purposes which consists in maintaining an arc between two vertical electrodes of different diameters so that the upper electrode will direct the heat of the arc downward toward the charge.



1,479,663. RELAY AND THE LIKE. ALFRED HESS, Chicago, Ill., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1920. Serial No. 358,866. 50 Claims. (Cl. 171—119.)

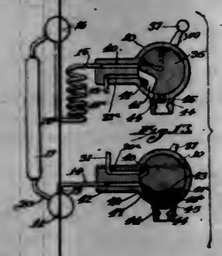
1. In combination, a winding adapted to be connected to a source of periodically varying current, a variable resistance conductor for varying the conductive effect of said winding, said conductor comprising a conducting

fluid and a movable member conductively in parallel relation with said fluid, and means governed by the variations in inductive effect of said winding.

1,479,664. SPEED-REGULATING SYSTEM FOR ELECTRIC MOTORS. WILLIAM T. HOLMES, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 29, 1922. Serial No. 584,956. 7 Claims. (Cl. 172—179.)

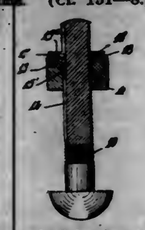
1. In a speed regulating system for electric motors, an armature circuit, a resistance therein, means for opening and closing said circuit, a series of speed regulating contactors adapted to cut in and out sections of said resistance, separate circuits for said contactors, a series of relays for closing the latter circuits, control circuits for said relays, an accelerating switch adapted to close said control circuits in succession, a decelerating switch adapted to open said control circuits in the reverse order of their closure, and means for actuating said accelerating and decelerating switches at will.

1,479,665. CORN AND BUNION PROTECTOR. PHILIP IROFF, Brooklyn, N. Y. Filed Oct. 7, 1922. Serial No. 593,027. 3 Claims. (Cl. 128—153.)



1. A corn and bunion shield comprising a cap, a strap fixed at one end to one side of said cap, a strip of elastic material extending under tension along the op-

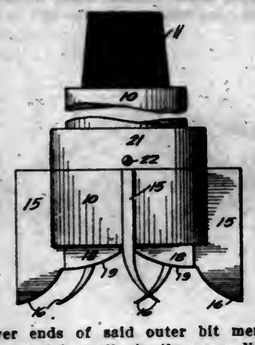
posite side of the cap and having the other end of the strap engaged thereunder, said cap having a pair of



slots formed therein, and said strip having its ends inserted through said slots and secured to the inner face of the cap.

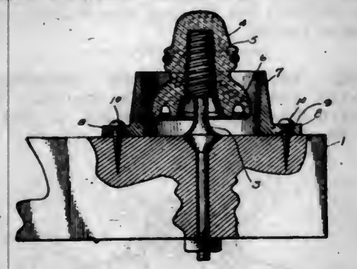
1,479,666. DISPENSING APPARATUS. BIRGER JOHNSEN, Los Angeles, Calif., assignor to Zelzah Carbonator Co., Los Angeles, Calif., a Corporation of California. Filed Nov. 16, 1922. Serial No. 601,327. 5 Claims. (Cl. 225—21.)

1. A carbonated water apparatus comprising a cooled water vessel, a draft valve body on the upper portion of said vessel, a distributing chamber arranged in the lower portion of the vessel, a water chamber in the upper portion of the vessel, means connecting the distributing chamber and the water chamber, and a gas supply and carbonated water outlet pipe connected to the distributing chamber, said pipe connecting with said valve.



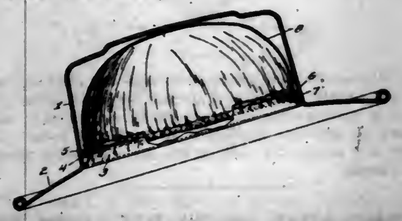
1,479,667. NUT LOCK. RUDOLPH E. KLIAVIN, Seattle, Wash., assignor of forty per cent to Kiril Tohtieff, Aberdeen, Wash. Filed Nov. 2, 1922. Serial No. 598,460. 3 Claims. (Cl. 151—8.)

1. In combination, a bolt having a longitudinal groove, a nut having its outer face formed with a radial groove, and having an undercut peripheral recess communicating with said groove, a two-armed key having one arm engaging in the said longitudinal groove and the other arm engaging in the radial groove, and a retaining element for said key adapted to engage in the said recess in the periphery of the nut to prevent axial displacement of the key.



1,479,668. WELL-DRILL BIT. WILLIAM R. LYLE, Los Angeles, Calif. Filed June 20, 1921. Serial No. 478,942. 2 Claims. (Cl. 255—61.)

1. The combination with a drill body, of inner bit members removably positioned on the under side of said drill body, the lower edges of which inner bit members are curved, outer bit members arranged on the lower portion of the drill body, portions of which outer bit members overlie the outer ends of the inner bit members,



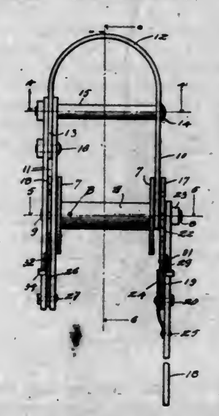
and the lower ends of said outer bit members being pointed and curved laterally in the same direction with respect to the axis of the drill body.

1,479,669. INSULATOR PROTECTOR. JAMES ERNEST MCCLAIN, Greenville, Tex., assignor of one-half to James H. Dinsmore and Bruce M. McMahan, both of Greenville, Tex. Filed Mar. 4, 1920. Serial No. 363,309. 2 Claims. (Cl. 173—28.)

1. As an article of manufacture an insulator protector comprising an open ended annular shell of cast metal, said shell being formed so that its outer wall is at an angle to the perpendicular when in position so as to reduce to a minimum the shock of impact of a missile from the ground, integral lugs extending from the base for securing the shell in position on a bar, the bottom surface of said shell and said lugs being a plane so that the shell may be affixed to any width of bar.

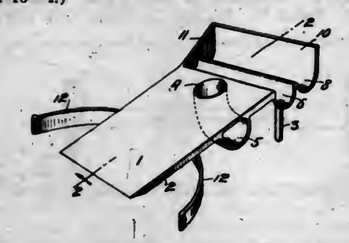
1,479,670. ADJUSTABLE-HEAD-SIZE HAT AND LINING THEREFOR. JANIE A. MCKNIGHT, Lincolnton, N. C. Filed Apr. 11, 1922. Serial No. 551,499. 3 Claims. (Cl. 2—113.)

1. An attachment for hats comprising a frusto-conical bandeau formed from a strip of flexible material cut on bias, of substantial width and adapted to have its lower edge secured within and to the bottom of a hat crown, said bandeau having its upper edge provided with an



elastic element for contracting said edge, and a crown lining having its lower end provided with a continuous encased metallic element corresponding in contour to the shape of the lower end of the lining and seated on the bandeau between the top and bottom edges thereof for retaining the lining within the crown.

1,479,671. FACING-RING STRUCTURE FOR LOCKS. EDWIN I. NOTTINGHAM, Washington, D. C., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Dec. 29, 1922. Serial No. 609,636. 6 Claims. (Cl. 70—46.)

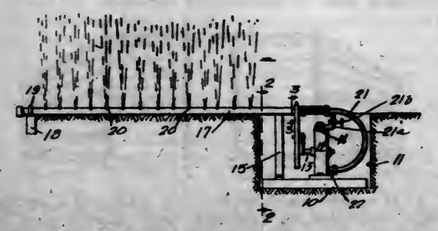


1. The combination with a facing ring, of an annular sheet metal portion embracing the same and having an inwardly projecting split annular member forming a plurality of spring fingers.

1,479,672. PORTABLE WINDLASS JACK. LESTER N. NULL, Oilton, Okla., assignor of one-half to John W. Smith, Oilton, Okla. Filed Oct. 14, 1921. Serial No. 507,616. 1 Claim. (Cl. 254—168.)

A windlass jack having a reel provided with trunnions, a U-shaped frame having an arm in which one of said trunnions is journaled, a ratchet wheel rigid on the last mentioned trunnion, a lever journaled on the last mentioned trunnion, a pawl on said lever engageable with said ratchet wheel, a fastening member on the last mentioned trunnion beyond said lever, the arch of the frame extending from said arm and terminating in an arm shorter than and at a distance from said arm, a bolt spanning said arm intermediate said reel and arch and passing through the second mentioned arm, bars through which said bolt passes engageable with opposite sides of the second arm and projecting beyond the end of the same, means on said bolt in abutment with the innermost bar, a ratchet wheel intermediate said bars in line with the second arm and rigid with the other trunnion, a fastening intermediate said bolt and ratchet wheel securing the second arm and bars together to supplement the fastening of the bars by said bolt, and a pawl cooperating with the second mentioned ratchet wheel pivoted to and intermediate said bars adjacent their distal ends.

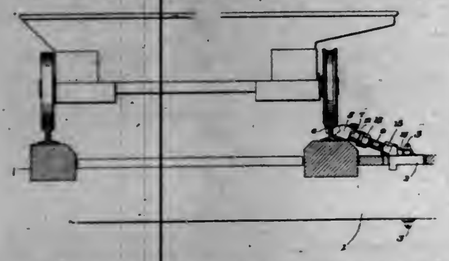
1,479,673. DEVICE FOR PRACTICE OF GOLF PUTTING. EDWIN SANFORD PHELPS, Montclair, N. J. Filed Mar. 24, 1922. Serial No. 627,390. 4 Claims. (Cl. 46—4.)



1. A device for practice of golf putting, comprising an inclined plane formed with a ball-receiving opening adjacent to its upper end and a plurality of parallel inclined troughs extending transversely to the upper end of the inclined plane to receive a ball that fails to enter the opening in the plane and may pass to either side thereof, the outermost trough having a rear wall extending above the pitch of the inclined plane.

1,479,674. LAMP BURNER. PETER PRITULA and CONSTANTINE KOROL, Ratner, Saskatchewan, Canada. Filed Oct. 26, 1922. Serial No. 597,108. 2 Claims. (Cl. 67—78.)

1. In a flame extinguisher for lamp burners, wherein a burner is provided with a wick tube, and a shaft carrying spur wheels projecting into the wick tube, a sleeve slidably mounted on said shaft, a pinion carried by said sleeve, a second shaft journaled parallel with the first named shaft, a gear wheel fixed thereto, and a shutter carried by said shaft and having the upper end thereof positioned overlying the open upper end of the wick tube and adapted to be so moved when the pinion and gear are in mesh.

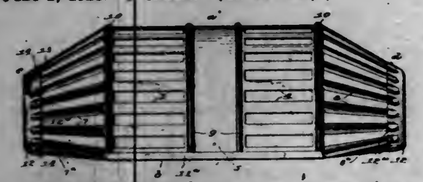


1,479,675. LAWN SPRINKLER. BEN REES, Anaheim, Calif. Filed June 20, 1921. Serial No. 479,010. 3 Claims. (Cl. 299—67.)

1. The combination, with a rotary water motor having an axially disposed shaft, of a perforated pipe mounted for rocking movement in suitable bearings and on an axis substantially parallel with said shaft, a connection

from the discharge side of the water motor to said pipe, a slotted arm secured to said pipe, and a crank fixed to the shaft of the water motor and having a portion arranged in the slot in said arm whereby rocking movement is imparted to the perforated pipe as the water motor is rotated.

1,479,676. TRACK BRACE. JOSEPH S. REID, Olean, N. Y., assignor to Clark Brothers Company, Olean, N. Y., a Corporation of New York. Filed Apr. 23, 1923. Serial No. 633,861. 1 Claim. (Cl. 238—336.)

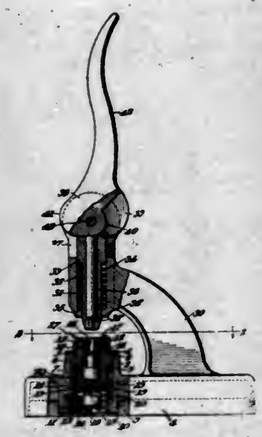


A track brace including two heads having right and left hand threaded sockets, a rod having right and left threads screwing into said sockets, one head constructed and adapted to fit a rail and the other a supporting beam, the heads having holes therethrough and bolts extending through the holes in the heads into the rail and beam respectively.

1,479,677. ANIMAL TRAP. EDWIN ROLKER, Baltimore, Md., assignor to Milton Roberts, Baltimore County, Md. Filed Apr. 23, 1921, Serial No. 463,846. Renewed June 2, 1923. 6 Claims. (Cl. 43—65.)

1. An animal trap comprising a top composed of a metal sheet punched to provide two transverse series of spaced bars, extending lengthwise of the top, and intermediate tongues, the latter bent over at the ends of the sheet and extended beyond its ends, and entrance and exit fitting secured to the ends of the tongues.

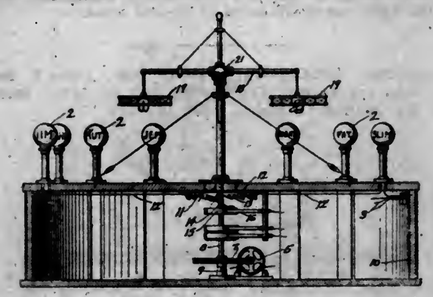
1,479,678. ANIMAL TRAP. EDWIN ROLKER, Baltimore, Md., assignor to Milton Roberts, Baltimore County, Md. Filed June 15, 1921, Serial No. 477,722. Renewed June 2, 1923. 3 Claims. (Cl. 43—65.)



1. In a sheet metal animal trap, a top and a bottom, each comprising an elongated metal sheet having its ends slotted longitudinally, forming a plurality of spaced end bars, and annular entrance and exit fittings of smaller diameter than the body, secured to the ends of said bars.

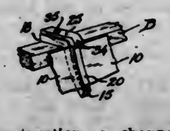
1,479,679. HOSE CLAMP. OSCAR NELSON SANDHOLM, Denver, Colo. Filed Jan. 22, 1923. Serial No. 614,279. 2 Claims. (Cl. 24—19.)

1. A fastening device comprising a band, spaced arms on one end of said band, a threaded nut having supporting arms on the opposite sides of said nut and journalled in said spaced arms, a screw bolt threaded in said nut and between said supporting arms, said band adjacent said spaced arms having a slot therein, and the end of said band opposite to said spaced arms being more narrow than the width of said slot and having a socket at the end thereof for the reception of the thrust end of said screw.



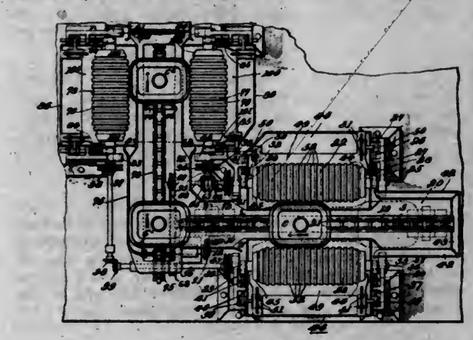
1,479,680. MACHINE FOR FORMING AND SETTING FASTENERS FOR PAPERS AND OTHER MATERIALS. CEDRIC P. SIBLEY, Detroit, Mich. Filed Nov. 1, 1922. Serial No. 598,400. 21 Claims. (Cl. 1—2.1.)

12. In a machine for forming and setting fasteners for papers and other materials, an apertured anvil adapted to receive a fastener blank, a pin a portion of which is adapted to be projected through the aperture of said anvil, a bored plunger mounted for sliding movement toward said anvil and having a punch member mounted for relative sliding movement within said bore, means for moving said plunger into operative engagement with said fastener blank to project said extension and form a fastener from said blank, and means for moving said plunger and with it said punch member to set said fastener.



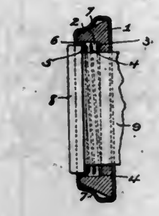
1,479,681. GAME. RAYMOND I. SMITH, Venice, Calif. Filed Apr. 15, 1922. Serial No. 552,845. 3 Claims. (Cl. 46—56.)

1. In an amusement device, a rotary mast, a series of lanterns arranged about the mast and provided with electric bulbs, a plurality of contact members each respectively connected with certain of the lamps, a control brush secured upon the mast, service wires from a source of supply, one of which is common to the lanterns and



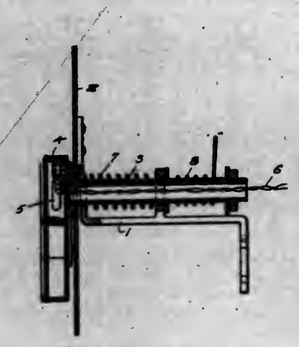
the other of which is connected to the brush secured upon the mast, and in which wire is arranged a plurality of switches in series to be manually closed for controlling the operation of the circuit closing means.

1,479,682. FLUME CONSTRUCTION. WILLIAM J. SMITH, Denver, Colo., assignor of one-fourth to James S. De Reamer and one-fourth to Carl B. Daniels, both of Denver, Colo. Filed May 2, 1921. Serial No. 466,078. 11 Claims. (Cl. 61—15.)



1. In flume construction, a channel shaped hanger, a pair of opposed sections having their ends disposed in the channel, and clamping members engaging the upper edges of said sections to retain the same in engagement with the hanger, the outer portions of said clamping members being removably secured in the channel of the hanger.

1,479,683. SQUARE-CAN-COATING MACHINE. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed Apr. 6, 1921. Serial No. 459,073. 19 Claims. (Cl. 113—80.)

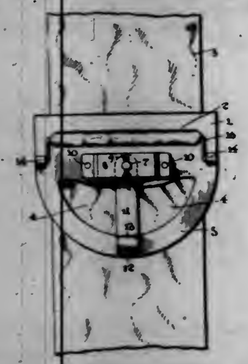


1. A machine for coating with sealing material can covers having straight edge portions and rounded corner portions including in combination devices for engaging the straight and rounded edge portions of the cover in succession, and means for conveying the covers bodily between said devices whereby the sealing material is scraped from the devices on to the cover.

1,479,684. FACING-RING STRUCTURE FOR CYLINDER LOCKS. FRANK E. THOMPSON and CHARLES LEDIN, Stamford, Conn., assignors to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 30, 1922. Serial No. 597,916. 6 Claims. (Cl. 70—46.)

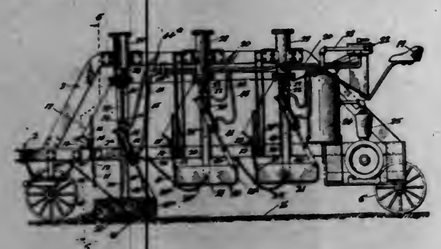
2. The combination of a facing ring having a solid body portion of hardened steel, a spring member carried by said body portion to yieldingly press against the flanged head of a lock cylinder, and a metal scalp covering the said body portion of the ring and constituting limiting means for the spring member.

1,479,685. VEHICLE TRAFFIC SIGNAL. ERNEST WARD, Independence, Mo. Filed Jan. 19, 1923. Serial No. 613,700. 1 Claim. (Cl. 116—51.)



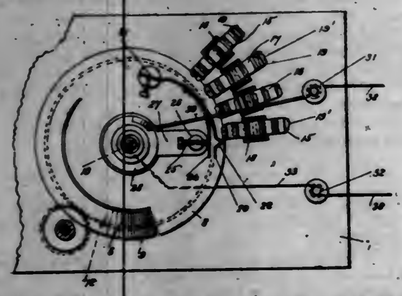
A signal of the class described including a bracket provided with spaced upstanding bearings, a shaft journaled in said bearings, an indicator carried on said shaft beyond one of the bearings, a dial coacting with said indicator and in which said shaft is journaled, said dial being located intermediate the indicator and adjacent bearing and secured to the bracket, the other end of the shaft extending beyond the other bearings, operating mechanism connected to the shaft at the latter end, and a return spring for the shaft surrounding the same and located intermediate the bearings.

1,479,686. HARNESS BUCKLE. THOMAS ESCOR WILKINS, Cullman, Ala. Filed July 25, 1923. Serial No. 653,721. 2 Claims. (Cl. 54—54.)



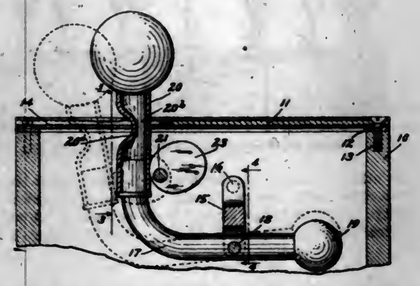
1. A back band buckle comprising, a plate having a transverse slot through its upper portion, and formed to provide a semi-circular track at its lower portion, a pair of spaced apertured lugs integral with the outer surface of said plate and arranged below the ends of said slot, a swinging clamp bar extending across and parallel with said slot and having angle shaped terminal portions pivoted in said lugs, a centrally positioned pivot

pin extending forward of and at right angles to the surface of said plate, and a headed trace chain coupling



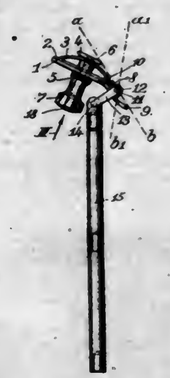
member pivotally supported at its upper end on said pin and having its head carrying said chain and slidable upon said track.

1,479,687. WHEELED SCRAPER. SPRUILLE A. WILSON, Sherman, Calif. Filed July 5, 1922. Serial No. 572,950. 13 Claims. (Cl. 37—127.)



1. A wheeled scraper having, in combination, a scraping shovel, and fluid pressure means for raising and lowering the shovel to effective position and a fluid pressure means for tilting the shovel when in its elevated position.

1,479,688. TELEGRAPH TRANSMITTER. FREEMAN W. WRIGHT, Venezia, Ariz. Filed Feb. 6, 1922. Serial No. 534,827. 10 Claims. (Cl. 178—115.)

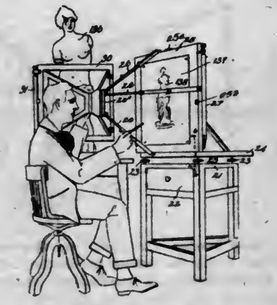


1. In a telegraph transmitter, a series of character wheels having raised characters, said characters being arranged parallel to each other, and each character wheel being mounted on a separate axis and certain of the said wheels having a different number of characters from the others, a single make and break device which is operated by all the said characters, and means for revolving the character wheels step by step selectively and placing the selected characters in engagement with the make and break device in regular order.

1,479,689. DISAPPEARING GOLF TEE. JACOB F. ZELLER, Los Angeles, Calif. Filed Oct. 20, 1921. Serial No. 509,086. 8 Claims. (Cl. 46—4.)

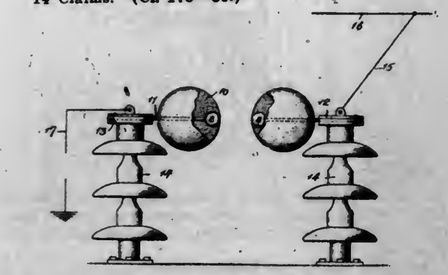
1. A golf tee, comprising a housing, a section of flexible material closing the top thereof, there being a slot formed in said flexible covering, a substantially L-shaped arm pivotally mounted within the housing, and a flexible tubular member indented on one side and carried by the vertical leg of said L-shaped arm and projecting upwardly through the slot in said cover member.

1,479,690. SAFETY RAZOR. ADOLF ANGST, Schaffhausen, Switzerland. Filed Jan. 5, 1923. Serial No 610,871. 9 Claims. (Cl. 30—12.)



1. A safety razor comprising in combination a blade holder and a blade exchangeably mounted on the former, guide means fixed on said blade holder and comprising a guard rod arranged in front of the cutting edge of the blade at some distance from said edge, and a handle pivotally connected to said blade holder, the axis of the pivot coinciding with the axis of said guard rod.

1,479,691. DRAWING APPARATUS. ROY P. ANSTOCK, Mahanoy City, Pa. Filed Oct. 5, 1920. Serial No. 414,925. 18 Claims. (Cl. 88—24.)



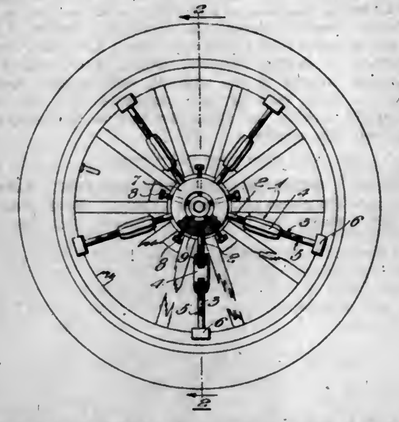
1. A device of the character described, comprising a mirror provided with an opening through which an operator stationed at the rear of the mirror can see through the mirror, a second mirror, said second mirror being

inclined relatively to the first mirror for enabling the operator to see through said opening the image of an object located in a direction at an angle to his line of

vision, and a plurality of other mirrors for enabling the operator to see a vignette of the picture being drawn or painted.

1,479,692. ARC GAP. CHARLES E. BENNETT, Atlanta, Ga., assignor, by mesne assignments, to Balt Manufacturing Company, Atlanta, Ga., a Corporation of Georgia. Filed May 25, 1920. Serial No. 384,221. 14 Claims. (Cl. 175—30.)

1. In the arc gap installation, a pair of electrodes operative when dry, and associated means operative only when wet to compensate the lowered impedance of the gap in the presence of moisture and serving to maintain the gap rating substantially uniform under wet and dry conditions.

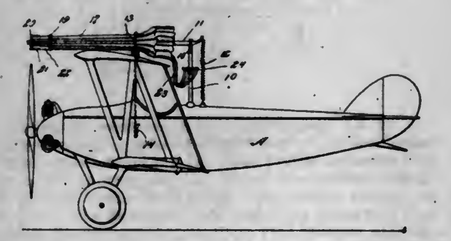


1,479,693. ARC GAP. CHARLES E. BENNETT, Atlanta, Ga., assignor, by mesne assignments, to Balt Manufacturing Company, Atlanta, Ga., a Corporation of Georgia. Filed Aug. 10, 1920. Serial No. 402,569. 12 Claims. (Cl. 175—30.)

1. In an arc gap installation, a pair of gap terminals, and condenser elements associated with said terminals and affecting the flux field across the gap.

1,479,694. EMERGENCY WHEEL SPOKE. OTTO BLEADO, Manistee, Mich. Filed Apr. 19, 1923. Serial No. 633,213. 2 Claims. (Cl. 301—104.)

2. An emergency device for application to automobile wheels comprising a hub encircling ring, adjustable means carried thereby for connecting it with the wheel hub, and one or more supplemental spokes associated with said ring, each spoke being composed of sections

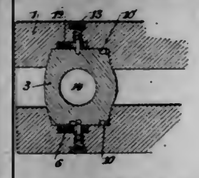


adjustably connected together, one of said sections having its outer end off-set inwardly and provided with a head shaped to engage the wheel felly.

1,479,695. PROCESS FOR THE PRODUCTION OF THERAPEUTICALLY-ACTIVE CONSTITUENTS OF OILS, BALSAMS, RESINS, AND EXTRACTS. FRIEDRICH BOEDECKER, Berlin-Tempelhof, Germany. Filed Mar. 28, 1923. Serial No. 627,189. 3 Claims. (Cl. 167—4.)

2. The herein described process of producing therapeutically active substances from oils, resins, balsams and extracts which comprises extracting such therapeutic substances from the oils with desoxycholic acid to form with such acid and the therapeutically active substance a crystallizable compound.

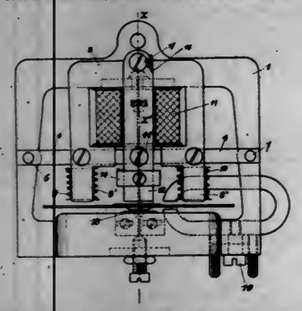
3. A process of producing therapeutically active substances from oils, resins, balsams and extracts which comprises treating the latter with a cholic acid to form with such acid and the therapeutically active substances a crystallizable compound, removing the compound thus formed from the solution and then separating the cholic acid from the therapeutically active substances.



1,479,696. SAFETY DEVICE FOR PLANES. HENRY J. CHANDLER, Plattsmouth, Nebr. Filed Sept. 13, 1921. Serial No. 500,289. 2 Claims. (Cl. 244—21.)

1. A parachute for aeroplanes comprising a staff including a fixed section rising vertically from the plane and secured thereto, and a movable section pivoted on the upper end of the fixed section and normally arranged horizontally, means for holding the latter mentioned section together with the body of the parachute horizontally, a coiled spring connected to the plane and to the adjacent end of the movable section for automatically moving the

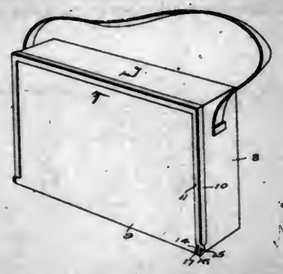
latter to a vertical position when released, a sleeve carried by the movable section and adapted to slide over the joint between said sections when the latter are aligned in a vertical position, a perforated collar carried by the movable section adjacent the upper end thereof, a plurality of coiled springs associated with said collar and a plurality of flexible elements having corresponding extremities secured to the adjacent ends of said springs and the outer edge of said parachute body for automatically opening the latter incident to the release of said movable section.



1,479,697. EQUILIBRATED BREECHBLOCK. PROSPER JULES CHARBONNIER, Paris, France. Filed Aug. 2, 1922. Serial No. 579,240. 2 Claims. (Cl. 89—17.)

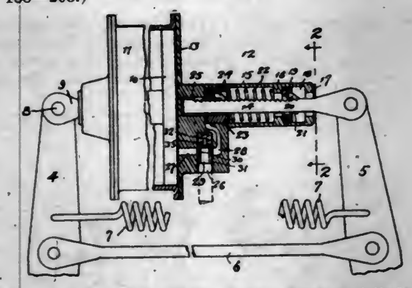
1. In a gun, a block adapted to be used as a breech, horizontal trunnions on this block arranged at right angle to the axis of the gun and movable in the breech-end, this block having a convex spherical face at the front and a convex revolving surface at the rear, the breech-end having concave bearing surfaces corresponding to the said surfaces, the axis of the trunnions being placed under the center of the front face of the block and above the center of the rear face so that the opening of the breech produces a rise in its front face.

2. In a gun, a block adapted to be used as a breech, trunnions on this block, knife edged blocks upon which these trunnions rest, these knife edged blocks being mounted in the gun with a certain play, and springs adapted to press the said knife edged blocks forwardly.



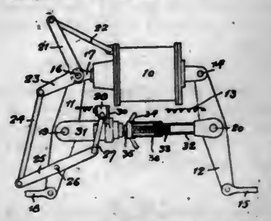
1,479,698. SHUNT COIL FOR ELECTRIC METERS. JOSEPH CHOPPINET, Brussels, Belgium. Filed July 15, 1921. Serial No. 485,137. 4 Claims. (Cl. 171—264.)

1. In an instrument of the character described, a magnetizable core including three arms, a rotatable armature arranged adjacent said arms, a magnetizable keeper, current windings on certain of said arms, a voltage coil on another of said arms, and a short circuit ring on the last mentioned arm, said last mentioned arm being removable, together with said voltage coil to permit replacement of the latter.



1,479,699. RECEPTACLE. HYMAN DELMAN, New York, N. Y. Filed Nov. 7, 1922. Serial No. 599,569. 4 Claims. (Cl. 217—57.)

1. In a receptacle, the combination with a body portion having an open end and a closure for said end; of a frame including opposed flanges for receiving therebetween edges of said body portion surrounding said opening, and a second frame connected to the first named frame and

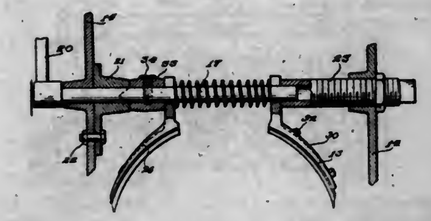


also including flanges for receiving therebetween edges of said closure, the flanges of the respective frame being disposed transversely relative to each other.

1,479,700. SLACK ADJUSTER FOR BRAKES. AXEL RUDOLF KONRAD DJURSON, Malmo, Sweden. Filed Sept. 29, 1921. Serial No. 504,218. 7 Claims. (Cl. 188—203.)

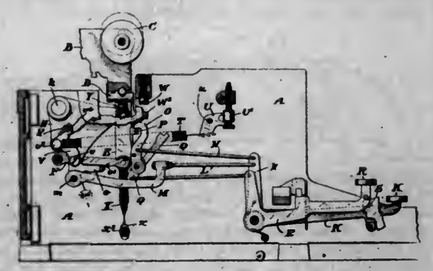
5. In an air-brake system, a slack adjuster cylinder, a piston working therein, a slack adjuster bar and a one-way operating connection between the piston and the adjuster bar.

1,479,701. SLACK ADJUSTER FOR BRAKES. AXEL R. K. DJURSON, Malmo, Sweden. Filed Nov. 19, 1921. Serial No. 516,397. 4 Claims. (Cl. 188—202.)



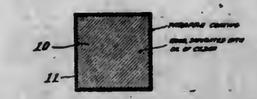
4. In a slack adjuster for brakes, an adjuster screw, a lever for imparting rotation thereto, a yielding member in the operative connection between the lever and the screw, a ratchet member, a pawl cooperating therewith, and means governed by the position of the lever for determining the engagement of the ratchet by the pawl and the rotation of the screw through said yielding member.

1,479,702. TRANSMISSION. GABINO DOMINGUEZ, Morley, Colo. Filed May 20, 1922. Serial No. 562,357. 3 Claims. (Cl. 188—249.)



3. In a vehicle transmission, the combination of a transmission case, drums therein, transmission bands

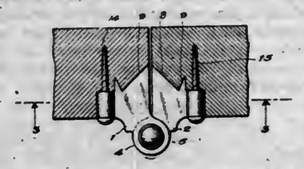
about said drums, pedal shafts journaled through the case, ear irons upon the ends of said bands operatively connecting the bands with the shafts, and means detachably connecting one of the ear irons of each band thereto,



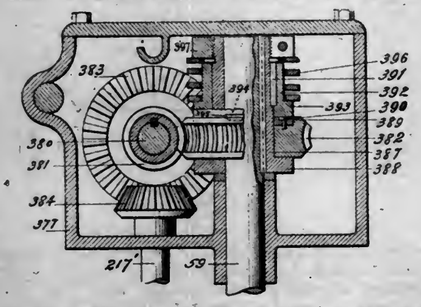
one of the ears of each of said ear irons being formed with an opening therethrough to accommodate a fastening element temporarily connecting the ends of each of the bands.

1,479,703. TYPEWRITING MACHINE. BERNARD J. DOWD, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 11, 1923. Serial No. 612,117. 16 Claims. (Cl. 197—73.)

1. In a typewriting machine, a member shiftable for case printing, means for shifting said member, a spring for partially counterbalancing the weight of said member, and means acting when said member is shifted to tension said spring to give an initial impulse to the return movement of the carriage.



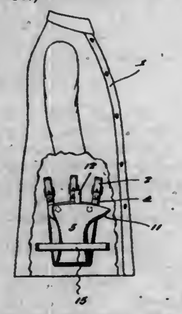
1,479,704. MOTH PROTECTING AND DESTROYING DEVICE. WILLIAM JEFFERSON DUDDLESON, San Luis Obispo, Calif. Filed Mar. 7, 1923. Serial No. 623,475. 3 Claims. (Cl. 167—6.)



1. An insecticidal device comprising a block unit of predetermined size and density completely saturated with oil of cedar, and an external coating of paraffin on the block for enclosing the oil of cedar and retarding the volatilization thereof.

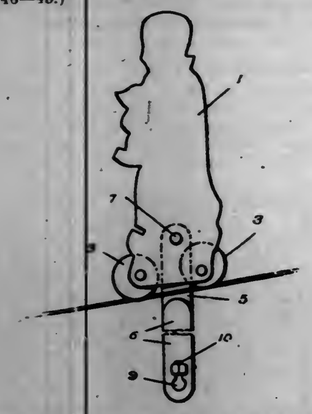
1,479,705. HINGE CONSTRUCTION. ERNEST FLAGG, New York, N. Y. Filed Mar. 27, 1923. Serial No. 628,064. 6 Claims. (Cl. 16—128.)

1. A hinge which includes a hinge plate portion adapted to be inserted into a supporting body portion at right angles to the surface thereof, the entire hinge plate portion adapted to be embedded in the body portion so that the entire surface of the plate portion contributes to the support of the body portion.



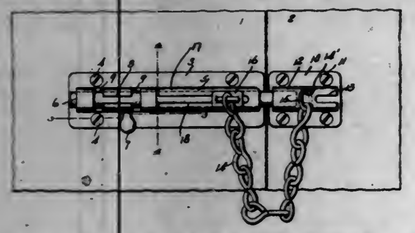
1,479,706. SAFETY COUPLING. PAUL W. FLEISCHER, Weehawken Heights, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Original application filed Dec. 6, 1915, Serial No. 65,266. Divided and this application filed Jan. 26, 1921. Serial No. 440,009. 7 Claims. (Cl. 64—104.)

1. In a safety coupling, the combination of a rotary driving member, a rotary driven member, coupling elements on said members respectively and arranged at each side of the axis of rotation, so that there is a driving engagement at each side of the axis, and on a non-diametrical line, said elements being tapered and automatically disengageable by excess of resistance of the driven member, and a spring acting to press said coupling elements into coupling engagement with each other.



1,479,707. RAINCOAT. ANTOINE R. FOISY, Salem, Mass., assignor of one-fourth to George F. Condon, Salem, Mass. Filed Apr. 19, 1921. Serial No. 462,636. 1 Claim. Cl. 2—86.)

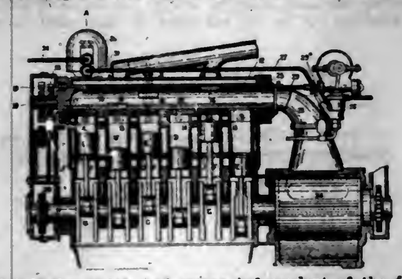
A rain coat provided with a plurality of elongated tabs secured to the inner sides thereof and having a legging on each side including buckles adjustably secured to the tabs, each of said leggings having their inner edges folded upon themselves to provide beads, each of said leggings having a foot portion and a foot strap, interengaging means at the edges of each legging,



each of said leggings having its inner side adjacent to its top edge provided with compressible studs, the foot portion of each legging having sockets designed to receive the studs when each legging is folded, and transverse straps having their ends secured to the inner sides of the coat for engaging the folded legging as and for the purpose specified.

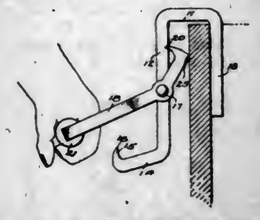
1,479,708. TOY. CHARLES GARNISS, Newport, R. I. Filed Apr. 18, 1922. Serial No. 554,755. 2 Claims. (Cl. 46—45.)

1. In a toy, the combination of a body member, grooved rollers eccentrically mounted on said member; a rod pivotally attached to said member above the roller mountings; a second rod pivotally attached to said first mentioned rod and adapted to serve alternatively as a handle and a counterpoise.



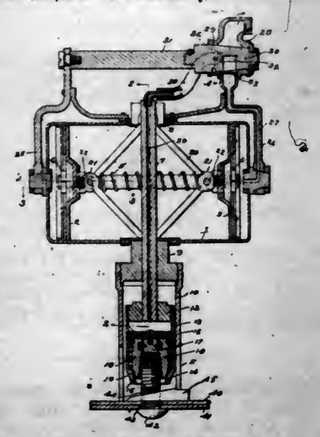
1,479,709. BOLT AND CHAIN LOCK. MEYER J. GOLDSTEIN, Brooklyn, N. Y. Filed Dec. 28, 1921. Serial No. 525,376. 3 Claims. (Cl. 292—264.)

1. A combined bolt and chain lock, including a bolt sleeve, a bolt slidable therein, a keeper adapted to receive said bolt, a flexible device anchored to the keeper, a key at the free end of the flexible device, said bolt sleeve including an offset portion adapted to receive said key.



1,479,710. INTERNAL-COMBUSTION ENGINE. GEORGE WENTWORTH GRAYSON, Sydney, New South Wales, Australia. Filed Sept. 30, 1921. Serial No. 504,294. 6 Claims. (Cl. 123—32.)

1. In a two cycle high speed internal combustion engine, means for introducing charges of preheated liquid fuel under pressure into compressed air contained in the cylinder thereof, said means comprising a receiver adapted to hold a fixed quantity of said liquid fuel under pressure, a high pressure pump adapted to run at low speed and to force said liquid into the receiver, a mechanically operated fuel injection valve automatically admitting timed charges of fuel into said cylinder, a fuel heating chamber intermediate said receiver and the

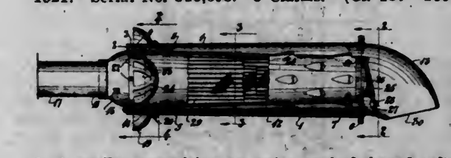


fuel injection valve, and means independent of the fuel admission for forcing fresh air into the cylinders whilst the exhaust ports are uncovered by the piston.

1,479,711. PORTABLE HANDLE. CATO HAARBERG, Fox Lake, Ill. Filed Aug. 31, 1922. Serial No. 585,526. 2 Claims. (Cl. 294—15.)

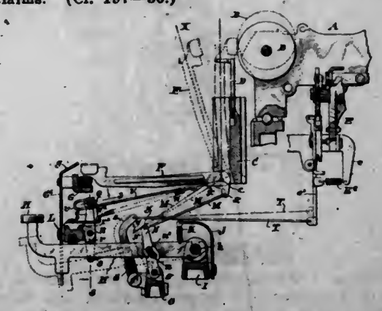
1. In a device of the character described, a U-shaped member, one of the legs of which is provided with an angular extension, a piercing point formed on the extremity of said angular extension, gripping jaws pivotally connected to the U-shaped member, a biting edge formed on each of said gripping jaws, and means for rocking the gripping jaws about their pivotal point to cause their biting edges to engage an article, as and for the purpose set forth.

1,479,712. BOLTING-UP MACHINE. FRED N. HALLETT, Seattle, Wash., assignor to The Construction Appliance Co., a Corporation of Washington. Filed May 6, 1922. Serial No. 558,890. 9 Claims. (Cl. 29—84.)



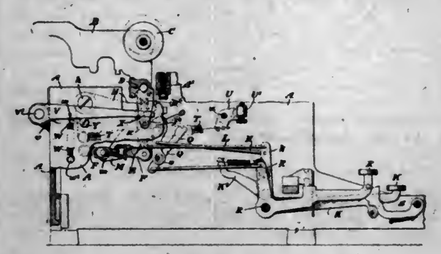
1. A bolting up machine including a cylinder, a pull rod operative therethrough, pistons in the cylinder connections between the pistons and the pull rod for operating said rod, and gripping means carried by the rod and operated independently of the rod.

1,479,713. WHEEL RIM. HOMER C. HANNA, Oklahoma City, Okla. Filed July 29, 1921. Serial No. 488,402. 1 Claim. (Cl. 152—21.)



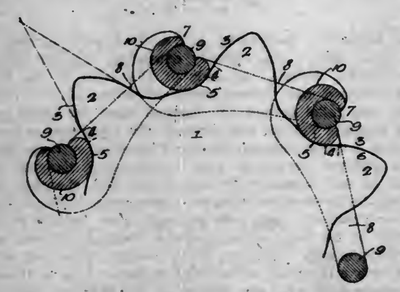
A wheel rim having fixed and demountable annular members of which the former is provided with lateral studs and the latter with lugs having circumferentially directed horns for engagement with said studs by a rotary movement of the demountable member, and a cam pivotally mounted on the fixed member adjacent one of said lugs for abutting engagement with the same when engaged with its attendant stud, said cam being provided with an arm for abutting engagement with the adjacent portion of the demountable member to limit the pivotal movement thereof.

1,479,714. EXHAUST MUFFLER FOR MOTOR CARS. FREDERICK J. HEEDLE, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,693. 5 Claims. (Cl. 137—160.)



1. A muffler comprising an outer conical-shaped cylinder and an inner conical shaped cylinder, the larger end of said inner cylinder being disposed adjacent to the smaller end of said outer cylinder, said outer cylinder having openings adjacent to the smaller end thereof, a funnel-shaped member carried by said outer cylinder and disposed adjacent to the openings, said inner cylinder having openings adjacent to the smaller end thereof and having an exhaust inlet adjacent to the larger end thereof, a rolled screen disposed in said inner cylinder, and a gravity door carried by said inner cylinder and communicating with said outer cylinder.

1,479,715. TYPEWRITING MACHINE. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1922. Serial No. 529,179. 7 Claims. (Cl. 197—30.)

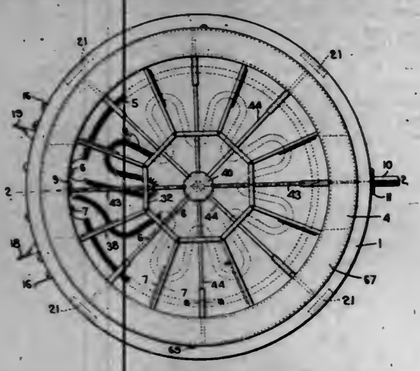


1. In a typewriting machine the combination with the key levers and the type bars of flexing connections therebetween, comprising vertical levers mounted to turn about fixed axes, links connecting the free upper ends of said vertical levers with the type bars, and sliding connections between said vertical levers and the rear portions of the key levers, the connection between each link and a type bar, and between said link and the vertical lever being moved by the full depression of a key lever to a toggle-locking or dead center position with the type bar a considerable distance from the platen when the sliding connections have reached their lower limit of movement the further movement of the type bar to the platen being caused by its momentum.

1,479,716. TYPEWRITING MACHINE. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 13, 1923. Serial No. 612,462. 13 Claims. (Cl. 197—73.)

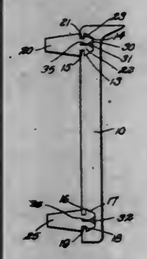
1. In a typewriting machine, a member shiftable for case printing, means for shifting said member, and means brought into action only near the end of the shifting movement which gives an initial impulse to the return movement of the member.

1,479,717. SPROCKET WHEEL. FREDERIC V. HETZEL, West Chester, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1922. Serial No. 532,731. 5 Claims. (Cl. 74—31.)



1. The combination in a sprocket wheel, of a rim on which the links of a specific chain may rest and have limited circumferential movement; and a series of teeth adapted to engage said links, the face of each tooth having a straight, flat portion, the length of which varies with the number of teeth in the wheel, and in which the pressure angle of the flat portion increases with the number of teeth in the wheel.

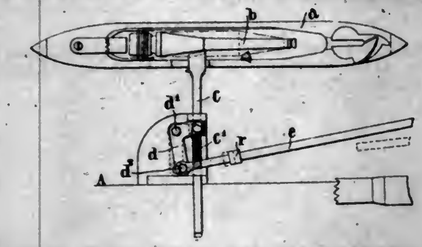
1,479,718. ELECTRIC GRILL. FRANK W. HEWITT, Arlington, Mass., assignor to Simplex Electric Heating Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,884. 17 Claims. (Cl. 219—19.)



1. A heating bed for an electric grill comprising a vertical peripheral plate, an inner vertical annular plate,

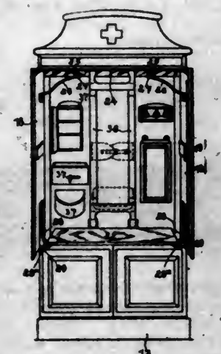
radial rib plates connecting said peripheral and annular plates, insulation windows in said various plates, and

a resistance element extending through and sustained by the said insulation windows.



1,479,719. HORSESHOE. NORMAN LANE, Grand Blanc, Mich. Filed July 21, 1922. Serial No. 576,559. 1 Claim. (Cl. 168—35.)

A horseshoe comprising a U-shaped body formed at its bight with a transversely extending channel having overhanging flanges, the ends of the arms of the body being formed with transversely extending similar channels, and calks detachably engaged upon the bight portion and the ends of the arms of the body and each including a wedge-shaped member formed at opposite sides with grooves receiving said overhanging flanges, the bases of said members fitting within said channels and having inclined faces engaging against the inclined sides of the channels, each calk member being formed at the bottom of its base portion with a V-shaped groove, and securing means consisting of a wedge associated with each calk and fitting within the V-shaped groove therein in engagement with the bottom of the channel, the base portions of said calks being formed with slits extending from the grooves whereby to provide resilience which will permit outward jamming of the material at opposite sides of the slits into firm engagement with the channels when said wedges are forced into place.



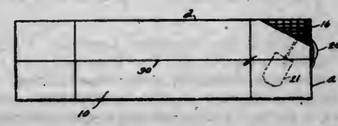
1,479,720. AUTOMATIC WEFT-REPLENISHING MECHANISM FOR LOOMS. JAMES LEWTAS and ERNEST HENRY BLACKHURST, Preston, England, assignors to The Whittaker Loom Company, Limited, Preston, Lancaster, England. Filed June 18, 1923. Serial No. 646,206. 3 Claims. (Cl. 139—276.)

1. In an automatic weft replenishing loom of the kind described, the combination with a weft fork hammer and a weft replenishing mechanism actuating element, of a rod like member movable with and extending through said hammer and adapted to actuate the element when the yarn has been exhausted to a predetermined point,

and a feeler connected to said rod like member and adapted to allow the actuation of the weft replenishing mechanism element by said member.

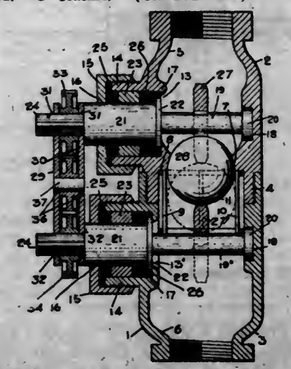
1,479,721. MEDICAL SERVICE CABINET. HORST LIEDTKE, Berlin-Schoneberg, Germany. Filed Aug. 9, 1923. Serial No. 656,473. 5 Claims. (Cl. 211—7.)

1. A medical service cabinet comprising a case having oppositely swinging hinged doors movable about vertical axes, means for locking said doors in closed position, and a gravity actuated table hinged within the case and arranged to engage and open the doors when the latter are unlocked.



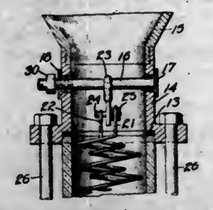
1,479,722. STOP MECHANISM FOR SPINNING MACHINES. GEORGE P. MCLAUGHLIN, Shickshinny, Pa. Filed Apr. 16, 1923. Serial No. 632,435. 2 Claims. (Cl. 118—3.)

1. In a thread spinner, the combination of a frame having a vertical guide, a rod slidable in said guide and movable to actuate a stop mechanism, a latch



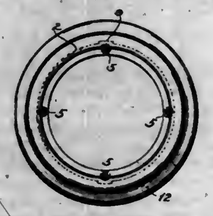
mounted on said frame for holding said rod normally against movement, a driven latch releasing device adjacent said latch, a lever fulcrumed to said latch and having its rear end normally clear of said releasing device, upwardly extending drop wires pivoted on said frame and having rearwardly extending arms, the front end of said lever having an open frame upon whose front bar said arms are adapted to drop to rock the lever into operative relation with said latch releasing device when any thread breaks, and a downwardly extending drop wire pivoted on said first named frame coaxially with the first named drop wires, said downwardly extending drop wire having an eye through which all of the threads are trained before passing to the spinning means, said downwardly extending drop wire being provided with a relatively long rearwardly extending arm adapted to fall onto the rear side bar of the lever frame to rock the lever in case all threads are broken by the spinning means.

1,479,723. CONTAINER FOR BOLTS OF TEXTILE FABRIC. JAMES MCQUISTON, Waltham, Mass., assignor to The Boston Manufacturing Company, 1901, Waltham, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1922. Serial No. 601,668. 4 Claims. (Cl. 229—87.)



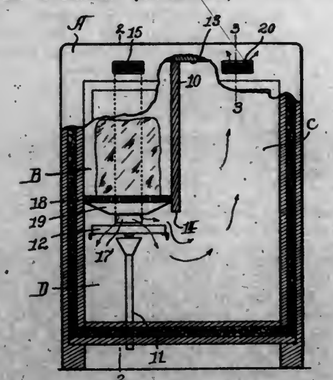
1. A bolt of textile fabric having a protective sheet, a side portion of which is cut to form a relatively broad body portion and a relatively narrow flap portion, the body portion folded over the top fold of the fabric and the flap portion tucked under the top fold, thereby to cover a side edge and the major portion of the top fold and leave uncovered a portion of the top fold corresponding to the width of the flap portion and cover lower folds of the fabric, and the opposite side portion of the sheet folded over the first side portion and the uncovered portion of the top fold of fabric, said second side portion having a corner portion above the flap-portion turned over to expose a portion of the top fold of fabric.

1,479,724. TAP. ALBERT HAROLD MACISAAC, Toronto, Ontario, Canada. Filed June 9, 1922. Serial No. 567,124. 4 Claims. (Cl. 251—40.)



1. A valve comprising a casing having a downwardly directed seat intermediately of its length, a ball coacting therewith, cam means bearing upon the ball at diametrically opposite points, and means for operating such cam means in unison to carry the ball onto and off its seat.

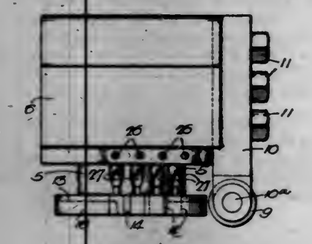
1,479,725. ELECTRIC FLUID STERILIZER. BARNETT WRIGHT MACY, Jacksonville, Fla., assignor to Electric Heating Corporation, Jacksonville, Fla., a Corporation of Florida. Filed Feb. 2, 1922. Serial No. 533,549. 3 Claims. (Cl. 219—38.)



1. An apparatus of sterilizing fluids comprising a container having a vertically extending tubular section, terminals supported at opposite ends thereof and a pair of conductors within the tubular section and connected to said terminals, said conductors comprising a pair of coiled wires the helices of one wire surrounding and spaced from the other, substantially as set forth.

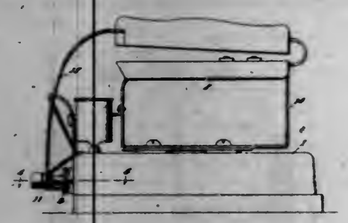
1,479,726. FACING-RING STRUCTURE FOR CYLINDER LOCKS. MAXWELL C. MAXWELL, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 30, 1922. Serial No. 597,927. 3 Claims. (Cl. 70—46.)

1. In a structure of the character described, the combination of an internally recessed facing ring, a plurality of coiled springs seated in the recessed portion of said ring, and a ring to receive a cylinder head, bearing against the outer ends of said coiled springs.



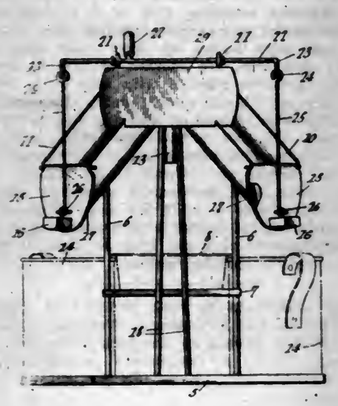
1,479,727. REFRIGERATOR. WILLIAM MANTEUFFEL, St. Paul, Minn. Filed Aug. 3, 1920. Serial No. 400,912. 5 Claims. (Cl. 62—46.)

1. A refrigerator comprising a casing having a partition extending downwardly from the upper portion of said casing to form an ice compartment on one side



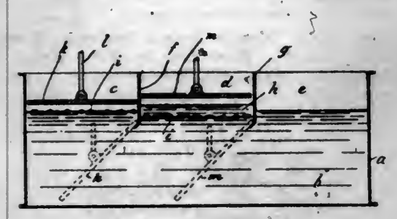
thereof and a food compartment to the side of and below said ice compartment, an air inlet on the front of said casing on one side of said partition, an air outlet on the front of said casing on the opposite side of said partition communicating with said food compartment, and a duct connected with said inlet running along the under surface of said casing within the ice compartment, and from thence downwardly along the inner surface of the back of said casing and discharging below said ice compartment into said food compartment.

1,479,728. DIE USED IN THE MANUFACTURE OF HORSESHOES. FRANK E. MERKLINGER and SAMUEL R. LIMERICK, Philadelphia, Pa., assignors to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 5, 1922. Serial No. 558,574. 5 Claims. (Cl. 59—60.)



1. The combination in dies used in the manufacture of horse shoes, of a lower die on which the horse shoe blank is mounted; an upper die; punches carried by the upper die for punching nail holes in the blank; a plunger arranged to bear against the blank while the punches are forced therethrough, the plunger stripping the punches as they are returned; and means for resiliently holding the plunger, the pressure on the plunger in engagement with said blank during said stripping operation being sufficient to straighten the hot blank after the punches have been withdrawn from the blank.

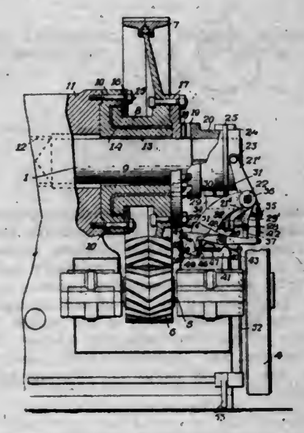
1,479,729. IRON. HERBERT L. MITCHELL and JOHN W. SLATE, Walnut Cove, N. C. Filed June 2, 1922. Serial No. 565,490. 1 Claim. (Cl. 219—25.)



An electric iron of the class described comprising a pair of blocks located within the iron, one of which is connected with the heating coils and the other with one of the terminals, a bushing carried by the body of the iron, a pin slidably carried by the bushing and having one end adapted to engage the blocks to electrically connect the blocks together, a movable handle part, a spring strip connecting said handle part with the other part and having a portion connected with the pin so that as the movable part is pressed downwardly the pin is pressed inwardly into engagement with the blocks.

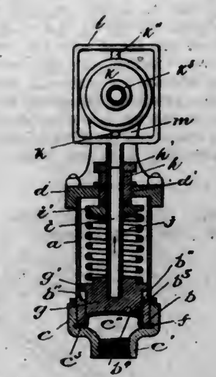
1,479,730. EGG SEPARATOR. OSCAR WILLIAM MOESLEIN, Harrisburg, Pa. Filed Dec. 5, 1922. Serial No. 605,042. 2 Claims. (Cl. 146—2.)

1. In a device of the character described, a support, inclined chutes mounted on the support, said chutes being in communication with each other at their upper ends, a funnel supported at the communicating ends of the chutes, a vertically disposed plate supported adjacent to the funnel and providing an egg breaking member, closures at the free ends of the chutes, and manually controlled means for operating the closures to move the closures to their inactive positions.



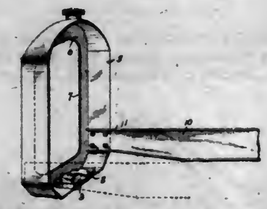
1,479,731. PROCESS FOR DETINNING IRON. JOHN STANLEY MORGAN, London, England, assignor to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England, a British Company. Filed June 21, 1921. Serial No. 479,363. 8 Claims. (Cl. 75—55.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A process of de-tinning iron which consists in treating the material at a temperature above the melting point of tin with a substance which is liquid at the temperature of operation and causes the tin to lose its adhesion to iron, and removing the tin from the surface of the iron by a physical operation.



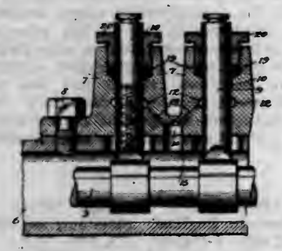
1,479,732. CLUTCH. EDWARD J. QUINN, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 17, 1918. Serial No. 240,440. 2 Claims. (Cl. 192—139.)

1. The combination with a pair of engageable clutch members, of a spring adapted to move said members into engagement, means operable by the rotation in unison of said members for moving them out of engagement and for compressing said spring, and means having



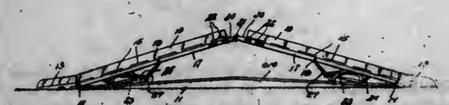
a lost motion connection with said last mentioned means for transmitting the pressure of said spring to procure engagement of said members.

1,479,733. PRESSURE-REGULATING MEANS FOR ELECTRICALLY-OPERATED APPARATUS. MARTIN JOSEPH QUINN, Toronto, Ontario, Canada. Filed Nov. 20, 1920. Serial No. 425,542. 7 Claims. (Cl. 137—157.)



1. In a pressure regulating apparatus for electrically operated systems, a pressure actuated motor comprising a housing, a movable piston therein, a piston rod for the piston, a pressure spring normally resisting the movement of the piston and piston rod, a pressure chamber opposed to the piston, an elastic diaphragm whose free movement is restricted only by the movement of the piston, interposed between the piston and pressure chamber, with the whole of its active surface in contact with the piston throughout its travel and out of contact with it when not distended.

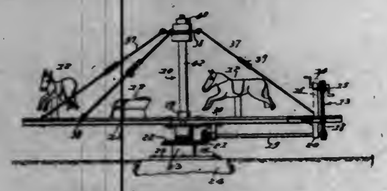
1,479,734. SIDE-FRAME BRACE AND RADIATOR SHELL. VICTOR W. PAGE, Kew Gardens, N. Y. Filed May 18, 1921, Serial No. 470,640. Renewed June 8, 1923. 2 Claims. (Cl. 180—68.)



1. In a vehicle frame structure, a plurality of side frames, a radiator shell rigidly secured to and connecting said side frames, said radiator shell forming a front brace for the side frames, and a crank shaft bearing carried by the lower wall of said radiator shell.

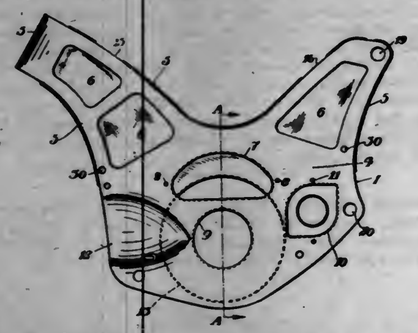
1,479,735. CAM-FOLLOWER GUIDE. VICTOR W. PAGE, Kew Gardens, N. Y. Filed Feb. 2, 1922. Serial No. 533,730. 3 Claims. (Cl. 123—90.)

1. In combination with a cam shaft housing, a plurality of cam follower guides, each having a longitudinal passage to receive the cam follower, and each provided with an annular passage in the side walls of the cam follower passage, passages extending from said annular passages to a passage in the cam shaft housing opening into the interior thereof, whereby lubricant pumped by the cam follower will be collected and returned to the cam shaft housing.



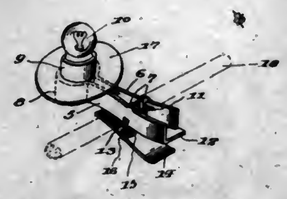
1,479,736. GUARD. WILLIAM M. PETTY, Livermore, Colo., assignor of one-half to George R. Holcomb, Laramie, Wyo. Filed July 23, 1921, Serial No. 487,079. Renewed June 1, 1923. 1 Claim. (Cl. 39—18.)

A device of the character described comprising a supporting frame provided at its ends with approach members, a pair of gate sections hinged at their outer ends upon the frame, links pivotally connected with each other and slidably connected with the adjacent ends of the gate sections to permit simultaneous movement of the gate sections, a pair of spaced parallel brackets located beneath each gate section, an angle lever pivoted between said pair of brackets, a coil spring connected with one arm of the angle lever and connected with one of the approach members, a member pivoted between the brackets and extending inwardly toward the meeting ends of the gate, a transverse member carried by the gate section and en-



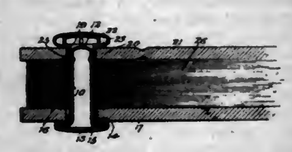
gaging said last named member, an intermediate angularly shaped element pivoted between the guides and engaging said inwardly extending member, said intermediate element being engaged by the free arm of said angle lever.

1,479,737. MERRY-GO-ROUND. ANTHONY M. PRENCEL and EDWIN HOFFMANN, Seguin, Tex. Filed Feb. 1, 1923. Serial No. 616,338. 1 Claim. (Cl. 46—27.)



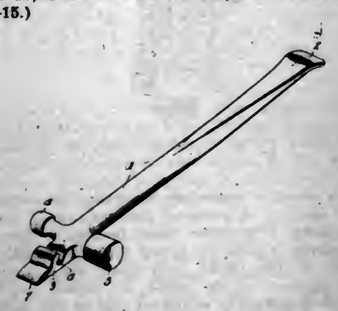
A merry-go-round having a central pedestal from which rises a spindle, a revoluble platform having a hub mounted upon said spindle, an anchor disk revolubly mounted upon the spindle at an elevation above the plane of the platform, tensionable guy rods extending from the anchor disk to the platform near its periphery, and operating means for communicating rotary motion to the platform, an anti-frictional foot bearing being arranged beneath said hub, collars being fixed to said spindle above and below the plane of said anchor disk, anti-frictional bearings being interposed between said disk and said collars, and a spacing sleeve being disposed in embracing relation with the spindle and terminal contact respectively with the hub and the collar which is beneath said anchor disk.

1,479,738. VELOCIPEDE FRAME. CYRIL GEORGE PULLIN, Isleworth, England. Filed July 20, 1920. Serial No. 397,567. 4 Claims. (Cl. 180—35.)



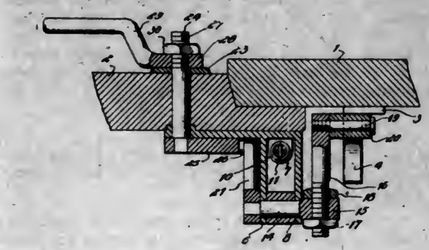
1. A centre frame of box-like construction for a motor driven velocipede having in combination, means for supporting a motor and fly wheel within and towards the bottom of said frame, bearings for support members to the rear road wheel of the velocipede, said centre frame being integrally jointed over the main part of its perimeter in a longitudinal plane about midway between its sides so as to form an integral structure with its base wholly and its sides partly removed and having one side formed with a suitable aperture for the removal of an engine flywheel and the other side with a bulged portion forming a cooling clearance or tunnel around an engine cylinder, the box-like structure comprising transverse plates connecting the side walls so as to partition off upper parts of the frame to serve as oil and fuel tanks, and an integral bearing formed at the forward end for the reception of a steering column.

1,479,739. LAMP HOLDER. JULIUS F. RADTKE, Chicago, Ill. Filed Mar. 2, 1922. Serial No. 540,557. 3 Claims. (Cl. 248—42.)



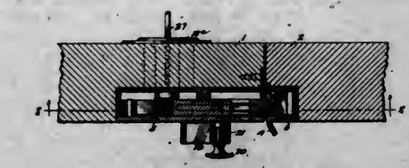
1. An electric lamp holder comprising a pair of clamping members having opposed lamp engaging portions at one end thereof, a pivotal and yieldable connection between said clamping members for yieldingly holding said lamp engaging portions in engaging position, a laterally extending flange carried by one of said clamping members and extending transversely of and beyond one longitudinal edge of the other clamping member forming a support therefor, and clamping means associated with the outer face of said flange for securing said holder to a support.

1,479,740. CONNECTER FOR LOOSE-LEAF BINDERS. LUDE REITER, Providence, R. I. Filed Apr. 11, 1922. Serial No. 551,597. 1 Claim. (Cl. 129—23.)



A connecter for loose-leaf binders, comprising a shank having a flaring end, an eyelet engaging collar on the shank and seating on the flaring end, a cap mounted on the flaring end of the shank and the eyelet engaging collar clamping them together, an eyelet movably mounted on the shank and adapted for projecting under the eyelet engaging collar for attaching the shank to any fabric, a head formed on the shank, a socket shaped to receive said shank head, and a cap provided in conjunction with the socket for attaching it to any fabric.

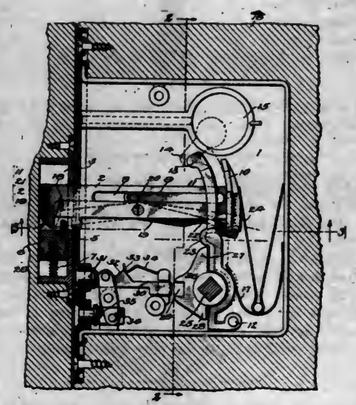
1,479,741. TOOL. HARRY REITZ, Ames, Okla. Filed Sept. 18, 1922. Serial No. 588,951. 1 Claim. (Cl. 81—15.)



A tool having an extension connected with its head, the extension having a chisel-shaped end and a curved notch formed on one face thereof, one wall of the notch being formed by a curved projection which is adapted to enter the flanged part of the rim, the chisel part adapted to act as a fulcrum when the device is in use.

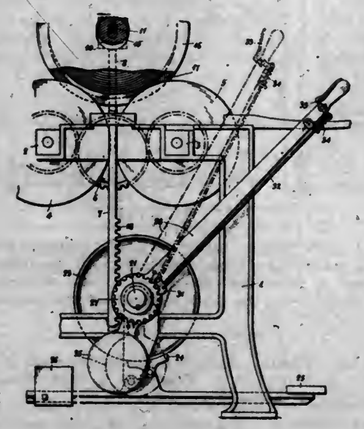
1,479,742. FASTENER. FAY RODGERS, Memphis, Tenn. Filed Sept. 27, 1922. Serial No. 590,896. 1 Claim. (Cl. 292—239.)

The combination with a refrigerator and its door, of fastening means therebetween, including a keeper secured to the refrigerator and having a beak formed with a downwardly rounded lip, a bracket plate secured to the door opposite the keeper having an outstanding pair of ears and an outstanding flange below and arranged centrally between the ears, a fixed pivot journaled between the ears and projecting therebeyond, a lever having an angle end secured on the pivot between the ears, a spring secured between the angle end of the lever and the flange of the bracket for forcing the said end of the lever against the bracket for limiting the swinging of the lever in this direction, means for adjusting the tension of said spring, a member passing through one end of the pivot and adjustably secured thereto, a laterally arranged anti-frictional roller carried by the member to engage the keeper, a finger fixed on the opposite end of the pivot, an arm having a bifurcated end receiving the finger, a fixed pivot therefor passing through the bracket and through the refrigerator door, and a handle member removably and adjustably fixed on the last mentioned pivot member.



1,479,743. LOCK. ANDREW SALATA, New York, N. Y. Filed Mar. 8, 1922. Serial No. 541,987. Renewed July 9, 1923. 4 Claims. (Cl. 70—14.)

1. A locking mechanism which comprises a sliding bolt, means operated from one side of the mechanism to retract the bolt, and means operated from the opposite side of the mechanism to retract the bolt, the second means when disposed in a certain position lying in the path of movement of the first means preventing the bolt from being retracted from one side of the mechanism.



1,479,744. LOCK. ANDREW SALATA, New York, N. Y. Filed Sept. 23, 1922. Serial No. 590,139. 6 Claims. (Cl. 70—46.)

1. A lock including a slidable bolt having a dependent finger portion on its end, a latch member engaging said finger portion to hold the bolt in its forward position, a pivoted lever, key-operated means for moving said lever,

and means on the bolt to be engaged by said lever to retract said bolt.

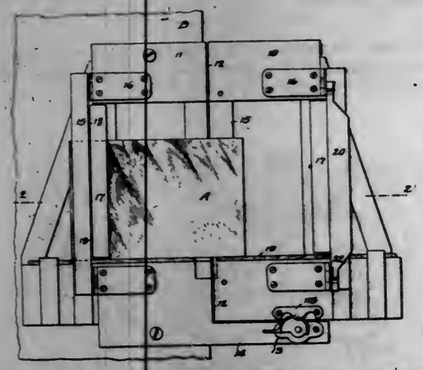
1,479,745. SLIVER-LAP MACHINE. JOHN F. SCHENCK, Jr., Shelby, N. C. Filed Sept. 15, 1922. Serial No. 588,367. 5 Claims. (Cl. 19—162.)

1. In a sliver lap machine, a roll-carrying frame, a shaft for elevating said frame, operating means journalled on said shaft and provided with engaging means for engagement with said shaft to rotate the latter for elevating said frame, said engaging means being releasable from said shaft to permit the descent by gravity of said frame independently of said operating means.

1,479,746. PIN HOLDER. GEORGE R. SCHROEDER, Beverly, Kans. Filed Sept. 29, 1922. Serial No. 591,417. 2 Claims. (Cl. 223—60.)

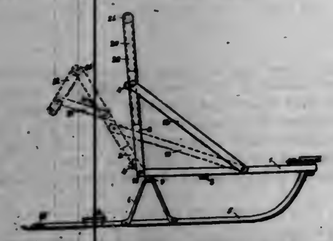
1. A pin holder comprising a pair of angular metallic plates rounded outwardly at the bottom thereof to pro-

vide trays which have their edges upturned, said plates having openings formed centrally at the bottom thereof,



and a U-shaped clamping member, engaging said openings for clamping a paper of pins between said plates.

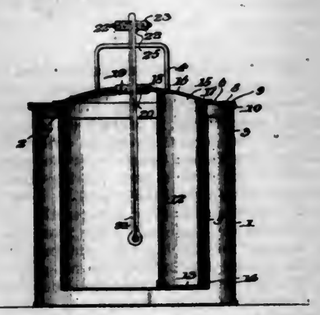
1,479,747. LIGNITE BRIQUETTE. THOMAS JOSEPH SMITCHELL, St. Paul, Minn. Filed Aug. 5, 1920, Serial No. 401,425. Renewed Nov. 19, 1923. 1 Claim. (Cl. 44—23.)



A briquette having a main body of lignite particles compressed and bound together by a binder composed of tar-pitch, rosin and glucose, the said substances being approximately in the following proportions, to wit, two thousand pounds of lignite, fifty-five pounds of tar-pitch, forty pounds of rosin and four pounds of glucose.

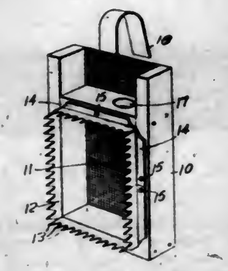
1,479,748. GLASS-CUTTING FRAME. MAYME L. SHAW, EMMA J. SHAW, and ALBERT L. SHAW, Corinne, Utah. Filed Feb. 28, 1923. Serial No. 621,938. 8 Claims. (Cl. 33—32.)

1. A glass cutting frame including separate sections jointly presenting a surface against which the glass to be cut may be placed for cutting, one of said sections movable relatively to the other to break off the cut glass.



1,479,749. SLED. AUGUST V. SKUR and CARL J. ENGLUND, New York, N. Y. Filed Aug. 7, 1923. Serial No. 656,253. 7 Claims. (Cl. 280—20.)

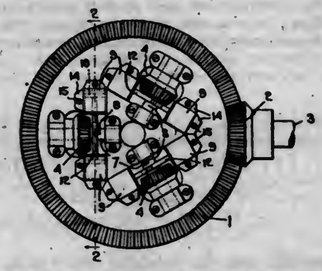
1. A sled having a body portion comprising a sectional seat and aligned back rest, the latter being adapted to be raised and lowered, means to lock the same in its lower position, a hinge whereby the back rest may be raised, means to lock the latter in its upper position, and a steering bar attached by a link to the centre section of the seat.



7. A sled having a frame with runners and a body portion comprising an aligned seat and back rest adapted to be raised and lowered, a brace for the latter, means to lock the back rest to the runners in its lower position, a handle for the back rest provided with extensions adapted to interlock with the runners comprising recesses in the runners and a movable catch carried by the handle extensions, slides attached to the handle and working on the side frame pieces on the back rest, a hinge whereby the back rest may be raised, and means to lock the latter to the frame in its upper position, the top face of the seat, back rest and brace being adapted to lie in one plane at will.

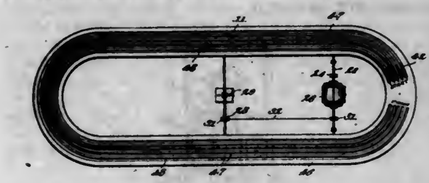
1,479,750. PASTEURIZER. ARTHUR L. SMITH, Mechanicsville, N. Y. Filed June 20, 1922. Serial No. 569,625. 5 Claims. (Cl. 53—2.)

1. In a pasteurizer, the combination of an outer water receptacle, a detachable inner receptacle adapted for holding milk, and a smaller removable cream receptacle contained within the milk receptacle.



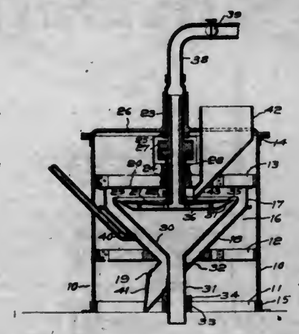
1,479,751. QUEEN-INTRODUCING DEVICE. JAY SMITH, Vincennes, Ind., and ERNEST R. ROOT, Medina, Ohio. Filed Apr. 20, 1921. Serial No. 463,065. 13 Claims. (Cl. 6—9.)

1. In a device of the kind described, a cage having on its side that lies next the comb when in use, comb penetrating points that have sides of substantial area that form an obstacle to bees.



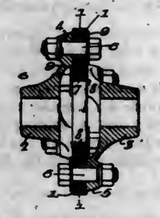
13. A queen introducing device having a queen confining chamber closed on all sides but one, and having a passage leading to the outside with a queen excluder that permits the passage of worker bees, and means for supporting such chamber with the open side towards the comb.

1,479,752. DIFFERENTIAL GEARING. WILLIAM J. SMITH, Dorchester, Mass. Filed Feb. 6, 1922. Serial No. 534,446. 1 Claim. (Cl. 74—100.)



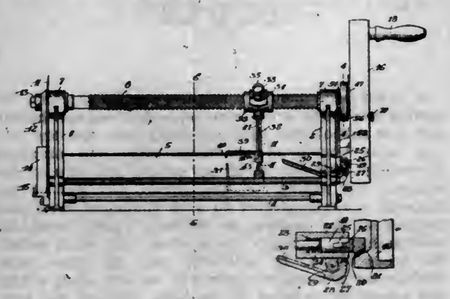
In a differential gearing, the combination with a ring bevel gear, of a driving pinion therefor, a plurality of side bevel gears rotatably mounted on the ring gear, a cylinder containing liquid associated with one of said bevel gears, and a ported piston in said cylinder connected to the bevel gear.

1,479,753. AMUSEMENT APPARATUS. WILLIAM J. STAFFORD, New York, N. Y. Filed Nov. 7, 1921. Serial No. 513,893. 13 Claims. (Cl. 46—56.)



13. An apparatus as characterized comprising a supporting structure embodying a race-way comprising different sections, freely movable objects, shuffling-means constituting certain of said sections for moving said objects, roller-means constituting certain of said sections for moving said objects, means for actuating the shuffling-means and the roller-means, and means for guiding the objects in the movements.

1,479,754. CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 12, 1922. Serial No. 551,934. 11 Claims. (Cl. 83—54.)



1. An air concentrator comprising, in combination, a rotary distributor, means for delivering materials to be separated to the distributor, means for rotating the distributor to throw the materials outwardly by centrifugal force, inner and outer containers surrounding the distributor to receive materials therefrom, a wall for directing materials into the inner container and disposed in the path of the materials traveling outwardly by centrifugal force from the distributor, and means for directing a jet of air against the materials traveling in said path so that it will deflect the lighter materials sufficiently to pass over said wall but will be prevented by the momentum of the heavier particles from deflecting the latter over the wall.

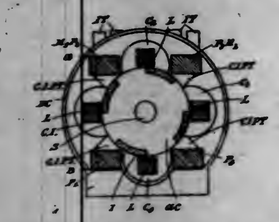
1,479,755. FLEXIBLE COUPLING. ROBERT J. STOKES, Trenton, N. J., assignor to Thermoid Rubber Company, Hamilton Township, N. J., a Corporation of New Jersey. Filed Nov. 22, 1921. Serial No. 517,002. 3 Claims. (Cl. 64—96.)

1. A flexible disk for couplings made of fabric and rubber, said disk having a series of holes for the passage of securing bolts; and a flexible, metallic section imbedded in the disk, said section having a central ring portion and also having holes aligning with some of the bolt holes in the disk.

1,479,756. SLICING MACHINE. SHERMAN A. THOMAS and FRED G. YAWMAN, Rochester, N. Y., assignors to Charles F. Morley, Rochester, N. Y. Filed Oct. 14, 1922. Serial No. 594,585. 11 Claims. (Cl. 146—113.)

1. In a slicing machine, the combination with a horizontal work guide and a rotary knife, of feeding mechanism arranged centrally above the guide and a work holder actuated by and depending from the feeding mechanism to traverse the guide, said work holder being wholly supported by the feeding mechanism.

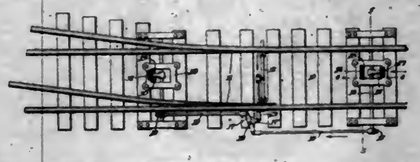
1,479,757. ART OF TREATING COAL. WALTER E. TRENT, Washington, D. C., assignor, by mesne assignments, to Trent Process Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 12, 1919. Serial No. 337,571. 5 Claims. (Cl. 44—1.)



1. The process of producing a fuel which consists in introducing to a mass of finely pulverized coal an oil in such a limited quantity sufficient to prevent dusting of the fine coal particles, without causing a dense agglomeration of the coal particles.

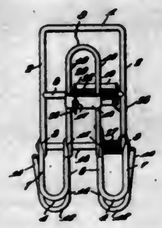
1,479,758. COFFEE DRIPPER. HAL W. TUCKER, San Antonio, Tex. Filed Dec. 12, 1922. Serial No. 606,484. 5 Claims. (Cl. 53—3.)

1. A device of the character described comprising an outer and an inner band and a reticulated bag held between them, the outer band having an annular flange for supporting the device on top of a coffee pot, and the inner band having an inwardly extending top plate at one side thereof; and a folding bail pivotally connected to said annular flange of the outer band at diametrically opposite sides thereof for handling the device.



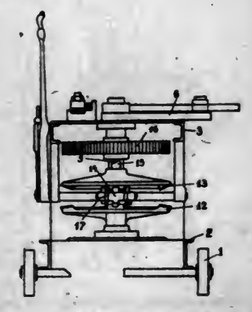
1,479,759. MAGNETO-ELECTRIC MACHINE. GEORGE MALCOLM TURNER, South Kensington, London, England. Filed July 19, 1920. Serial No. 397,481. 1 Claim. (Cl. 123—149.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A multi-polar inductor magneto-electric machine including permanent multi-polar horse shoe magnets having cast iron salient pole tips, stationary high and low tension coils wound on laminated cores and arranged alternately with respect to the salient pole tips of the magnets and parallel to, and within, the legs of the magnets, a shaft parallel to said laminated cores and the legs of the magnets, an inductor having laminated multi-segments rotatably mounted on said shaft within the space formed by said coils and pole tips, cross laminations mounted concentrically on said shaft within and across the arch of the magnets, whereby the magnetic flux returning within the legs of the magnets will traverse the core laminations and cross laminations by way of the inductor segments and pole tips, a stationary distributor arranged on said shaft adjacent said cross laminations, insulated high tension terminal connections for said distributor, a collector device carried by the shaft and having brushes engaging said distributor, a circuit interrupter device externally mounted on the arch of said magnets and connected with the end of the shaft projecting through said arch.



1,479,760. SWITCH-OPERATING DEVICE. JESSE H. UPTON and JOSEPH C. UPTON, Columbus, Ga. Filed Apr. 10, 1922. Serial No. 551,249. 2 Claims. (Cl. 246—239.)

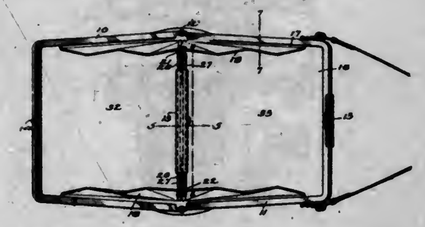
1. A switch operating mechanism comprising a pair of spaced receptacles supported between adjacent ties of the trackway, spaced parallel shafts arranged transversely of the trackway and mounted for rotation, said shafts passing through said receptacles, a lever carried by each shaft and rising from the receptacle, levers carried by the corresponding ends of said shafts, operating rods arranged at one side of the trackway and having their outer ends connected with the last mentioned levers of the respective shafts, a T-shaped link fulcrumed upon the adjacent tie of the trackway and having its



stem connected with the bridle of the switch, and a pivotal connection between the head of said link and the adjacent ends of said operating rods whereby the latter are simultaneously moved to rotate said shafts toward and away from each other, in combination with a train carried trip adapted to engage the levers projecting upwardly from said receptacles for the purpose specified.

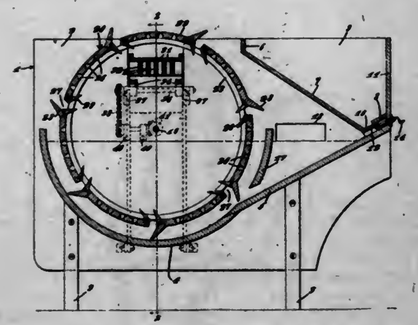
1,479,761. CLOTHESPIN. EDWIN EARL VIRING, Utica, Kans., assignor of one-half to Loy Muchmore, Utica, Kans. Filed Mar. 9, 1923. Serial No. 623,993. 4 Claims. (Cl. 24—137.)

1. A clothes pin comprising crossed levers having cooperating jaws, a keeper carried by one lever, a latch pivoted on the other lever and cooperating with the keeper to hold the jaws against separation, and spring means for moving the levers to separate the jaws when the latch is disengaged from the keeper.



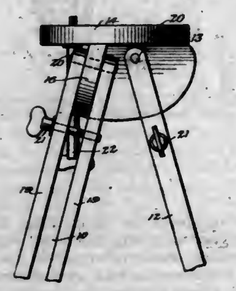
1,479,762. BENDING DEVICE FOR BAR IRON. ANTON WAGENBACH, Elberfeld, Germany. Filed June 17, 1921. Serial No. 478,370. 1 Claim. (Cl. 153—46.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

Bending device for bar iron, comprising in combination a motor, a driving gear, a bending lever arranged to be driven by the said motor in both directions, a sole plate provided with holes on opposite ends and stops



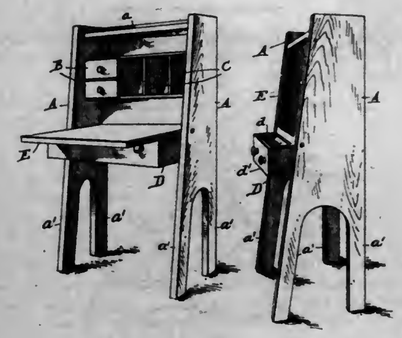
arranged to be received in the said holes to enable the work to be inserted in the machine in either direction, and an eccentric serving as poppet for the iron provided with an indented bottom surface, a device on the sole plate provided with an indented or corrugated surface into which the said bottom surface of the eccentric can be pressed, and a pressing mechanism.

1,479,763. HAND BAG. NICHOLAS WENDEL, Brooklyn, N. Y. Filed Aug. 7, 1922. Serial No. 580,244. 2 Claims. (Cl. 150—30.)



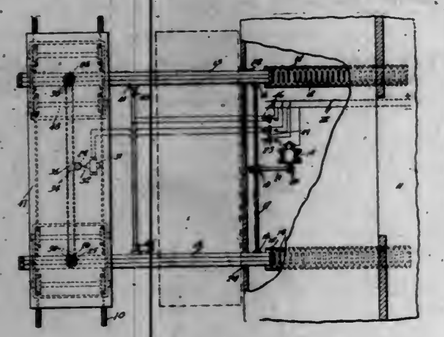
1. As a new article of manufacture, a hand bag comprising a bag body and pivoted frame jaws extending throughout the height of the bag body, plaited gussets at the opposite sides of the bag body, and a central partition secured at its opposite edges to the central plait of each gusset to provide separate segmental compartments in the bag body, the said central partition consisting of a double wall the plies of which are stitched together medially and transversely to leave the same open at the upper end defining therebetween together with the central gussets plaits, a change pocket.

1,479,764. MACHINE FOR TREATING SMALL GRAIN. MAX A. WHEELER, Lind, Wash. Filed May 3, 1922. Serial No. 558,096. 1 Claim. (Cl. 83—27.)



In a device of the class described, a tank, a drum journaled in the tank and provided with openings, a chute extended into the end of the drum and located adjacent to the top of the drum, angular wings carried by the drum and extended along one edge of each opening, the wings comprising inner and outer parts forming a pocket, the outer part serving to scoop material from the bottom of the tank and to deposit the material in the pocket, the inner part being so located as to permit a spilling of the material from the pocket into the drum before the wing arrives at a position directly above the chute, and wings carried by the drum and extended along the other edge of each opening, the last specified wings being so located as to prevent material from passing out of the drum into the tank, through the openings, after the material has been spilled into the tank, and being so located as to carry the material upwardly and deposit the same in the chute.

1,479,765. TRIPOD. EMMETT EDWIN WHITING, Wabasha, Minn. Filed Apr. 14, 1922. Serial No. 552,716. 5 Claims. (Cl. 248—43.)

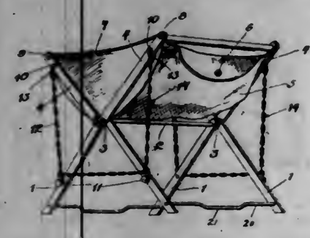


4. In a tripod, a head provided on its under side with a T-shaped member embodying transverse extending and aligned webs and a forwardly extending web, legs each formed of a pair of members having their upper ends extending on opposite sides of a web and pivoted thereto, and means for clamping the members of the legs in the webs.

1,479,766. COMBINED WRITING DESK AND BLACKBOARD. HORATIO OLIVER WHYMAN, Phoenix, Ariz. Filed July 15, 1922. Serial No. 575,224. 5 Claims. (Cl. 45—70.)

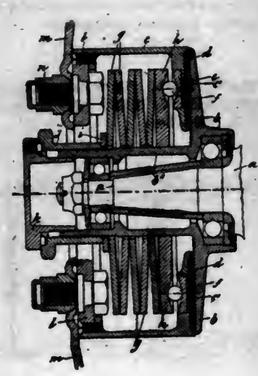
1. A combined writing desk and blackboard comprising a pair of uprights, a swinging blackboard pivotally supported between said uprights in a substantially vertical position and adapted to be lowered into a substantially horizontal position and serve as a writing desk, a drawer slidably fitted between said uprights below said blackboard and a till within said drawer at the front thereof forming therewith a rest for said blackboard when the latter is lowered; said till being adapted to serve as a stop to limit inward movement of the drawer by contact with the lower edge of said blackboard when the drawer is moved inwardly and the blackboard raised.

1,479,767. SHIFTING APPARATUS. JOHN JACOB WOLF, Boonton, N. J. Filed Nov. 15, 1921. Serial No. 515,232. 11 Claims. (Cl. 214—1.)



1. A transfer apparatus for shifting loads, comprising load receiving members, means for moving the load receiving members, means, over which the load may be positioned, for raising the load receiving members to lift the load, and means for supporting the load receiving members after they have been withdrawn from the raising means, said supporting means permitting movement of the load receiving members thereon.

1,479,768. PAINT COMPOSITION. THOMAS W. WOODWARD, Collinsville, Ill. Filed May 4, 1922. Serial No. 558,526. 7 Claims. (Cl. 134—39.)



4. A paint composition composed of paraffin oil, black oil, gloss oil, Japan dryer, plaster of Paris, lamp black and graphite mixed together in substantially the proportions of four pints of paraffin oil, to two pints of black oil, to two pints of gloss oil, to one pint of Japan dryer, to one-half pound of plaster of Paris, to one-third pound of lamp black, to one-fifth pound of graphite.

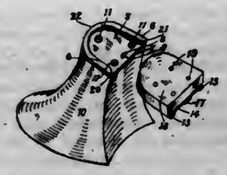
1,479,769. COLLAPSIBLE CHAIR AND BAG. MUNEKAZU YAMANISHI, Seattle, Wash. Filed Sept. 13, 1922. Serial No. 588,068. 2 Claims. (Cl. 190—8.)

1. A folding stool, comprising a frame work made up of a central bar, arms pivotally mounted thereon, legs pivotally mounted thereon, brace rods connecting the upper ends of each pair of arms, brace rods connecting the lower ends of each pair of legs, a seat strip connecting the brace rods of the arms, a bag portion secured to the arms and underlying and wholly independent of the seat strip, the arms being foldable together and the legs folded upward onto the arms in the collapsed condition of the structure, said legs being of greater length than the arms to arrange the brace rods of the legs above the bag as a carrier therefor when the parts are in collapsed relation.

1,479,770. SHOCK ABSORBER FOR VEHICLES. GEORGES BROULHIET, St. Etienne, France. Filed Apr. 16, 1923. Serial No. 632,451. 4 Claims. (Cl. 152—44.)

1. A shock absorber for vehicles, comprising in combination an axle and hub, a wheel, a drum secured to said wheel coaxial with and displaceable in a radial direction relatively to said hub, an end plate integral with said hub and at right angles to the axis thereof, an end plate integral with said drum and in frictional engagement with said end plate on the hub, conical seatings on said end plate integral with the drum, a disc slidable on said hub enclosed in said drum, conical seatings on said disc, balls enclosed between said sets of seatings and resilient means for pressing said disc against said balls.

1,479,771. HAND COVERING. GUY EDWARD SPENCER CAMPBELL, London, England. Filed June 15, 1922. Serial No. 568,607. 5 Claims. (Cl. 2—104.)

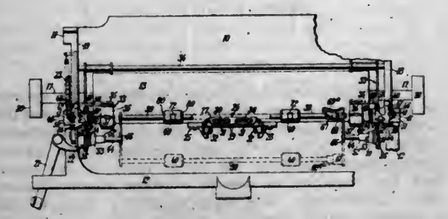


1. A shield adapted to cover the back and front of the hand in that portion immediately adjacent the juncture of the fingers and palm and in advance of the juncture of the thumb without engaging any portion of the thumb, said shield having a finger portion to encircle a finger between the knuckle joint and next adjacent finger joint.

1,479,772. FIXED-JAW SPANNER. WALTER HERBERT COOK, London, England. Filed Sept. 19, 1922. Serial No. 589,038. 2 Claims. (Cl. 81—119.)

1. A fixed jaw spanner, comprising a rectilinear jaw face, and a series of stepped jaw faces opposite to and parallel to said rectilinear jaw face, each of said stepped jaw faces being in length equal to approximately one third of the face of the hexagonal nut which is to be operatively engaged by that jaw face, and the steps of said stepped jaw faces being of such a length that they decrease from the smallest to the largest of the said jaw faces.

1,479,773. DETACHABLE HEEL. JAMES CRAIG, Alexandria, near Sydney, New South Wales, Australia. Filed July 2, 1923. Serial No. 649,122. 1 Claim. (Cl. 36—42.)

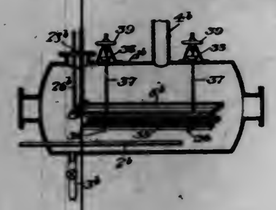


The combination with a shoe heel member having a plane unbroken lower surface and a heel lift member having a plane unbroken upper surface, of a flat plate secured to and conforming to the shape of one of said members and having an inturned edge flange forming a curved pocket, a second flat plate secured to the other one of said members and of substantially the same shape as the last mentioned member, said second plate having its edge portion offset to provide a curved projection adapted to be inserted into said circular pocket, one of said plates having a cut out portion providing a locking edge, and the other plate being slit longitudinally to provide a locking tongue having its free edge extending to the front of the heel to permit operation of the same from the front of the heel, and a lug integral with the locking tongue adapted to abut against the locking edge to hold said members together, the major portions of said plates being spaced apart to permit sufficient movement of the locking tongue to disengage the lug from the locking edge without recessing the plane unbroken surfaces of the heel and lift.

1,479,774. GAME APPARATUS. HERMAN W. STEINMETZ, Rochester, N. Y., assignor to Autoquip Mfg. Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 25, 1921. Serial No. 495,226. 1 Claim. (Cl. 46—56.)

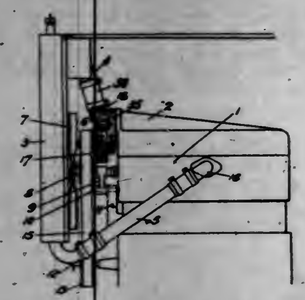
In a game device the combination with a flat, cylindrical casing having an index opening and an axially alined opening in its upper face and a slot in its peripheral wall, of a dial rotatably mounted within the casing and provided with characters adapted to successively register with the index opening and with a spinning stem projecting through the axial opening of the casing, a star shaped stop wheel secured to the dial, a bell crank stop lever adapted to engage between points of the stop wheel and having a manually operable release arm projecting through the peripheral slot in the casing and a semicircular leaf spring partially encircling the stop wheel and engaging the stop arm to hold it normally disengaged.

1,479,775. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 9, 1920. Serial No. 372,431. 28 Claims. (Cl. 197—135.)



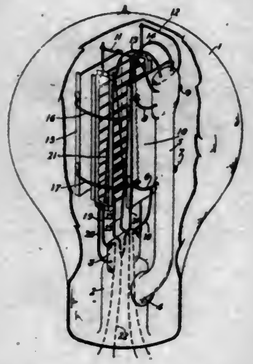
1. In a typewriting machine, the combination with a traveling carriage, of a platen-frame in said carriage having ends, a platen, a stud at each end of said frame, a bracket adapted to embrace each stud, a releasable catch adapted to hold each bracket in position, a feed-roll shaft having offset ends journaled in the brackets and adapted to be swung on its ends from and against the platen, a cam on one of said ends, and a spring-pressed follower for the cam adapted to cause the rolls to bear upon the platen.

1,479,776. APPARATUS FOR CRACKING AND DISTILLING OILS. JOSEPH GEORGE DAVIDSON, Pittsburgh, Pa., assignor to Charles H. Conner, New York, N. Y. Filed Aug. 23, 1920, Serial No. 405,231. Renewed Jan. 26, 1923. 7 Claims. (Cl. 196—25.)



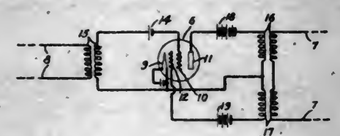
1. An apparatus for cracking and distilling oil, comprising a still adapted to contain a relatively large body of oil, one or more massive electrical resistors therein arranged to be submerged in the body of oil, and means for supplying polyphase alternating current to said resistors.

5. An apparatus for cracking and distilling oil, comprising a still adapted to contain a relatively large body of oil, one or more massive electrical resistors



therein adapted to heat the oil, and means within the still for removing deposited carbon from the resistors from time to time.

1,479,777. CENTRIFUGAL PUMP. WILLIAM HEBARD, Winnemucca, Nev. Filed Jan. 3, 1922. Serial No. 526,784. 2 Claims. (Cl. 123—175.)



2. A water circulating device for the cooling systems of automobile power plants consisting of a coupling adapted to be inserted between the engine and radiator, including a permanently open conduit which affords communication between the water space of the engine and the radiator, to permit constant thermo-siphonic flow therethrough, said coupling being formed with a chamber off-set from said conduit and communicating therewith, a flat partition wall intersecting said chamber for a part of its length, forming a by-pass communicating with said conduit, and a pump in said by-pass.

1,479,778. VACUUM-TUBE DEVICE. HENDRIK J. VAN DER BIJL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1918. Serial No. 256,240. 16 Claims. (Cl. 250—27.)

1. A vacuum tube device comprising a pair of plane parallel continuous electrode surfaces, and means whereby one of said surfaces is supported substantially entirely by the other of said surfaces.

1,479,779. ELECTRON-DISCHARGE DEVICE. HENDRIK JOHANNES VAN DER BIJL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1920. Serial No. 397,772. 30 Claims. (Cl. 179—171.)

1. In an electric system, a vacuum tube having an anode, a cathode and an auxiliary electrode, external circuit connections between said anode and cathode and between said cathode and said auxiliary electrode, means for establishing space current to said anode, means for establishing space current to said auxiliary electrode, a control member for controlling said space current, and means responsive to changes in the space current flowing to said anode and responsive to changes in the space current flowing to said auxiliary electrode produced by variations in the potential of said control member.

Patents Nos. 1,479,780 to 1,480,540.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 318—No. 2. TUESDAY, JANUARY 8, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Amendment to the Rules of Practice.

(ORDER No. 2,850.)

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, Rule 17 of the Rules of Practice is amended by adding at the end thereof the following:

Before his name may be entered on the Register of Attorneys every applicant must subscribe and swear to an oath prescribed by the Commissioner of Patents and pay to the Office a registration fee of $5.00.

THOMAS E. ROBERTSON,
Commissioner.

Letter from Secretary of Interior.

WASHINGTON, *December 29, 1923.*

HON. THOMAS E. ROBERTSON,
Commissioner of Patents.

MY DEAR MR. COMMISSIONER: I was indeed pleased to receive your encouraging report giving the results of the special effort your force has made to reduce the number of cases awaiting action. The accumulation of undisposed applications has been a source of concern to both of us, and I am happy to congratulate you and the other officers and employees of the Patent Office for the interest in their work which made possible a reduction of twelve thousand cases since October 1st.

That teamwork and conscientious endeavor were required to gain this supremacy over the almost submerging flood of applications coming into the Office is evident; and while I am unable to offer tangible reward for the labor involved, yet I know that each employee already feels amply compensated for his extra effort in the pride of accomplishment which always follows a job well done.

To achieve is to open the door for further achievement, because we do not know our strength until tried by emergency. It is my hope that the sense of personal power which this test may have accorded the participants may point the way to their future success in whatever work they may undertake.

My thanks and best wishes for the New Year go to all of you.

Sincerely yours,

HUBERT WORK.

Trade-Marks.

The trade-mark searching facilities open to the public at Room 159 in the Patent Office have been augmented by installing trade-marks published under the act of 1905, but not yet placed upon the register. These are arranged in accordance with the arrangement of words and symbols of registered marks, as well as by classes. All marks published since January 1, 1923, have been included.

CLASSIFICATION MANUAL.

A Manual of Classification of Patents in the United States Patent Office has been published, indicating the classes and subclasses as of January 1, 1924, on sheets about 6 inches by 9 inches, punched for insertion in a loose-leaf binder. An index is being prepared for publication. It is proposed to keep the Classification Manual current by reprinting necessary pages from time to time as changes in classification are made. While this is done primarily for the use of the Office, the Superintendent of Documents, Government Printing Office, Washington, D. C., on receipt of $1.00 will furnish a copy of the Manual of Classification at once, and for the same price will send, on publication, a copy of the index and copies of such pages as may be reprinted during the calendar years 1924 and 1925.

Condition of Applications Under Examination at Close of Business December 28, 1923.

(Total number of applications awaiting action, excluding Trade-Mark Division, 66,783: Trade-Mark Division, 2,154. Oldest new case, Apr. 2, 1923; oldest amended, Apr. 2, 1923. The dates given are 1923.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

U. S. Circuit Court of Appeals—Second Circuit.

MCLEOD TIRE CORPORATION *v.* B. F. GOODRICH CO.

Decided December 26, 1922.

[287 Fed. Rep. 339.]

PATENTS—1,029,307 AND 1,055,577, FOR TIRE CONSTRUCTION, VOID FOR ANTICIPATION.

The McLeod patents, No. 1,029,307, for a method of making tire casings, the essence of which is the vulcanizing of the tire while stretched or expanded by pressure applied from within, and No. 1,055,577, for the product of such method, *Held* void for anticipation in the prior art and prior use.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by the McLeod Tire Corporation against the B. F. Goodrich Company. Decree for defendant, and complainant appeals. Affirmed. For opinion below, see 272 Fed. 901. See, also, 268 Fed. 205.

Messrs. Bouvier & Beale (*Mr. B. F. Norris* of counsel) for the appellant.

Mr. Charles Neave and *Mr. Merrell E. Clark* (*Mr. Robert M. Pierson* of counsel) for the appellee.

Before HOUGH, MANTON, and MAYER, Circuit Judges.

MANTON, *Cir. J.*:

This is a suit for infringement of two patents granted to McLeod, the first, No. 1,029,307, applied for November 13, 1911, granted June 11, 1912, for a method of making tire casings, and the second, No. 1,055,577, applied for March 10, 1912, and granted March 11, 1913, for pneumatic-tire casing made in accordance with the method provided for in the first patent.

The automobile tire is made up of an outer casing, which is held on the rim of the wheel by engagement at the edges of the casing and by the inner tube contained in the casing, and which is inflated with air when ready for service. The tire casings are built up on a form of core, which is a metal ring having the contour of the inside of the casing. Upon this core are placed alternate layers of unvulcanized rubber and layers of fiber strands, which strands or fiber give strength to the tire casing. The strands are in the form of cords of threads, or in the form of a woven fabric, such as canvas. The inventive thought of the patents in suit relate to the building up of the tire on the cord; that is, the treatment during the process of vulcanization which is necessary in order to set the rubber and give it its desired wearing qualities. The appellant's claim is a new way of vulcanizing them while they are expanded or stretched by pressure applied from within. The inventor says he conceived the idea in April, 1911. He has never built any tires under his process or method. The patents do not explain with any degree of definiteness how much they should be stretched when vulcanized.

The defenses interposed are that the patents are anticipated by the prior patents and publications and prior commercial uses in this country; also that they are invalid, because their disclosure is insufficient. The claim of infringement is also contested. There are 11 claims in No. 1,029,307, the method patent. In substance, it is a method of making pneumatic-tire casings, and is the forming of a casing structure of fabric or raw rubber, thereafter placing the threads of said fabric under uniform tension to approximately the limit of the elasticity of the threads by applying fluid pressure internally to said structure, and finally vulcanizing said structure, whereby the threads are set in their stretched condition. Appellant does not claim any new material is used in his method, or that it was the first to vulcanize a tire while subject to a fluid pressure applied internally of the structure, but the claim is a special tensioning or stretching of the fabric threads during vulcanization to approximately the limit of the elasticity of the threads. The patents do not specify any percentage of stretch. The percentage of stretch used by the appellee varies between four and seven and one-half per cent in the tires which are alleged to infringe.

We think the patents of the prior art and prior uses defeat the appellant's claims. The appellant claims that the patents cover the idea that, if the tire is vulcanized in the position it is expected to assume when put in service under inflation, that tire, when complete and put into use under service pressure, will remain in the condition in which it was vulcanized; that is, it will not expand, and will not be as susceptible to injury as a tire which was not vulcanized in that way. The patent granted to Cowen August 11, 1896, No. 565,854, provided for a tire of a single-tube type, and said it—

> is built up or formed in usual or suitable manner of alternate layers of rubber and woven fabric, as canvas or duck.

It is then placed upon a rim, and when on that rim—

> is preferably inflated, as shown in Fig. 2, preferably not quite to the extent to which it will be inflated when placed in the vulcanizing chamber,

and then, while it is unvulcanized, but inflated, it is covered or wrapped with fabric. After the wrapping or covering has been applied, it is provided:

> The tire tube is preferably again and further inflated to a pressure, say, of 20 to 30 pounds, to more tightly press the tube against its covering fabric, and further and more distinctly to impress the surface of the covering fabric into the tread of the tire. During the process of vulcanization the air already forced within the tube greatly expands by reason of its being heated, thereby tending to burst the tube, this tendency, particularly

prior to complete vulcanization, being restricted only by the covering material or materials, and I have found in practice that this bursting tendency is best restricted, and in the most simple and effective manner, by the spiral wrappings of fabric described, and by means of this or equivalent means for confining the tread-covering fabric upon the tire tube I am enabled to vulcanize the tire tube while in an inflated condition practically such as it is called upon to assume when in use upon the road.

In the Moseley British patent of 1896, which was an outer casing and inner tube, vulcanization was provided while—

the air tube is inflated. In this condition the tire is subjected to a vulcanizing temperature, or is otherwise treated so as to effect or complete the vulcanization.

The specifications read that—

this improved tire is not subject to the ordinary strains and stresses from air inflation when in use, and any wounds or cuts inflicted upon it have no tendency to open and spread.

And claim 2 of that patent provides that, when applied to a tire cover or casing, it is—

a pneumatic tire cover, which is vulcanized or has its vulcanization completed when occupying the same position and under the same conditions as when in use.

In the German patent to Reithoffer, No. 124,327, granted in 1901, substantially the same idea is incorporated as in the Moseley patent, and speaking of the "air bag" (the inner tube) it—

expands the rubber, which because of the heating has become yielding, together with its reinforcement, * * * and stretches the same in all its parts into the shape which the tire, when in use, is intended to assume.

There are other patents, such as the Gray, No. 15,471, granted in 1900, and the Johnstone, No. 12,847, of 1903, and the United States patent to Cobb, No. 969,131, granted August 30, 1910, which we think disclosed the idea of vulcanizing the tire while the inner tube is inflated, and there is a stretching or extension approximately in the shape which they were subsequently to assume while in service.

In addition thereto, there was ample evidence of a prior use disclosing the idea contended for by the appellant. The Silvertown tire, made in England, and the subsequent manufacture of this cord tire in this country in substantially the same manner as manufactured in England discloses the appellant's idea. In the latter part of 1910, or early in 1911, the Diamond Rubber Company commenced the manufacture of these tires under the licenses which had been purchased from the British originators of these tires and the process of making them. The process employed was the same that was employed by the Silvertown Company of London, England, the British licensees under the Gray & Sloper patents. It was from that company that the Diamond Company learned of the Silvertown process through Mr. Tew and Mr. Converse, who were sent by the Diamond Company to the plant in England for study. This process included the step of vulcanizing the tires in the mold under internal hydraulic pressure applied by means of a water tube or water bag under such conditions that the tire had room to expand in the mold and thus stretch the cords. This equipment used by the Diamond Company was made in England in accordance with the specifications and drawings of the Silvertown Company, and was brought into this country at the time their employees returned after their period of study in the Silvertown plant in September, 1910. Subsequently equipment was made in this country.

The drawings for the Diamond equipment prescribed a sectional stretching during vulcanization of from four to nine per cent according to the different sizes of tires. The different sizes of cords were used in different sizes of tires and the percentage of stretch prescribed for such size of tire bore a definite relation to the ultimate strength of the particular cord used in tires of that size. Tires were actually stretched during vulcanization in substantial accordance with the percentages shown on the drawings and were then used in substantially the same condition. The district judge found these facts. After a review of the evidence and this record, we agree with such findings. We find nothing in the appellant's patent indicating the extent of the stretch during vulcanization which will keep the tire from any expansion under service pressure, but the appellant's contention is that the expansion must be sufficient to put the threads under uniform tension throughout and to set them in the process of vulcanization at approximately the stretch that they were designed to have in the service with the inner tube inflated. This is too indefinite as to the extent of stretch. However, the prior art and use lead to the conclusion that the patents are void.

Decree affirmed.

U. S. Circuit Court of Appeals—Second Circuit.

W. A. SCHLEIT MFG. CO., INC., *v.* SYRACUSE RADIATOR CO., INC., ET AL.

Decided January 8, 1923.

[288 Fed. Rep. 52.]

PATENTS—1,174,525, CLAIMS 1, 3, 5, FOR DRAFT REGULATOR FOR HOT-WATER HEATERS, HELD VALID AND INFRINGED.

The Schleit patent, No. 1,174,525, claims 1, 3, and 5, for a draft regulator for hot-water heaters, *Held* to disclose invention, and though, in view of the prior art, entitled to only a limited scope, infringed by defendant's device, which was practically a Chinese copy.

APPEAL from the District Court of the United States for the Northern District of New York.

Suit in equity by the W. A. Schleit Manufacturing Company, Inc., against the Syracuse Radiator Company, Inc., and others, for infringement of a patent. Decree for plaintiff (278 Fed. 305), and defendants appeal. Affirmed.

STATEMENT OF THE CASE.

Suit is upon patent to Schleit, 1,174,525, dated March 7, 1916, claims 1, 3, and 5. The invention claimed is for a "draft regulator for hot-water heaters." Its "primary object is to utilize the temperature of the water leaving the heater for regulating directly a check damper and indirectly a draft damper controlling the combustion chamber." Another object is to "provide a construction having a minimum number of parts and adapted to be assembled with ease, through which any movement of the check damper beyond a predetermined point is positively and directly transferred to the draft damper."

Of the claims in suit, the second most philosophically defines the alleged invention, and the fifth most specifically conforms to the disclosure. They are as follows:

2. A heater having a combustion chamber and a smoke chamber, a draft damper for the combustion chamber, and a check damper for the smoke chamber, means within the smoke chamber and attached to a wall thereof for transferring movement from the check damper to the draft damper in reverse form, and means for operating the check damper.

5. In a water heater, a check damper, a draft damper, a supporting member for said draft damper, pivoted to a wall of the heater and having a lost-motion connection with said draft damper, means for operating the check damper, said supporting member being operated by the movement of the check damper to open and close the draft damper.

The trial court held the patent valid and infringed. Defendants appealed.

Messrs. Parsons & Bodell and *Mr. Arthur E. Parsons* for the appellants.

Mr. Eugene A. Thompson and *Mr. Howard P. Denison* for the appellee.

Before ROGERS, HOUGH, and MANTON, Circuit Judges.

HOUGH, *Cir. J.* (after stating the facts as above):

Both parties make hot-water heaters, and each has attached to its product an automatic regulation for draft. The patent relates to the method of regulation. The heaters of both parties show a combustion chamber within a water jacket, and in each it is the heat of the water which furnishes the power for automatic regulation. The patent relates solely to the means of using this power to maintain predetermined relation between the draft damper, (at the opening from combustion chamber to smoke chamber) and a check damper or hinged-door opening from the smoke chamber to the outer air.

Automatic and thermostatic regulation is admittedly not new in the art of heating, and this patent does not pretend to be a pioneer. The concept is a narrow one, and covers only means attached to a wall of the heater (including the smoke chamber) for transferring from the damper under thermostatic regulation to the other damper the impetus or power of its own movement. The beneficial results are mechanical simplicity, compactness, and a minimum exposure of working parts to the ordinary furnace attendant, for whose benefit mechanical devices of this kind are preferably "fool-proof."

The patentee's method of transmitting thermostatic movement is extremely simple. As the water heat varies above or below the predetermined temperature, the movement of the thermostat is transmitted by a link and lever device to the check damper, which, when closed, rests against one end of a lost-motion device pivoted to the wall of the smoke chamber, and the pressure of such resting lifts from its seat the draft damper. With the draft on, temperature rises and the operation is reversed; i. e., the check damper is lifted, and, its pressure being absent from the end of the lost-motion apparatus, the draft damper reseats itself by gravity. Nothing is outside the metal heater, except the one thing that requires regulation; i. e., the thermostat and its connecting lever.

The prior art shows no utilization for the purposes above set forth of this simple contrivance, hidden in the smoke chamber and attached to the wall thereof, whereby a connection is maintained automatically between the opening and closing of check and draft dampers. It would serve no useful purpose to compare the structure of defendant with that of plaintiff. Suffice to say that we regard them as mechanically exactly alike, and especially has the defendant copied plaintiff's attachment to the interior wall of the smoke chamber of the lost-motion device, which is the connection between draft and check dampers.

The defense in this court is that defendant's regulator "is the prior regulator of Roney Patent No. 893,874." We fail to see any real or patentable resemblance between Roney and defendant. That patentee, like many others, does show a "damper regulator," and also a connection between two objects, one of which is certainly a damper, and the other a valve "in the cold air flue"; and it is true that a movement of said valve compels movement of the draft damper, but it is not a lost-motion movement, and it is not situated and does not take place in anything that can fairly be called a smoke chamber. Of course, all the mechanical parts, whether put together by plaintiff, defendant, or Roney, are old, and it is the form of their union and the method of their coordination which is the essence of this small invention. The method, purpose, and result of Roney's regulation are all different from that desired by the parties to this suit. What Roney wished was to establish by hand, and from a considerable distance, a simultaneous opening or closing of an old-fashioned draft door at the base of his furnace and the chimney damper at its exit. This is a wholly different thing from what the parties hereto desire and achieve. Roney's patent (not to speak of many others) suffices to keep within narrow limits modern inventions about draft regulation. This patent is narrow; it covers nothing but the means of accomplishing a result which has been accomplished in many other ways. Its range of equivalents is small, but wide enough to cover what is practically a "Chinese copy."

Decree affirmed, with costs.

U. S. Circuit Court of Appeals—Second Circuit.

GARSON *v.* ELWELL-PARKER ELECTRIC CO.

Decided March 13, 1923.

[288 Fed. Rep. 824.]

PATENTS—1,337,400 FOR A CRANE, HELD INVALID FOR WANT OF NOVELTY.

The Garson patent, No. 1,337,400, for crane, in which hoisting rope is used to raise boom and boom is automatically locked by interengaging members between its free end and the pivot, *Held* invalid for want of novelty in view of the prior art.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit by Thorvald N. Garson against the Elwell-Parker Electric Company for infringement of the

Garson patent, No. 1,337,400, applied for September 20, 1918, granted April 20, 1920. Decree for defendant. Plaintiff appeals. Affirmed.

Mr. Charles W. Mortimer for the appellant.

Mr. Justin W. Macklin and *Mr. Everett N. Curtis* for the appellee.

Before MANTON and MAYER, Circuit Judges, and LEARNED HAND, District Judge.

MANTON, *Cir. J.:*

The inventor says that the patent in suit relates particularly to a crane which forms the subject matter of an earlier patent, No. 1,228,659, granted to him on June 5, 1917; its characteristic being the provision of a single hoisting rope from the load and boom, two interengaging members being located at the base of the boom for automatically locking the latter in an elevated position to permit the lowering of the hoisting rope. He does not sue on the earlier patent. The object of the present improvement is said to be to provide a heavy-duty crane of the class, for instance, used on a locomotive or heavy truck; cranes capable of handling a load of five tons or more. A characteristic of the present improvement is said to be the combination of the mast and boom and interengaging boom-locking members in such relationship that the hook in its reaction upon the locking members is a lever of this class only, and thus the strain on the locking members is reduced to a minimum; and it is said that, when the interengaging locking members consist of a ratchet and pawl, as in the embodiment of the invention described, the size of the ratchet teeth and pawl may be largely increased over the corresponding parts when acted upon by the boom as a lever of the first class. In the patent in suit, and in the previous patent granted to the appellant, there is used a ratchet and pawl mechanism connecting the mast to the boom, being attached to the boom between its pivot and free end.

The defenses interposed are invalidity of the patent and noninfringement. We need only consider the first—that is, the invalidity of the patent—for we think what was shown in the prior art anticipated what the inventor is said to have accomplished. The patent in suit has but one claim and reads as follows:

> In a crane, the combination with a support of a hoisting drum and driving means therefor, a boom pivotally mounted upon the support, a hoisting rope connected with the drum and led over the end of the boom, means including the hoisting rope for raising the boom, and two interengaging members, one carried by said support and one carried by the boom, and disposed intermediate the pivotal connection of the boom and the free end of the latter, for automatically locking the boom in its elevated position, whereby the boom will react upon the said interengaging members as a lever of the second class.

In reference to the prior patent granted to the appellant, it was apparent that he recognized the inherent mechanical weakness of the first patented structure, particularly that the short lever at the base could not support heavy loads at the far end of the boom. He emphasizes the whole point of the patent in suit by his reference to the particular use, position, and form of the ratchet and pawl which he shows in this patent and says:

> As in the embodiment of the invention hereinafter described the size (and hence strength) of the ratchet teeth and pawl may be largely increased over the corresponding parts when acted upon by the boom as a lever of the first class.

This patent was allowed, because it was thought the two interengaging members between the pivotal connection of the boom and its free end constitute a difference over his prior patent and upon which the single claim was allowed. But we think that, in view of the general state of the prior art, it required no invention to select an old mechanical expedient as a particular means of supporting a boom, as used in many forms, such as cranes. It appears that the identical booms do appear in the patents referred to as the prior art, and disclose the latching means between the base of the boom and the outer end of the boom. Cranes had been used of various forms and types. They had been mounted on tracks, ships, and vehicles of all sorts, and had been used to raise a load, and move it laterally, and place it wherever desired within the reach of the crane. Some illustrations are building cranes, ship cranes, and locomotive cranes. These devices have invariably a means for holding a crane in its raised position while lowering the load. Indeed, this is an essential to functioning.

The Hammond patent, No. 940,146, applied for June 12, 1908, and granted November 16, 1919, is a hoisting apparatus comprising a base, a jib pivoted thereto, a hoisting device carried by the jib and operating to swing the same on a pivot, a latch bar pivoted to the base, and a keeper therefor on the jib. In the patent granted to Hladky, No. 981,561, applied for July 23, 1910, and granted January 10, 1911, for spreader crane, the claim provided for a crane comprising—

> a base, a standard, a rocking boom, and a housing surrounding said standard composed of hinged sections adapted to swing open and permit of the disassembling of said base and standard, and means for anchoring the housing against revoluble movement.

This device in operation demonstrates continued pull on the cable after the hook or form engages the pin and will raise the boom.

All the elements of appellant's device are present, except the implication of the automatic locking in different positions; but the locking and reconnection are precisely the same as in the patent, except for automatically doing so. Its purposes, function, and elements are identical with that of the claim in suit, with the single possible point in favor of the claim of automatic locking which is found in the prior art. The patent to Hitchcock, No. 456,332, applied for November 5, 1890, and granted July 21, 1891, was for a hoisting apparatus used for heavy loads. The pulling is on the lifted chain by the use of a hoisting engine, which means a power-driven drum, for use in hoisting apparatus. It has two interengaging members as latching means between the pivot and the rear end of the boom, one carried by the support and one carried by the boom, clearly showing a disposed intermediate free end of the boom and its pivotal connection, and for automatically locking the boom in its elevated position. The function of these interengaging members is to drop the load near the base of the boom, when the boom is latched in a raised position as does the device of the patent in suit.

In view of these disclosures of the prior art, we find that the inventor discloses nothing new or novel that rises to the dignity of invention, and the patent in suit must be held void.

Decree affirmed.

ADJUDICATED PATENTS.

(C. C. A. Ill.) The Beck patent, No. 1,058,711, for a cut-back die-thread machine, claims 1 and 2 *Held* invalid. *Nye Tool & Machine Works* v. *Crown Die & Tool Co.*, 292 Fed. Rep. 851.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Dec. 17, 1923.*

Plummer & Edwins, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Buffalo Vegetable Marketing Co., of 29 East Market Street, Buffalo, N. Y., and Sol Perimon, of 1837 West Jefferson Avenue, Detroit, Mich., for registration of a trade-mark and trade-mark registered September 20, 1921, No. 146,841, to Plummer & Edwins, of Second Avenue and University Street, Seattle, Wash., and a letter sent by registered mail to said Plummer & Edwins at the said address having been returned by the post office undeliverable, the Office has failed to secure service upon said Plummer & Edwins. Notice is therefore given that unless said Plummer & Edwins, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 11, 1923.*

Bliss, Painter & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between Johnson & Company, 100 South Minnesota Avenue, St. Peter, Minn., for registration of a trade-mark and trade-mark registered September 1, 1903, No. 41,018, to Bliss, Painter & Co., 108 and 110 Third Street North, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said Bliss, Painter & Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Bliss, Painter & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This interference will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Dec. 11, 1923.*

Sprayene Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between Richmond Dairy Company, 314–322 North Jefferson Street, Richmond, Va., for registration of a trade-mark and trade-mark registered December 22, 1914, No. 101,542, to Sprayene Company, Woodstown, N. J., and a notice of such declaration sent by registered mail to said Sprayene Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Sprayene Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Dec. 13, 1923.*

V Co., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The M. Shaffer Company, 724 Passyunk Avenue, Philadelphia, Pa., to effect the cancellation of the trade-mark registration of V Co., of Wheeling, W. Va., No. 90,603, dated March 4, 1913. The Office having been unable to secure service upon said V Co., notice is hereby given that unless said V Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Amendment to the Rules of Practice.

(ORDER No. 2,846.)

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, the following rules of the Rules of Practice of the United States Patent Office are amended as follows:

Rule 191, lines 24 and 25, cancel—

Size 10 by 15 inches, per copy---------- .25
Size 8 by 12½ inches, per copy---------- .15

and substitute—

Size 8 by 13 inches, per copy---------- .20
Size 6 by 9 inches, per copy---------- .15

This becomes effective January 1, 1924.

THOMAS E. ROBERTSON,
Commissioner.

Notice—Change in Size and Price of Photostat Copies of Manuscript.

On and after January 1, 1924, photostatic copies of manuscript applications and file wrapper and contents, and records of assignments, will be furnished on prints 8 x 13 inches, for which a charge of twenty cents per sheet will be made. This will produce a print approximately full size of the original, and hence as legible as the original.

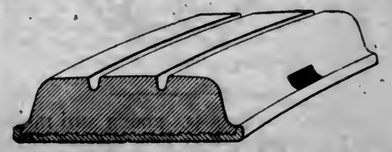
TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 8, 1924.

[VOL. 318. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.



As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 132,628. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CLARENCE P. BROWNING, Peconic, N. Y. Filed May 19, 1920.

PARADISE

Particular description of goods.—Fresh Eggs, Catchup, Pure Honey, Horse-Radish, Apple Butter, and Chili Sauce.
Claims use since Apr. 29, 1920.

Ser. No. 136,120. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE FIRESTONE TIRE AND RUBBER COMPANY, Akron, Ohio. Filed Aug. 14, 1920.

No claim is made to the representation of a solid tire. The mark consists of a small patch of rubber, substantially rectangular in form and distinguishable from the rest of the tire, placed on the side of tire adjacent the flange of the rim.

Particular description of goods.—Solid Tires Composed of Rubber or Rubber and Fabric.
Claims use since May, 1920.

Ser. No. 137,827. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) CHARLES D. DURKEE & COMPANY, INC., New York, N. Y. Filed Oct. 2, 1920.

D

Particular description of goods.—Marine Hardware and Deck Fittings—Namely, Ship Cleats, Chocks, Davits, Gears, Steering Wheels, Deck Lights, Skylights, Ship Ventilators, Ventilator Cowls, and Ventilator Deck Rings, Propellers, Rudders, Rudder Yokes, Tillers, Rowlocks, Boom Travelers, Gaff Jaws, Deck Plates and Rings, and Other Goods of This Character.
Claims use since July 10, 1919.

Ser. No. 147,874. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) G. L. P. CO. INC., Brooklyn, N. Y. Filed May 18, 1921.

No claim is made to the word "Trade-Mark" apart from the mark shown.

Particular description of goods.—Packed Olive Oil.
Claims use since April, 1921.

Ser. No. 148,083. (CLASS 17. TOBACCO PRODUCTS.) MAGNOLIA CIGAR CO., Brooklyn, N. Y. Filed May 23, 1921.

MAGNOLIA

Particular description of goods.—Cigars.
Claims use since 1883.

Ser. No. 156,625. (CLASS 16. PAINTS AND PAINTERS' MATERIALS. THE EGYPTIAN LACQUER MANUFACTURING COMPANY, New York, N. Y. Filed Dec. 13, 1921.

Particular description of goods.—Lacquers, Thinners for Lacquers, and Lacquer Enamels.
Claims use since September, 1892.

Ser. No. 157,729. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) PHON OLA COMPANY, Dayton, Ohio. Filed Jan. 10, 1922.

Phon Ola

Particular description of goods.—Talking Machines and Phonographs.
Claims use since about Oct. 15, 1921.

Ser. No. 159,007. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CHICAGO FUSE MFG. COMPANY, Chicago, Ill. Filed Feb. 8, 1922.

GEM

Particular description of goods.—Switch Boxes for Electric Wiring Purposes.
Claims use since Dec. 1, 1913.

Ser. No. 159,697. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE FERBERT-SCHOANDORFER COMPANY, West Park, Cleveland, Ohio. Filed Feb. 23, 1922.

Tin-o-Red

The mark as shown in the drawing includes the expression "Tin-o-Red" in one color superimposed upon the representation of a pair of shears in another color, all upon a black background.
Particular description of goods.—Ready-Mixed Paints and Varnishes.
Claims use since on or about Nov. 15, 1921.

Ser. No. 160,370. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE SALT'S TEXTILE MANUFACTURING COMPANY, Bridgeport, Conn., and New York, N. Y. Filed Mar. 8, 1922.

DUVETTE

The mark consists of the word "Duvette."
Particular description of goods.—Fabrics in the Piece Made Wholly or in Part of Worsted, Wool, Mohair, Alpaca, Jute, Cotton, Silk, and Artificial Silk, and Blankets.
Claims use since Feb. 1, 1922.

Ser. No. 160,934. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EAST SIDE PACKING COMPANY, East St. Louis, Ill. Filed Mar. 20, 1922.

I·X·L

Particular description of goods.—Beef and Pork Products—Namely, Bacon, Callas, Hams, Cooked Hams, Lard, Pork Sausages, and Frankfurters.
Claims use since 1906.

Ser. No. 161,055. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARRANZINI & CORRADO, New York, N. Y. Filed Mar. 22, 1922.

PRINCIPESSA MAFALDA

Particular description of goods.—Olive Oil.
Claims use since Feb. 1, 1922.

Ser. No. 162,563. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. B. MEWHINNEY CO., INC., also doing business as Mewhinney's, Terre Haute, Ind. Filed Apr. 19, 1922.

JOLLY GOOD

Particular description of goods.—Chocolate-Coated Cream Peanut Bar.
Claims use since Mar. 23, 1917.

Ser. No. 162,720. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BEAUFORD R. CAMP, San Francisco, Calif. Filed Apr. 22, 1922.

"Optimo"

The mark consists of the word "Optimo."
Particular description of goods.—Candy.
Claims use since Mar. 15, 1922.

Ser. No. 162,887. (CLASS 15. OILS AND GREASES.) PENNSYLVANIA SYNTHETIC GAS & CHEMICAL COMPANY, Philadelphia, Pa. Filed Apr. 25, 1922.

No claim is made to the lining, which indicates red and blue colors on the drawing, and no claim is made herein to the words "New Gas" except in the association shown in the drawing; but no common-law rights therein are waived.
Particular description of goods.—Fuels for Internal-Combustion Engines.
Claims use since on or about Mar. 20, 1922.

Ser. No. 164,007. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ROSS ANTENNA COMPANY, Providence, R. I. Filed May 17, 1922.

RACO

Particular description of goods.—Radio Antenna Wire.
Claims use since Apr. 1, 1922.

Ser. No. 164,496. (CLASS 33. GLASSWARE.) CALIFORNIA GLASS & PAINT CO., Los Angeles, Calif. Filed May 25, 1922.

POPPY BRAND

No claim is made for the word "Brand."
Particular description of goods.—Beveled Plate Glass, Tile and Sheet Prism Glass, Plain Plate Glass, Flat Drawn Window Glass, 7/32-Inch Flat Drawn Crystal Glass, Rough Glass, Ribbed Glass, Figured Wire Glass, Polished Wire Glass, Ornamental and Figured Glass, Leaded Art and Colored Glass, Black and White Glass.
Claims use since June, 1920.

Ser. No. 164,712. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARCHIONY BROTHERS, INC., New York, N. Y. Filed May 31, 1922.

"SPUMONETTES"

Particular description of goods.—Ice Cream, Flavored Ice, Ice-Cream Bricks, Ice-Cream Cones, and Ice-Cream Sandwiches.
Claims use since January, 1920.

Ser. No. 165,299. (CLASS 12. CONSTRUCTION MATERIALS.) MACKLANBURG-DUNCAN CO., Oklahoma City, Okla. Filed June 10, 1922.

Numetal

No claim made to the words "New" and "Metal."
Particular description of goods.—Metal Weather Strip.
Claims use since Mar. 1, 1921.

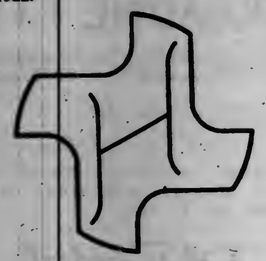
Ser. No. 166,610. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STANDARD LABORATORIES, Des Moines, Iowa. Filed July 8, 1922.

Blue-Cross

Particular description of goods.—Aspirin.
Claims use since June 29, 1922.

Ser. No. 166,746. (CLASS 15. OILS AND GREASES.) MARTIN PRODUCTS COMPANY, San Francisco, Calif. Filed July 11, 1922.

GREASEASY



No claim made to the representation of a grease gun apart from the mark as shown on the drawing.
Particular description of goods.—Lubricating Grease in Cartridge Form.
Claims use since June 1, 1922.

Ser. No. 166,868. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN CEREAL SYRUP COMPANY, Chicago, Ill. Filed July 14, 1922.

ACAROSE

Particular description of goods.—Sirup for Food Purposes.
Claims use since Aug. 1, 1919.

Ser. No. 167,129. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE HARTFORD TAP & GAUGE COMPANY, Hartford, Conn. Filed July 20, 1922.

Particular description of goods.—Taps.
Claims use since at least Jan. 1, 1921.

Ser. No. 167,217. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM AMERISE, doing business as Hazleton Marcaroni Mfg. Co., Hazleton, Pa. Filed July 22, 1922.

PARADISE

Particular description of goods.—Olive Oil, Tomato-Paste Sauce.
Claims use since July 2, 1921.

Ser. No. 167,424. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT SCHMIDT, Berlin, Germany. Filed July 26, 1922.

Bedos

Particular description of goods.—Bleaching Preparations, Mordants, Acids, Codein Tablets, Phenacetin, Quinine, Antipyrene, Caffeine, Tinctures, Chloral Hydrate Tablets, Morphine Scopolamine, Novocaine, Adrenaline, Colchicine, Guaiacol, Menthol, Digitalis, Diuretic Tablets, Atropine, Arsenic Hypophosphite Tablets, Laxatives, Cascara Tablets, Calomel Tablets, Astringents, Bismuth-Opium Tablets, Soda-Mint Tablets, Stomach Tablets, Hyperacidity Tablets, Emetics, Anticlimacterium Tablets, Sedatives, Zinc Tablets, Hexamethylenetetramine Tablets, Potassium Iodide Tablets, Santonin Tablets, Aconite Tablets, Acetylosalic Acid Tablets, Bromide Tablets, Effervescent Sodium Bromide Tablets, Morphine Tablets, Morphine-Atropine Tablets, Camphor-Benzoin Tablets, Asthma Tablets, Creosote Tablets, Caffeine Tablets, Ether-Camphor Ampoules, Digitalis Tablets, Theobromide Tablets, Blaud's Pills, Glycerin-Phosphate Tablets, Arsenic Tablets, Calcium Tablets, Calomel Tablets for Children, Phenol-Phthalein Tablets, Opium Tablets, Hæmo-Styptic Tablets, Cereum-Oxalic Tablets, Pepsin Tablets, Flatulence Tablets, Ergotin Tablets, Ovary Tablets, Ichtyosilver Tablets, Salol Tablets, Hydrargyrum Tablets, Chenopodium Tablets, Tooth Paste, Greaseless Creams, Grease Creams, Mouth Washes, Talcum Powder, Shampoos, and Bath Salts.
Claims use since January, 1922.

Ser. No. 167,478. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MASSACHUSETTS CHOCOLATE COMPANY, Boston, Mass. Filed July 27, 1922.

BROADWAY

Particular description of goods.—Sweet-Chocolate Nut Bar.
Claims use since Jan. 18, 1922.

Ser. No. 167,563. (CLASS 15. OILS AND GREASES.) ROY W. GOODMAN, doing business as Goodman Oil Company, Boise, Idaho. Filed July 29, 1922.

The horizontal lining indicates portions shown in blue.

The letters of the mark appear in solid blue colors.
Particular description of goods.—Toffee and Candies.
Claims use since Oct. 9, 1923.

Ser. No. 187,235. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN WANAMAKER PHILADELPHIA, Philadelphia, Pa. Filed Oct. 19, 1923.

Charme d'Amour

Particular description of goods.—Perfumes.
Claims use since Nov. 1, 1917.

Ser. No. 187,237. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WINSTON, HARPER, FISHER COMPANY, Minneapolis, Minn. Filed Oct. 19, 1923.

UNIVERSITY

Particular description of goods.—Salt, Baking Soda, Starch for Laundry Purposes, Lye, Ammonia, and Liquid Bluing.
Claims use since Jan. 1, 1900.

Ser. No. 187,251. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STACY B. GANOW, New York, N. Y. Filed Oct. 20, 1923.

THIOPHATES

The mark consists of the word "Thiophates."
Particular description of goods.—Saline Laxative.
Claims use since Sept. 11, 1923.

Ser. No. 187,266. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) D. M. PIERCE, doing business as Estoma Co., Detroit, Mich. Filed Oct. 20, 1923.

ESTOMA

Particular description of goods.—Medicine for the Treatment of Stomach, Liver, and Intestinal Ailments.
Claims use since Jan. 1, 1923.

Ser. No. 187,275. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIS NORTON & CO., North Topeka, Kans. Filed Oct. 20, 1923.

Particular description of goods.—Wheat Flour.
Claims use since Sept. 1, 1923.

Ser. No. 187,278. (CLASS 38. PRINTS AND PUBLICATIONS.) THE ALLIED GROCERS, INC., New York, N. Y. Filed Oct. 22, 1923.

The HOSTESS

Particular description of goods.—Title of a Monthly Publication.
Claims use since May 14, 1923.

Ser. No. 187,316. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SAMUEL B. JOHNSON, doing business as Herington Creamery Co., Herington, Kans. Filed Oct. 22, 1923.

prairie Gold

Particular description of goods.—Butter.
Claims use since Dec. 1, 1915.

Ser. No. 187,318. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) KIDDIE'S KARNIVAL CORPORATION, Eufaula, Ala. Filed Oct. 22, 1923.

KIDDIE'S KARNIVAL

Particular description of goods.—Miniature Theaters, Toy Figures, and Accessories Used in Connection Therewith.
Claims use since February, 1923.

Ser. No. 187,328. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) LYON & HEALY, INC., Chicago, Ill. Filed Oct. 22, 1923.

MARAVIGLIA

Particular description of goods.—Piano Keyboard Accordion.
Claims use since 1919.

Ser. No. 187,332. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) MAILOMETER COMPANY, Detroit, Mich. Filed Oct. 22, 1923.

MAIL-O-METER

Particular description of goods.—Combined Sealing and Stamping Machines and Sealing Machines.
Claims use since December, 1915.

Ser. No. 187,348. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) ROSS-TACONY CRUCIBLE COMPANY, Tacony, Philadelphia, Pa. Filed Oct. 22, 1923.

SYNCARB

Particular description of goods.—Refractory Crucibles and Their Parts.
Claims use since Aug. 30, 1923.

Ser. No. 187,395. (CLASS 15. OILS AND GREASES.) TIDE WATER OIL COMPANY, Bayonne, N. J., and New York, N. Y. Filed Oct. 23, 1923.

FORROL

Particular description of goods.—Lubricating Oils.
Claims use since Oct. 18, 1923.

Ser. No. 187,396. (CLASS 15. OILS AND GREASES.) TIDE WATER OIL COMPANY, Bayonne, N. J., and New York, N. Y. Filed Oct. 23, 1923.

VEEDOL FORROL

Particular description of goods.—Lubricating Oils.
Claims use since Oct. 18, 1923.

Ser. No. 187,409. (CLASS 2. RECEPTACLES.) JAMES R. ELLIS, Washington, D. C. Filed Oct. 24, 1923.

EVERHARD

Particular description of goods.—Shipping Containers for Ice Cream.
Claims use since Oct. 20, 1921.

Ser. No. 187,459. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAAS-LIEBER GROCERY COMPANY, St. Louis, Mo. Filed Oct. 25, 1923.

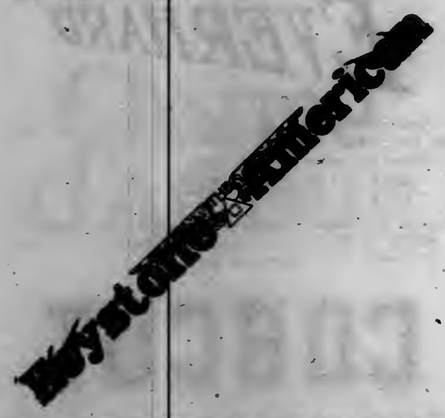
COBCUT

The mark consists of the letters forming the word "Cobcut," each of said letters being bordered by a gold margin.
Particular description of goods.—Canned Goods—Namely, Corn.
Claims use since Dec. 16, 1908.

Ser. No. 187,498. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE VAN IDERSTINE COMPANY, Long Island City, N. Y. Filed Oct. 25, 1923.

VICO

Particular description of goods.—Poultry Feed, Digester Tankage, and Raw-Bone Meal.
Claims use since September, 1922.



Ser. No. 187,505. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BRIDGETTS & CO., New York, N. Y. Filed Oct. 26, 1923.

FOX RIVER BRAND

No claim to the word "Brand" apart from the mark.
Particular description of goods.—Sun-Dried and Salt-Cured Codfish.
Claims use since Oct. 1, 1923.

Ser. No. 187,522. (CLASS 38. PRINTS AND PUBLICATIONS.) KEYSTONE AMERICAN, INC., Pittsburgh, Pa. Filed Oct. 26, 1923.

Particular description of goods.—The Title of a Newspaper.
Claims use since Oct. 4, 1923.

Ser. No. 187,576. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 27, 1923.

Marvona

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 1, 1923.

Ser. No. 187,587. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) NEV-A-HONE RAZOR STROP COMPANY, New York, N. Y. Filed Oct. 27, 1923.

"NEV-A-LOSE"

Particular description of goods.—Leather Key Purses, Leather Coin Purses, and Leather Wallets.
Claims use since May 1, 1923.

Ser. No. 187,638. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PROJECTION OPTICS CO. INC., Rochester, N. Y. Filed Oct. 29, 1923.

Super-Lite Lens

No claim is made to the word "Lens" apart from the mark as shown on the accompanying drawing.
Particular description of goods.—Projection Lenses.
Claims use since Oct. 13, 1922.

Ser. No. 187,663. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE L. D. CAULK COMPANY, Milford, Del. Filed Oct. 30, 1923.

"FREEPAS"

Particular description of goods.—Dental Instruments—viz, Pulp-Canal Explorers, Pulp-Canal Pluggers, Hatchet-Edge Picks, Apical Curettes, Barbed Broaches, Diagnostic Wires, Pulp Knives, and Depth Gauges.
Claims use since Sept. 29, 1923.

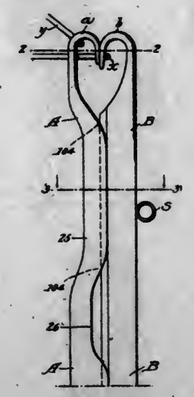
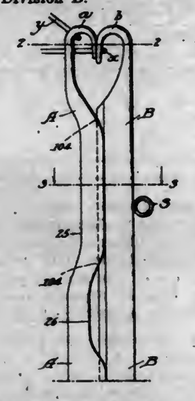
REISSUES



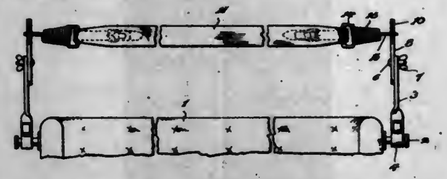
JANUARY 8, 1924.

15,739. BASKET-BALL GOAL INDICATOR. RICHARD JACKSON, Jr., San Francisco, Calif., assignor of one-third to Allyn R. Reese and one-third to James W. Douglas, both of Denver, Colo. Filed Feb. 20, 1922. Serial No. 538,119. Original No. 1,381,466, dated June 14, 1921, Serial No. 441,581, filed Feb. 1, 1921. 13 Claims. (Cl. 116—67.)



1. The combination with a basket ball basket comprising a ring and a basket depending therefrom, of a goal indicator having a frame secured to said ring, a gong on said frame, and a lever fulcrumed on the frame, one end of the lever extending into the basket and the other end being adapted to sound the gong.

15,740. KNITTING-MACHINE NEEDLE. ROBERT W. SCOTT, Babylon, N. Y. Filed Apr. 30, 1923. Serial No. 635,715. Original No. 1,385,929, dated July 26, 1921, Serial No. 378,233, filed May 1, 1920. 17 Claims. (Cl. 66—5.) Division A.

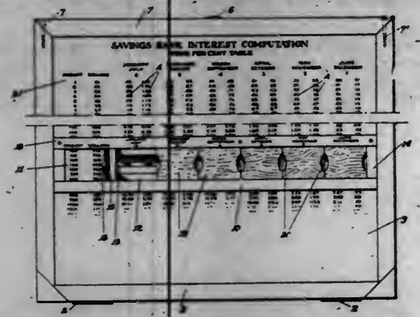


17. A knitting machine needle in two parts in sliding relation to each other and having return bend hooked operating ends with the open sides of the hooks facing each other without overlapping in the direction of the plane in which the hooks lie, and one hook adapted to enter a loop held by the other part, and take said loop from the latter.

15,741. KNITTING-MACHINE NEEDLE. ROBERT W. SCOTT, Babylon, N. Y. Filed Apr. 30, 1923. Serial No. 635,716. Original No. 1,385,929, dated July 26, 1921, Serial No. 378,233, filed May 1, 1920. 4 Claims. (Cl. 66—5.) Division B.

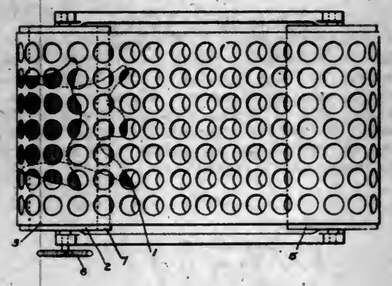
1. A knitting machine needle in two parts in sliding relation to each other, one of said parts having an offset 26 for the purpose of accommodating the old loop when said needle part is projected out of knitting position.

15,742. HEADREST FOR MOTORISTS. JOHN ICKENROTH, Richmond Heights, Mo. Filed June 1, 1923. Serial No. 642,855. Original No. 1,445,689, dated Feb. 20, 1923, Serial No. 534,169, filed Feb. 4, 1922. 4 Claims. (Cl. 155—174.)



2. A headrest for vehicle seats comprising supporting devices mounted at fixed points adjacent the ends and back of the seat and including bracket bars rising above and free of the ends and back of the seat and provided with series of notches in their upper end portions, a flexible head-supporting member disposed between the upper ends of said bracket bars, and elastic members carried by the ends of the head-supporting member and freely engageable in the notches in the bracket bars.

15,743. SAVINGS-BANK INTEREST INDICATOR. HARRY S. MOIR, Chico, Calif. Filed June 18, 1923. Serial No. 646,264. Original No. 1,383,227, dated June 28, 1921, Serial No. 384,037, filed May 25, 1920. 8 Claims. (Cl. 235—69.)



1. A savings account interest sheet comprising a pair of parallel amount dollars columns of numerals, the numerals of one column being differentiated from the numerals of the other column and the numerals of said

columns being in horizontal line, a plurality of parallel differentiated numeral columns parallel with said pair of columns, the numerals of the plural columns being in horizontal plane with each other and with the numerals of the pair of columns, the plural columns alternating with each other in differentiating numerals, said plural columns having the names of the months of a year as-

sembled at the head thereof, and a vertically movable slotted holder including a plurality of transversely movable gates, one gate adapted to serve as an indicator within the slot of said holder, said gates being adapted to be moved from one of the months columns to another according to the date of deposits and to provide for adjusting the indicator according to the amount.

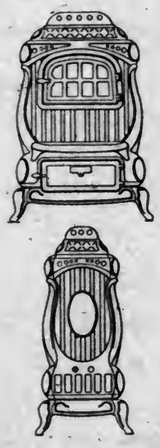
15,744. PROCESS OF GAUGING LEATHER. MARTIN H. REYMOND, Binghamton, N. Y. Filed Feb. 15, 1923. Serial No. 619,286. Original No. 1,437,683, dated Dec. 5, 1922, Serial No. 491,633, filed Aug. 11, 1921. 9 Claims. (Cl. 33—121.)

1. The process of determining the cutting quality of leather, consisting of, indicating over its surface regular-sized regularly-spaced areas, inspecting these areas in accordance with some fixed standard as to allowable imperfections, and, from the area of the leather and from the number of areas determined as the result of such inspection computing an index number as to the cutting quality.

DESIGNS

JANUARY 8, 1924.

63,706. PRINTED FABRIC. LEO BLUHM, New York, N. Y., assignor to Phoenix Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed July 5, 1923. Serial No. 6,680. Term of patent 3½ years.

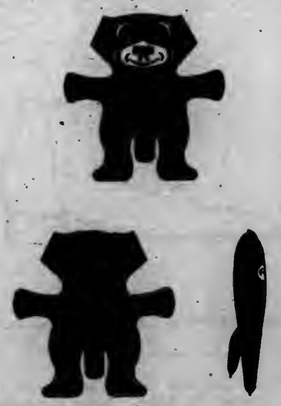


The ornamental design for a printed fabric substantially as shown and described.

63,707. RIBBON OR SIMILAR ARTICLE. OLIVE BUSHNELL, New York, N. Y., assignor to Johnson-Cowdin-Emmerich, Inc., New York, N. Y., a Corporation of New York. Filed June 6, 1923. Serial No. 6,424. Term of patent 3½ years.

The ornamental design for a ribbon or similar article substantially as shown.

63,708. COAL HEATER. LESLIE DANA, St. Louis, Mo. Filed Oct. 2, 1923. Serial No. 7,379. Term of patent 14 years.

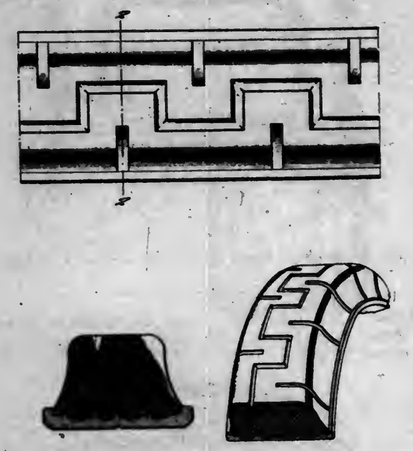


The ornamental design for a coal heater, as shown.

63,709. FANCY BAG. HETTIE J. DUDLEY, Richmond, Va. Filed Apr. 7, 1923. Serial No. 5,717. Term of patent 14 years.

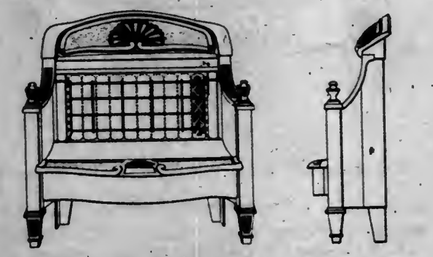
The ornamental design for fancy bag as shown.

63,710. DOLL. MICHAEL JOHN DUFF, Bridgeport, Conn. Filed Nov. 4, 1922. Serial No. 4,220. Term of patent 3½ years.



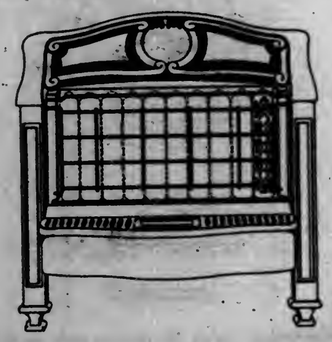
The ornamental design for a doll, as shown.

63,711. FINGER RING OR ARTICLE OF SIMILAR NATURE. LOUIS FIEDLER, New York, N. Y., assignor to Benjamin Gross Company, Inc., New York, N. Y., a Corporation of New York. Filed July 28, 1923. Serial No. 6,888. Term of patent 3½ years.



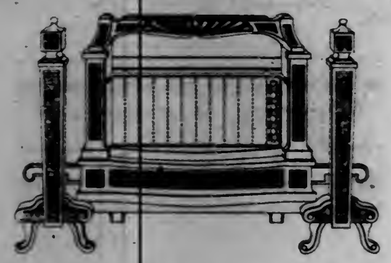
The ornamental design for a finger ring or article of similar nature as shown.

63,712. SOLID TIRE. FRED D. FOWLER, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Company of Massachusetts. Filed Oct. 25, 1923. Serial No. 7,584. Term of patent 14 years.



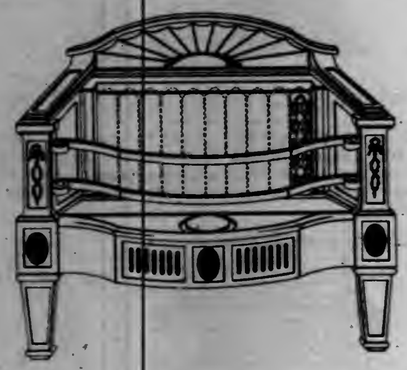
The ornamental design for a solid tire as shown.

63,713. GAS HEATER. JOHN H. GRAYSON, Athens, Ohio, assignor to The J. H. Grayson Manufacturing Company, Athens, Ohio, a Corporation of Ohio. Filed Aug. 1, 1923. Serial No. 6,919. Term of patent 14 years.



The ornamental design for a gas heater, as shown.

63,714. GAS HEATER. JOHN H. GRAYSON, Athens, Ohio. Filed Aug. 6, 1923. Serial No. 6,946. Term of patent 14 years.



The ornamental design for a gas heater, as shown.

63,715. GAS HEATER. JOHN H. GRAYSON, Athens, Ohio. Filed Aug. 3, 1923. Serial No. 6,947. Term of patent 14 years.

The ornamental design for a gas heater, as shown.

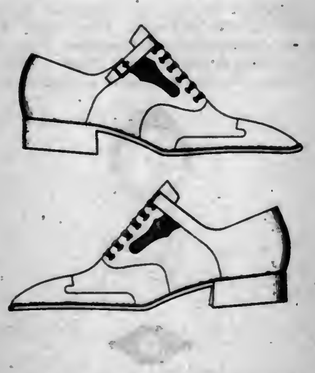
63,716. GAS HEATER. JOHN H. GRAYSON, Athens, Ohio. Filed Aug. 3, 1923. Serial No. 6,948. Term of patent 14 years.

The ornamental design for a gas heater, as shown.

63,717. COVERED DISH. MARK A. HALEY, Syracuse, N. Y., assignor to Onondaga Pottery Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 29, 1922. Serial No. 4,438. Term of patent 14 years.

The ornamental design for covered dish, substantially as shown.

63,718. SHOE. EUGENE KEZY, Chicago, Ill. Filed Aug. 4, 1922. Serial No. 3,288. Term of patent 7 years.

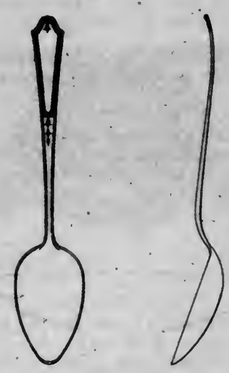


The ornamental design for a shoe, as shown.

63,719. SHOE. EUGENE KEZY, Chicago, Ill. Filed Aug. 4, 1922. Serial No. 3,289. Term of patent 7 years.

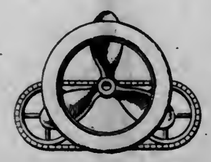
The ornamental design for a shoe, as shown.

63,720. SHOE. EUGENE KEZY, Chicago, Ill. Filed Aug. 4, 1922. Serial No. 3,290. Term of patent 7 years.



The ornamental design for a shoe, as shown.

63,721. SHOE. EUGENE KEZY, Chicago, Ill. Filed Aug. 4, 1922. Serial No. 3,292. Term of patent 7 years.



The ornamental design for a shoe, as shown.

63,722. SPOON OR SIMILAR ARTICLE. ALFRED G. KINTZ, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Jan. 23, 1923. Serial No. 4,972. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

63,723. SIGN OR SIMILAR ARTICLE. PAUL B. LUM, Washington, D. C., assignor to Washington Automotive Trade Association, Washington, D. C., an Association of the District of Columbia. Filed Dec. 29, 1922. Serial No. 4,748. Term of patent 14 years.

The ornamental design for sign or similar article, as shown.

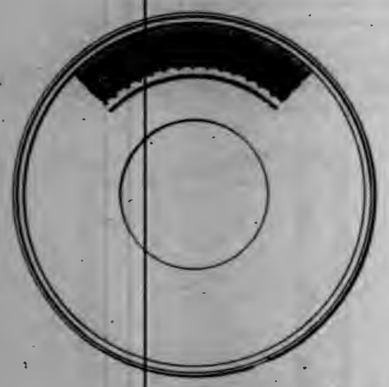
63,724. BOTTLE. WILLIAM BAIRD MARBLE, Los Angeles, Calif., assignor to Federal Glass Company, a Copartnership of California. Filed Aug. 28, 1923. Serial No. 7,111. Term of patent 14 years.

The ornamental design for a bottle, as shown.

63,725. SHIELD FOR ELECTRIC-LAMP SOCKET. PAUL MOHRMANN, Chicago, Ill., assignor to Friedley Voshardt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1923. Serial No. 5,449. Term of patent 7 years.

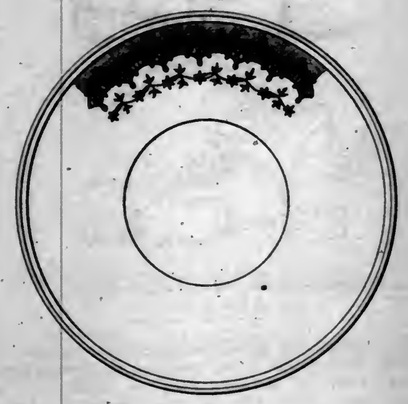
The ornamental design for a shield for electric lamp socket, as shown.

63,726. CABINET. EDMUND MORRIS, Grand Rapids, Mich. Filed Sept. 27, 1921. Serial No. 503,617. Term of patent 3½ years.



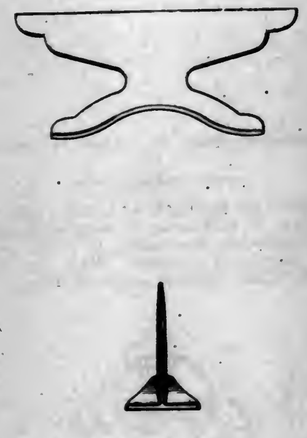
The ornamental design for a cabinet, as shown.

63,727. CABINET. EDMUND MORRIS, Grand Rapids, Mich. Filed Sept. 27, 1921. Serial No. 503,618. Term of patent 3½ years.



The ornamental design for a cabinet as shown.

63,728. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1922. Serial No. 4,528. Term of patent 7 years.

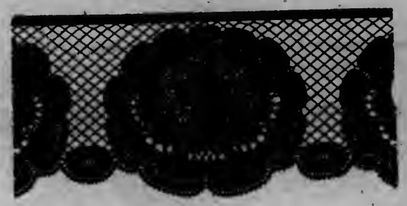


The ornamental design for a plate or analogous article, substantially as shown and described.

63,729. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1922. Serial No. 4,529. Term of patent 7 years.

The ornamental design for a plate or analogous article substantially as shown and described.

63,730. DISPLAY REST FOR SHOES OR THE LIKE. HENRY J. NUTRIZIO, New York, N. Y. Filed Apr. 12, 1922. Serial No. 1,695. Term of patent 3½ years.



The ornamental design for a display rest for shoes or the like as shown.

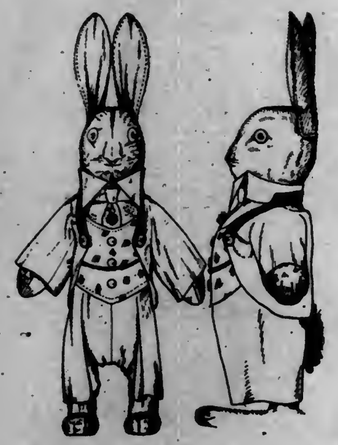
63,731. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed July 19, 1923. Serial No. 6,809. Term of patent 14 years.

The ornamental design for lace substantially as shown.

63,732. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 9, 1923. Serial No. 6,989. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

63,733. RIBBON OR SIMILAR ARTICLE. ANTONIO PETRUCCELLI, New York, N. Y., assignor to Johnson-Cowdin-Emmerich, Inc., New York, N. Y., a Corporation of New York. Filed June 6, 1923. Serial No. 6,426. Term of patent 3½ years.

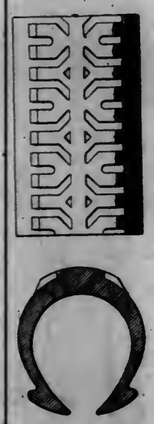


The ornamental design for a ribbon or similar article substantially as shown.

63,734. PERFUME BOTTLE. LOUIS PHILIPPE, New York, N. Y. Filed Aug. 31, 1923. Serial No. 7,130. Term of patent 3½ years.

The ornamental design for a perfume bottle as shown.

63,735. TOY RABBIT. LOLA L. PRIBBLE, Twin Falls, Idaho. Filed Apr. 1, 1922. Serial No. 1,486. Term of patent 7 years.

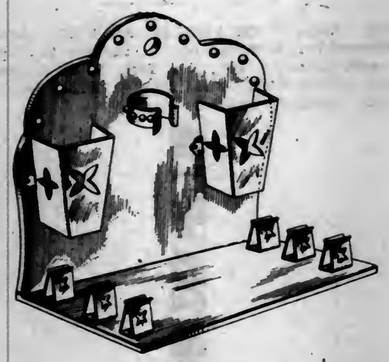


The ornamental design for a toy rabbit as shown.

63,736. CANDLESTICK. ALFRED E. REYNOLDS, Danbury, Conn. Filed Oct. 2, 1923. Serial No. 7,880. Term of patent 3½ years.

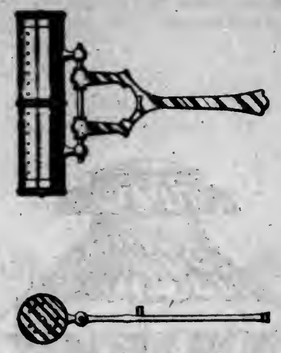
The ornamental design for a candlestick as shown.

63,737. TIRE TREAD. THOMAS G. RICHARDS, Spokane, Wash. Filed Apr. 27, 1923. Serial No. 5,971. Term of patent 7 years.



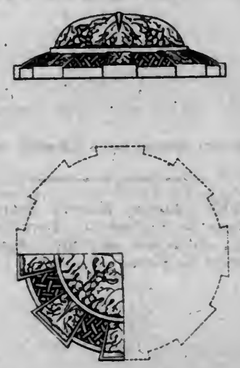
The ornamental design for a tire tread, as shown.

63,738. TIRE. JOHN A. SCHEID, Roxborough, Pa. Filed June 26, 1922. Serial No. 2,829. Term of patent 14 years.



The ornamental design for a tire as shown.

63,739. HOLDER FOR TOILET ARTICLES. HARRY L. SCHROEDER, Aspinwall, Iowa. Filed June 7, 1923. Serial No. 6,438. Term of patent 7 years.

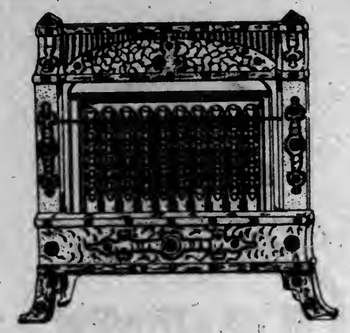


The ornamental design for a holder for toilet articles, as shown.

63,740. CONDIMENT HOLDER. LORENZO D. SCOTT, East Machias, Me. Filed Oct. 4, 1923. Serial No. 7,391. Term of patent 3½ years.

The ornamental design for a condiment holder, as shown.

63,741. PEDESTAL BASE, LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Mfg. Company, a Corporation of Illinois. Filed Sept. 14, 1923. Serial No. 7,201. Term of patent 3½ years.

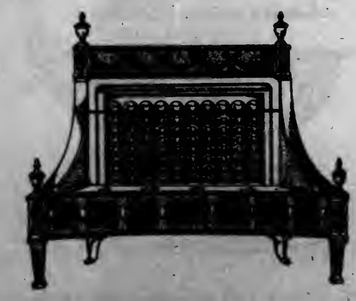


The ornamental design for a pedestal base as shown.

63,742. LACE. BARNET SHAPIRO, Brooklyn, N. Y. Filed June 4, 1923. Serial No. 6,879. Term of patent 7 years.

The ornamental design for lace, as shown.

63,743. GAS HEATER. ALEXANDER B. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 5,599. Term of patent 7 years.



The ornamental design for a gas heater, as shown.

63,744. GAS HEATER. ALEXANDER B. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 5,600. Term of patent 7 years.

The ornamental design for a gas heater, as shown.

63,745. GAS HEATER. ALEXANDER B. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 5,601. Term of patent 7 years.

The ornamental design for a gas heater, as shown.

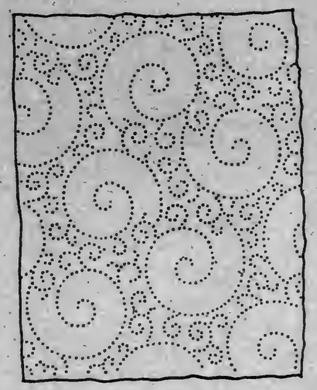
63,746. HUMIDOR. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Herbert A. Hover, Lewistown, Mont. Filed July 16, 1923. Serial No. 6,786. Term of patent 14 years.

The ornamental design for a humidor, as shown.

63,747. HUMIDOR. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Herbert A. Hover, Lewiston, Mont. Filed July 19, 1923. Serial No. 6,803. Term of patent 14 years.

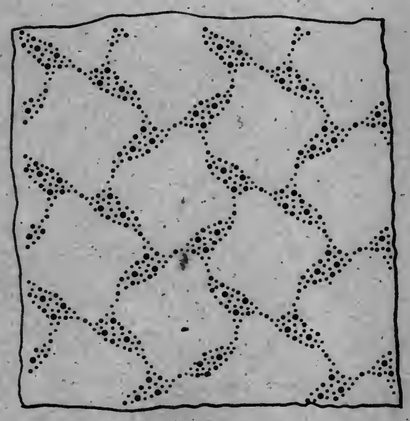
The ornamental design for a humidor, as shown.

63,748. HUMIDOR. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Herbert A. Hover, Lewistown, Mont. Filed July 19, 1923. Serial No. 6,804. Term of patent 14 years.



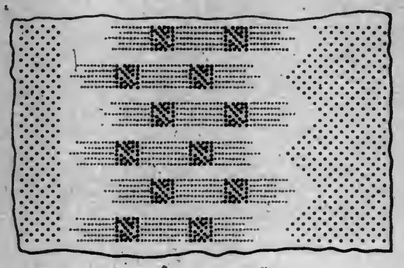
The ornamental design for a humidor as shown.

63,749. CHAIR. ALFRED HORNER STRINGS, Chicago, Ill., assignor to Commercial Furniture Company, Chicago, Ill. Filed Jan. 20, 1923. Serial No. 4,946. Term of patent 3½ years.



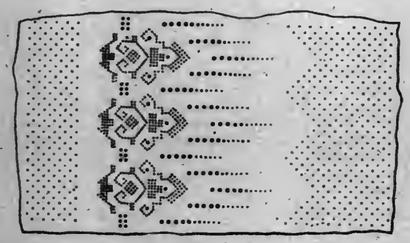
The ornamental design for a chair, as shown.

63,750. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 18, 1922. Serial No. 3,412. Term of patent 3½ years.



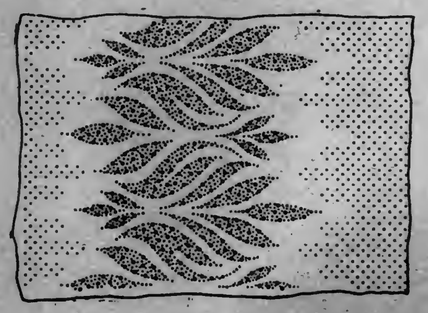
The ornamental design for flocked voile fabric, as shown.

63,751. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 18, 1922. Serial No. 3,423. Term of patent 3½ years.



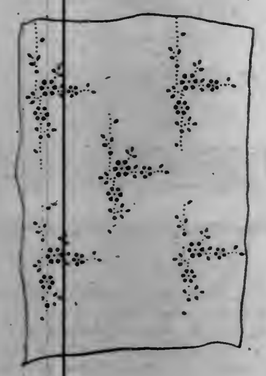
The ornamental design for flocked voile fabric, as shown.

63,752. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1923. Serial No. 7,056. Term of patent 3½ years.



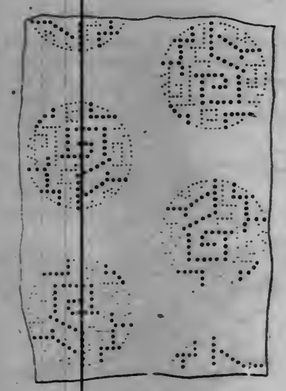
The ornamental design for flocked voile fabric, as shown.

63,753. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1923. Serial No. 7,057. Term of patent 3½ years.



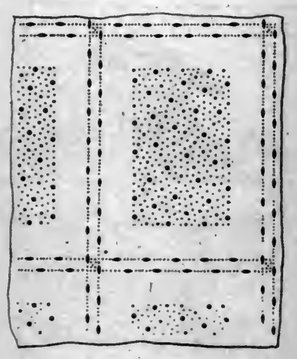
The ornamental design for flocked voile fabric, as shown.

63,754. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1923. Serial No. 7,058. Term of patent 3½ years.



The ornamental design for flocked voile fabric, as shown.

63,755. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 7,236. Term of patent 3½ years.

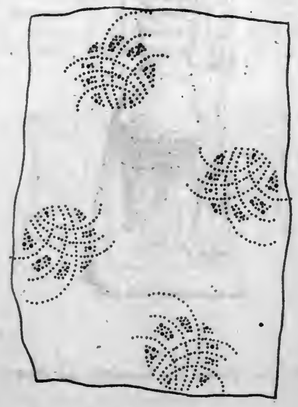


The ornamental design for flocked voile fabric, as shown.

63,756. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 7,237. Term of patent 3½ years.

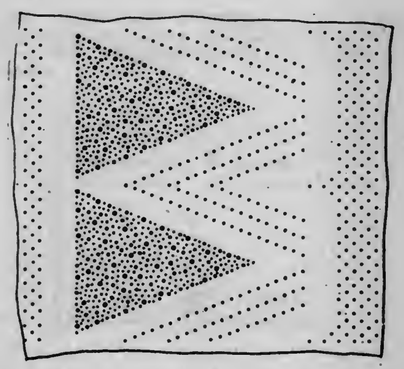
The ornamental design for flocked voile fabric, as shown.

63,757. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 7,238. Term of patent 3½ years.



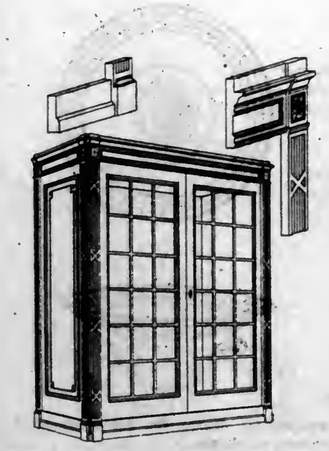
The ornamental design for flocked voile fabric, as shown.

63,758. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 7,239. Term of patent 3½ years.



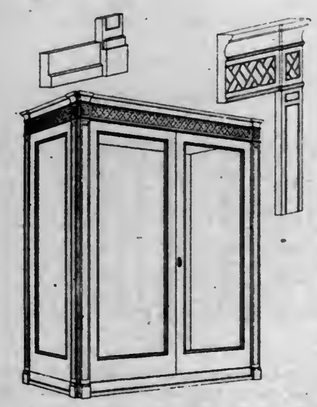
The ornamental design for flocked voile fabric, as shown.

63,759. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 7,240. Term of patent 3½ years.



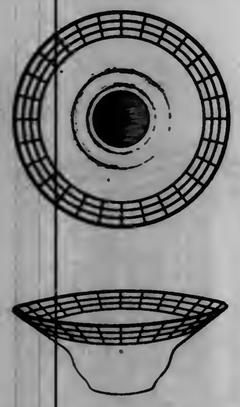
The ornamental design for flocked voile fabric, as shown.

63,760. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 7,243. Term of patent 3½ years.



The ornamental design for flocked voile fabric, as shown.

63,761. CABINET. KENNETH WELCH, Grand Rapids, Mich. Filed Sept. 27, 1921. Serial No. 503,619. Term of patent 3½ years.



The ornamental design for a cabinet, as shown.

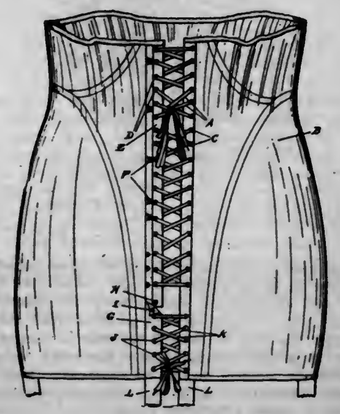
63,762. CABINET. KENNETH WELCH, Grand Rapids, Mich. Filed Sept. 27, 1921. Serial No. 503,620. Term of patent 3½ years.

The ornamental design for a cabinet, as shown.

63,763. ORNAMENTAL BOWL OR SIMILAR ARTICLE. CHARLES H. WEBB, Pittsburgh, Pa., assignor to Westmoreland Specialty Company, Grapeville, Pa., a Corporation of Pennsylvania. Filed Jan. 19, 1922. Serial No. 262. Term of patent 3½ years.

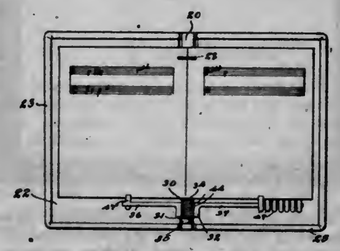
The ornamental design for an ornamental bowl or similar article, as shown.

63,764. STATUE. LEE WOODWARD ZEIGLER, New Windsor, Newburgh, N. Y. Filed Mar. 21, 1923. Serial No. 5,552. Term of patent 3½ years.



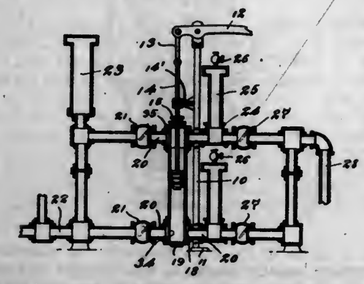
The ornamental design for a statue, as shown.

PATENTS



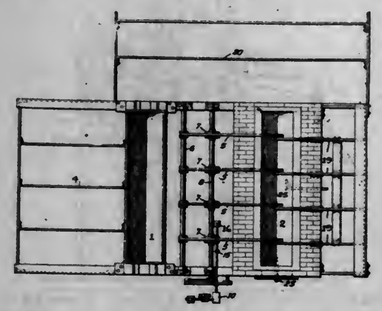
GRANTED JANUARY 8, 1924.

1,479,780. CORSET. WILLIAM F. ALBERT, Detroit, Mich., assignor to American Lady Corset Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 24, 1919. Serial No. 284,811. 3 Claims. (Cl. 2—74.)



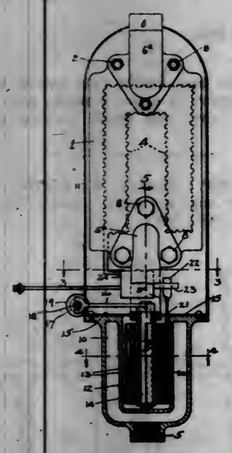
3. A corset comprising a body member having adjacent vertical edges at the front thereof, a strip detachably secured to one of said edges, a lacing connecting said strip to the other of said edges, a flap projecting from the edge to which said strip is detachably secured, said flap forming an extension of said strip beneath the same, means detachably engaging the upper edge of said flap with the lower edge of said strip, and hose supporting members attached to said flap and to the corresponding opposed edge portion of the body member.

1,479,781. MUSIC-LEAF TURNER. ALIPIO C. BARTHOLO and MANUEL PERRY, New Bedford, Mass. Filed Feb. 15, 1921. Serial No. 445,124. 2 Claims. (Cl. 84—489.)



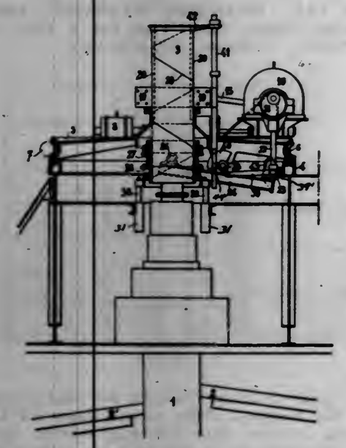
1. In a music-leaf turner, a back element comprising a tube rectangular in cross section, music retaining means on the front thereof, the front part of the tube at the lower end being turned outwardly to form an upper pivot ear, the rear part of said tube being turned in a similar direction at a lower level to form a lower pivot ear, the sides of said tube being extended a distance below the last named ear, means engaged with the tube to support it above a music rest, a pintle engaged in said ears, and music turning arms pivoted thereon.

1,479,782. PUMP. ELBERT W. BARTON, Binghamton, N. Y. Filed Aug. 24, 1921. Serial No. 494,997. 1 Claim. (Cl. 103—216.)



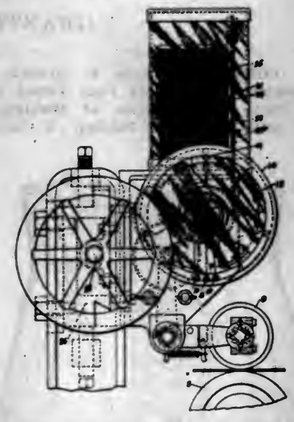
In a pump for liquids, a cylinder mounting including end fittings fixedly connected, a cylinder mounted therein in removable inserted relation, at least one of the fittings having an opening therethrough receiving the cylinder slidably therethrough, a cap member screwed into the outer side of the opening and against the end of the cylinder for retention and support thereof, a lateral conduit connection being provided on the fitting, communication being formed between the connection and the interior of the cylinder.

1,479,783. SOLDERING APPARATUS. FRANK F. BENTLEY, Warren, Ohio. Filed Dec. 3, 1921. Serial No. 519,571. 9 Claims. (Cl. 113—78.)



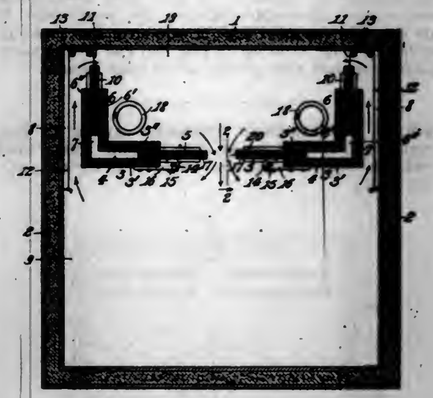
1. In apparatus of the character described in combination, a flux trough, a solder pot and means for heating the same, parallel ways extending between the flux trough and solder pot to support a can while it is slid from the trough to the pot arranged to guide the can to soldering position over the soldering pot with a joint down, and means under control of the operator for causing a relative movement between the ways and solder pot to bring the same together to dip the can joint into the solder.

1,479,784. THERMOSTATIC CONTROL DEVICE. CYRUS M. BOSWORTH, Lakewood, and ALOYSIUS G. BOSSEL, Cleveland Heights, Ohio. Filed Aug. 23, 1920. Serial No. 405,530. 5 Claims. (Cl. 297—16.)



4. In a device of the class described, the combination of a suitable chamber having a well adapted to contain a body of liquid, a spindle vertically mounted in said well, a thermo-sensitive element consisting of a sheet-metal coil attached at its inner end to said spindle, and a bar attached to the outer end of said coil, one such end of said coil being normally held stationary and the other being free to move, the length of said coil axially being greater than its width.

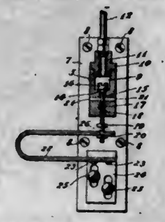
1,479,785. HELICAL-HEARTH FURNACE. EMILE BRACQ-LAURENT, Paris, France. Filed Apr. 20, 1922. Serial No. 555,755. 5 Claims. (Cl. 259—144.)



1. In a furnace with a helical hearth having a central shaft, a rotating platform, and scraper arms, means producing the angular movement and the up and down movement of the central shaft, comprising a single spindle driven by an electric motor mounted on the rotating platform of the furnace.

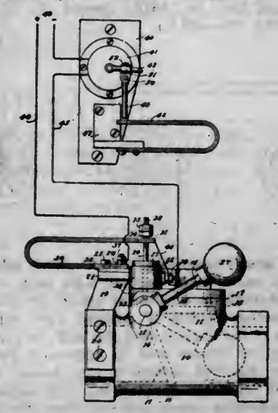
1,479,786. PROCESS OF PAPER MANUFACTURING. EDWARD H. BUTTERFIELD and FERDINAND D. OTTENBEIN, Middletown, Ohio, assignors to Tom Harvey, jr., Middletown, Ohio. Filed May 12, 1919. Serial No. 296,668. 9 Claims. (Cl. 92—46.)

1. The herein described process of paper manufacturing consisting in delivering the raw material to the wet end of the machine in substantially the quantity required to form a paper web of predetermined thickness, in causing the web so formed to come in contact with a metering instrument to actuate the same to produce indications to make a record of the mean thickness of the paper showing the plus and minus variations therefrom and to cause automatic regulation of its thickness.



1,479,787. REFRIGERATOR. WILLIAM M. CLEMANS, Wheeling, W. Va. Filed Feb. 14, 1921, Serial No. 444,957. Renewed June 25, 1923. 5 Claims. (Cl. 62—96.)

1. In a refrigerator, a casing, companion decks partially separating the interior of the casing into an upper cooling chamber and a lower storage chamber, said decks being relatively spaced to provide an intermediate air circulation passage between said chambers, said decks being also spaced from the opposite side walls of said casing to provide side passages, bridges superposed on said decks and spaced from the top of the casing to form intermediate passages, panels slidably disposed within said decks and adapted for movement toward and away from each other for closing or partially closing said

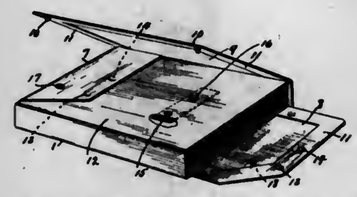


intermediate passage, and panels slidably disposed within said bridges and adapted for movement toward and away from the top of said casing for closing or partially closing said intervening passages.

1,479,788. FIRE EXTINGUISHER. GEORGE W. COLLIN, Bridgeport, Conn. Filed Mar. 10, 1922. Serial No. 542,560. 3 Claims. (Cl. 169—19.)

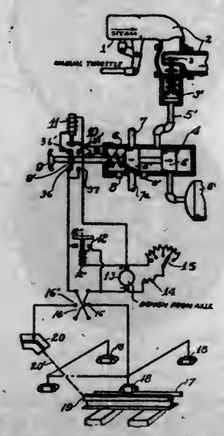
1. In a fire extinguisher, the combination with a base plate and chambered body portion having inlet and outlet ports, said outlet port having a valve seat, a valve normally engaging said seat and covering the outlet and provided with an external stem portion carrying longitudinally spaced apart stops, a resilient U-shaped thermo-plate secured at one end to the base plate and having its free end positioned intermediate said stops, being normally spaced from the innermost stop and engaging the outermost stop under pressure to yieldingly maintain the valve on its seat, and adapted to engage the innermost stop to raise the stem and its valve upon a predetermined expansion of said thermo-plate.

1,479,789. AUTOMATIC VALVE CUT-OFF. GEORGE W. COLLIN, Bridgeport, Conn. Filed May 31, 1922. Serial No. 564,692. 7 Claims. (Cl. 137—161.)



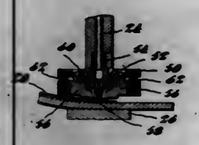
6. In combination, a valve, a thermostat having a movable part and adapted to cause the operation of the valve at a predetermined temperature, a high tension circuit connected to said thermostat and including a severable connection with said movable part, whereby a predetermined movement of said part will sever the connection and break the circuit, a switch in said circuit, and heat-sensitive means adapted to operate said switch at a predetermined temperature.

1,479,790. EVAPORATION-PREVENTING MANTLE. ALEX B. DAVIS, Cincinnati, Ohio, assignor of one-half to George Chamberlain, Decatur, Ill. Filed May 19, 1923. Serial No. 640,273. 7 Claims. (Cl. 23—11.)



1. A foam mantle for the purpose described, formed by a blown mixture of a starch sugar, a hygroscopic salt, and a glycol.

1,479,791. SLIP-ON COVER FOR BOOKS AND THE LIKE. GUSTAV DEGENRING, Elizabeth, N. J. Filed June 15, 1922. Serial No. 568,380. 4 Claims. (Cl. 281—34.)



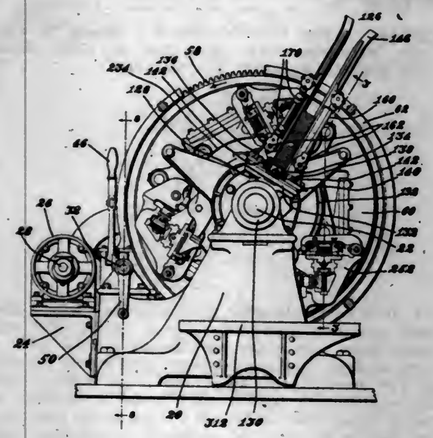
4. As an article of manufacture, a slip-on cover of extensible water-proof material provided with a pocket in one side thereof for receiving one cover of a book, foldable flaps at the other side of the slip-on cover adapted to be folded over upon each other to form another pocket for the other cover of the book, snap-fasteners for holding the flaps in this position, reinforcing means for securing the fasteners to the cover, said flaps being so disposed relatively to each other as to enable the same to be folded over about the book to entirely enclose the same and snap-fasteners for holding the flaps in this position.

1,479,792. ELECTRIC AUTOMATIC TRAIN-STOP SYSTEM. FRANK E. DELVIN, Leslie, Mich., and RAY B. DELVIN, Evanston, Ill. Filed Nov. 7, 1921. Serial No. 513,370. 3 Claims. (Cl. 246—67.)

1. Automatic stopping means for railway trains, comprising a pair of conductors disposed along the track, and on each train a direct current generator the speed and voltage of which varies with the train speed, brake applying means responsive to electric current, a reversing switch arranged to control the polarity of connections to said conductors, a switch normally open in use and responsive to decrease in voltage to short the circuit leading to said conductors, and circuit means connecting said generator, brake applying means, reversing switch and conductors in series.

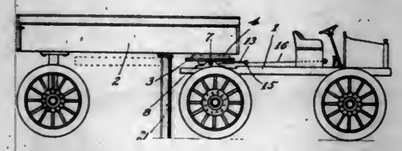
1,479,793. MACHINE FOR INSERTING FASTENINGS. ALBIN C. EEK, Webster Groves, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 15, 1920. Serial No. 424,242. 24 Claims. (Cl. 1—5.)

8. In a machine for operating on perforated articles and comprising a tack-driving plunger and track-feeding means, a device to receive tacks from said means and position them below said plunger, said device having projections to enter the perforations to center them below tacks to be driven therethrough, and being constructed and arranged to withdraw the projections as the tacks are driven.



1,479,794. PHONOGRAPH-RECORD DEVICE. VICTOR H. EMERSON, New York, N. Y., assignor to Kiddie Rekord Company, Inc., Plainfield, N. J., a Corporation of New Jersey. Filed Nov. 27, 1922. Serial No. 603,587. 3 Claims. (Cl. 35—12.)

1. An educational and entertaining device for children comprising a pictorially corelated series of sound record discs each having upon one face a sound record of selected subject matter and a pictorial representation of subject matter common to all the members of the series, and upon the reverse face a pictorial illustration of the action of the subject matter recorded upon the first mentioned face.

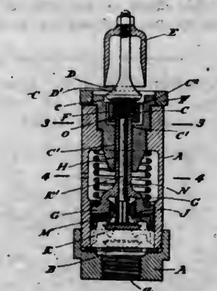


1,479,795. COMPRESSING MACHINE. CLYDE L. KNOTT and EDWARD ERICKSON, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 24, 1920. Serial No. 405,590. 27 Claims. (Cl. 12—48.)

3. A compressing machine having a mold carrier, a plurality of compressing molds upon the carrier, mechanism upon the carrier for feeding blanks to the molds in succession, a blank magazine, and means for removing

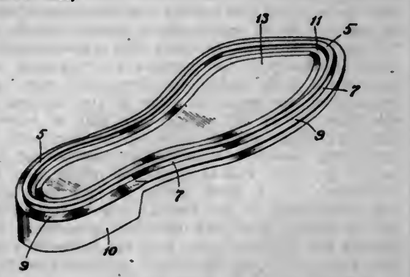
blanks successively from the magazine and transferring them to the feeding mechanism.

1,479,796. TRAILER COUPLING DEVICE. JOHN C. ENDEBROCK, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 24, 1919. Serial No. 332,995. 6 Claims. (Cl. 280—33.1.)



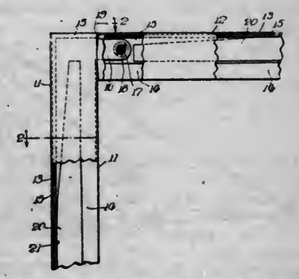
1. A fifth wheel comprising two sections, said sections having plane surfaces in contact with each other, and being non-rotatable in horizontal planes on their mountings, one section having a guiding jaw, and pivoted coupler jaws at the apex of said jaw and the center of the plate adapted to release and to enclose a post on the other section, the first section having means to be controlled by an operator for locking and unlocking said jaws into and from closed position over the post.

1,479,797. CONSTRUCTION OF AUTOMATIC PRESSURE ALARM. FRANK MONTAGUE EVELEIGH, Auckland, New Zealand. Filed July 11, 1922. Serial No. 574,161. 3 Claims. (Cl. 116—70.)



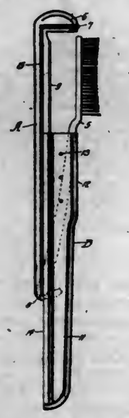
1. A pressure alarm comprising a cylinder adapted to be connected at its inner end to the pressure system, a plug closing the outer end of the said cylinder, and formed with a central bore extending through it and with radial bores opening from the side of the central bore and then extending out through the said plug, a whistle device mounted at the outer end of the central bore and on to which the said ports open, a piston movably mount in the said cylinder and being under the pressure of the system, a spring controlling said piston and adapted to move it inwards when the said pressure falls below

a predetermined amount, and a hollow sleeve attached to the outer side of said piston opening through the piston, and fitting the bore in the said plug, adapted to close



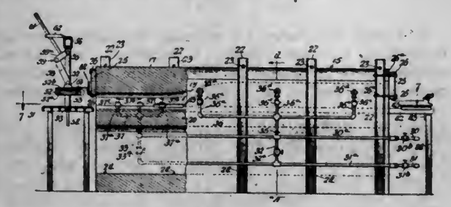
the said port openings when the said piston moves outward and to uncover them when the piston moves inwards.

1,479,798. RUBBER SOLE. GEORGE FERGUSON, Wollaston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 28, 1920. Serial No. 362,055. 2 Claims. (Cl. 36—18.)



2. A molded and vulcanized one-piece sole and heel adapted to be incorporated in a turned shoe, comprising a sewing rib projecting from the upper face of the sole, a feather located outside the rib and a gutter located inside the rib, the feather around the forepart of the sole being substantially at right angles to the outer wall of the rib and around the heel portion being inclined downwardly away from the base of the rib.

1,479,799. WINDOW SASH. GEORGE H. FORSYTH, Chicago, Ill. Filed Aug. 15, 1919. Serial No. 317,644. 11 Claims. (Cl. 20—56.)

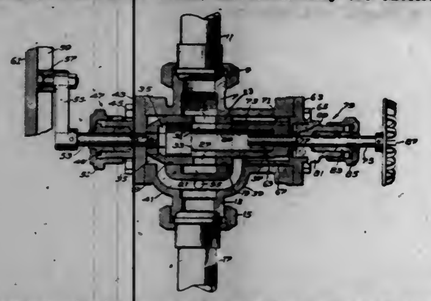


1. In a sash, the combination of stiles and rails connected for relative angular movement, and sheet supporting members fulcrumed intermediate their lengths on the stiles and rails whereby to provide an angular adjustability of the sheet relative to the sash in the plane of the opening.

1,479,800. TOOTHBRUSH CASE. MAX FELDSTEIN, Chicago, Ill. Filed Feb. 21, 1921. Serial No. 446,679. 8 Claims. (Cl. 206—15.1.)

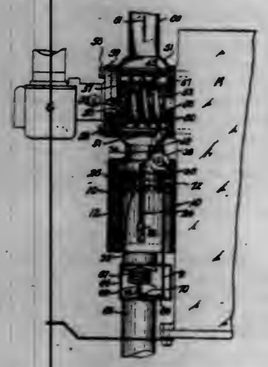
1. A tooth brush case comprising an elongated formed sheet metal body member having turned up sides and ends one of the latter extending up beyond the sides so as to form an open L-shaped body, and a formed sheet metal cover slidably attached to the body open at one end to abut the extending end of the body, shaped to conform to and enclose the brush end of a tooth brush and tapering down to a closed narrow other end to abut the body member to close the same, said cover being grooved along its sides and frictionally engaging under tension cooperating slides on the body member to permit slidably opening and closing the cover.

1,479,801. PROCESS FOR MAKING GLASS PLATE LETTERS. ADOLPH W. GAST, Chicago, Ill., assignor to Chicago Miniature Lamp Works, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1922. Serial No. 575,145. 9 Claims. (Cl. 49—84.)



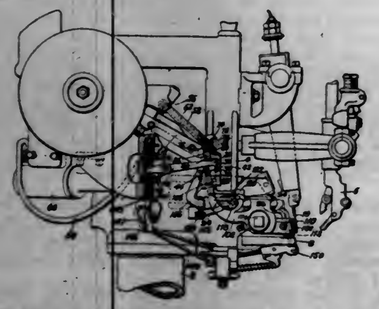
1. The process of making glass-letter-plates which consists in heating a glass blank together with a supporting plate, with the glass blank supported upon but spaced above the surface of the supporting plate by small fragments placed at intervals between the blank and plate, the heat being applied until the glass blank becomes pliable and workable under pressure against a die, and in then subjecting the glass blank to pressure against a die to form the letter, character, or other device in the letter plate.

1,479,802. VALVE. EVERETT B. GLENDENNING, Boston, Mass., assignor to McTarnahan Fuel Oil Burning Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1923. Serial No. 615,572. 12 Claims. (Cl. 277—32.)



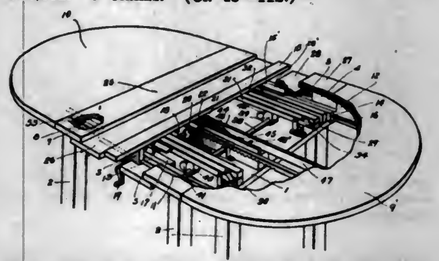
5. A valve comprising a casing having an inlet and an outlet, a pair of telescoping sleeves mounted in said casing having registering ports, means for imparting rotative adjustment to one of the sleeves to vary the

effective openings of said ports, and means longitudinally to adjust the other sleeve, further to vary the effective



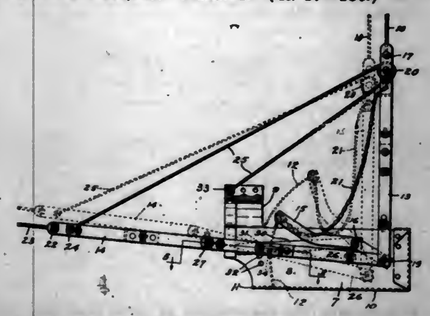
openings of said ports, said casing and the sleeves being constructed and arranged to permit fluid to press equally throughout the circumference of said sleeves.

1,479,803. FUEL CONDITIONER FOR INTERNAL-COMBUSTION ENGINES. FRANK C. GOFF, Denver, Colo. Filed Jan. 10, 1921. Serial No. 436,880. 15 Claims. (Cl. 123—25.)



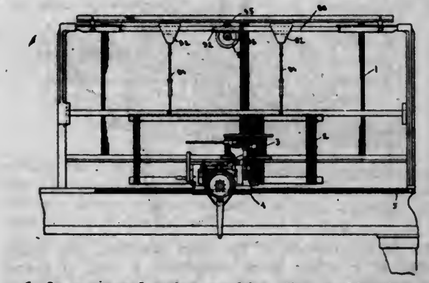
1. A fuel conditioner for internal combustion engines comprising a water supply, a vaporizer, and means adapted to be controlled by the pressure of the exhaust gases of the engine for feeding water to the vaporizer.

1,479,804. FASTENING-HANDLING MECHANISM. JOSEPH GOULDBOURN and WILFRID THOMAS MINETT, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 3, 1920. Serial No. 421,496. 44 Claims. (Cl. 1—6.)



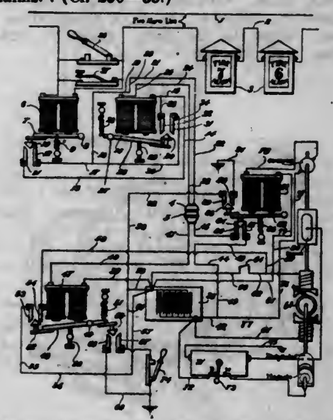
1. In a machine of the class described, the combination with means under the operator's control to separate in each cycle either one or a plurality of fastenings, separate conduits for the fastenings, and means utilizing compressed air to transfer the fastenings, of means for concentrating the effect of the air in the conduit or conduits having therein a fastening or fastenings to be transferred.

1,479,805. EXTENSION TABLE. ELDON A. GUTRIDGE, Ottawa, Kans. Filed Apr. 26, 1922. Serial No. 556,601. 6 Claims. (Cl. 45—112.)



1. An extension table comprising a base board, rigid side bars carried by the base board and having recesses intermediate their ends, oppositely movable table top members supported by the base board and in guiding relation with the side bars, a transverse shaft journaled on the base board and having a pinion thereon, means for turning the shaft, two rack bars carried by the oppositely slidable table top members and engaging the top and bottom of the pinion respectively, two pairs of table leaves lying one upon the other in the recesses of the side bars, means for raising each pair of leaves into the plane of the slidable table top members, said means comprising elevators consisting of bars linked one on top of the other and in pairs, one of the bars having a vertical slot, a shaft carried by the base board, a star wheel rigid on the shaft, a bar movable with one of the slidable table top members, projections on the slidable bar for contacting with the projections on the star wheel to rotate the second mentioned shaft, pairs of cams on the second mentioned shaft, one cam of each pair being of sufficient width to bridge the slot in the lower elevator bar, and the other cam being at an angle thereto and of width sufficient to pass through the slot to raise the upper bar of each pair, and means for actuating the first mentioned shaft.

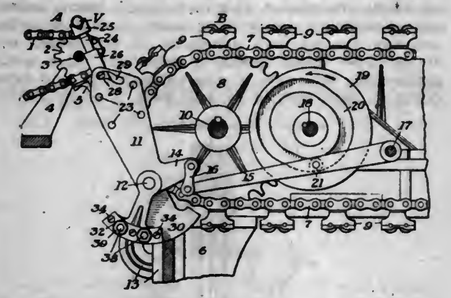
1,479,806. EXCAVATING APPARATUS. CHRISTIAN L. HANSEN and EDWARD H. PEER, Charles City, Iowa; said Peer assignor to said Hansen. Filed May 4, 1923. Serial No. 636,549. 7 Claims. (Cl. 37—136.)



1. An excavator comprising a drag bucket, a front drop-gate therefor having lever arms pivotally connected with the sides of the bucket, and a hoisting bail and a hauling bail which are pivotally connected with the lever arms.

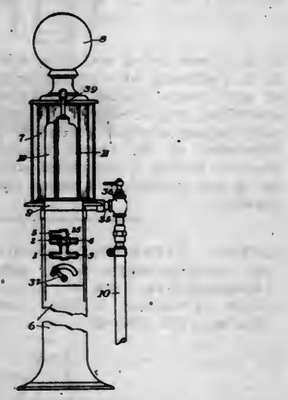
1,479,807. WARP-DRAWING MACHINE. EDGAR F. HATHAWAY, Dorchester, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 25, 1918. Serial No. 224,431. 8 Claims. (Cl. 28—44.)

1. In a warp-drawing machine, the combination with harness-supporting bars 80, of the guide supports 98 on which they are longitudinally movable, a manual device 97 for moving said bars as a unit, and manually and longitudinally adjustable supports 82 carried by said bars.



1,479,808. MEANS FOR STARTING INTERNAL-COMBUSTION ENGINES. CHARLES H. D. HAYWARD, Newark, N. J. Filed Apr. 21, 1919. Serial No. 191,496. 15 Claims. (Cl. 290—35.)

1. The combination with an internal combustion engine, a generator driven therewith, a storage battery and an electric starter, of a normally open electromagnetic switch the closing of which places its magnet in circuit with the storage battery, means in said circuit for closing normally open ignition and starter circuits, and means in circuit with the generator for breaking the said electromagnetic switch circuit and forming another ignition circuit.

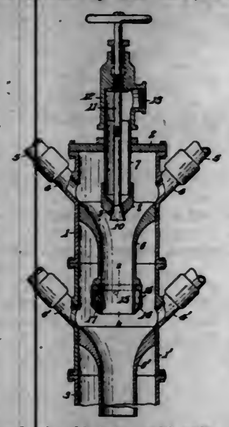


1,479,809. TRANSFER MECHANISM FOR VIAL-WORKING MACHINES. BENJAMIN T. HEADLEY, PARKE H. THOMPSON, deceased, by Rena M. Thompson, executrix, and DAVID IRVIN DU BOIS, all of Millville, N. J., assignors to Whitall-Tatum Company, Millville, N. J., a Corporation of New Jersey. Original application filed Nov. 15, 1919. Serial No. 338,179. Divided and this application filed Jan. 26, 1921, Serial No. 440,114. Renewed June 17, 1922. Serial No. 569,012. 17 Claims. (Cl. 198—20.)

1. A blank charging device for a vial bottoming machine comprising a plurality of levers movable with relation to each other, a reciprocating member on one of the levers for raising a blank from one support and transferring it to another support, and means for retarding the movement of one lever to cause it to move with

relation to the other lever to cause the member thereon to reciprocate to raise the blank from one support and lower it onto another support, substantially as described.

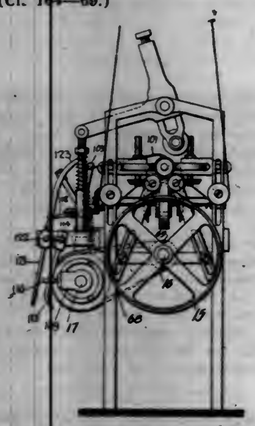
1,479,810. DISPENSING APPARATUS. GEORGE W. HIDDLESON, Beaver Falls, Pa., assignor of three-fourths to William Elmes, Beaver Falls, Pa. Filed Oct. 19, 1922. Serial No. 595,605. 8 Claims. (Cl. 221—100.)



1. In a dispensing apparatus, a measuring receptacle, a valve casing cooperating with said receptacle, means in said casing for controlling the liquid level in said receptacle, and means for initially supplying the liquid to be measured to said receptacle, there being a communicating channel between said receptacle and casing and an overflow channel in said casing, substantially as described.

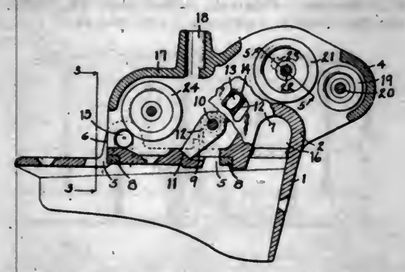
2. In a dispensing apparatus, a measuring receptacle, a valve casing cooperating with said receptacle, there being a communicating channel between said receptacle and casing, an overflow channel in said casing, and a vertically and rotatably mounted valve in said casing adapted to variably establish communication between said channels for determining the liquid level in said receptacle, substantially as described.

1,479,811. VACUUM-PRODUCING DEVICE FOR SUCTION CLEANERS. HARRY HINERMAN, CHARLES MEYERS, and IRA E. EWING, Wheeling, W. Va. Filed Nov. 28, 1921. Serial No. 518,282. 1 Claim. (Cl. 230—13.)



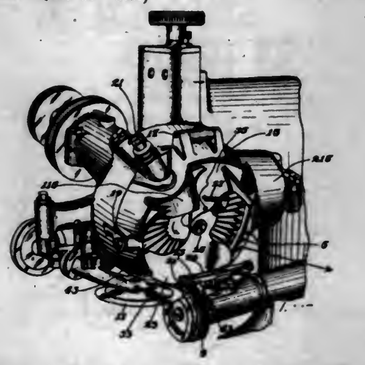
A vacuum producing device comprising a plurality of vertically alined casing sections having connection with a drain, the uppermost section having its upper end closed, each of said sections having air-inlet

branches, a contracted throat member disposed concentrically within each of said sections below said branches, each of said members having its upper end flared outward into engagement with the adjacent casing section and presenting a widely flared mouth, a tube extending centrally through and adjustable in the closed end of the upper casing section, a water-inlet valve casing surmounting said tube, a stem adjustable in said valve casing, a valve carried by said stem, a nozzle carried



by the lower end of said tube, said valve being adapted to be positioned with respect to the discharge opening of said nozzle through adjustment of said stem for controlling the velocity of the water admitted through said opening, a nipple carried by the lower end of the uppermost of the throat members and providing a chamber having a contracted discharge passage annular to said member, and means admitting water to said chamber.

1,479,812. PAPER-TUBE-MAKING MACHINE. JOSEPH W. HOLT, Brooklyn, N. Y., assignor to Union Paper Company, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1921. Serial No. 502,609. 13 Claims. (Cl. 164—69.)

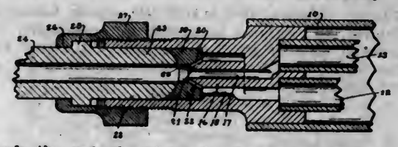


1. In a paper tube making machine, the combination comprising mechanism for cutting off portions of the tube as formed, mechanism for cutting said portions to finished size, and mechanism actuated by said cutting off mechanism for causing the finishing cutting mechanism to operate through one cycle each time a tube portion is cut off.

1,479,813. ANCHOR-ROPE PULLEY. JOHN A. HOLZAPFEL, Jackson, Mich. Filed Feb. 12, 1923. Serial No. 618,541. 14 Claims. (Cl. 114—181.)

11. In a structure of the class described, the combination of a pulley block comprising a pair of spaced side members, a fixed wringer pulley journaled between said side members, a coacting movable wringer pulley provided with a journal, said side plates being provided with elongated forwardly inclined bearings for said journal disposed at the rear of and in a plane above the axis of the fixed wringer pulley, and a guide pulley disposed at the rear of and below the plane of the axis of the movable pulley.

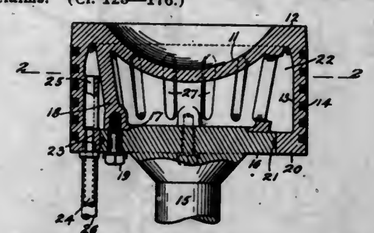
1,479,814. SKIVING MACHINE. DAVID G. JACKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 24, 1921. Serial No. 524,674. 8 Claims. (Cl. 69—9.5.)



1. A machine of the class described having, in combination, a cylindrical skiving knife, means for rotating the knife, means for feeding material to the knife to be skived, and a fan located inside the knife and rotating therewith for expelling the resulting chips.

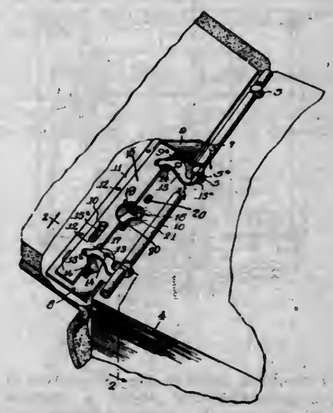
8. A machine of the class described having, in combination, a rotary cylindrical knife, a guard adapted to cover all but the lower portion of the edge of the knife, a feed roll and a presser foot for directing the work to the lower portion of the edge of the knife, a chip deflector located adjacent the roll and foot, and a cooperating rotary chip remover having radial corrugations located within the knife.

1,479,815. ACETYLENE-TORCH INJECTOR. JOHN W. JOHNSON and RICHARD MISRITZ, Milwaukee, Wis. Filed Feb. 13, 1922. Serial No. 536,272. 1 Claim. (Cl. 158—27.4.)



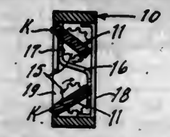
An acetylene torch having in combination a gas supply pipe, an air supply pipe, a handle through which said pipes pass, a mixing member secured to one end of said handle, said member being formed with a nozzle

connected to said air supply pipe and a chamber surrounding said nozzle and connected to said gas supply pipe, said nozzle projecting through said chamber and terminating adjacent one end thereof, a filler member disposed in said chamber provided with a recess tapered to form a restricted orifice which immediately sur-



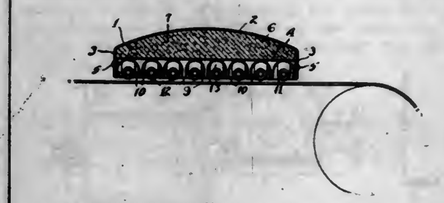
rounds the end of said nozzle, thereby intermixing said gas and air during the delivery of the same, an outer delivery nozzle formed with an annular shoulder adjacent one end thereof, a draw nut formed with an inwardly extending projection engaging said shoulder, and screw threads on the outer end of said mixing member for receiving said draw nut, whereby said delivery nozzle is rotatably and detachably secured in place.

1,479,816. PISTON. OLAV ESKIL JORGENSEN, New York, N. Y. Filed Apr. 19, 1920. Serial No. 374,901. 7 Claims. (Cl. 123—176.)



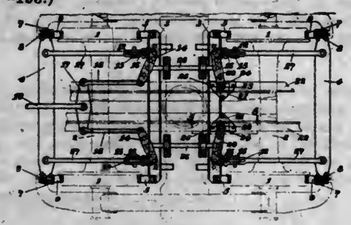
1. A liquid-cooled piston having a working face, a headed piston rod, a rib integral with the working face, means for securing said rib to the head of the piston rod, a cylindrical body portion supported from the working face, the cylindrical body portion and the head of the piston rod being movably fitted together to complete an enclosed chamber for the cooling liquid, and means for conducting cooling liquid into such chamber.

1,479,817. LOOSE-LEAF BINDER. JOSEPH KAHN, Chicago, Ill. Filed May 25, 1922. Serial No. 563,512. 7 Claims. (Cl. 129—23.)



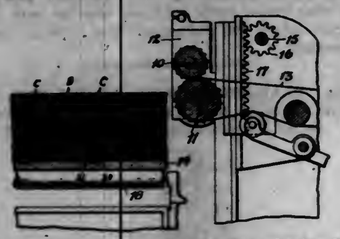
1. A loose-leaf binder comprising hinged covers and a back, binding posts anchored in one of the cover members, a lock casing mounted on the other cover member, hooked locking members pivotally mounted in said casing and adapted to be swung into and out of locking engagement with the free ends of said binding posts, and means for actuating said locking members simultaneously.

1,479,818. BLANKET-HOLDING DEVICE FOR CRIBS. MICHAEL KAHNE, New York, N. Y. Filed Dec. 18, 1922. Serial No. 608,640½. 3 Claims. (Cl. 5—320.)



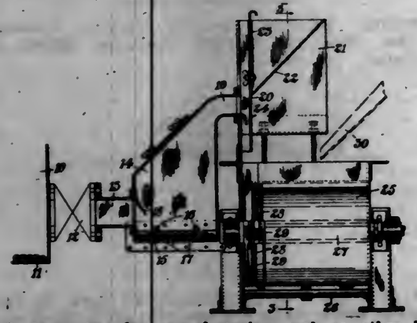
1. In a clamping means, the combination with a frame, of a pair of oppositely directed members mounted therein to swing about parallel axes which are near enough to permit adjacent edges of said members to meet, means connected to the said members to cause them to move in unison in opposite directions, cranks connected to said members and adapted to have their terminals shifted from one side to the other of the said axes, and a retractile spring connected to the cranks.

1,479,819. HEATER. ANNE J. KLUEVER, Lakewood, Ohio. Filed Feb. 2, 1922. Serial No. 533,514. 4 Claims. (Cl. 34—18.)



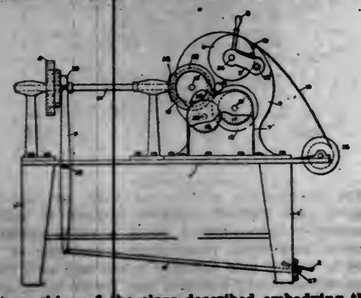
1. In a heater of the character set forth, the combination with a casing, of a reflector plate arranged within said casing, a portion of said reflector plate being spaced from said casing, heat insulating material interposed between said reflector and casing, a plurality of supports secured to said reflector, and a heating coil carried by said supports.

1,479,820. BRAKE MECHANISM. BENJAMIN F. KURTZ, Avalon, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Oct. 7, 1921. Serial No. 506,153. 10 Claims. (Cl. 188—193.)



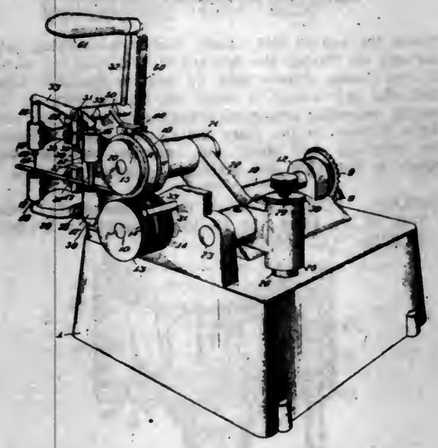
5. The combination with a car body, of center sills forming a part thereof, brackets secured to said sills and depending therebelow, a truck, a brake mounted on said truck, said brake comprising a plurality of levers adapted to engage said brackets below said sills the connections between said brackets and levers being adapted to automatically compensate for relative movement between said body and truck.

1,479,821. SHEET STACKER. SAMUEL M. LANGSTON, Wenonah, N. J. Filed Feb. 7, 1923. Serial No. 617,486. 9 Claims. (Cl. 271—86.)



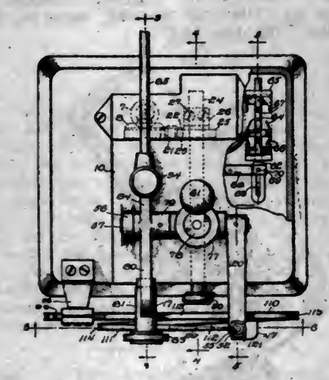
1. A machine for stacking slotted sheets, including means for delivering the sheets edgewise in succession in a direction at an angle to the general direction of the slot, and a stack support having means for holding the portion at the far side of the slot at a lower elevation than the body portion of the sheet.

1,479,822. MANUFACTURE OF COAL OR OTHER BRIQUETTES. HENRY GARDINER LLOYD, Surbiton, England, assignor of one-half to George St. Barbe, London, England. Filed Sept. 28, 1922. Serial No. 591,116. 14 Claims. (Cl. 44—11.)



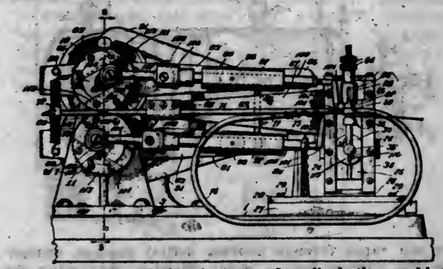
1. Apparatus for manufacturing coal or other briquettes with the aid of a binding agent, which comprises means for feeding continuous streams of heated binding agent and water to a receptacle in which they froth, means for delivering a stream of material to be briquetted, and means for continuously delivering said froth from the receptacle into contact with said stream of material.

1,479,823. MEANS FOR PRODUCING REED ARTICLES. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1921. Serial No. 484,290. 28 Claims. (Cl. 117—34.)



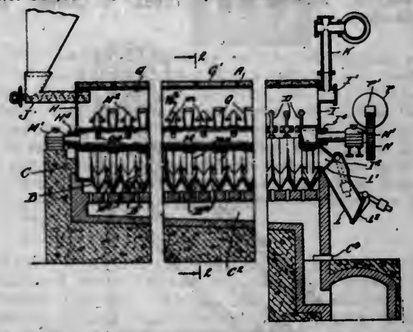
1. A machine of the class described embodying therein, a plurality of wrapping wheels spaced around an intermediate zone constituting the path of travel of the stock to be wrapped, the axes of rotation of said wrapping wheels being divergent with respect to the path of travel of the stock and being adapted to feed the stock forward.

1,479,824. THREADING MACHINE. HANS LUNDQUIST, Chicago, Ill., assignor to United States Specialty Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1919. Serial No. 342,987. 11 Claims. (Cl. 223—38.)



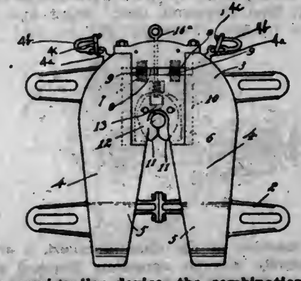
1. In a machine of the character described, the combination of a ribbon support, and means for selectively holding said support pivotally on either one of two supporting portions, with which said support is provided.

1,479,825. THREADING MACHINE. HANS LUNDQUIST, Chicago, Ill., assignor to United States Specialty Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1920. Serial No. 423,052. 26 Claims. (Cl. 223—38.)



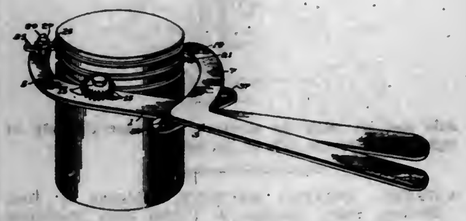
1. In a threading machine, the combination of a tape support, a garment-feeding device, a pressure device adapted to act upon the garment during the feeding movement, and means for releasing the feeding device and the pressure device simultaneously.

1,479,826. LACE-THREADING MACHINE. HANS LUNDQUIST, Chicago, Ill., assignor to United States Specialty Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1921. Serial No. 463,830. 35 Claims. (Cl. 223—38.)



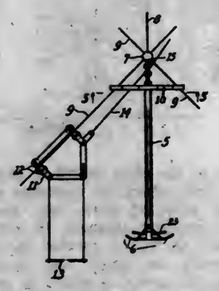
1. In a device of the character described, the combination of a threading needle and means for feeding lace on the needle, said means including elements which successively engage in alternation from above and below portions of the lace to be fed, and means for imparting an oscillating and reciprocating movement to said elements.

1,479,827. RETORT FURNACE. CHARLES V. McINTIRE, East Orange, N. J. Filed June 7, 1923. Serial No. 643,830. 6 Claims. (Cl. 202—9.)



6. In apparatus for destructive distillation comprising a stationary retort, means in said retort for agitating the material being distilled to break it up and facilitate its distillation and means for injecting a fluid into the retort at distributed points along a portion of the retort wall normally covered by the material being distilled.

1,479,828. SEMITRAILER. JAMES MORRISON, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 20, 1919. Serial No. 346,330. 2 Claims. (Cl. 280—33.1.)

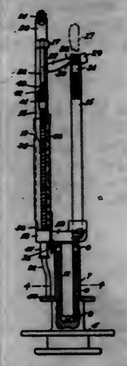


1. In a semi-trailer device, the combination with the tractor and the trailer, of fifth wheel members for said vehicles, both of said members having plain surfaces to contact with each other, automatic coupling means adapted to couple said two fifth wheel members together, said means comprising a pin and a box having pin engaging jaws therein, said box being longitudinally slidable and spring controlled with relation to one of the members.

1,479,829. DEVICE FOR REMOVING CARBON FROM PISTON GROOVES. CARL H. OLSON and WALTER F. PAGE, Boston, Mass., assignors to The Morgan Manufacturing Company, Incorporated, Keene, N. H., a Corporation of New Hampshire. Filed May 22, 1922. Serial No. 562,589. 11 Claims. (Cl. 15—104.01.)

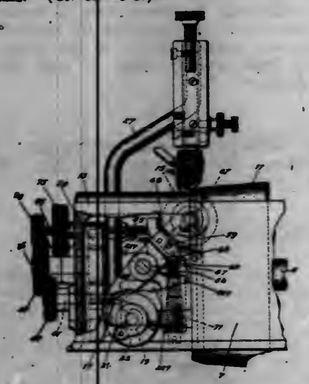
6. A device for removing carbon from piston ring grooves, comprising, in combination, a holder, means mounted thereon for disintegrating the carbon in a piston groove, and means mounted on the holder for following the disintegrating means to clear the carbon from the groove.

1,479,830. APPARATUS FOR ACROBATS. TONY J. PATT, Chicago, Ill. Filed Sept. 10, 1921. Serial No. 499,761. 8 Claims. (Cl. 46—70.)



1. A trick apparatus comprising means for suspending a performer, means for lowering the suspending means, and means operated by the said lowering means for rotating the suspending means around a vertical axis, said lowering and rotating means coacting to produce rotation of the performer continuously proportional to the lowering thereof.

1,479,831. BRAIDING CARRIER. ROBERT CARL RAHM, Wyomissing, Pa., assignor to Berks Engineering Company Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1922. Serial No. 597,760. 7 Claims. (Cl. 96—15.)

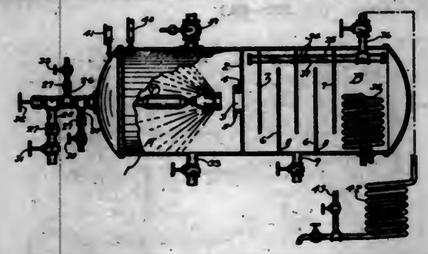


3. A braiding carrier comprising a raceway engaging base portion, and a bobbin-holder portion freely rotatable

thereon; said rotatable bobbin-holder portion having a yarn-delivery guide-eye located eccentric to its pivotal

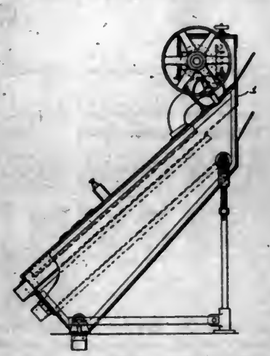
axis and set with its aperture axis approximately at right angles to the axis of the bobbin.

1,479,832. SKIVING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 12, 1922. Serial No. 606,445. 13 Claims. (Cl. 69—9.5.)



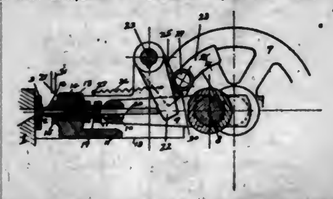
1. A machine of the class described having, in combination a knife and means for engaging and advancing to the knife a piece of work, said means including a pair of feed members arranged to engage the work one on each side thereof, a carrier for said members, and means whereby the carrier may be adjusted angularly in a path the plane of which is at an angle to the direction of feed movement of the work.

11. A machine of the class described having, in combination, a frame, a rotary shaft carried thereby, a cylindrical knife mounted on the shaft, a head capable of swinging away from the frame, an adjustable bracket carried by the head, and a presser and feed roll carried by the bracket.



1,479,833. METHOD FOR REFINING OILS. WILLIAM J. REILLY, Denver, Colo. Original application filed Aug. 1, 1921, Serial No. 488,760. Divided and this application filed Apr. 6, 1922. Serial No. 549,988. 5 Claims. (Cl. 196—25.)

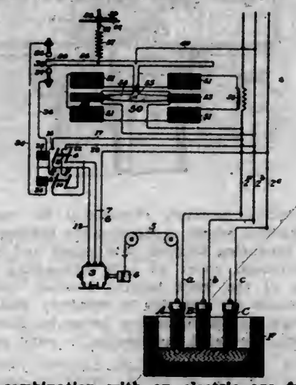
1. A method of converting oils of high specific gravity into oils of lower specific gravity which comprises passing the oil into a distilling chamber, mixing the same with vapors heated to the temperature required to maintain conversion passing the mixed oil and vapor through a helical passage at the pressure necessary to maintain conversion whereby they become thoroughly intermingled, passing the intermingled oil and vapor into a chamber containing a catalytic agent passing said intermingled



oil and vapor through another helical passage, expanding the mixture into a vapor chamber, separating the undecomposed particles from the vapor and condensing the vapor under any desired pressure less than that under which the distillation takes place.

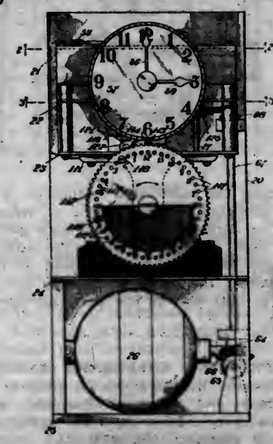
1,479,834. SCREENING APPARATUS. MORLEY PUNSHON REYNOLDS, Cleveland Heights, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1921, Serial No. 456,122. Renewed May 31, 1923. 8 Claims. (Cl. 83—56.)

1. In a screening apparatus, the combination of a woven wire screen tensioned to a uniform vibratory tension, an electro-magnetic means adapted to vibrate said screen at a high speed, and resilient supporting means for said screen, said means being adapted to maintain said screen within predetermined limits.



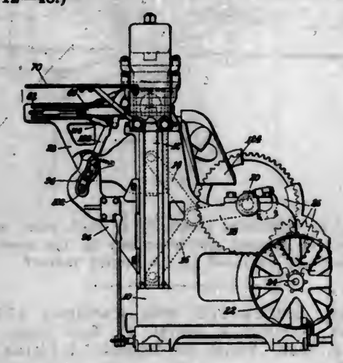
1,479,835. MACHINE FOR TRIMMING BLANKS OF BOLTS, NUTS, SCREWS, AND THE LIKE. MICHAEL J. RILEY, East Cleveland, Ohio. Filed Apr. 4, 1921. Serial No. 458,344. 7 Claims. (Cl. 10—20.)

1. In a machine of the class described, a stationary die, a relatively movable oppositely disposed punch, a hole in the punch to receive the shank of a blank, a gate supporting the punch, means to reciprocate the gate to move the punch, a pusher rod in the hole in



said die and on the gate and movable relatively thereto toward and away from the die, and means to reciprocate the pusher rod independently of the motion of the gate.

1,479,836. ELECTRIC MOTOR CONTROL. BYRAMJI D. SAKLATWALLA and ARTHUR N. ANDERSON, Crafton, Pa., assignors, by mesne assignments, to Vanadium Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1919, Serial No 292,283. Renewed May 23, 1922. Serial No. 563,120. 4 Claims. (Cl. 204—64.)



1. The combination with an electric arc furnace, of a motor for feeding an electrode, a relay in the motor feeding circuit, means for operating the relay in accordance with the furnace conditions for feeding the electrode in or out of the furnace, and means independent of the relay for causing the relay to interrupt the feed current to the motor whereby the electrode is fed by a step by step movement and prevented from being fed beyond its desired stopping position, substantially as described.

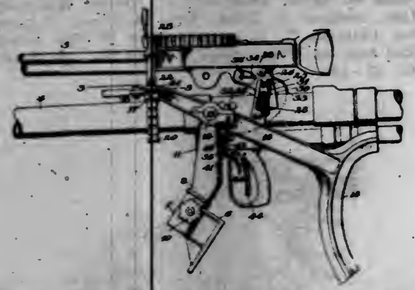
1,479,837. PERIODICALLY-OPERATED MECHANISM. HAROLD S. SINES, Chicago, Ill., assignor to Mineralac Electric Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 19, 1915, Serial No. 3,021. Divided and this application filed Feb. 24, 1919. Serial No. 278,787. 17 Claims. (Cl. 200—40.)

17. The combination with a mechanism comprising two actuating springs which deenergise at different rates, of a common motor for re-energising said springs.

1,479,838. COMPRESSING MACHINE. CHESTER C. SMALL, deceased, late of Newton Highlands, Mass., by Jennie M. Small, administratrix, Newton Highlands, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 16, 1918. Serial No. 254,287. 19 Claims. (Cl. 12—48.)

1. In a compressing machine, the combination of a plurality of oppositely-facing blank-confining molds, and oppositely moving means arranged for relative approaching movement to simultaneously exert pressure upon the entire areas of the oppositely facing blanks confined in said molds.

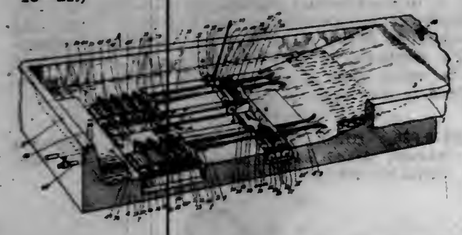
1,479,839. HEEL GUARD FOR SHOES. CLARENCE SNYDER, Grand Rapids, Mich. Filed Mar. 21, 1922. Serial No. 545,448. 4 Claims. (Cl. 36—55.)



1. As an article of manufacture, a guard of knitted elastic fabric having a selvedged lower edge adapted to be arranged within the heel of a shoe, and a relatively narrow attaching strip of oilcloth disposed on the outer side of said guard with its upper edge and attaching strip being secured along their upper edges by overstitching but otherwise unattached, the attaching strip being arranged with its face adjacent the guard, the outer side of the attaching strip being provided with an adhesive extending to the upper edge thereof.

4. A guard adapted to be arranged within the heel of a shoe, said guard being of fabric, and a relatively narrow attaching strip of water proofed non-elastic material disposed on the outer side of said guard, said attaching strip and guard being connected along their upper edges but being otherwise free, the attaching strip having a securing adhesive on its outer surface.

1,479,840. SIGHTING MEANS AND METHOD FOR PROJECTILE FIRING. ANDREW J. STONE, Washington, D. C., assignor to the Government of the United States. Filed Aug. 1, 1918. Serial No. 247,774. 4 Claims. (Cl. 89—41.)



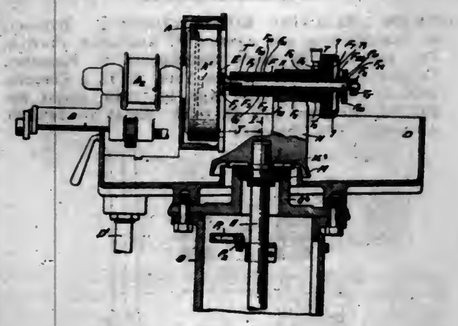
2. In combination, a gun of relatively large calibre, a rapid fire gun of relatively small calibre mounted fixedly

with relation to said first named gun, and triggers for each of said guns, said triggers being independent but

disposed in immediate proximity to each other so that they may be gripped simultaneously by the same hand and selectively operated by the fingers thereof.

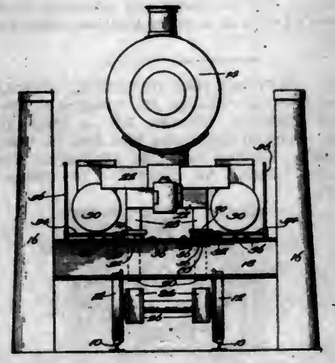
1,479,841. APPARATUS FOR WASHING AUTOMOBILES. CHARLIE E. STOVER, St. Paul, Minn. Filed Oct. 9, 1922. Serial No. 593,206. 5 Claims. (Cl. 15—21.)

1. An apparatus for washing automobiles, comprising a tank adapted to contain water for partially submerging the wheels of the automobile, submerged rotatable supports for the rear driving wheels of the automobile, adapted to be rotated by said wheels when the motor is running, submerged rotary supports for the front wheels of the automobile, operative connections between said front and rear wheel supports for communicating rotary motion to the former when the latter are actuated, inner and outer submerged brushes for brushing, respectively, the inner and outer sides of the wheels when the motor is running, and brake mechanism for holding, at will, said rotatable rear wheel supports to prevent rotation thereof, for the purpose set forth.



1,479,842. RING CONSTRUCTION. JOHN A. SWEITZER, Providence, R. I., assignor to Powers & Mayer Manufacturing Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 18, 1922. Serial No. 600,540. 6 Claims. (Cl. 29—160.6.)

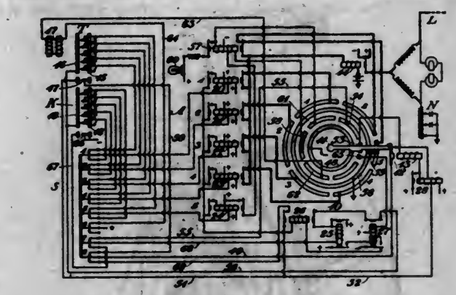
1. The method of forming a ring or the like having an ornamented crown portion which consists in first punching out a flat crown piece to form therein a pierced design, then shaping the same with a forming die into an arcuate crown or head, and then securing the same to a ring-shank or the like.



5. An article of jewelry comprising a ring shank having a portion pierced and spread to form a crown support, and an arcuate crown secured to said support.

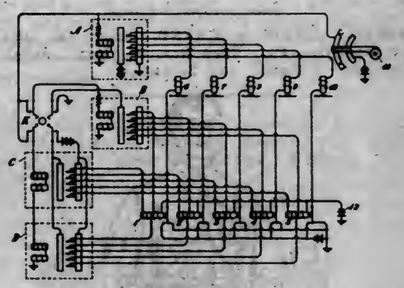
1,479,843. GRINDING MACHINE. WILLIAM TAYLOR, Leicester, England. Filed Aug. 9, 1917. Serial No. 185,238. 46 Claims. (Cl. 51—131.)

5. A grinding machine, comprising in combination a rotary grinding wheel, a rotary work holding member, means for producing between said wheel and member a relative movement about an axis intersecting the axis of rotation of the work holding member, said means including means for applying a definitely limited force to effect such movement, and a device for limiting the rate of such movement, adjustable to vary such rate.



1,479,844. LATERAL-SHIFTING MECHANISM FOR JACKS. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Aug. 22, 1921. Serial No. 494,334. 1 Claim. (Cl. 254—85.)

In mechanism for hoisting a locomotive, a vertically reciprocable supporting beam, a pair of separated load receiving plates, carried by said beam, slow motion mechanism under each plate for moving the adjacent plate along the beam, and means at the end of each plate, nearest its end of the beam, adapted to be engaged by an operator at that end of the beam for operating the power means.



1,479,845. PRINTING-TELEGRAPH SYSTEM. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 10, 1918. Serial No. 239,257. 39 Claims. (Cl. 178—33.)

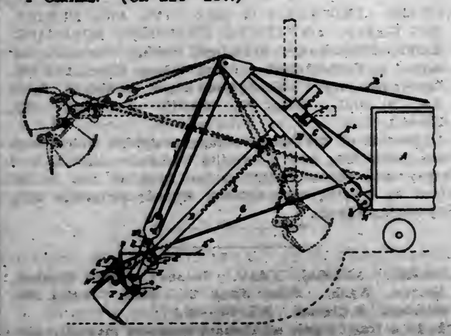
1. In a signalling system, a distributor for transmitting successive groups of signalling impulses in predetermined order, means normally restraining said distributor, electromagnetic means for releasing said restraining means, a circuit for said electromagnetic means passing over said restraining means, and means

to render the first transmitted impulse of each group of a character different from that of the last impulse previously transmitted.

1,479,846. CIPHERING DEVICE. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 23, 1920. Serial No. 391,215. 5 Claims. (Cl. 178—22.)

1. In a secret communication system in which messages are to be transmitted by scrambling them at the sending station with characters arbitrarily recorded on a key tape and received by combining the received signals with the characters of a synchronously positioned identical key tape at the receiving station, the method of operation which consists in scrambling a part of the message including information with regard to the remainder of the message with a set of characters arranged in a predetermined order and beginning with a character determined in accordance with a prearranged plan, unscrambling the signals thus received at the receiving station by combining them with a set of characters arranged in the same order and beginning with a character determined by said prearranged plan, scrambling the characters of the remainder of the message with a set of characters arranged in a predetermined order and beginning with a character arbitrarily chosen at the sending station, and unscrambling the signals thus received at the receiving station by combining them with a set of characters arranged in the same predetermined order as at the sending station and beginning with a character determined by the previously received part of the message.

1,479,847. METHOD OF PRODUCING PHONOGRAPH RECORDS OF SPECIAL TYPES. EUGENE A. WIDMANN, Brooklyn, N. Y., assignor to Voice Recorder Company, Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1918. Serial No. 247,185. 2 Claims. (Cl. 18—48.3.)



1. The process of making a toy phonograph record which consists in first, the preparation of a mass of record material, then preparing a sheet of suitable material having stamped thereon a pictorial figure having an opening centrally disposed therein of a predetermined diameter, placing the figure with the opening over the record mass, inserting the same in a phonograph record pressing device having a matrix of the size of the said opening so that the matrix registers therewith, and imprinting the matrix through said opening into said record material, substantially as described.

1,479,848. STORAGE BATTERY. HORACE M. WILLIAMS, Providence, R. I., assignor to Electrol Manufacturing Company, a Corporation of Rhode Island. Filed Oct. 15, 1919. Serial No. 330,893. Renewed May 5, 1923. 4 Claims. (Cl. 204—29.)

1. An electric storage battery having, in combination with the usual lead plates, a body of colloidal silica precipitated in situ serving as a matrix and an electrolyte in suspension in said body comprising a sulphuric acid solution mixed with a minor quantity of methyl salicylate.

1,479,849. STEAM SHOVEL. WARREN D. WILLIAMS, Erie, Pa. Filed Jan. 12, 1922. Serial No. 528,789. 4 Claims. (Cl. 214—137.)

1. In an apparatus of the class described, a dipper, a plurality of spaced ears having openings therethrough

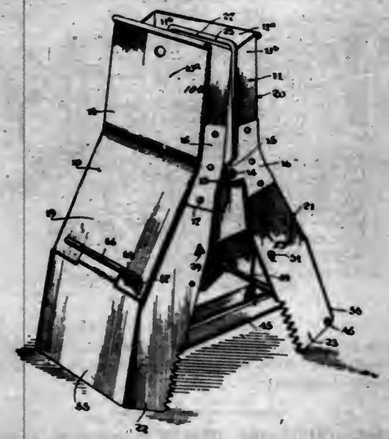
adjacent to the front and rear edges of the upper side of said dipper, a dipper stick, plates secured on the lower end of said dipper stick, lateral arms extending from opposite edges of said plates and overlapping said ears on said dipper and having openings which coincide with the openings in said ears, and pins through said openings in said ears and arms.

2. In an apparatus of the class described, a dipper-stick, a dipper, means to pivot the front edge of said dipper to said stick, a pulley pivoted on said dipper-stick, and a drag-line secured to the rear end of said dipper and passing over said pulley whereby the open end of the dipper is tipped downwardly to the work.

1,479,850. BELT FASTENER. WILLIAM H. BRADSHAW, Lansdowne, Pa., and HENRY W. LYNDALL, Wilmington, Del., assignors to Main Belting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 23, 1921. Serial No. 471,687. 4 Claims. (Cl. 24—33.)

2. In a device of the character described adapted to connect the adjacent ends of a belt, comprising two complementary fastener members hinged together along their adjacent edges, the outer surfaces of said members being flat, the inner surfaces of said members being curved substantially to the curvature of a pulley with which it is to be used, fastening devices on the curved surfaces adapted to secure a belt thereto, and a pivot pin whose axis is located substantially in the central plane of effort of that portion of the belt, as it leaves the pulley, which is tangent to the pulley at the outer edge of the outer fastening means while the complementary members and adjacent parts of the belt are still in engagement with the pulley.

1,479,851. DECOLORIZING CARBON AND METHOD OF MAKING SAME. ROD A. DEMME, New York, N. Y., assignor to Darco Corporation, New York, N. Y., a Corporation of Delaware. Filed July 23, 1920. Serial No. 398,509. 6 Claims. (Cl. 252—3.)



1. The process of making a decolorizing material which comprises destructively distilling oil shale to remove as much as possible of the volatile material, cleaning out the pores of the so-distilled shale at a temperature ranging above 600° C. and removing impurities with weak acid.

1,479,852. PROCESS FOR TREATING AND PURIFYING GASES CONTAINING HYDROGEN SULPHIDE. ALFRED ENGELHARDT, Wiesdorf, Prussia, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Aug. 8, 1921. Serial No. 490,712. 7 Claims. (Cl. 23—10.)

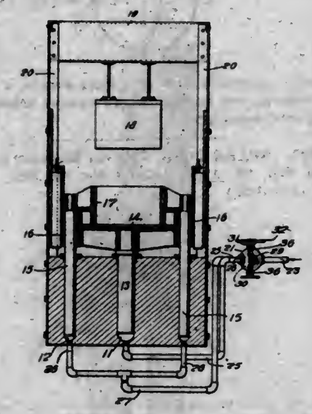
1. Process of oxidising hydrogen sulphide which comprises contacting gas containing hydrogen sulphide and oxygen with porous active carbon such as may be obtained by heating carbonaceous organic materials with dehydrating agents.

1,479,853. ANIMAL TRAP. ISAAC CHARLES GAMBLE, Seattle, Wash. Filed June 28, 1922. Serial No. 571,348. 3 Claims. (Cl. 43—88.)

1. In a trap, a pair of channel members pivotally connected together and including a base section and flanges, said channel members comprising upper and lower angularly disposed sections, the side flanges of the lower sections having extensions provided with toothed edges and constituting the jaws of the trap, a spring coacting with the upper sections of the channel members for urging the jaws toward and in engagement with each other,

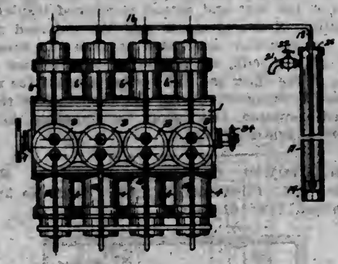
trigger mechanism including a toggle coacting with the lower sections of the channel members, a trip plate, a trip arm engageable with the toggle for releasing the same, and a link connecting the trip plate and the trip arm, and removable closure plates releasably secured to the lower sections and extending between the jaws.

1,479,854. UNION GARMENT. DAVID E. HELLER, Wilkes-Barre, Pa. Filed Nov. 29, 1922. Serial No. 603,964. 1 Claim. (Cl. 2—144.)



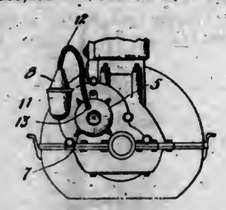
A union garment comprising blouse and trousers having an opening extending from the crotch to the collar, means for releasably closing said opening, and an opening extending from the side to the center of the garment and separating the front of the blouse from the trousers; and continuous separable fasteners positioned at either side of the center of the garment for closing said transverse opening and securing the blouse to the trousers, said continuous separable fasteners being concealed, when fastened, beneath the lower edge of the blouse.

1,479,855. HYDRAULIC PRESS. EMERY C. HODGES, Joliet, Ill. Filed Aug. 30, 1922. Serial No. 585,170. 4 Claims. (Cl. 138—16.)



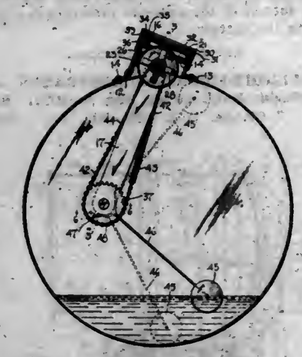
1. In a hydraulic press the combination of two independently movable members, separate hydraulic cylinders for the several members, a valve having separate passages

connected with the several cylinders and having supply and discharge passages, and a valve plug having a port that opens at both ends upon the periphery of the plug, and adapted to establish communication between the supply passage and one of the passages to the cylinders, a port that opens at both ends upon the periphery of



the plug and adapted to establish communication between the supply passage and another cylinder connected passage and a port that extends from the periphery of the plug into one of said other ports and has its peripheral end positioned to be at one of said cylinder connected passages when one end of said first mentioned port is at the waste outlet.

1,479,856. AIR COMPRESSOR. GRANVILLE A. HUMASON and JOSEPH F. BASHARA, Houston, Tex. Filed Aug. 23, 1920. Serial No. 405,329. 2 Claims. (Cl. 230—32.)



1. An air compressor including a casing, a plurality of series of cylinders carried thereby, each series comprising a low pressure, intermediate, and a high pressure cylinder, each cylinder having an intake and an exhaust port, valves controlling said ports, pipes connecting the exhaust port of the cylinder with the intake port of the next succeeding cylinder, from low to high, a common manifold connected to the exhaust ports of the high pressure cylinder of each series, pistons in said cylinders an axially arranged drive shaft in said casing, eccentric discs fixed on said shaft in alignment with the respective series of cylinders, each disc having an annular raceway, a bearing in each raceway, and piston rods connected at their outer ends to said pistons and at their inner ends to said respective bearings.

1,479,857. TIMER-LUBRICATING DEVICE. LOUIS FOSTER JACKSON, Starkville, Miss. Filed Dec. 6, 1922. Serial No. 605,291. 3 Claims. (Cl. 123—196.)

1. Means for supplying oil ladened air from the crank case of an automobile to the timer shell, comprising a tube having means of communication with the crank case to receive the oil ladened air therefrom, said tube having its outlet end leading into the timer shell to discharge the oil ladened air therein, said outlet end being uncovered whereby the oil ladened air may pass freely to all parts interiorly of the shell including the contact segments.

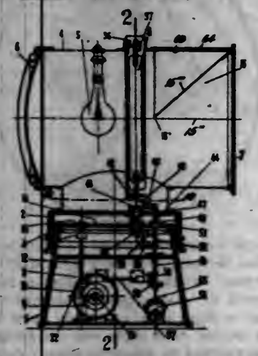
1,479,858. LIQUID-VOLUME INDICATOR. CHARLES D. JENNEY, Detroit, Mich. Filed Aug. 15, 1919. Serial No. 317,772. 10 Claims. (Cl. 73—82.)

1. A liquid volume indicator comprising a tank of circular cross section, said tank provided with a nipple secured thereto, a graduated cylinder mounted on a bearing carried by said nipple, a toothed wheel fixed to said bearing, a rigid arm extending from the nipple to the interior of the tank, said arm carrying at its inner end a toothed wheel to which is rigidly fastened an arm provided at its extremity with a float, and a chain connection between the two said toothed wheels, substantially as set forth.

1,479,859. PROCESS FOR MAKING ANTIFRICTION METAL. WILLIAM KOEHLER, Cleveland, Ohio. Filed Sept. 5, 1922. Serial No. 586,321. 9 Claims. (Cl. 75—1.)

1. The process of producing an anti-friction metal consisting in mixing together finely comminuted metals of different melting points and then subjecting the mixture to a temperature, sufficiently high to melt the metal having the lowest melting point.

1,479,860. ELECTRIC CANDLE. GRACE MOYNAN LEWIS, Asbury Park, N. J. Filed Jan. 27, 1923. Serial No. 615,239. 3 Claims. (Cl. 240—8.5.)

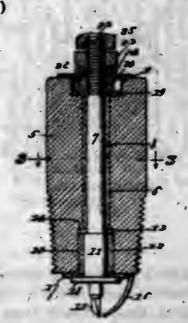


1. An electric candle comprising a base, a tubular body portion carried by said base, a lamp secured to the upper end of said body portion, a battery freely mounted in said body portion, and means whereby the turning of the

body portion on the base in one direction will cause a movement of both the lamp and the battery in opposite directions away from each other for disconnecting the

lamp from the battery and will cause said lamp and battery to move both toward each other when the body portion is turned in the opposite direction for connecting the lamp to the battery.

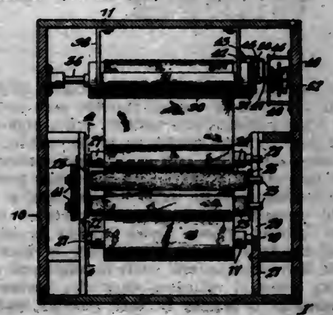
1,479,861. LIGHT-SIGNALING APPARATUS. ARISTIDE LUBIA, Turin, Italy. Filed Nov. 8, 1921. Serial No. 513,711. 7 Claims. (Cl. 240—1.)



1. A light signaling apparatus comprising a source of light, a parabolic mirror for producing a substantially horizontal luminous beam, a reflector having substantially the shape of one fourth of a cone, said reflector having its apex on the projection axis and its straight edges lying on vertical and horizontal planes, respectively, passing through said projection axis, and operating to deflect a portion of said beam to produce a luminous fan-shaped beam lying in a plane transverse to said beam and extending from horizon to zenith, and means for rotating said apparatus around a substantially vertical axis.

1,479,862. POSITION LIGHT FOR AIRCRAFT. ARISTIDE LUBIA, Rome, Italy. Filed Dec. 27, 1921. Serial No. 525,150. 1 Claim. (Cl. 240—1.)

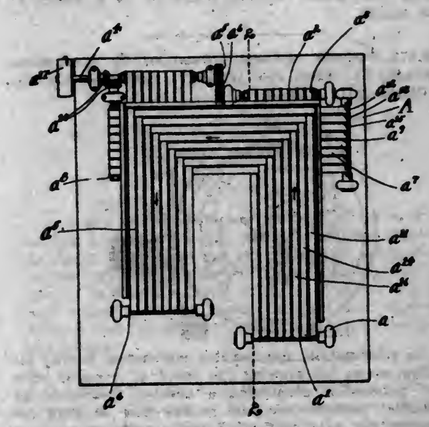
A position light for aircraft comprising a frame having suspension means, a reflector beneath said frame, a source of light beneath said reflector and an envelope encircling said source of light and connected to said frame, said envelope comprising a segment of an annular lens section positioned substantially at the level of and concentric with said light source and segments of annular prismatic drum lens sections located intermediate said first named lens section and said reflector, and substantially concentric with said light source, a segment of lower transparent screen and an opaque screen for completing said envelope.



1,479,863. SPARK PLUG. HENRY MACKEY, Fonda, Iowa. Filed Feb. 27, 1923. Serial No. 621,620. 2 Claims. (Cl. 123—169.)

1. In a spark plug, a body of soft metal, an electrode extending therethrough having an enlargement near its inner end, the said electrode terminating in a stem, a flange at the junction of the stem and the enlarged portion of the electrode, an insulating sleeve interposed between the electrode and the wall of the body, the said body having recesses in its inner and outer ends, the first mentioned recess constituting a seat for the enlarged portion of the electrode, an insulating sleeve interposed between the enlarged portion of the electrode and the wall of the body, an insulating ring interposed between the ends of the first and second mentioned insulators at the junction of the electrode and the enlarged portion thereof, an insulator interposed between the flange and the end of the body, an insulating ring applied to the electrode at the outer end and resting against the wall of the recess in engagement with the outer end of the first mentioned insulator, and means for retaining the parts in assembled relation.

1,479,864. TOWEL CABINET. ALFRED H. MARTIN, Buffalo, N. Y. Filed Aug. 23, 1922. Serial No. 583,908. 22 Claims. (Cl. 161—1.)

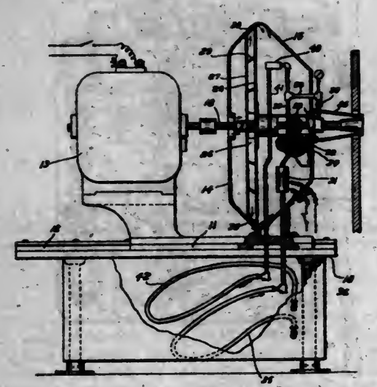


1. In a towel cabinet, stop-means for automatically arresting the toweling after the withdrawal of a predetermined length thereof, and means for automatically releasing said stop-means after a given lapse of time, whereby the immediate withdrawal of succeeding lengths of toweling is prevented.

1,479,865. ROPE STRUCTURE. HAROLD G. METCALF, Auburn, N. Y. Filed June 18, 1923. Serial No. 646,183. 3 Claims. (Cl. 117—52.)

1. A rope structure comprising a plurality of strands or readies laid together in twisted relation to form the finished rope, each of said strands comprising a twisted yarn or ply yarn impregnated with a lubricating or water repellant substance and embedded in and surrounded by a relatively large body of sliver fibers twisted to a degree less than that of the impregnated yarn to form a relatively soft center, the whole being surrounded by yarns each twisted to a greater degree than the slivers, said yarns being spirally laid about the center and with adjacent yarns in contact with each other to form an enveloping sheath.

1,479,866. ARTICLE-TRANSFER DEVICE. JOEL MOORMAN, Norwood, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1921. Serial No. 493,365. 3 Claims. (Cl. 198—190.)

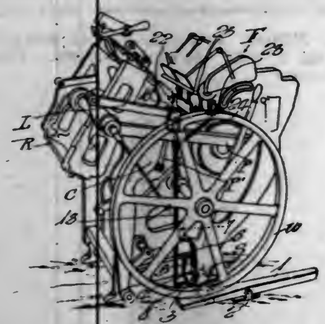


1. In a transfer device the combination of a series of belts extending in parallelism, a second series of belts extending in parallelism with one another and at an angle to the first series of belts, the succeeding belts of each series passing between succeeding belts of the other series.

1,479,867. PISTON. MORGAN L. MUNDAY, Munday, Tex. Filed Sept. 8, 1921. Serial No. 498,268. 6 Claims. (Cl. 74—108.)

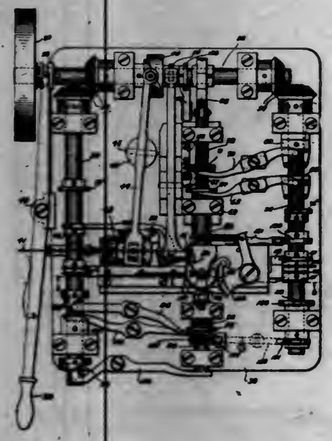
1. A piston having a head and a skirt, ring grooves arranged in the upper portion of said skirt, rings in said grooves, an oil collecting trough in the upper portion of said skirt and an oil collecting trough in the lower portion of said skirt.

1,479,868. OIL BURNER. LEO F. NOCK, East Greenwich, R. I. Filed Apr. 26, 1922. Serial No. 556,799. 4 Claims. (Cl. 158—77.)



2. A hydrocarbon burner comprising a casing having a tapered air conducting tubular neck adapted to extend through an opening in the furnace, a rapidly rotatable spray nozzle mounted in said neck, a blower in said casing for supplying air under pressure through said neck to said nozzle, a pump for forcing the fuel through said nozzle, said casing being so mounted that it may be moved bodily with its contents relatively to the furnace opening to regulate the amount of air to be drawn in through said opening.

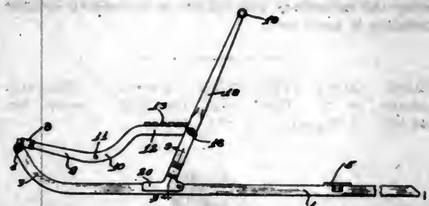
1,479,869. AUTOMATIC STOP FOR JOB PRESSES. IRA VERNON ORANGE, High Point, N. C. Filed June 28, 1920. Serial No. 392,295. 14 Claims. (Cl. 192—127.)



1. The combination with a power driven job press having an automatic feeder for feeding paper onto the platen, of means for throwing off the driving power of

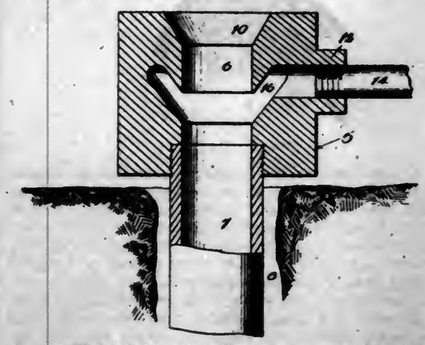
the press and applying a brake to a moving part of the press, said means having a control in the path of any

sheets of paper moved retrogradely from the platen by the feeder, said control being adapted to be struck and operated by such paper.



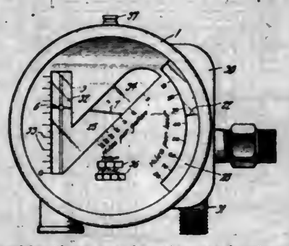
1,479,870. CHAIN-MAKING MACHINE. JOSEPH A. PAYETTE, Attleboro, Mass., assignor to S. O. Bigney & Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Jan. 25, 1922. Serial No. 531,816. 17 Claims. (Cl. 59—16.)

1. In a chain machine, a die member, means for advancing a length of wire across said member, means for severing the advanced length, a pair of jaws, means for causing said jaws to grip the severed length of wire and draw it back through said die to form a staple, means for gripping and holding the next previously formed link, means for advancing said jaws to pass the legs of the staple through said formed link, an anvil, and means including laterally-movable bending members for closing the free ends of the staple about said anvil to form a link.



1,479,871. SPORT SLED. VICTOR E. PEARSON, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 520,118. 1 Claim. (Cl. 280—23.)

A sled comprising a pair of long flexible metal runners set on edge, a chair seat pivotally supported on the front ends of said runners, a chair back pivotally supported on said runners adapted to support the seat, and a cross-bar connecting the side members of the seat back, a U-

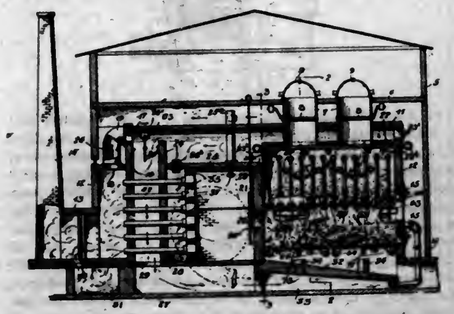


shaped member at the rear edge of the seat adapted to engage said cross-bar and means for releasably holding said cross-bar and U-shaped member in engaging position.

1,479,872. DRILL HEAD. FRANK EDWARD SACKRIDER, Billings, Okla. Filed Jan. 21, 1922. Serial No. 530,985. 2 Claims. (Cl. 169—4.)

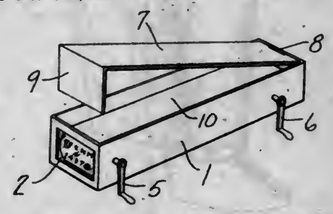
1. A drill head for oil well casings comprising a body having a longitudinally extending opening adapted for alignment with a well casing, the intermediate portion of said body being provided with an annular spray nozzle communicating with and surrounding said longitudinally extending opening and being approximately in the shape of a truncated cone whereby to direct the steam downwardly and obliquely of the longitudinal axis of the body, said body being provided with means whereby said nozzle may be connected to a source of steam supply.

1,479,873. FLOW METER. RUDOLPH W. SCHROEDER, Chicago, Ill. Filed Feb. 16, 1921. Serial No. 445,504. 3 Claims. (Cl. 235—1.)



1. In combination, speedometer mechanism having indicating means for showing the speed of a motor, flow meter mechanism comprising a member positioned by differential pressure incident to the flow of fluid for indicating the rate of flow of fuel to said motor, and means connected to said speedometer indicating mechanism and said flow meter member for indicating at any particular time the speed of said motor per unit fuel consumed.

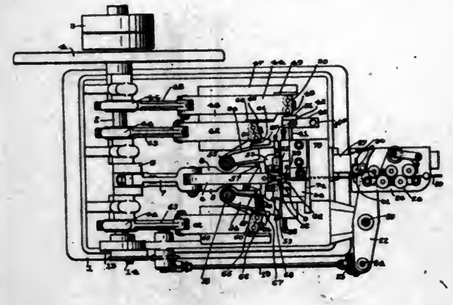
1,479,874. PROCESS OF HYDROLYZING NITRILES. GILBERT E. SEIL, Oakmont, Pa., assignor to The Roessler & Hasslacher Chemical Company, a Corporation of New York. Filed Oct. 15, 1921. Serial No. 507,879. 10 Claims. (Cl. 260—112.)



5. The process of hydrolyzing cyanhydrin of alpha-oxyisobutyric acid by treating one molecule thereof dissolved in an inert solvent, with substantially one molecule of the dihydrate of sulphuric acid in the presence of a catalyst.

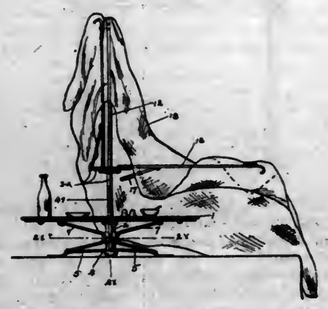
1,479,875. REFUSE INCINERATOR. BERNARD F. SHAUGHNESSY, Brooklyn, N. Y. Filed Oct. 12, 1920. Serial No. 414,174. 18 Claims. (Cl. 110—8.)

1. A refuse incinerator comprising a furnace casing, refuse hoppers extending through the top of the casing, a fire box in the casing below the hoppers, upper and lower grates in the fire box, a gas chamber adjacent the the fire box, a fan communicating with the interior of the casing and including a return passage communicating with the fire box below the lower grate, the fan drawing the products of combustion through the top of the fire box and discharging the same below the lower grate to be reburned and subsequently returned to the gas chamber, and means to conduct the smoke from the gas chamber to the atmosphere.



1,479,876. EDUCATIONAL DEVICE. ORVILLE E. SHIRLEY, Salt Lake City, Utah. Filed Feb. 10, 1923. Serial No. 618,245. 1 Claim. (Cl. 35—12.)

A device of the character described, comprising a box having a window in one end; two rollers transversely journaled in the box, one at each end; a configured tape on the rollers; a lid hinged to the open top side of the box; a shutter depending from the free end of the lid and adapted to close down into the box between the window and the adjacent roller; and means for rotating the rollers.

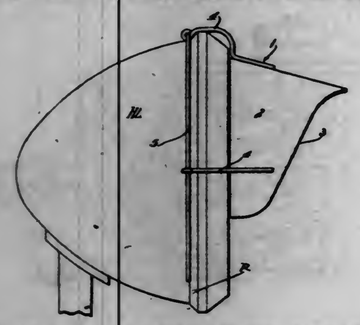


1,479,877. NAIL-MAKING MACHINE. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed May 23, 1921. Serial No. 471,810. 6 Claims. (Cl. 10—51.)

1. In a machine of the class described, the combination with a rotating element, a reciprocatory actuating member connected to said element, a die movable in a rectilinear path, and a pivotally mounted arm for operating

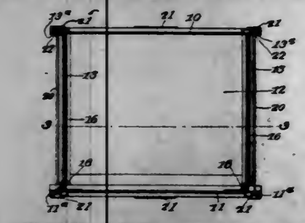
said die, of an anti-friction device carried by said actuating member for transmitting the movement thereof to said arm.

1,479,878. SELF-SERVING DEVICE. FREDERICK B. SPROSS, Bergen, N. Y. Filed Jan. 24, 1923. Serial No. 614,562. 1 Claim. (Cl. 45—26.)



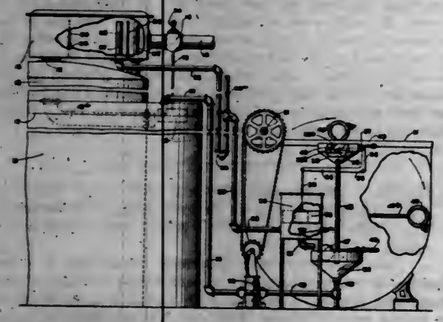
In a self serving device, the combination of a base, a standard supported by said base, a turntable mounted to rotate on said standard, a thrust bearing interposed between said turntable and said base, extension members mounted to slide radially on the under side of said turntable, an extension ring adapted to rest on said extension members, shoulders formed on the under side of said extension ring, said extension member being adapted to engag between said shoulders, a supporting platform mounted on the upper end of said standard, a series of radial arms mounted to swing on said platform, a brace for each of said arms, said braces being adapted to rest on top of said platform to hold said arms in a vertical position, said braces also being adapted to be disengaged from said platform to allow said arms to rest on said paltform in a horizontal position, a table cover adapted to be supported by said arms.

1,479,879. ANTIGLARE DEVICE FOR AUTOMOBILE HEADLIGHTS. JACOB STEINHILPER, Williamsport, Pa. Filed Mar. 1, 1923. Serial No. 622,081. 1 Claim. (Cl. 240—48.)



A device of the class described comprising a hood having its rear edge shaped to conform to the face of the headlight rim in connection with which it is to be used, a spring wire clamping ring, and transversely extending spring clips connecting said hood and ring, said clips being secured at one end to the hood and at their other end to the ring and operating as spacers for the hood

and ring, the portion between the hood and ring being bowed outwardly and of a length to span the rim of the headlight, said ring being designed to fit the headlight

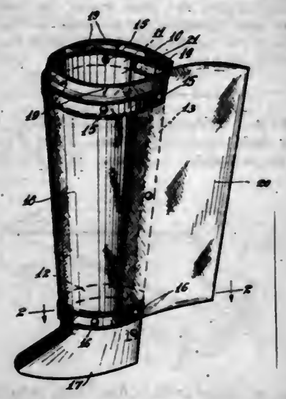


at the rear of its rim whereby the hood is held in abutting engagement with the front face of the rim when applied.

1,479,880. COLLAPSIBLE SHIPPING CASE. GEORGE W. STITZER, Mahanoy City, Pa. Filed Mar. 16, 1921. Serial No. 452,890. 3 Claims. (Cl. 220—6.)

1. A collapsible shipping case having separable top and bottom members and side and end walls, engaged by sliding movement, the said top and bottom members being extended beyond the plane of the side and end walls and provided with marginal exterior reinforcements having registering countersunk openings, and retaining bolts received within the openings and secured within the countersinks, the bottom member being further provided with transverse stop webs arranged for contact with the lower edges of the end walls.

1,479,881. AUTOMATIC PROPORTIONATE FEED CONTROL. WALTER WAGNER, Berwyn, Ill., assignor to International Filter Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 11, 1920. Serial No. 364,986. 19 Claims. (Cl. 210—18.)

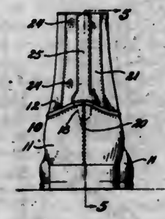


1. In apparatus of the class described, the combination of a treating receptacle, feeding mechanism for supplying treating material to said receptacle, means for supplying liquid for treatment in said receptacle, means for selecting a constant proportion of the supplied liquid, a hydraulic link accommodating continuous discharge of such selected liquid and mechanism responsive to increases and decreases in the head of liquid in said link for varying operation of the feeding mechanism.

1,479,882. SWIVEL CONNECTION. JOSEPH S. WALTON, Los Angeles, Calif. Filed Apr. 24, 1923. Serial No. 634,413. 5 Claims. (Cl. 155—95.)

1. A swivel connection including a sleeve member and a collar member, one of said members being provided with a skirt portion slidably engaging the other member, internal lugs provided on each of said members and having notches, a coiled spring arranged within said members and having certain of its convolutions resting in said notches, one end of the spring being rigidly connected to one of said members and the other end of the spring being rigidly connected to the other of said members, means on one of said members for clamping the same to the standard of a stool, and means on the other member for clamping the same to the seat of said stool.

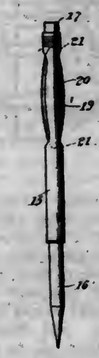
1,479,883. FIREPROOF LEGGING. EDISON L. WHEELER, Chicago, Ill., assignor to F. H. Wheeler Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 524,867. 12 Claims. (Cl. 36—2.)



1. In a fire proof legging, the combination of a body portion of stiff non-conducting sheet material to fit the leg of the wearer, springs connected with the upper and lower ends of said body portion for encircling the leg of the wearer, and a covering of fire-resistant fabric covering said body portion.

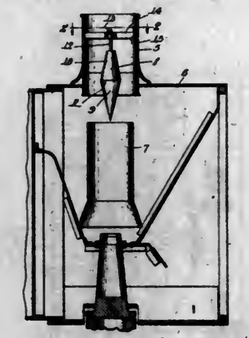
12. In a fire proof legging, the combination of a body portion of stiff non-conducting sheet material shaped to fit the leg of the wearer, springs for encircling the leg of the wearer, a covering of fire resistant material, fastening devices extending through said body portion, said covering, and said springs, to secure said springs to the upper and lower ends of said legging and to secure said body portion and said covering together, said covering and springs extending rearwardly beyond each

edge of said body portion, and reinforcing metal bars connecting the ends of said springs, said covering extending beyond the ends of said springs on one side of the legging to form a flap to protect the back portion of the leg of the wearer.



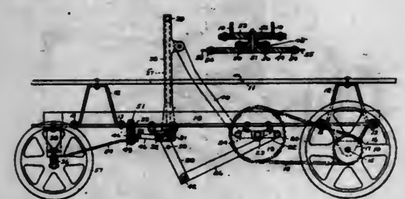
1,479,884. SHOE. ANDREW L. ZERN, Philadelphia, Pa. Filed July 22, 1922. Serial No. 576,730. 2 Claims. (Cl. 36—50.)

1. A shoe having its quarters separated in the rear, and having a counter-stiffener which has a notch in its upper rear edge beneath said separation; a flap fastened to the rear of one quarter and overlying the other quarter; and quickly detachable fastening means between the second quarter and the overlying part of the flap, said notch with the pliable shoe material covering it rendering the heel pliable at this point and facilitating spreading of the upper and removal of the foot.



2. A shoe having a lower with a counter-stiffener which has a substantially V-shaped notch in its upper rear edge, said notch and the material of said lower permitting spreading of the upper side of said stiffener and rendering the rear of the upper pliable at this point; upper quarters open at the front and the back; lacing connecting the front of the quarters; a flap connected to the rear face of one of the quarters to overlie the other quarter; snap fasteners for connecting the flap to the last-named quarter; and a reinforcing strip at the back of the flap connected to the lower.

1,479,885. MAGNIFYING IMPLEMENT. CHARLES E. APPLER, Chicago, Ill. Filed May 4, 1917. Serial No. 166,339. 1 Claim. (Cl. 88—39.)

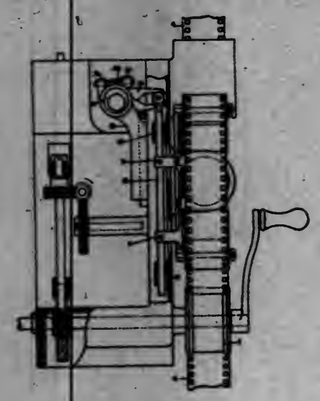


As a new article of manufacture, a tubular holder about the diameter of a pencil and having an extension at one end serving as a handle, said tubular holder having windows therein on opposite sides and a long narrow lens arranged longitudinally within said tubular holder with its magnifying surfaces exposed at said windows, the maximum thickness of said lens being no greater than the diameter of the tubular holder which supports and protects it.

1,479,886. STEAM-EXPANDING DEVICE. LEM ARNOLD, San Angelo, Tex. Filed Mar. 8, 1923. Serial No. 623,782. 4 Claims. (Cl. 162—4.)

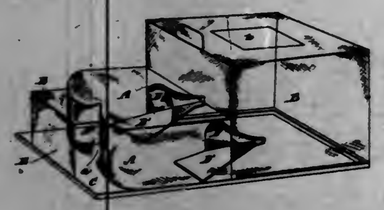
1. The combination with the smoke stack of a railway locomotive, of a steam nozzle arranged beneath the same, and a steam expanding device concentrically arranged within the smoke stack, said device embodying a lower downwardly tapering stream expanding conical part and an upwardly tapering stream-line frustro-conical part, said parts having their large ends arranged at a point constituting the maximum diameter of the device, the upper end of the stream-line part terminating at a point remote from said maximum diameter.

1,479,887. VEHICLE. JOHN S. BITNER, Fort Wayne, Ind. Filed Nov. 28, 1921. Serial No. 518,146. 3 Claims. (Cl. 208—38.)



1. In a vehicle, the combination of a main frame, front and rear axles on the frame, the front axle being pivoted, wheels on the axles, a yoke pivoted at its opposite sides to the frame, a post revolubly mounted in the yoke rearwardly of the pivotal points of the yoke and adapted to be actuated by the occupant of the vehicle for rocking the yoke on its pivots, a transmission means between the yoke and the rear axle for driving the said axle, a member secured to the lower end of the post and rotatable therewith between the arms of the yoke, and a linkage means connecting the opposite ends of the said member and the opposite ends of the front axle for steering the vehicle.

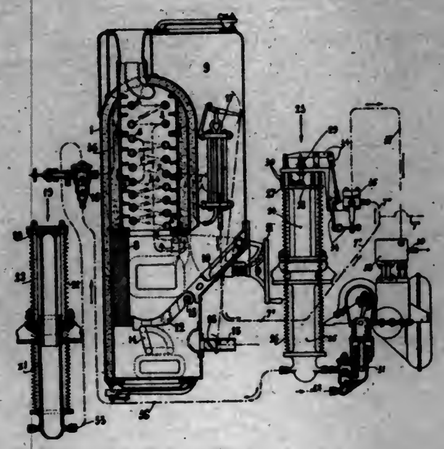
1,479,888. CINEMATOGRAPH MECHANISM. GEORGE B. BOWELL, High Barnet, England, assignor of one-half to Gilbert Richard Redgrave, London, England. Filed Dec. 1, 1922. Serial No. 604,343. 10 Claims. (Cl. 88—18.)



1. Cinematograph mechanism of the continuously moving film kind comprising a framework, a film guide mounted in said framework above the optical axis of projection, a film feed mounted in said framework below the optical axis, a reciprocating member adapted to move that portion of the film lying between said guide and said feed so that the upward motion of the member exactly compensates for the downward progression of

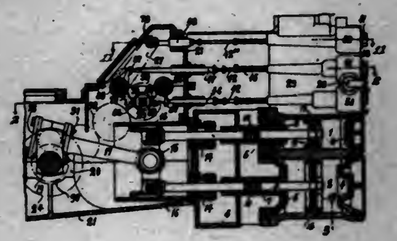
the film over the surface of said member and that part of the film where the optical axis crosses it is maintained stationary relatively to said optical axis, means

for actuating said member and means for controlling the motion of said member to allow of adjustment of its travel to agree with the pitch of the film.



1,479,889. SPARROW TRAP. JOHN B. BROWN, Wakanui, Ashburton, New Zealand. Filed Nov. 17, 1919. Serial No. 338,483. 1 Claim. (Cl. 43—65.)

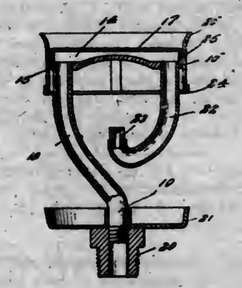
A sparrow trap formed by a bait chamber combined with a bird enclosure and having an inlet passage or passages leading from the bait chamber to the enclosure, a curved wall of such bait chamber having a concave inner surface, an inlet opening or openings in such curved wall and a screen arranged to extend across the outside of such opening or openings and disposed at a suitable distance therefrom, substantially as specified.



1,479,890. APPARATUS FOR REGULATING THE SUPPLY OF WATER TO INSTANTANEOUS STEAM GENERATORS. MAURICE BRUNET, Liege, Belgium, assignor to Maison Detilleux, Société Anonyme, Liege, Belgium. Filed Aug. 17, 1921. Serial No. 493,104. 3 Claims. (Cl. 137—153.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

1. In apparatus for regulating the supply of water to an instantaneous steam generator, of the type wherein the output of the feed-pump is controlled through the action on the admission of driving fluid to said pump of a device influenced by the pressure in the generator, the combination in said device of: a hydraulic accumulator comprising a cylinder interposed on the feed-pipe and in communication with the generator therethrough, a guided plunger working in said cylinder and a spring resistance applied to said plunger and normally tending to retain same within its cylinder; a longitudinally movable spring-pressed adjustable finger arranged axially in relation to the plunger and having its lower end normally situated at a predetermined point in the path of said plunger's stroke; and a sytsem of suitably-ar-

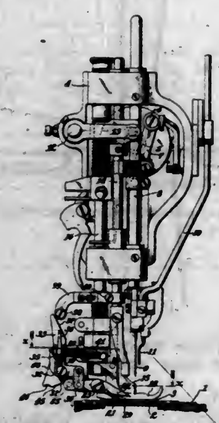
ranged levers and connections, having one end-member in permanent operative relation with the upper end of said adjustable finger and the other end-member operatively connected to the valve controlling the admission of driving-fluid to the feed-pump; all substantially as described.



1,479,891. STEAM ENGINE. MAURICE BRUNET, Liege, Belgium, assignor to Maison Detilleux, Société Anonyme, Liege, Belgium. Filed Aug. 17, 1921. Serial No. 493,105. 1 Claim. (Cl. 121—105.)

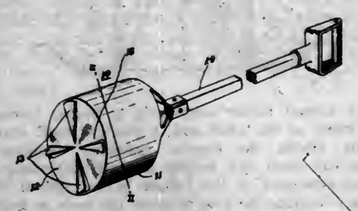
In a valve distribution mechanism for compound steam-engines comprising high and low pressure cylinders, the combination of a set of admission and exhaust valves, suitably guided spring-influenced valve rods for said valves, a longitudinally fixed rotary main camshaft, cams on said camshaft composed of two portions arranged to control the said valves for forward and backward drive respectively, said cams increasing progressively in eccentricity from nil to a maximum in opposite directions from their adjacent ends, a pair of longitudinally slidable rocker-shafts extending parallel to the main camshaft, a set of rockers on each rocker-shaft, having one of their ends in operative contact with the main camshaft and the other end in operative contact with the said spring-influenced valve-rods, a set of auxiliary valves for controlling the distribution of live steam to the admission of the low pressure cylinder and the discharge of the steam from the exhaust of the high-pressure cylinder respectively, suitably guided

spring-influenced valve-rods for said auxiliary valves, a non-rotatable but longitudinally movable cam-member, extending parallel to the rocker- and main camshafts and having the free ends of the last-named valve-rods bearing thereon, a rigid connection between the rocker shafts and the said non-rotative cam-member, a single operating lever, cooperating with said rigid connection, for imparting jointly and simultaneously a longitudinal movement to the pair of rocker-shafts and a corresponding longitudinal movement to the non-rotative cam-member, and a set of suitable cams on the said cam member for operating the aforesaid auxiliary valves to admit live steam to the low-pressure cylinder and allow the discharge of the exhaust steam of the high-pressure cylinder, said cams being positioned on each side of a neutral so as to become operative only when, by the joint longitudinal movement of the respective rocker-shafts, the aforesaid rockers have reached a point of the corresponding cams of the main camshaft, on either side of said neutral, of suitably predetermined eccentricity in accordance with the fixed percentage of cut-off above which live steam should be admitted to the low-pressure cylinder, whereby the movement of the aforesaid single lever will produce at will driving in one direction and the other at any desired per cent of cut-off and automatically cause the exhaust steam of the high-pressure cylinder to be replaced by live-steam in the low-pressure cylinder when the percentage of cut-off reaches the aforesaid predetermined value substantially as described.



1,479,892. LIQUID-FUEL BURNER. JUAN ANTONIO XEREZ BURGOS, Malolos, Bulacan, Philippine Islands. Filed Dec. 12, 1922. Serial No. 606,438. 3 Claims. (Cl. 158—63.)

3. A burner for liquid fuel stoves comprising a horizontal retort section, a supply pipe section leading to said retort section and connected thereto at one end, a burner tube carrying section depending from said retort section at the other end thereof and bent to dispose the burner tip immediately below the center of said retort section, a flange supporting ring carried by said pipe sections immediately below said horizontal retort section and a heat confining annular band carried by said flange supporting ring and encircling said retort section, and a starting pan mounted upon the lower end of the supply pipe, a coupling also on the supply pipe and supporting the pan.

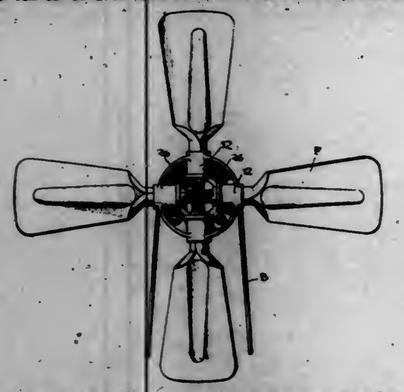


1,479,893. PICOT-EDGING ATTACHMENT FOR SEWING MACHINES. FREDERIC M. CARD, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 8, 1921. Serial No. 513,742. 7 Claims. (Cl. 112—125.)

1. The combination with a sewing machine adapted to make an open-work seam and including two presser-feet, of coacting blades disposed between the presser-feet rearward of the point of seam-formation, means operatively connected with the actuating mechanism of the

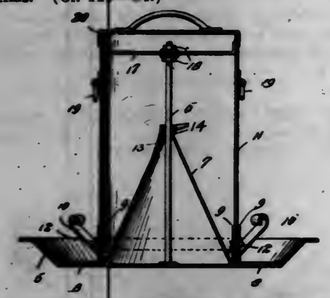
sewing machine to relatively move said blades to sever the fabric, and a shift-element operative during operation of the machine to render said blades inactive.

1,479,894. SAND-BORING IMPLEMENT. RICHARD F. CAREY, Moore, Pa. Filed Sept. 12, 1922. Serial No. 587,707. 4 Claims. (Cl. 255—67.)



4. A toy for boring holes in sand or like material comprising a thin sheet metal cup member having a continuous cylindrical wall and a flat unitary bottom extending transversely of the cylindrical wall, said bottom having a plurality of openings with downwardly inclined bit members at the rear edges thereof, the bit members being constituted by material of the bottom which is bent down to provide the openings, a handle, integral tongues extending from the upper edge of the cup and secured to the handle, and means for securing the bottom of the cup to one end of the handle, said means including a downwardly tapered spreader below the bottom for forcing out the central core of material into the range of the bit members.

1,479,895. FAN. ELI FRANKLIN COLBY, Lake Mills, Iowa. Filed Oct. 31, 1922. Serial No. 598,148. 13 Claims. (Cl. 170—162.)

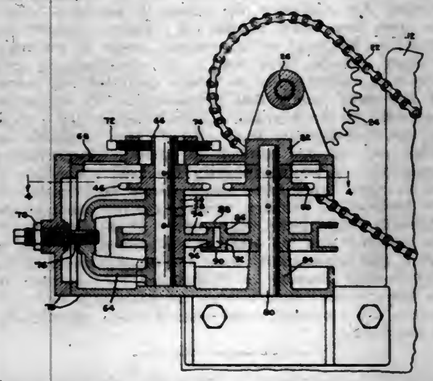


1. A fan blade supporting member, comprising a plate-like member having formed upon its front face a plurality of circumferentially arranged nipples, each

nipple terminating in spaced relation with respect to the center of said member at its inner end, and each

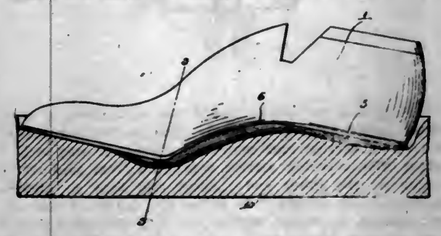
nipple protruding from the outer periphery of said member said member being adapted for attachment to a pulley.

1,479,896. ANIMAL FEEDER. JAMES W. COLEMAN, Moultrie, Ga. Filed Jan. 29, 1923. Serial No. 615,479. 2 Claims. (Cl. 119—54.)



2. An animal feeder comprising a hopper having inclined walls on its lower end, a vertical shaft arranged centrally within the hopper, agitating elements pivoted on the shaft and having laterally extending arms disposed exteriorly of the hopper to be engaged by the animals to agitate the feed to cause the same to gravitate from the hopper, a pan supporting the hopper, bifurcated supporting elements carried by the pan in which the hopper is mounted.

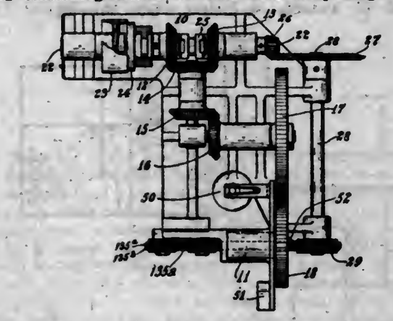
1,479,897. SEWING-MACHINE SHUTTLE. EDWIN D. COLLINS, Beechwood, N. J., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Feb. 11, 1922. Serial No. 535,723. 1 Claim. (Cl. 112—232.)



A sewing machine shuttle comprising a bobbin chamber, a fixed cross-bar extending across the inner end of the chamber, a fixed tubular post on said cross-bar centrally located in said chamber, an externally polygonal bobbin-core-engaging sleeve, mounted to rotate on said post, and adapted to bear on the internal surface of a bobbin core, salient angles of the sleeve being provided with barbs projecting outward from the sleeve and adapted to permit a bobbin to be readily positioned on the sleeve and to indent the core and resist removal thereof, and means associated with the post and sleeve for confining the sleeve against free removal from the post and for frictionally retarding rotation of the sleeve and a bobbin engaged therewith.

1,479,898. CARAMEL-FORMING MACHINE. JAMES N. COLLINS and EDWARD G. OSZMAN, Minneapolis, Minn., assignors to J. N. Collins Company, Minneapolis, Minn. Filed May 6, 1922. Serial No. 558,889. 1 Claim. (Cl. 107—12.)

A caramel forming machine comprising a support, a shaft, a forming roller secured to said shaft, a second shaft, a cooperating forming roller secured to said second shaft, a housing for said rollers, a yoke having two bearings for said second shaft, a screw-threaded member received in a screw-threaded opening in said yoke and rotatably carried by said housing, means for securing said screw-threaded member against rotation, a third bearing for said second shaft mounted in a slot in said housing, set screws for securing said third bearing in adjusted position, and means for supplying caramel material to the space between said rollers.

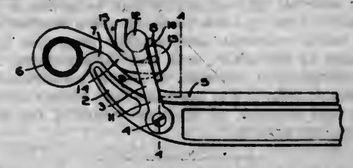


1,479,899. METHOD OF MAKING SHOES. OLIVER E. DE RIDDER, Rochester, N. Y. Filed Jan. 20, 1923. Serial No. 613,995. 3 Claims. (Cl. 12—142.)

2. A method of making shoes which consists in providing a last with an inner sole in a moistened condition attached to the bottom thereof, applying pressure through a member of yielding material to such inner sole to cause the inner sole to conform to the under side of the last, stitching the upper to the inner sole, and then completing the other operations of making the shoe.

1,479,900. METHOD AND MACHINE FOR MAKING CABLED STRUCTURES. JOHN A. DORNER and FRED CLINTON FRANCISCO, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,072. 14 Claims. (Cl. 117—5.)

1. A winding machine comprising a ring winder, means including a drive roller adapted to propel an endless core in a straightened path through said ring winder, and tensioning means for said core comprising a plu-

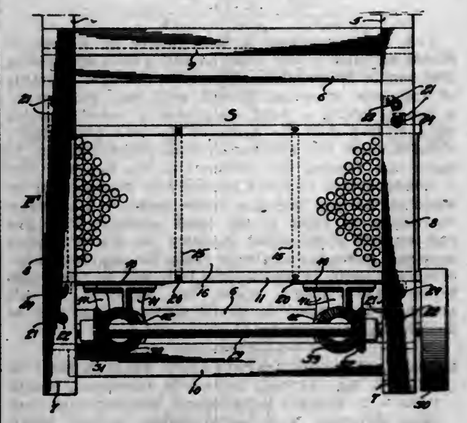


rality of rollers mounted upon a common support and means for moving said support toward and from the aforementioned drive roller.

1,479,901. HULL OF FLYING MACHINES. CLAUDIUS DORNIER, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,552. 4 Claims. (Cl. 244—14.)

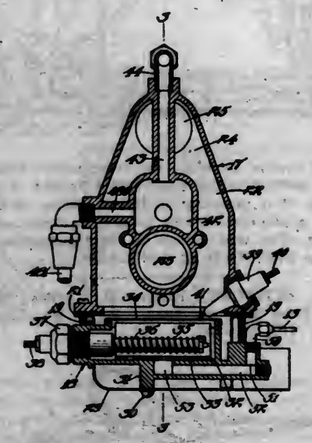
1. Flying machine comprising in combination a hull the middle portion of which has a cross-section resembling a hollow inverted T and driving gear on the lateral portions of said hull.

1,479,902. STRAP WRENCH. WILLIAM A. ELLISON, Salem, Mass., assignor to David F. Murphy, Salem, Mass. Filed Aug. 2, 1922. Serial No. 579,122. 2 Claims. (Cl. 81—64.)



1. A strap pipe wrench comprising a handle having a curved gripping nose, a shackle pivoted to the handle, an anchoring member independent from the shackle but adapted to engage the latter, said anchoring member having a plurality of strap-receiving slots extending through it, each of which slots is of a size to have a strap threaded therethrough, and a strap arranged to be passed through the shackle over the nose and around the pipe to be gripped, thence back through the shackle and through one slot of the anchoring member and around a portion thereof, and through the other slot of said anchoring member and the shackle.

1,479,903. COMBINATION HAMMOCK AND BAG. KNUD ERLAND, Seattle, Wash. Filed Oct. 29, 1921. Serial No. 511,490. 3 Claims. (Cl. 190—42.)

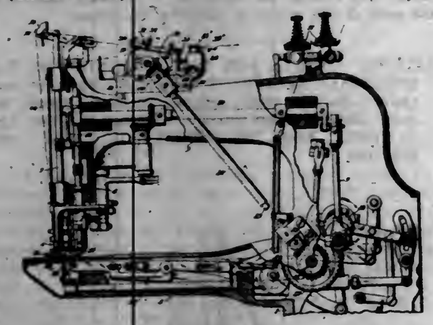


1. A device of the class described comprising a flexible piece of material in the shape of a hammock, hems on the sides of the material, other hems on the ends of the material, cords inside of the hems, eyelets in the hems, cords in the eyelets of the end hems, rings in the outer ends of the cords at the ends of the material, handles on the material and a blanket with tapes in which are eyelets.

1,479,904. COMPOUND GYRATORY SCREENING DEVICE. HENRY WILLIAM FALKER, Ashland, Pa. Filed May 1, 1922. Serial No. 557,549. 5 Claims. (Cl. 83—38.)

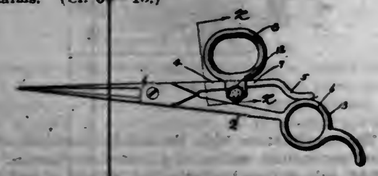
1. A screening device including a flexibly suspended screen and means for imparting a gyratory motion to the ends of the screen in opposite directions.

1,479,905. HEATER FOR INTAKE MANIFOLDS FOR INTERNAL-COMBUSTION ENGINES. STEPHEN IVAN FERETS, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Apr. 19, 1921. Serial No. 462,541. 9 Claims. (Cl. 123—180.)



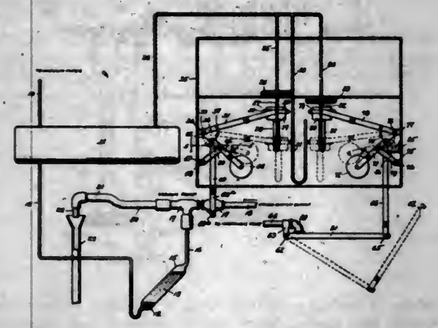
1. The combination with the intake manifold of an internal combustion engine, of a burner for heating said manifold, said burner having a fuel pit and a fuel inlet communicating with the bottom of said pit, means in said fuel pit for heating and vaporising the fuel therein, and means for supplying liquid fuel to said inlet.

1,479,906. MOP. WILLIAM H. FISHER, Brockton, Mass. Filed Sept. 11, 1922. Serial No. 587,306. 3 Claims. (Cl. 15—153.)



1. A mop comprising a body formed of strands of fibrous material to form a flat bundle, a band surrounding said bundle intermediate of its ends having a plurality of grommets extending through said band and bundle, a handle having a head comprising a lower clamping plate shorter than the width of the mop presenting a rounded under face and having studs projecting from its upper face through the grommets in the mop body and a complementary clamping member also shorter than the width of the mop having a handle socket and apertures to receive the studs of the lower clamping plate and nuts on said studs acting to clamp the plates together upon said gommets and also to clamp the mop body therebetween whereby in use the mop body will be firmly held between the clamping plates, but prevented by said grommets from being so tightly clamped as to prevent dismantling of the clamping plates and mop.

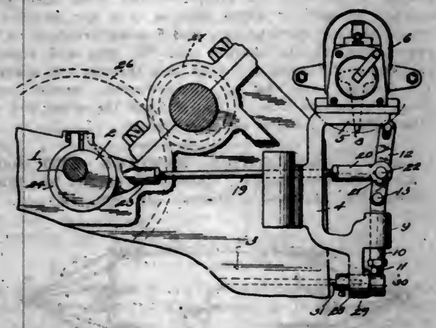
1,479,907. THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 3, 1920. Serial No. 356,007. 7 Claims. (Cl. 112—248.)



1. In a sewing machine, the combination with a plurality of needles having their eyes arranged at different elevations, of a plurality of thread-tension devices one for each needle-thread, and actuating means operating successively close said devices on their respective threads during the down-stroke of said needle.

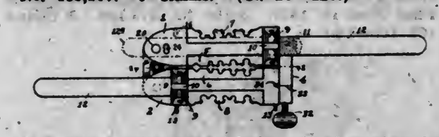
1,479,908. SCISSORS. ALBERT H. GOSHIA, Sherwood, Ohio. Filed Mar. 20, 1923. Serial No. 626,324. 4 Claims. (Cl. 30—13.)

4. In a scissor having a shank, a finger loop slidably mounted thereon, and arranged to slide with the movement of the hand of the operator.



1,479,909. VACUUM-CONTROL APPARATUS. JOHN J. GRAFFLIN, Atlanta, Ga. Filed Aug. 18, 1921. Serial No. 492,181. 5 Claims. (Cl. 230—24.)

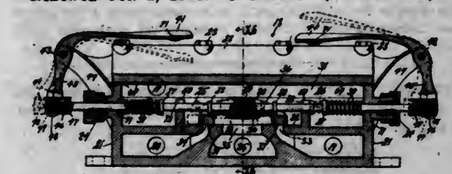
1. Apparatus responsive to change of pressure comprising in combination a chamber, a liquid reservoir exposed to the pressure within said chamber, a second reservoir exposed to a different pressure from that in the chamber, one of said reservoirs being movable with respect to the other, connecting means whereby said apparatus may be governed by the movement of the movable reservoir and a conduit of relatively small sectional area leading from one of said reservoirs to the other; said reservoirs adapted to contain alternately a quantity of liquid transferable thru said conduit from one to the other upon change of pressure within said chamber, to effect movement of the movable reservoir by gravity.



3. Apparatus responsive to change of vacuum comprising in combination a vacuum chamber, an upper liquid reservoir exposed to the vacuum within said chamber, a lower reservoir exposed to atmosphere, one of said reservoirs being movable with respect to the other, connecting means whereby said apparatus may be governed by the movement of the movable reservoir and a conduit of relatively small sectional area leading from one of said reservoirs to the other; said reservoirs adapted to contain alternately a quantity of liquid transferable thru said conduit from one to the other upon change of vacuum within said chamber, to effect movement of the movable reservoir by gravity.

1,479,910. SAFETY DEVICE FOR IGNITION MECHANISM. CORNELIUS B. HARDMAN, Columbus, Ohio. Filed Oct. 26, 1922. Serial No. 596,949. 2 Claims. (Cl. 123—149.)

1. In combination with the timing shaft of an internal combustion engine, of a magneto controlling arm, a tripping arm having a yieldably supported member carried thereby for engaging the magneto arm to oscillate the same, and means for oscillating the tripping arm.



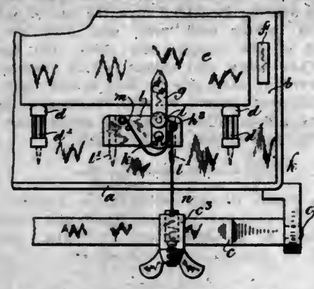
1,479,911. ADJUSTABLE THREAD CUTTER. REUBEN H. HARPER, Chicago, Ill. Filed July 7, 1921. Serial No. 483,107. 9 Claims. (Cl. 10—125.)

2. A thread cutter comprising a pair of members having die faces on opposite sides, a plate pivoted to one of the members and having a recess therein, an adjusting nut and a screw therefor seated in the recess in the plate and the screw pivoted to the other member.

7. In a hinged tool, a pair of members, a hinged plate pivoted to one of the members, means forming an adjustable connection movable with respect to the plate and pivoted to the other member, graduations on opposite sides of the hinge plate, and a pointer on the member to which the hinge plate is not directly pivoted corresponding to the graduations at the sides of the hinge plate.

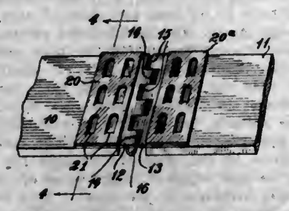
1,479,912. ONE-MAN CONTROL FOR TRACTOR AND TRUCK ATTACHMENTS. MORTIMER A. HARRISON, Madera, Calif. Filed Aug. 10, 1920, Serial No. 402,715. Renewed Oct. 2, 1923. 6 Claims. (Cl. 303—50.)

1. The combination with a truck or tractor and a device drawn thereby and provided with an operable part; of a compressed air cylinder having a piston therein connected to operate said operable part; a source of compressed air; a pipe leading from said source; air connections communicating with opposite ends of the cylinder; and a valve on the tractor and arranged between the pipe and said air connections to control the admission and exhaust of air to and from the opposite ends of the cylinder to operate the piston in said cylinder.



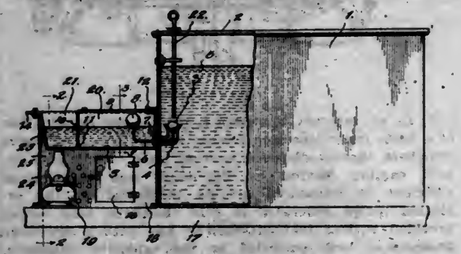
1,479,913. BUCKLE. WILLIAM E. HATHEWAY, Bridgeport, Conn. Filed Feb. 24, 1923. Serial No. 620,872. 3 Claims. (Cl. 24—184.)

1. A buckle construction comprising a frame and a lever journaled thereto, said frame having a floor, elongated sections of the floor pierced therefrom to form clamping means for anchoring webbing to the floor, means whereby said sections are reduced and made shorter than the openings in the floor from which said sections were pierced, so that webbing can be secured between the ends of the sections and walls of said openings.



1,479,914. SHEET ADJUSTER FOR PRINTING PRESSES. HENRY S. HORNBECK, Union Hill, N. J. Filed Dec. 8, 1921. Serial No. 520,909. 1 Claim. (Cl. 101—414.)

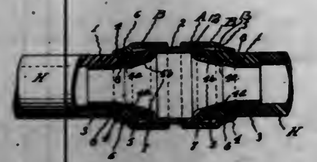
A sheet adjuster for printing presses comprising movable and opposed fingers adapted to receive between them with a yielding pressure the sheet to be printed, a yielding cushion interposed between the fingers, means



to press the fingers together, and means to move the fingers to carry the sheet with them until its movement is resisted.

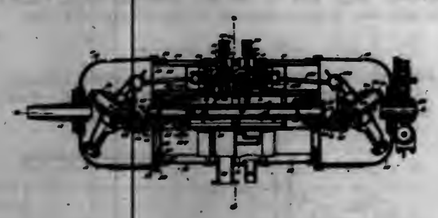
1,479,915. CONNECTING DEVICE FOR BELTS. GEORGE E. HULSE, New Haven, Conn., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed July 14, 1922. Serial No. 574,923. 6 Claims. (Cl. 24—33.)

1. In a device of the general nature of that herein described, in combination, a connecting member having a belt end secured thereto at one end thereof and having a plurality of openings in substantially the other end thereof, and means for securing another belt end to said connecting member including a plurality of belt-engaging members integrally connected with one another and separate from said connecting unit and each passing through one of said openings to engage said belt end.



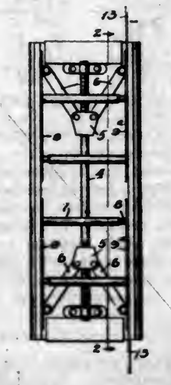
1,479,916. STOCK-WATERING APPARATUS. JOSEPH M. JACOBS, Tampico, Ill. Filed Dec. 22, 1919. Serial No. 346,768. 1 Claim. (Cl. 119—73.)

In a stock watering apparatus, the combination of a sheet metal housing having sides (15) and ends forming a chamber, with a flange along the upper edges of said housing, a sheet metal trough curved in cross section and formed with a flange (14) to rest on said flange of the housing, so that upwardly diminishing spaces (25) are formed which extend upward to said flanges at each side of the trough, a flat sheet metal cover (9) having a vertical end wall (10) forming a partition in said trough, with provisions to permit the water to pass from one side of said partition to the other, bolts (13) passing



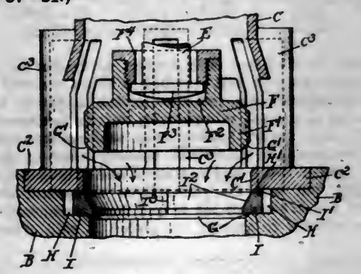
through said flange and cover to hold the latter in place, projections (12) bent inward from the upper edge of one end of the housing to extend over the end of said cover, so that by raising said cover said partition is also raised out of the trough, said sides (15) forming a chamber (18) below said trough, which chamber terminates upward at each side in said spaces (25), a door for said chamber, means in said chamber to heat said trough, and means adjacent to said projections (12) to supply water to this end of the trough.

1,479,917. HOSE CLAMP. EDWARD A. JOHNSON, Brooklyn, N. Y., assignor to Apex Specialties Corporation, New York, N. Y. Filed Nov. 20, 1919. Serial No. 339,256. 4 Claims. (Cl. 285—79.)



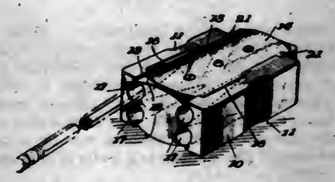
1. A hose clamp comprising, a thimble having tapered portions at each of its ends and straight nose portions; screw caps engageable with said tapered portions for providing zones of compression for the hose ends; and a relief chamber adjacent to each zone of compression for receiving a hose end and adapted to turn the hose end in said chamber in direction outwardly relative to the axis of the thimble for preventing withdrawal of the hose end from the chamber; the straight nose portions being insertible in the ends of the hose for interiorly supporting the hose adjacent to the zones of compression for preventing breaking of the hose at said zones.

1,479,918. MULTICYLINDER INTERNAL-COMBUSTION ENGINE. ALBERTO LLEO and CLAUDIO BARADAT, Barcelona, Spain; said Baradat assignor to said Lleo. Filed Jan. 5, 1920, Serial No. 349,652. Renewed Oct. 4, 1923. 14 Claims. (Cl. 123—58.)



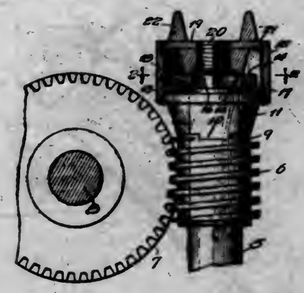
1. In an internal combustion engine, the combination of a main central casting having a plurality of explosive chambers therein disposed concentrically about an axis, said casting having a ruggedness and massiveness sufficient to withstand strains incidental to the explosion forces generated in said chambers, said casing provided with a fuel passageway and with a discharge passageway both encircled by the explosive chambers, conduits leading from each of said passageways to the exterior of the casting, valves for controlling the flow of gases from the fuel passageway into the explosive chambers and for controlling the flow therefrom into the discharge passageway, a relatively light cylinder shell construction at opposite longitudinal ends of the casting including piston cylinders fitted to the casting and constituting continuations of each of the explosive chambers at opposite ends thereof and balanced pistons in said light shell cylinders exposed to the common explosive chamber.

1,479,919. LOOSE-LEAF BINDER. ARTHUR R. MEYER and ELMER A. REED, Chicago, Ill., assignors to Wilson-Jones Loose Leaf Company, a Corporation of Illinois. Filed June 18, 1921. Serial No. 478,490. 5 Claims. (Cl. 129—12.)



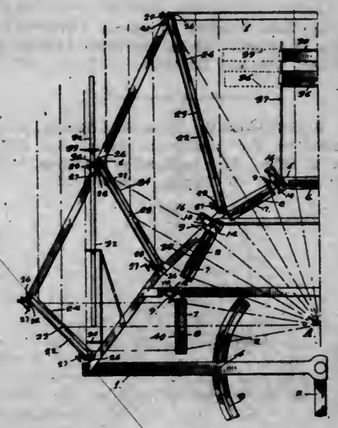
5. In a loose leaf binder, a longitudinally shiftable leaf-holding unit comprising a pair of leaf-holding posts, and means for shifting said unit comprising a rotatable cam device having a cam-like engagement with said unit.

1,479,920. VALVE. CHARLES E. MILLER, Chicago, Ill. Filed Apr. 27, 1922. Serial No. 556,905. 18 Claims. (Cl. 37—21.)



1. In combination with a valve seat a seat protecting member adapted when the valve is opened to cover the valve seat and when the valve is closed to expose the seat to the valve.

1,479,921. COMPOUND TOOL. JEROME J. MILLER, Chadron, Nebr. Filed Apr. 4, 1923. Serial No. 629,871. 2 Claims. (Cl. 120—93.)

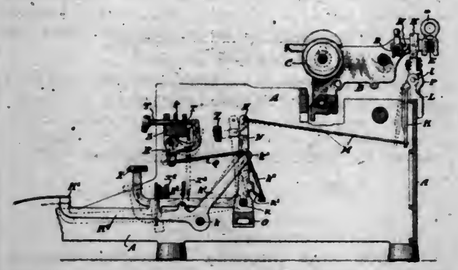


1. A pencil sharpener including a body having a pencil receiving and guiding bore and a blade receiving surface along and through one side of which the bore opens, said body having undercut shoulders at opposite sides of its said blade receiving surface, cut away intermediate the ends thereof along the major portion of the length of said bore.

1,479,922. PROTECTING DEVICE FOR MACHINES. LOUIS E. MITCHELL, Chicago, Ill., assignor to Morgan Gardner Electric Co., Chicago, Ill. Filed Oct. 6, 1921. Serial No. 505,951. 7 Claims. (Cl. 287—53.)

3. A driving device comprising a shaft having an angular driving portion, a washer engaging with said portion and having a depending flange, a nut for holding the washer, a clutch member having projections engaging with recesses in said flange and a worm driven by said clutch member, said clutch member having an upwardly extending rim to form a cup for retaining the pieces when the washer is broken.

1,479,923. SOLAR FURNACE. MARCEL E. MOREAU, San Francisco, Calif. Filed Apr. 10, 1922. Serial No. 551,294. 11 Claims. (Cl. 126—270.)

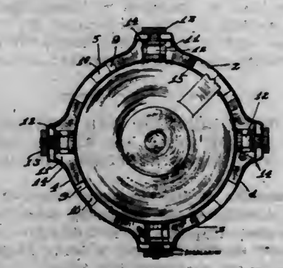


5. A solar furnace comprising a fixed lens arranged transversely to the path of solar rays; a plurality of lenses arranged adjacent to the fixed lens and having their focal points concentrated on the focal point of the fixed lens; adjustable mirrors arranged to reflect solar rays parallel to the rays entering the fixed lens into the other lenses whereby an intense heat may be produced at said common focal point; and means for preventing a portion of said solar rays from passing through any one of said lenses.

1,479,924. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,722. 13 Claims. (Cl. 197—63.)

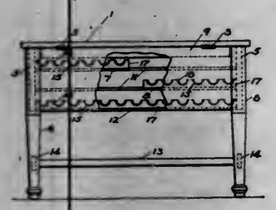
1. In a typewriting machine, a carriage provided with a margin stop rail and a tabular stop rail, end margin stops and an intermediate stop on said margin stop rail,

one or more stops on the tabular rail, a center stop adapted to engage any of said stops, a vertically arranged lever operatively connected with the center stop, means under the control of the operator and connected with



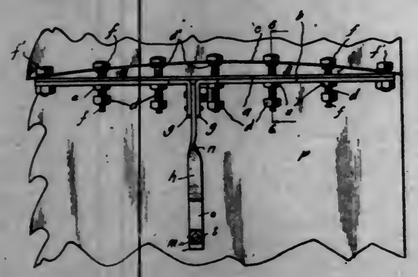
said vertical lever for settting the center stop in three positions to engage the margin stops, the intermediate stop, or the tabular stops, and devices for locking said setting means to hold the center stop in one position to which it is set.

1,479,925. CYLINDRICAL RAVIOLI SHAPER, SEALER, AND CUTTER. ROSA OLERI, San Francisco, Calif. Filed May 15, 1923. Serial No. 639,107. 3 Claims. (Cl. 107—51.)



1. A pastry shaper, sealer and cutter comprising a wooden core provided with a plurality of circumferential projections thereon, a plurality of wooden strips attached to the edges of the projections and extending thereon parallel to the axis of the core, and a plurality of metal corrugated strips extending around each of the projections of the core and along each wooden strip.

1,479,926. TIMER HOUSING. JESSE C. OSBORN, Chicago, Ill., assignor to J. W. Duntley, Chicago, Ill. Filed Apr. 3, 1920. Serial No. 370,986. 7 Claims. (Cl. 200—24.)

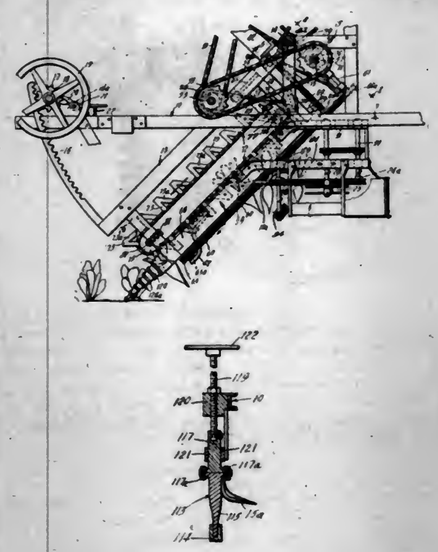


1. A timer housing comprising a plurality of interfitting chambered metal sections, insulating means in each of said sections, and means for introducing and securing a conduit in one of said sections.

1,479,927. PIANO BENCH. GEORGE J. RAUPPE and DAVID CORNFOOT, Buffalo, N. Y. Filed Aug. 16, 1922 Serial No. 582,155. 3 Claims. (Cl. 45—64.)

2. A piano bench comprising a supporting structure including a compartment with solid front, rear and end panels and open at its top, legs for sustaining the compartment, a seat hinged at its forward portion above the compartment, grooves in said front and rear panels, and a roll holder adapted to be slidably mounted in said grooves, said roll holder having brackets with semi-circular openings for supporting and spring clamps to form a curved contact for holding said music rolls, substantially as described.

1,479,928. SAW GAUGE. JERRY RICKER, Enterprise, Oreg., assignor to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 18, 1922. Serial No. 601,788. 6 Claims. (Cl. 33—202.)



1. A saw gauge of the character described comprising a stock of rigid construction, a flexible band, means for securing the band to the stock at longitudinally spaced points and operable to flex portions of the band along its length to variable curves, and means for tilting the stock at variable angles with a straight surface.

1,479,929. BEET DIGGING AND CONVEYING MACHINE. ALVA M. RICKS, Los Angeles, Calif. Filed June 26, 1920. Serial No. 392,053. 10 Claims. (Cl. 55—9.)

1. In a machine of the character described beet digging means embodying soil disturbing means embodying a plow member adapted to be arranged well below the surface of the ground, and a blade adapted to be arranged nearer the surface of the ground.

7. In a machine of the character described beet digging means comprising in combination, soil disturbing means, two co-operating bits operating above the ground, and a transverse soil engaging member operating under the surface of the ground and extending under the bits, said member and bits cooperating to handle beets.

10. In a machine of the character described beet digging means comprising in combination a plow adapted to plow a furrow alongside a row of beets, a transverse

soil engaging blade adapted to extend across the row of beets and to assist in lifting the beets, and means to engage the beet tops and lift them.

1,479,930. HOBBYHORSE. EDNA G. ROBESON, Atlanta, Ga. Substitute for application Serial No. 220,035, filed Mar. 2, 1918. This application filed Aug. 8, 1922. Serial No. 580,581. 5 Claims. (Cl. 46—22.)

1. In a device of the character described, in combination, a body member, a support rigidly connected therewith and about which the body member rocks, roller means at the end of said support, legs pivoted to the rear part of said body member whereby as the body member tilts forwardly said legs will swing toward said support, and means to limit the pivotal movement of the legs.

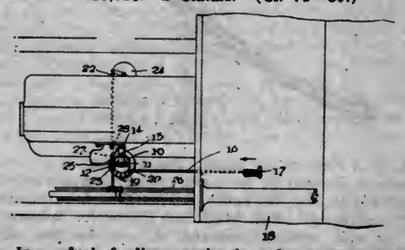
1,479,931. DRIVING WHEEL. OTTO SEVERIN RUUD, Rymoen, near Roverud Station, Norway. Filed Oct. 3, 1922. Serial No. 592,167. 1 Claim. (Cl. 301—41.)

In a driving wheel, the combination of a disc; lugs of circular cross section tapered at their traction points, each comprising two spirals integrally connected at their

traction points and their respective free ends extending in different directions and to opposite sides of said disc;

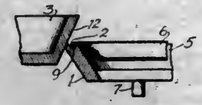
and rivets for securing the respective ends of two adjacent lugs together and to said disc.

1,479,932. PIN TONGUE. LOUIS E. SADLER, Attleboro, Mass. Filed Oct. 2, 1922. Serial No. 591,840. 1 Claim. (Cl. 24—160.)



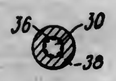
In a pin tongue, a body having an eye at one end, and a cup having a bottom and a rim, the rim having a slot extending transversely thereof, the eye being received in the cup and extending through the slot and having one side face thereof seated on the cup bottom, the free edge of the rim being extended inwardly and impinged against the opposite side face of the eye, the bottom of the cup having an aperture in register with the eye.

1,479,933. SHEET-METAL ROAD WHEEL. HAROLD B. SANKEY, Wolverhampton, England. Original application filed Nov. 11, 1919, Serial No. 337,361. Divided and this application filed Feb. 27, 1922. Serial No. 539,574. 3 Claims. (Cl. 301 6.)



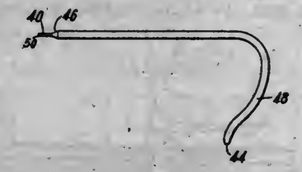
2. A sheet metal disc wheel comprising an outer disc member, a flange at the outer edge of said outer disc member, an inner disc member and a flange at the outer edge of said inner disc member, and means by which said outer disc member is secured at its inner edge to said inner disc member.

1,479,934. FOOT FEED FOR AUTOMOBILES. ALFRED E. SCHALLER, Maywood, Mo. Filed Sept. 27, 1920. Serial No. 413,016. 2 Claims. (Cl. 74—89.)



1. In a fuel feeding mechanism for automobiles, a throttle attaching rod, foot-operable means for said rod, manually operable means for said rod having a slip connection thereon, a stop for said manually operable means on said throttle actuating rod, a rocker having a plurality of openings therethrough in a path around its axis, said rod having a swivel intermediate its length and adjacent one end, said end being selectively attachable in said openings, and an actuating element for said rocker selectively attachable to said openings.

1,479,935. CRUST-TRIMMING MECHANISM FOR PIE-MAKING MACHINES. DENNIS WOOD SMITH, Chicago, Ill., assignor to Colborne Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1922. Serial No. 584,243. 3 Claims. (Cl. 107—1.)

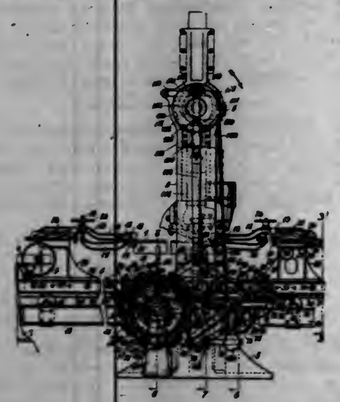


1. A device of the class described comprising a crust trimming element having a trimming surface, a carrier including a pie-tin support having a trimming edge of greater diameter than the pie-tin, and mechanism for moving said carrier along a path to bring said trimming edge into engagement with said trimming surface for trimming a pie crust.

1,479,936. METHOD OF MAKING SPECTACLE TEMPLES. FREDERICK A. STEVENS, Providence, R. I., assignor to Stevens and Company, Inc., Providence, R. I., a Corporation of Rhode Island. Original application filed June 22, 1921, Serial No. 479,479. Divided and this application filed Sept. 1, 1921. Serial No. 497,641. 3 Claims. (Cl. 18—59.)

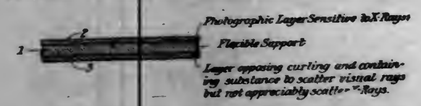
1. The method of making a spectacle temple that comprises mounting a reinforcing rod in a seamless zylonite tube, bending the tube with the reinforcing rod therein to the shape of a temple, and permitting the zylonite tube to shrink into tight engagement with the reinforcing rod.

1,479,937. SPECTACLE TEMPLE. FREDERICK A. STEVENS, Providence, R. I., assignor to Stevens and Company, Inc., Providence, R. I., a Corporation of Rhode Island. Original application filed June 22, 1921, Serial No. 479,479. Divided and this application filed July 1, 1922. Serial No. 572,154. 6 Claims. (Cl. 88—52.)



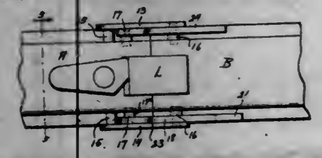
1. A spectacle temple comprising a seamless zylonite tube and a reinforcing rod in the tube, the rear portion of the tube with the reinforcing rod therein being bent to the shape of a temple, and the temple being adapted to be hinged at the forward end.

1,479,938. SPACING DEVICE. FREDERICK C. STIENING, Glenshaw, Pa. Filed Aug. 25, 1921. Serial No. 495,361. 42 Claims. (Cl. 64—117.)



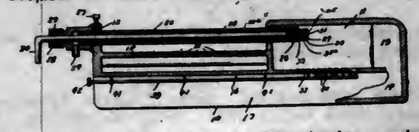
1. In a spacing device, in combination with operating means to repeatedly operate upon an object, a carriage

for said object, intermittently and positively acting feeding mechanism for said carriage, a templet fed directly



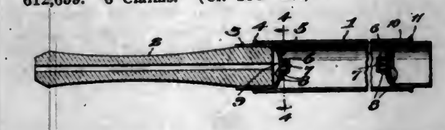
with said carriage by said carriage feeding mechanism, and means whereby said templet positively controls said feeding mechanism.

1,479,939. PHOTOGRAPHIC FILM FOR X-RAY WORK. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 27, 1922. Serial No. 590,970. 4 Claims. (Cl. 95—9.)



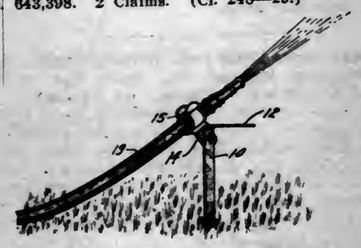
1. An article of manufacture comprising a supporting flexible sheet of light transmitting material having on one surface thereof a coating of material sensitive to X-rays and upon the other surface a coating of material tending to counteract the tendency of the supporting sheet to curl because of the first mentioned coating, said second mentioned coating comprising material capable of scattering visual rays but not appreciably absorbing or scattering X-rays.

1,479,940. COLLAPSIBLE RIM FOR AUTOMOBILE TIRES. HARRY SWERDLOW, New York, N. Y. Filed Feb. 17, 1923. Serial No. 619,683. 17 Claims. (Cl. 301—33.)



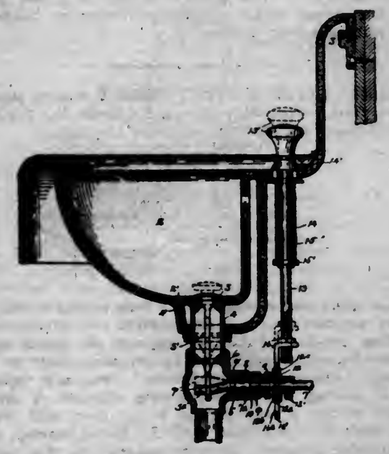
10. A tire rim split at one point, spaced links each pivoted at one end to one section of the tire rim and at its opposite end to the other section of the tire rim, a member arranged adjacent each of said links and pivoted to one of the sections, each of said members having a slot receiving the pivot of its adjacent link to the other of the sections, the slot of one of said members coacting with the engaged pivot to lock the rim in its fully contracted position, the slot of the other of said sections being formed to coact with the pivot of said link to form a stop positively limiting movement of the rim sections to expanded position at a point between the expanded position and the contracted position maintained by the first named member, the first named member forming a lever providing for contraction of the rim sections.

1,479,941. GAS BURNER. FRANK M. TAYLOR, La Fayette, Ind., assignor of one-half to Martin J. Somers, Minneapolis, Minn., and one-half to Valley Taylor, La Fayette, Ind. Filed May 11, 1922. Serial No. 560,132. 4 Claims. (Cl. 158—65.)



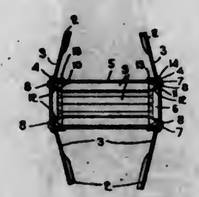
1. A burner of the class described having a mixing chamber, means to admit fuel thereto, means to admit air to said chamber in quantities regulated relative to the quantity of fuel admitted, a substantially straight wall above and parallel with the base of the burner having an inlet opening therethrough, shutter members pivotally mounted in said opening, a slidable rod operable from a distance loosely connected to said shutter members, and guide elements for the rod depending from said wall.

1,479,942. CIGARETTE HOLDER. JEAN G. THEOBALD, Attleboro, Mass. Filed Jan. 15, 1923. Serial No. 612,659. 6 Claims. (Cl. 131—10.)



1. In a collapsible cigarette holder, a tubular body open at each end and affording a holder for the cigarette and a housing for the mouthpiece, a cap on the inner end of the mouthpiece having a bead intermediate its ends and having either of the latter receivable in the body, said cap having an end wall and a hollow knob extending out from the end wall, the knob being formed with a central opening and with radial openings, and a cap of a similar construction having each of the ends thereof, receivable in the body for closing the opposite end of the body in one position and in a reversed position affording a holder proper for the cigarette.

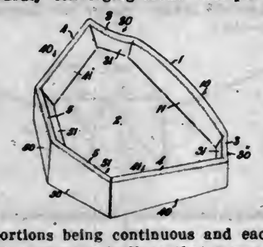
1,479,943. SUPPORT FOR GARDEN HOSE. JAMES THOMPSON, Greeley, Colo. Filed June 4, 1923. Serial No. 643,398. 2 Claims. (Cl. 248—29.)



1. In a support for garden hose comprising a vertical standard, pointed at its lower extremity and turned at right angles near its upper extremity to form a handle the combination of an angle clip pivoted to the vertical leg of said vertical standard; a resilient hose clamp pivoted to the horizontal leg of said angle clip and spring means at both said pivoted points holding the pivoted parts in frictional engagement.

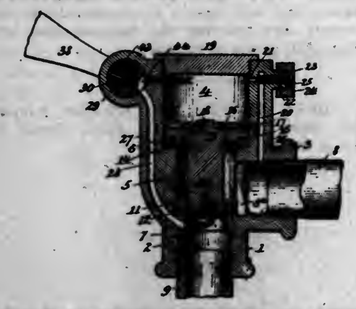
1,479,944. WASTE-VALVE MECHANISM. ORVIS W. VALLIER, Watertown, N. Y., assignor to J. B. Wise Incorporated, Watertown, N. Y., a Corporation of New York. Filed Apr. 23, 1923. Serial No. 633,952. 6 Claims. (Cl. 4—200.)

1. A waste valve mechanism, including a valve, a crank-rod, operatively connected with said valve, a disc carried by said crank-rod having a socket; and a reciprocatable member having an opening to operatively receive said disc and having an inwardly facing tooth engaging said socket for rocking said crank-rod.



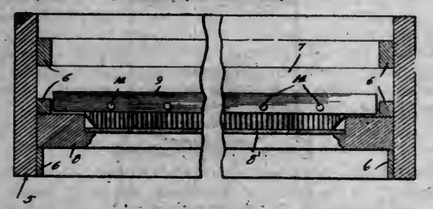
1,479,945. WHEEL CONSTRUCTION. ANDREW O. VESTINE, Watertown, Mass., assignor to Watertown Pressed Steel Company, Watertown, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1921. Serial No. 506,511. 3 Claims. (Cl. 301—105.)

3. A wheel comprising a pair of complementary hub members having apertures located at predetermined distances from their centers, a tubular barrel intermediate of said hub members having integral tongues extending through the apertures in said hub members and operable when deformed to lock said hub members upon said barrel, a series of rollers having reduced end portions circumferentially arranged within the chamber of said barrel and retaining caps engaging the ends of said barrels having apertures to receive said tongues and clamped thereupon by the said hub members and having lips underlying the tapered ends of said rollers.



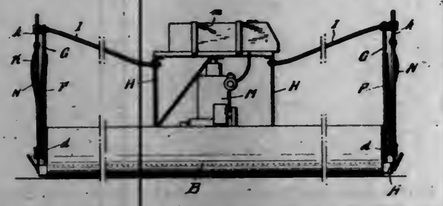
1,479,946. DENTURE-MODEL FORMER. COLEMAN B. WARREN, Norfolk, Va. Filed Feb. 19, 1923. Serial No. 620,000. 4 Claims. (Cl. 32—6.)

1. In dental model formers, a metal cup including a back wall portion whose ends terminate in forwardly diverging portions, forwardly converging side wall portions and forwardly converging front wall portions, the



several wall portions being continuous and each including inward and downward inclines that merge with the bottom of the cup.

1,479,947. AUTOMATIC TOILET FLUSH. CHARLES H. WAY, Lansing, Mich. Filed Aug. 29, 1919. Serial No. 320,643. 1 Claim. (Cl. 137—93.)

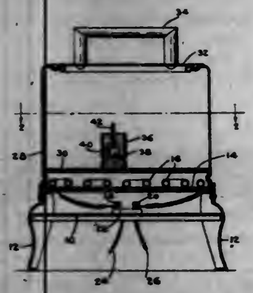


1. A flushing structure for toilets comprising a casing having a connection for a service pipe and a connection for a flush pipe, a reciprocable plunger in the casing having a normal tendency to move by gravity into position for closing communication between the service and flush pipes, a duct leading from the service pipe to the interior of the casing on that side of the plunger remote from the flush pipe, a rockable valve interposed and working in an enlargement of the casing and provided with a spanning cavity, a duct leading from said cavity to the flush pipe, a diametric passage extending through the valve from the cavity to the opposite side of the valve, and a short duct leading from the same side of the plunger to said cavity, whereby water at service pressure will pass through the short duct and through the said diametric passage to and against the walls of the valve body.

1,479,948. WEATHER STRIP. CLYDE MARION WOLF, Hillsdale, Mich. Filed June 7, 1923. Serial No. 644,052. 2 Claims. (Cl. 20—69.)

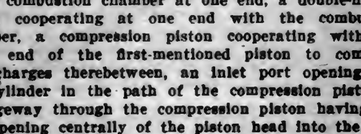
1. In combination with the opposed rails of adjacent sashes, a weather strip including a body portion, a strip of flexible material secured to the body portion, parallel members of fibrous material embedded within the flexible material, and said flexible material adapted to underlie the space between the adjacent sashes.

1,479,949. DEVICE FOR FINISHING CONCRETE PAVEMENTS. WALTER L. ASHMORE, Macon, Ga. Filed Apr. 15, 1922. Serial No. 553,008. 9 Claims. (Cl. 94—45.)



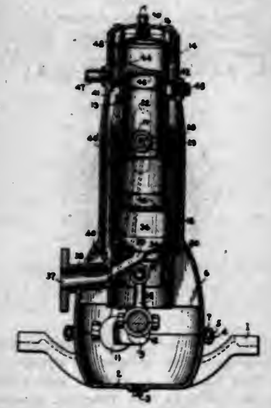
1. A device for finishing concrete pavements and the like comprising a pair of rollers, a pressure-plate arranged between said rollers, a vibrator mounted upon said pressure-plate, and means for pulling the device over the surface of the concrete, together with mechanism whereby the pressure plate is raised by said pulling means, and with means for automatically raising the rollers and lowering the pressure-plate when the pull upon the device is released.

1,479,950. HEEL PROTECTOR. WILFRED BARRETT, Waltham, Mass. Filed Feb. 11, 1922. Serial No. 535,784. 1 Claim. (Cl. 36—74.)



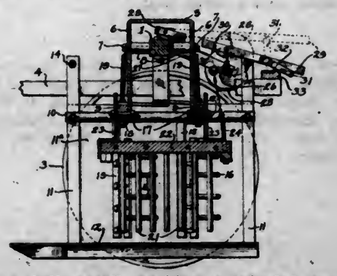
A protector for rubber heels having a wear-plate adapted to lie against the tread-face of the heel and having at least one securing-leg projecting from said wear-plate and adapted to enter and be anchored in the heel, said securing leg consisting of a shank having a cutting edge extending across its inner end, said cutting edge having a length substantially equal to the width of the shank, said shank being also provided with shoulders at opposite edges facing said wear-plate, these shoulders having blunt oblique edges terminating at the respective ends of said cutting edge, for the purpose set forth.

1,479,951. ELECTRIC OVEN FOR DENTAL PURPOSES. WILLARD A. BJORNSTAD and RUDOLPH A. SILENE, Minneapolis, Minn. Filed Sept. 15, 1922. Serial No. 588,355. 2 Claims. (Cl. 219—35.)



1. An electric oven for dental purposes comprising a base which is open at its upper end, a casing having a continuous vertical wall attached to said upper end, a disk of insulating material supported at said upper end to constitute an airtight closure for the bottom of said casing, heating coils positioned upon the upper surface of said disk, means whereby electric current may be supplied to said coils, and a metal plate positioned in the lower portion of said casing close to the upper surface of said coils to constitute a hot plate for supporting flasks containing investment material and embedded wax models.

1,479,952. LATHE CENTER. ALBERT C. BOYCE, Muskogee, Okla. Filed May 22, 1922. Serial No. 562,711. 3 Claims. (Cl. 82—33.)

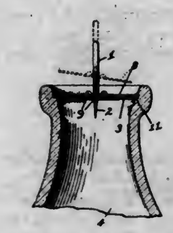


1. A lathe center comprising a body having a reduced shank adapted for engagement within the tail-stock of a lathe, the face of the body opposite the shank being formed with a chamber, and an extension shaft at the center of the chamber projecting beyond said face, a thrust bearing located within said chamber, a center proper having a body portion fitting upon said extension shaft in engagement with the thrust bearing, and a retaining member movably mounted in the center proper and operatively engaging the extension shaft whereby to permit rotation of the center member upon the extension shaft while preventing longitudinal displacement.

1,479,953. INTERNAL-COMBUSTION ENGINE. ALBERT MANNING BRAY, Cleveland, Ohio. Filed Sept. 29, 1921. Serial No. 504,024. 10 Claims. (Cl. 123—51.)

4. In an internal combustion engine, a cylinder having a combustion chamber at one end, a double-headed piston cooperating at one end with the combustion chamber, a compression piston cooperating with the other end of the first-mentioned piston to compress fuel charges therebetween, an inlet port opening into the cylinder in the path of the compression piston, a passageway through the compression piston having one end opening centrally of the piston head into the compression chamber and its other end adapted to uncover said port when the piston reaches one end of its stroke, and means for introducing the fuel charge into the combustion chamber after it has been compressed between the pistons.

1,479,954. BOLL-WEEVIL MACHINE. ARTHUR BRIGDEN, Birmingham, Ala. Filed Feb. 24, 1923. Serial No. 620,998. 7 Claims. (Cl. 43—143.)



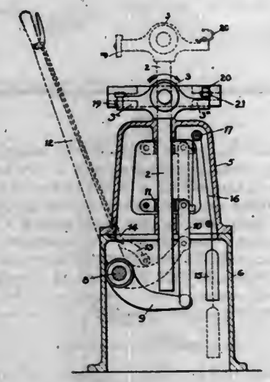
1. In a boll weevil machine, a wheeled supporting frame having a centrally pivoted transverse bar, means depending from the bar on opposite sides of its pivot to embrace a row of cotton plants to brush insects therefrom and to catch the insects, and resilient means connected to the bar on each side of its pivot to hold the bar normally horizontal and the brushing and catching means on each side at equal height but yielding to permit the same to pass over clods and the like.

1,479,955. CELLULOSE-ETHER SOLVENT AND COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1921. Serial No. 465,928. 7 Claims. (Cl. 106—40.)

1. A viscous, flowable composition, comprising a solution of an alkyl ether of cellulose in a mixture containing a lower monohydroxy aliphatic alcohol and one of the group of a phenyl ether and its homologues.

1,479,956. MILK-BOTTLE OPENER. JOSEPH FRANK CASTRO and ARTHUR BAIL, San Rafael, Calif. Filed Nov. 18, 1922. Serial No. 601,825. 3 Claims. (Cl. 65—47.)

1. A milk bottle opener comprising a member having a spear shaped point adapted for insertion through the cap of milk bottles and the like; shoulders formed upon the piercing point arranged to engage the inner side of the cap whereby the cap may be removed from the bottle; a disc slidably and rotatably mounted upon the member above the piercing point to engage the upper side of the cap for returning said cap to the bottle; and ribs formed upon the disc to engage and move the member outwardly with respect to the cap when rotated from the entering position whereby the shoulders may be moved into firm engagement with the cap.



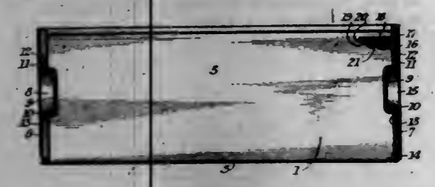
1,479,957. BUTTON PENCIL CLASP. CURTIS L. CRUVER, Chicago, Ill. Filed Dec. 31, 1920. Serial No. 434,221. 9 Claims. (Cl. 24—11.)

1. A device of the class described having, in combination, a back portion, clasping jaws on said back portion, a spring tongue extending from the back portion and terminating in a holding portion, and integral wings formed on the back portion and having their outer edges

bent forwardly to form flaring flange segments adapted to be secured to a correspondingly bent peripheral flange carried by a button.

1,479,958. FOUNDRY MOLDING MACHINE. ROBERT DUFFUS, Lutterworth, England. Filed Sept. 3, 1921. Serial No. 498,300. 2 Claims. (Cl. 22—32.)

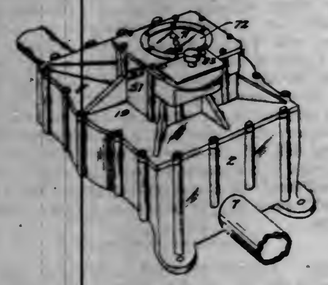
1. Foundry molding machine comprising in combination a pair of rotatable brackets independently mounted on horizontal axes and adapted to receive the pattern plate between them, trunnion heads carrying said brackets, connecting rod and crank mechanism for raising and lowering said heads, laterally projecting lugs on the opposite ends of one of said brackets, a stop pivoted at one side of the adjacent trunnion head and having a limited rotary movement from the horizontal to the vertical and adapted in the former position to form an abutment for one of the said lugs, a locking catch pivoted at the other side of the same trunnion head and adapted to be moved into engagement with the other of said lugs on the adjacent end of the pattern plate when the latter is brought down to the horizontal position against the said stop.



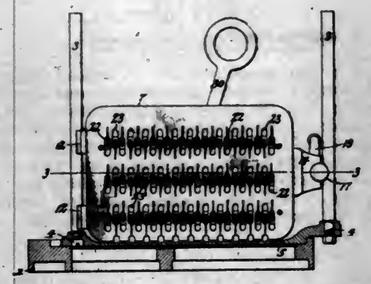
1,479,959. PHOTOGRAPHIC-PRINTING MACHINE. HENRY B. EVANS, Kankakee, Ill., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 22, 1920. Serial No. 425,796. 8 Claims. (Cl. 95—13.)

1. In a photographic printing machine, a fixed support, a light transmitting-printing window in said support, a source of light behind said window, a platen having an extended smooth, yielding bearing surface,

links pivoted to each side of the platen and to the support, said links being of equal length between their pivotal points, whereby the platen is maintained always parallel to said window, and the links are always parallel to each other.

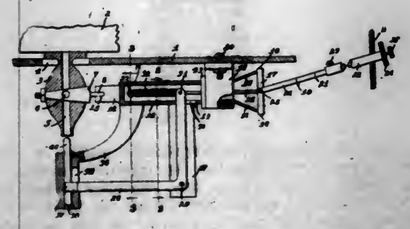


1,479,960. SENSITIVE-MATERIAL UNIT. EDWARD P. FLYNN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 8, 1923. Serial No. 623,588. 5 Claims. (Cl. 242—71.)



1. In combination, a roll of sensitized material having end hubs with central apertures, and a box adapted to contain said roll and having a fixed end wall with a fixed trunnion engaging one end aperture, and having an opposite hinged wall, said hinged wall having a trunnion adapted to engage the opposite end aperture, the last named trunnion and the corresponding aperture being so shaped that when the wall is swung to closed position these parts will engage with a camming action and lift the roll to properly centered position in the box.

1,479,961. FLUID METER. ALBERT J. GRANBERG, San Francisco, Calif., assignor to The Granberg Meter Company, San Francisco, Calif., a Corporation of California. Filed July 16, 1919. Serial No. 311,124. 3 Claims. (Cl. 73—37.)



1. The combination with a casing having opposite and parallel walls and having an inlet port and a plurality of outlet ports, of a frame slidable longitudinally in said casing, a meter head arranged within said frame and slidable transversely with respect thereto having a plurality of ports adapted to register at different times with the inlet port and outlet ports and having passages therein connected to the ports therein and opening on the sides of the head, and projections on the head adapted to cover certain outlet ports.

1,479,962. ARTICLE HOLDER FOR SLICING MACHINES. ERNEST A. HAND and FREDERICK A. WYGANT, Hornell, N. Y., assignors to The A. J. Deer Company, Incorporated, Hornell, N. Y., a Corporation of New York. Filed Feb. 8, 1919. Serial No. 275,745. 15 Claims. (Cl. 146—217.)

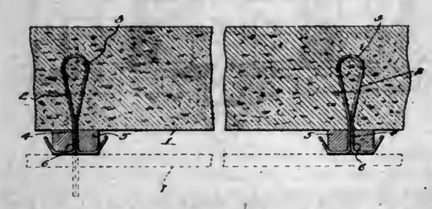
1. An article holder for slicing machines comprising a breast plate provided with a front bearing face with which the article to be sliced is adapted to engage, and having a movement perpendicular to said face but held against movement in a direction parallel with said face, and a gripping hook co-operating with said face and having a movement parallel thereto but held against movement in a direction perpendicular to said face, and the front end of said hook being arranged in rear of the face of said breast plate when the latter is in its projected position.

1,479,963. RADIATOR-DRAINING ATTACHMENT. ARIE HOF, Maurice, Iowa. Filed Apr. 12, 1922. Serial No. 551,954. 6 Claims. (Cl. 137—139.)

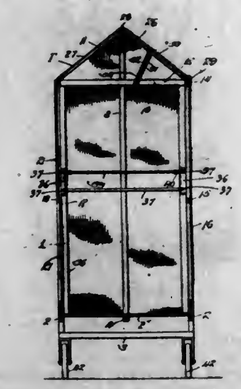
1. In a device of the class described, a cock comprising a rotatable valve; a rotatable member connected to the valve; a cleaner for the cock and mounted directly on the rotatable member to swing therewith; and means for operating the cleaner.

1,479,964. WELL-PACKER ATTACHMENT FOR PUMPS. GRANVILLE A. HUMASON, Houston, Tex. Filed July 17, 1922. Serial No. 575,664. 4 Claims. (Cl. 103—5.)

4. In a device of the character described, the combination of a pump barrel, a foot valve thereon, a plunger in said barrel, means to close the space outside said pump barrel below said foot valve and means to force lifting fluid down outside said pump barrel to a point below said foot valve and up with the fluid being pumped.



1,479,965. COMBINATION LOCK. JOHN P. IOOR, Philadelphia, Pa. Filed Oct. 13, 1921. Serial No. 507,453. 6 Claims. (Cl. 70—53.)

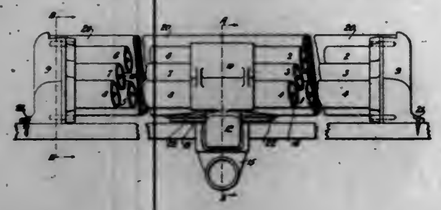


1. In a combination lock; the combination with a pivoted oscillatory hook-shaped locking bolt having bifurcations with a cam recess between them; of a keeper plate including a box having a bight arranged to be engaged by said bolt; a rotary spindle carrying a cam independent of said bolt, extending in said cam recess and arranged to reciprocate said bolt by turning movement of said spindle; an incompletely circular detent member, carried by said spindle and having two gaps in its circumference; two rotary combination tumblers, each having an axial arbor, and an incompletely circular body arranged to engage and disengage said detent at said gaps; each of said tumbler bodies having a gap in its circumference, arranged to be radially registered with said spindle, by turning said tumbler arbors, to release said detent and permit rotation of said spindle to unlock said bolt; index members, including an exterior operating handle on said spindle and exterior dials on said tumbler arbors; and polygonal means on said spindle and tumbler arbors arranged to respectively secure said handle and tumblers in relative variable cooperative position; whereby the combination of said lock mechanism may be changed.

1,479,966. BUILDING CONSTRUCTION. VAN ORAN JEFFRIES, Columbus, Ohio. Filed Mar. 5, 1923. Serial No. 622,807. 2 Claims. (Cl. 72—101.)

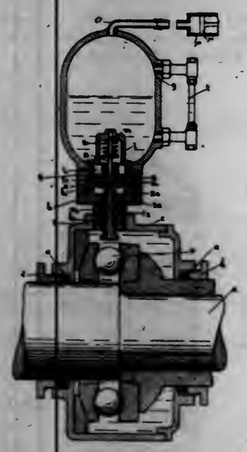
1. A cement wall structure, a series of vertical lath supporting strips arranged against one side of the wall, ties comprising loops and pliable arms, the loops being embedded in the wall, said arms being extended from the wall and passed through the strips.

1,479,967. BED AND PLAY PEN. CLARENCE L. JOHNSON, Littleton, Colo. Filed Apr. 18, 1922. Serial No. 555,000. 6 Claims. (Cl. 5—93.)



1. A screen bed comprising side screens, head and foot screens with gable upper ends, side rails joining the head and foot screens at the bases of the gable ends and at the tops of the side screens, and roof screen frames hinged together and to one of the side rails and foldable one upon the other and swingable to one side of the bed whereby the entire top of the bed is exposed to access from one side rail to the other, said side rails forming supports for the roof frames when the latter are disposed in downwardly diverging relation for completely closing the top of the bed.

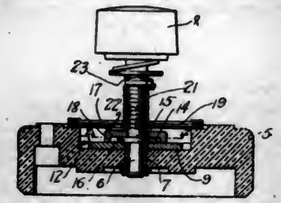
1,479,968. HEATER FOR MOTOR CARS. ADRIAN DENMAN-JONES, London, England. Filed Mar. 2, 1921. Serial No. 449,208. 3 Claims. (Cl. 257—148.)



3. In heating apparatus for an automobile, the combination of a series of tubes, an inlet pipe and an outlet pipe both depending therefrom, a plate having in it two

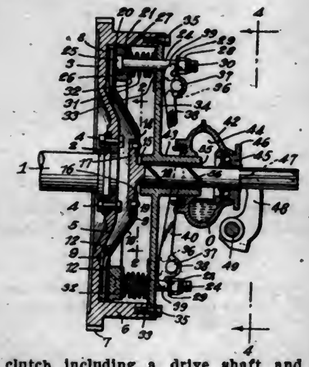
sockets adapted to receive the pipes, a conductor adapted to lead hot air to that socket which receives the inlet

pipe, and spring-influenced means mounted in the plate and adapted to cover the sockets when the heater is removed.



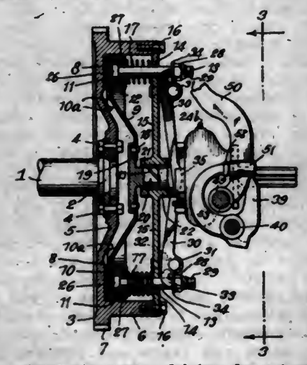
1,479,969. LUBRICATING. KARL OSKAR LEON, Stockholm, Sweden, assignor, by mesne assignments, to Nya Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed Mar. 2, 1920. Serial No. 362,861. 4 Claims. (Cl. 184—76.)

1. An improved device for feeding lubricant into a shaft bearing comprising a vessel for the lubricant, a passageway from said vessel into the bearing, a check valve to automatically shut off said passageway, a closed pressure fluid container with a flexible bottom, a piston resting upon said flexible bottom and supporting said check valve, a spring for forcing said piston toward said flexible bottom, a passageway from the bearing to the rear side of the said flexible bottom, a spring actuating said flexible bottom on the said rear side to counterbalance the fluid pressure in the container, and means to control the spring action upon the said flexible bottom.



1,479,970. SNAP SWITCH. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Mfg. Co., Plainville, Conn., a Corporation of Connecticut. Filed Dec. 11, 1920. Serial No. 429,909. 6 Claims. (Cl. 200—66.)

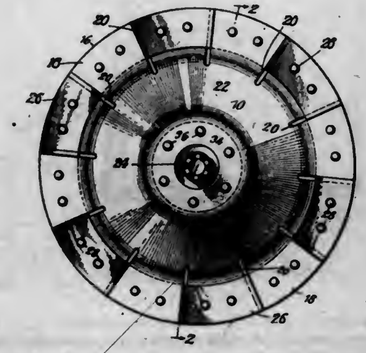
1. In a snap switch, an insulating base, an abutment plate carried thereby and having upstanding peripheral stop lugs, a spindle having a cam mounted to rotate adjacent said plate, a flat pawl member engaging one side only of said cam and resting on said plate and having an integral tooth in the plane of said cam and adapted to coact with said stop lugs, a housing



mounted on said spindle and having flanges engaging the opposite edges of said pawl member, and a spring connecting said housing and said spindle.

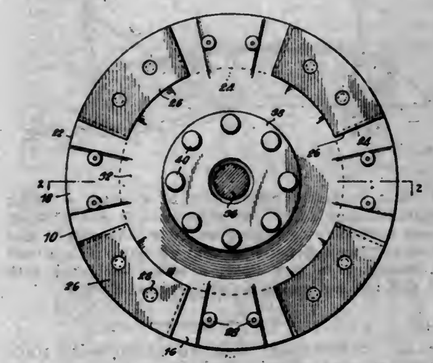
1,479,971. CLUTCH. ALFRED T. STUART, Flint, Mich., and GEORGE H. ROBINSON, New York, N. Y., assignors to Durant Motors Incorporated, a Corporation of Delaware. Filed Aug. 17, 1921. Serial No. 492,949. 3 Claims. (Cl. 192—52.)

1. A clutch including a drive shaft and a driving member and a driven member comprising a disc having an inner conoidal portion and an outer comparatively flat slightly dished portion said disc also having a plurality of kerfs formed therein to render it slightly resilient so that when it is moved into contact with the driving member it will smoothly and gradually pick up the load.



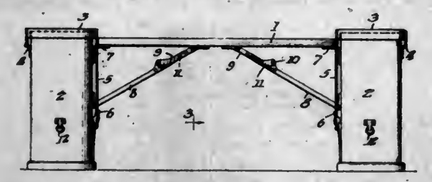
1,479,972. CLUTCH COLLAR. ALFRED T. STUART, Flint, Mich., and GEORGE H. ROBINSON, New York, N. Y., assignors to Durant Motors Incorporated, a Corporation of Delaware. Filed Aug. 17, 1921. Serial No. 492,950. 6 Claims. (Cl. 192—113.)

1. In a clutch structure a driving element and a driven element, a power transmission shaft secured to the



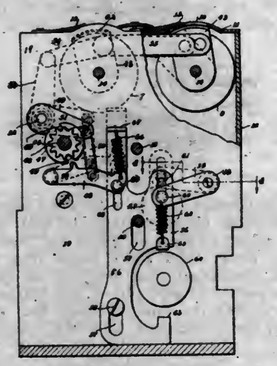
driven element and a clutch collar in slidable engagement with the driving element and the transmission shaft, the said collar having a chamber formed therein for holding a lubricant which is adapted to be splashed onto the bearing surfaces.

1,479,973. CLUTCH. ALFRED T. STUART, Flint, Mich., and GEORGE H. ROBINSON, New York, N. Y., assignors to Durant Motors Incorporated, a Corporation of Delaware. Filed Apr. 24, 1922. Serial No. 556,248. 7 Claims. (Cl. 192—107.)



1. A device of the kind described which comprises a plate having a flat peripheral portion, said portion being divided into a number of sectors by kerfs extending inwardly from the circumference and friction pads arranged alternately on opposite sides of said sectors.

1,479,974. CLUTCH. ALFRED T. STUART, Flint, Mich., and GEORGE H. ROBINSON, New York, N. Y., assignors to Durant Motors Incorporated, a Corporation of Delaware. Filed Aug. 26, 1922. Serial No. 584,475. 8 Claims. (Cl. 192—107.)

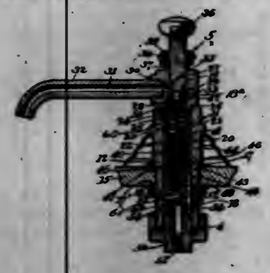


8. A device of the kind described which comprises, a clutch plate having a peripheral gripping portion, said gripping portion having flat friction surfaces each of constant frictional area alternately offset in opposite directions from and parallel to an intermediate plane and sloping portions connecting said flat friction surfaces adapted to be compressed as the flat surfaces are compressed into a single plane.

1,479,975. CARRYING CASE. GRACE D. STURGES, Santa Monica, Calif. Filed May 31, 1921. Serial No. 473,639. 5 Claims. (Cl. 190—12.)

1. In a device of the class described, the combination of a pair of spaced receptacles, and a shelf member extending between and pivoted to the receptacles adjacent the top thereof so that the latter fold under the shelf member, and means for releasably holding the receptacles in the unfolded position.

1,479,976. SHUTTER-CONTROL DEVICE FOR MEASURING AND COMPUTING MACHINES. JOHN L. WHEELER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 31, 1921. Serial No. 441,245. 12 Claims. (Cl. 33—133.)

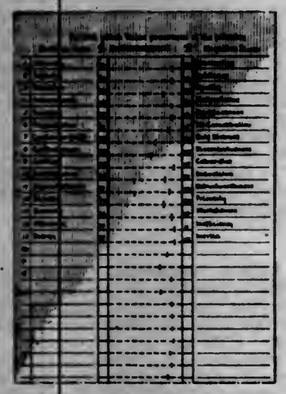


1. In a fabric measuring and computing machine, the combination of a length-indicator for indicating the length of a measurement in units of measures and aliquot fractions thereof, a chart bearing computed figures based on different prices, and corresponding to the units and aliquot fractions thereof indicated by the length-indicator, a measuring-roller mounted so as to be rotated by the fabric when pulled through the machine, means driven by the measuring-roller for actuating the length-indicator and the chart, marking means for marking the fabric at the point where it is to be cut off, and means mounted in the machine and operating automatically to prevent the disclosure of the computed figures on the chart when the length-indicator indicates a length incommensurate with the unit of measure and said aliquot fractions thereof.

1,479,977. LIQUID DISPENSER. GABRIEL A. BOBRICK and ARTHUR L. BOBRICK, Los Angeles, Calif. Original application filed Feb. 17, 1916, Serial No. 78,814. Divided and this application filed Nov. 27, 1920. Serial No. 426,680. 3 Claims. (Cl. 221—102.)

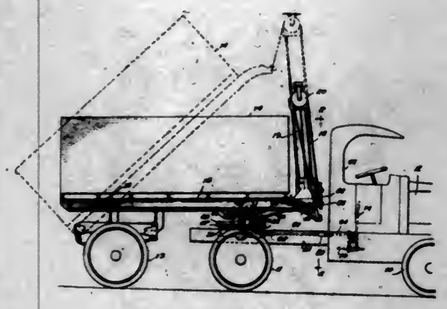
1. The combination with a hollow body having an outlet near one end and an inlet near the other end, a hollow piston mounted in said body to reciprocate therein between said inlet and outlet, a receiving chamber formed below said piston and a discharge chamber formed above said piston, said piston provided with a

bore having inlet and outlet ports; a valve seat and valve within said bore to open and close communication between the inlet and outlet ports; a stem extending from the valve through said valve seat and adapted to



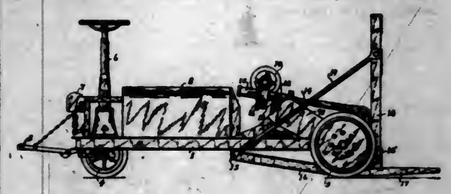
contact with a portion of said body to open said valve upon each inward stroke of said piston, and a spring holding said valve seated until positively opened by contact of the valve stem with the body.

1,479,978. LIQUID DISPENSER. GABRIEL A. BOBRICK and ARTHUR L. BOBRICK, Los Angeles, Calif. Original application filed Feb. 17, 1916, Serial No. 78,814. Divided and this application filed Nov. 27, 1920. Serial No. 426,679. 4 Claims. (Cl. 221—102.)



4. The combination of a body having a piston chamber, a spring-actuated piston mounted in said chamber and having an actuating stem extending out from said body, a discharge outlet from which liquid from said piston chamber is discharged from one end of said chamber upon the actuation of said piston, and indepepdent valve means for closing the inlet of liquid into the opposite end of said piston chamber upon the inward stroke of the piston.

1,479,979. RATING DEVICE. ELBERT S. BOUGHTON, New York, N. Y. Filed May 7, 1919. Serial No. 295,480. 14 Claims. (Cl. 283—1.)

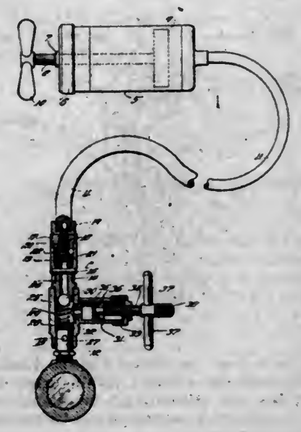


1. In a rating device a rating chart, indicating the degree to which an object possesses certain characteristics, a second chart indicating by similar means the standard of requirement of such characteristics, and means for contrasting the indications on the two charts for comparing the characteristics of the object with the standard requirements.

1,479,980. DUMPING VEHICLE. ADDI B. CADMAN and EDWIN H. ALLEN, Beloit, Wis., assignors to Warner Manufacturing Company, Beloit, Wis., a Corporation of Wisconsin. Filed May 24, 1922. Serial No. 563,216. 24 Claims. (Cl. 298—21.)

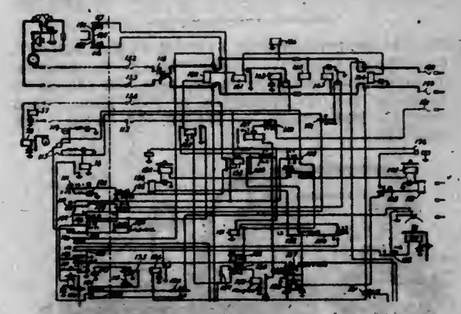
1. The combination with a truck unit, a trailer unit, a hoist on said trailer unit, and a device joining said units and comprising a fifth wheel, of power means on the truck unit, and an operating connection between said power means and said hoist comprising a shaft extending axially through said fifth wheel.

1,479,981. INDUSTRIAL TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 9, 1920. Serial No. 394,932. 6 Claims. (Cl. 254—8.)



1. In a truck, the combination of a frame, a tilting support adapted to be projected beneath and pick up a load, a toggle, one link of which is connected to said tilting member and the other link to said frame, a pull rod connected to said links, a screw connected with said pull rod and means for operating said screw.

1,479,982. METHOD OF MAKING ANHYDROUS MAGNESIUM CHLORIDE. WILLIAM R. COLLINGS and JOHN A. GANN, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Dec. 11, 1918. Serial No. 266,225. 18 Claims. (Cl. 23—13.)

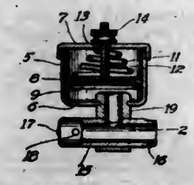


9. In a method of making anhydrous magnesium chloride, the steps which consists in driving off a portion of the water of crystallization from the normal hydrated salt by heated air; and then completing the dehydration with a current of hydrochloric acid gas.

1,479,983. LUBRICATING SYSTEM. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 14, 1921. Serial No. 444,933. 2 Claims. (Cl. 184—105.)

1. The combination with a lubricant compressor having a discharge conduit provided at its free end with a coupling member for making a detachable connection with a lubricant receiving nipple, of means for increasing the pressure on the lubricant delivered to the nipple, comprising a sleeve having means at one end for making a detachable connection with said coupling member, and means at the other end for making a detachable connection with the nipple, a high pressure pump communicating with said sleeve, and a check valve in said sleeve for preventing reverse flow of lubricant through said conduit.

1,479,984. TELEPHONE-EXCHANGE SYSTEM. GERALD DEAKIN, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed May 26, 1919, Serial No. 299,062. Patent No. 1,444,781, dated Feb. 13, 1923. Divided and this application filed June 20, 1921. Serial No. 478,894. 9 Claims. (Cl. 179—18.)



1. In a telephone system, a cord circuit, selective switches for extending said cord circuit to establish talking connections, a register sender for controlling the selective movement of said switches, a finder mechanism consisting of a plurality of separately movable finder switches, and means for operating all of said finder switches simultaneously to associate the register sender with said cord circuit.

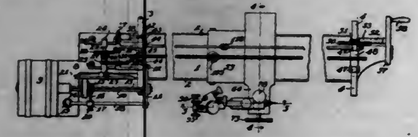
1,479,985. BOTTLE-STOPPER SHIELD. DANIEL ENOMOTO, Berkeley, Calif. Filed Nov. 18, 1922. Serial No. 601,750. 2 Claims. (Cl. 215—38.)

1. In combination with a bottle stopper having a top piece of greater diameter than the stopper itself, of a tubular shield being circumferentially spaced from said stopper and receiving in its upper end the circular top piece, said shield extending beyond the free end of the stopper, the top piece and upper end of said shield being substantially flush with one another.

1,479,986. LUBRICATING DEVICE. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, a Corporation of Delaware. Original application filed Nov. 18, 1918, Serial No. 262,930. Divided and this application filed May 28, 1920. Serial No. 384,928. 7 Claims. (Cl. 184—45.)

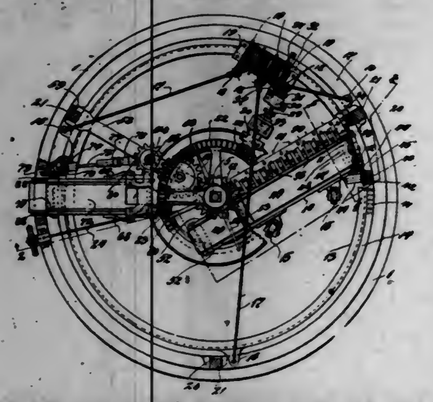
4. The combination with a cylinder of a plunger slidable in said cylinder, a spiral spring between said plunger and one end of said cylinder, means, for conducting lubricant from the other end of said cylinder comprising a tubular member, means for supplying lubricant to said cylinder comprising a second tubular member communicating with said first-named tubular member and provided with a spring-pressed closure, the said second tubular member comprising means for making quick detachable connection with the discharge conduit of a lubricant compressor, a screw-threaded rod connected with said plunger and projecting through its first mentioned end, and a nut threaded on said rod outside of said cylinder whereby the inward movement of said plunger can be controlled and automatically limited.

1,479,987. SIGNBOARD. WILLIAM J. FRASER, Toronto, Ontario, Canada. Filed June 2, 1921. Serial No. 474,550. 7 Claims. (Cl. 40—142.)



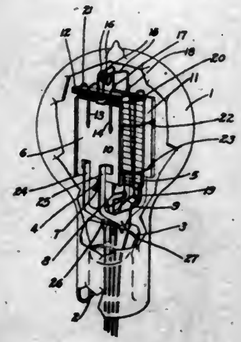
1. A sign board having a plurality of transverse grooves formed in its face; and a resilient strip positioned in each groove free of its sides and the face of the board so that a projection on a letter or symbol may be pressed between either side of said strip and the adjacent side of the groove.

1,479,988. HOSE CLAMP. OWEN A. GAGE, Muskegon, Mich. Filed Aug. 6, 1923. Serial No. 655,846. 3 Claims. (Cl. 24—19.)



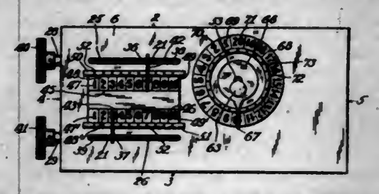
1. In a hose clamp, a metallic body having a bolt hole through it longitudinally, a bearing offset upon said body, a screw threaded eye bolt passed through the hole in the body, a nut for adjusting said bolt longitudinally in the hole, a flexible cable firmly connected at one end with the body, with the other end free to pass around a hose and through the eye in the bolt and be firmly clamped around the hose by the longitudinal adjustment of the bolt.

1,479,989. MACHINE FOR CUTTING AND WELDING WITH FLUID FUEL. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 29, 1920. Serial No. 377,500. 34 Claims. (Cl. 266—23.)



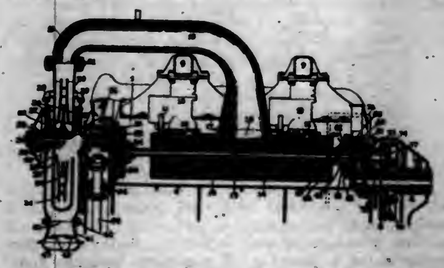
1. In a machine of the character described, the combination of a base, a carriage supported by and movable along said base, a blow-pipe or torch mounted on said carriage, an operating device movable in the direction of travel of said carriage on said base and independent of said carriage, and means for connecting the said carriage with the said device.

1,479,990. AUTOMATIC SILAGE FEEDER. ALVIN KEYS, Mariette, Mich. Filed Aug. 9, 1920. Serial No. 402,176. 9 Claims. (Cl. 214—17.)



1. An automatic silage feeder comprising a sweeping picker, a hopper, elevator-means for conducting silage to said hopper, and elevator-means for conducting silage away from said hopper, and means for mounting and actuating said parts.

1,479,991. ELECTRON-DISCHARGE DEVICE. ROBERT W. KING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,314. 7 Claims. (Cl. 250—27.)



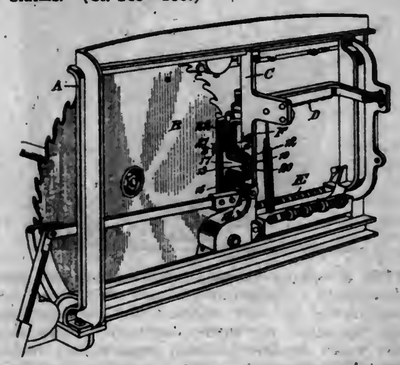
1. A vacuum tube comprising a press, anode, cathode and control electrodes, a forked metallic member mounted on said press and supportingly associated with said anode, and supporting connections between said anode and control electrode.

1,479,992. MATHEMATICAL GAME APPARATUS. HENRY J. KINNEY, Indianapolis, Ind. Filed Apr. 17, 1922. Serial No. 553,630. 9 Claims. (Cl. 35—2.)

1. A game apparatus having a movable push-rod provided with an adjustably supported guide yoke and also a register socket for the push-rod provided with an adjustably supported guide, the yoke and the guide being independently movable to aline the push-rod and the register socket, and gearing connected with the guide of the register socket to move the socket to the push-rod.

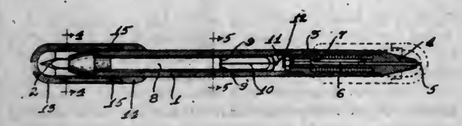
1,479,993. MOTIVE-POWER SYSTEM FOR AIRCRAFT. CHARLES B. KIRKHAM, Garden City, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Company, Inc., a Corporation of New York. Filed Sept. 16, 1918. Serial No. 254,283. 11 Claims. (Cl. 123—119.)

1. In combination with a multi-cylinder internal combustion engine including a crank shaft and a gear down propeller shaft, a blower compressor attachment, a driving connection between the blower attachment and the propeller shaft, a pressure reservoir, a connection between the pressure reservoir and the blower, and a carburetor for the engine arranged to receive its supply of air from said reservoir.



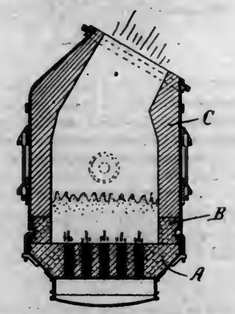
1,479,994. TRACTOR PLOW. ALVARO S. KROTZ, Janesville, Wis. Filed Aug. 27, 1917. Serial No. 188,269. 11 Claims. (Cl. 97—98.)

1. In a plowing machine, the combination of a plow consisting of a beam structure and a soil turning device mounted thereon, said plow provided with a single depth regulating wheel at the front end thereof to travel on the ground, means to adjust the front end of said plow up and down on the wheel to change the depth of the furrow, a self contained tractor for pulling the plow, and a draft connection from the tractor to the forward end of the plow, provided with flexible connections at both ends, whereby the plow can swing sidewise and trail behind the tractor, but is self contained so far as depth and horizontal position is concerned, and is held in upright position by the tractor, and means for tilting the plow relative to the tractor.



4. An unstable tractor plow comprising a beam and plow bottom, a stable tractor provided with a support carried by the tractor at the rear end thereof, a draft link connection disposed directly between the plow beam and the support, means providing the front and rear ends of said connection with horizontal pivots, and the front end with a vertical pivot, so that the rear end of the draft link is adapted to swing up and down and laterally in relation to the tractor and up and down in relation to the plow, a depth wheel mounted independently of said draft link adjacent the front end of said beam to carry the same, whereby the furrow depth is controlled by said wheel and the upright position of the plow thus controlled by said tractor is independent thereof, except as to sidewise tipping with the tractor, as and for the purpose specified.

1,479,995. HAND GUARD FOR SHINGLE MACHINES. PAUL FREDRICK LUETH, Everett, Wash., assignor to Sumner Iron Works, Everett, Wash., a Corporation of Washington. Filed Nov. 7, 1921. Serial No. 513,462. 4 Claims. (Cl. 143—159.)

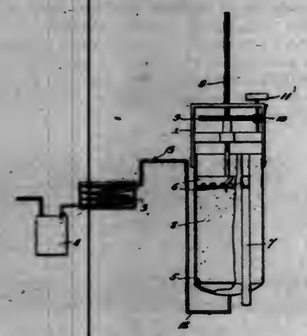


1. In an upright shingle machine, the combination of an attaching member having vertically spaced arms constituting knuckles, a pin secured to and extending vertically through said knuckles, a bracket carrying a plate and formed with a knuckle pivoted to and vertically movable on said pin between the first-named knuckles, and interengaging cam projections on the lower end of the last-named knuckle and the upper surface of the lower one of the first-named knuckles, said cam projections having mutually engageable inclined surfaces for raising the bracket with respect to the attaching member when the bracket is swung in one direction about its pivot and having oppositely-disposed vertical surfaces mutually engageable to lock the bracket against movement in the opposite direction.

1,479,996. COMBINED FOUNTAIN PEN AND LEAD PENCIL. GUSTAV A. LUNDMARK, Chicago, Ill. Filed Mar. 2, 1922. Serial No. 540,397. 1 Claim. (Cl. 120—46.)

In a fountain pen having an ink chamber, a rubber tube closed at its upper end in said chamber, a resilient U-shaped member positioned over said tube, pivotally connected yoke members embracing said tube and pivoted to said resilient member, a flexible operable connection extending from said yoke members through the lateral wall of said chamber, and a button secured to said connection, said pen having an exterior recess for normally confining said button.

1,479,997. BESSEMERIZING IRON. RICHARD STANISLAUS MCCAFFERY, Madison, Wis. Filed Dec. 29, 1920. Serial No. 433,871. 16 Claims. (Cl. 75—27.)



1. The process of refining iron containing chromium which comprises bessemerizing a bath of the molten metal, under conditions which result in the production of a slag rich in chromium and relatively neutral as compared to the slags of the ordinary basic bessemer and acid bessemer processes in a converter having only such parts thereof as come in contact with the slag during the performance of the process lined with refractory material of a composition which is substantially neutral with respect to the chromium constituent of the slag.

1,479,998. METHOD OF AND APPARATUS FOR TREATING FILTERING MATERIALS. JOHN ROBERT MCCONNELL, Warren, Pa. Filed June 8, 1922. Serial No. 566,895. 14 Claims. (Cl. 252—2.)

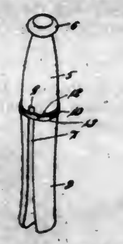
1. The method of revivifying filtering materials containing non-combustible and combustible matter without the use of extraneous fuel other than that used for initiating combustion comprising progressively burning out the combustible matter.

8. In apparatus for revivifying filtering materials, the combination of a retort adapted to hold a charge of used clay containing combustible matter, means for supplying an oxygen containing fluid to a clay-section to maintain therein the combustion initiated by the application of a

flame, and to bring the adjacent section to a kindling temperature, means for stirring the uppermost clay-section to prevent fusion of the clay, and means adapted to permit the removal of a revivified clay section without substantially interfering with the combustion in the adjacent clay section.

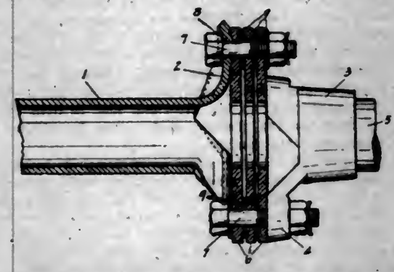
1,479,999. FUSIBLE LINK. FREDERICK WILLIAM MCDONALD, Oakland, Calif., assignor to McDonald & Moore, Oakland, Calif., a Firm composed of Fred. W. McDonald and I. B. Moore. Filed Aug. 25, 1920. Serial No. 405,861. 1 Claim. (Cl. 169—42.)

A fusible link of the character described embodying an elongated comparatively thin strip of celluloid narrowed centrally of its ends to provide enlarged end portions and a thin web joining said end portions and eyelets riveted in the centers of the enlarged end portions.



1,480,000. CENTRIFUGAL PIPE-CASTING MACHINE. JAMES R. MCWANE, Birmingham, Ala. Filed Mar. 23, 1920. Serial No. 368,171. 12 Claims. (Cl. 22—65.)

1. In a centrifugal casting machine, a rotatable head stock and a rotatable tail stock, pouring nozzles for both the head and tail stocks extending therethrough for delivering molten metal to a mold carried at the ends by said head and tail stocks, and means for moving the pouring nozzles axially of the head and tail stocks and independently of movement of the head and tail stocks.



1,480,001. CLOTHESPIN. WAYNE A. MARTIN, Greenfield, Mass. Filed Apr. 26, 1923. Serial No. 634,723. 2 Claims. (Cl. 24—138.)

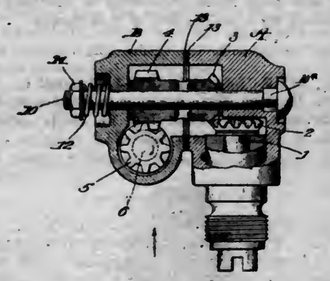
1. A clothes-pin comprising a body with branches projecting therefrom, a reinforcing member encircling said pin, one end of said member having a spur to engage within the material of the pin underneath the other end

of said member and said other end being secured to the outer surface of the spurred end by a fusing operation.

1,480,002. SHAFT-COUPLING MEMBER AND METHOD OF MANUFACTURING THE SAME. LEONARD H. MATTINGLY, Allegan, Mich. Filed Aug. 1, 1922. Serial No. 578,038. 3 Claims. (Cl. 29—148.)

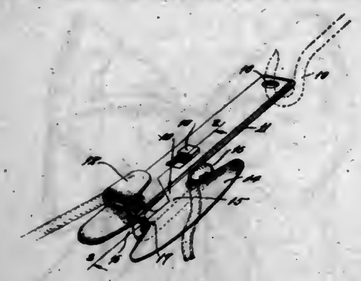
2. The method of manufacturing shaft coupling members consisting of longitudinally slotting a tubular shaft at one end, bending the segments formed by the slots into radially disposed arms, and simultaneously conforming to an outwardly facing channel cross section.

1,480,003. MACHINE FOR MINING. EDMUND C. MORGAN, Chicago, Ill.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Jan. 5, 1916. Serial No. 70,341. 123 Claims. (Cl. 262—28.)



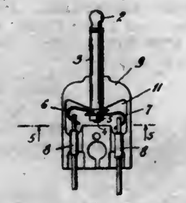
1. In a mining machine, the combination with a frame having a supporting standard, of a supplemental frame carried by said standard and rotatable freely about the same, kerf-cutting mechanism comprising a cutter chain mounted on said supplemental frame to move bodily therewith, power mechanism on said supplemental frame for driving said cutter chain, power mechanism on said supplemental frame for moving the latter together with said kerf-cutting mechanism in an arc about said standard to effect arcuate feed of said kerf-cutting mechanism, and power mechanism on said supplemental frame for adjusting the elevation of said supplemental frame together with said kerf-cutting mechanism on said standard.

1,480,004. UNIVERSAL JOINT. ELI NOEL, Kansas City, Mo. Filed May 3, 1922. Serial No. 558,207. 2 Claims. (Cl. 69—91.)



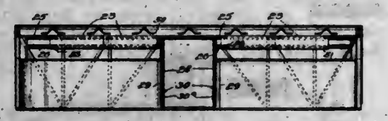
1. A universal joint, comprising a centrally located spherical body forming the center of motion, oppositely disposed concentric slide bearings or bearing blocks provided with transverse slotted apertures, one of said bearing blocks being provided with oppositely disposed demountable circular boxes having their centers horizontally aligned with the horizontal axis of said spherical body and the other bearing block being provided with oppositely disposed trunnions mounted for angular movement in said boxes and together forming a hinge connection uniting said bearing blocks, oppositely disposed concentric heads slidably and supportingly bearing on said spherical body and on said first mentioned bearing blocks and having shafts guidingly supported thereby.

1,480,005. SWIVEL-GEAR HOUSING AND JOINT. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 30, 1922. Serial No. 548,289. 2 Claims. (Cl. 74—101.)



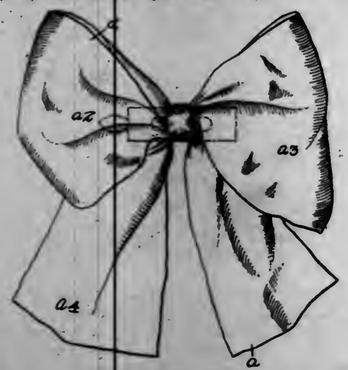
1. In a swivel gear joint and housing, in combination with two gear housing members and a pair of intermeshing gears in each of them, all constituting a four-gear train of which the two intermediate gears are co-axial and rigid with each other, the two housing members being adapted to seat upon each other at a plane transverse to the axis of said co-axial gears; a bolt extending through the housing members and said co-axial gears for binding the housing members together and journalling said co-axial gears; said bolt being stopped as to rotation at its seat in one of the housing members, shouldered for stopping longitudinally on one of them and being of uniform diameter through the entire length of and beyond the other, and a spring on said bolt outside the housing stopped between the adjacent housing member and the head or nut of the bolt.

1,480,006. CLOTHESLINE SUPPORT. WILLIAM H. ORTMAN, Milwaukee, Wis. Filed July 1, 1921. Serial No. 481,822. 2 Claims. (Cl. 24—129.)



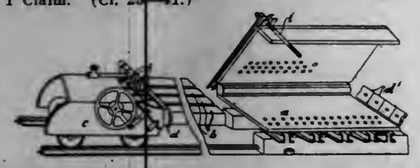
1. A device of the class described formed of a single piece of material and cut to provide a shank, an extension arranged at one end of said shank, and having its opposite end portions bifurcated, a hook carried by the shank and formed adjacent said extension, and said furcations and hook adapted to receive therein the end of a clothes line.

1,480,007. CONNECTING PLUG. LOUIS G. PACENT, Winfield, N. Y., assignor to Pacent Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1923. Serial No. 626,285. 5 Claims. (Cl. 173—361.)



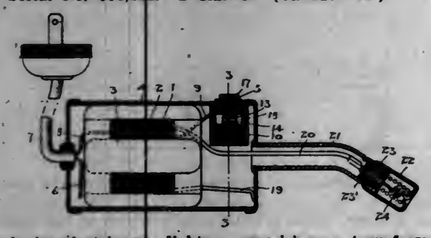
1. In a connecting plug, a contact member, a handle attached to said contact member, a resilient conducting member connected with said contact member, said resilient member having an apertured free end portion adapted to engage a pin type cord tip, said handle defining a chamber enclosing said resilient member, and an aperture adapted for the insertion of a pin type cord tip, said resilient member being adapted to grip said cord tip and force it against the side of said aperture.

1,480,008. GRAIN DOOR FOR RAILWAY CARS. EDWARD POSSON, Chicago, Ill., assignor of one-half to Frederick C. Maegly, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,569. 10 Claims. (Cl. 20—31.)



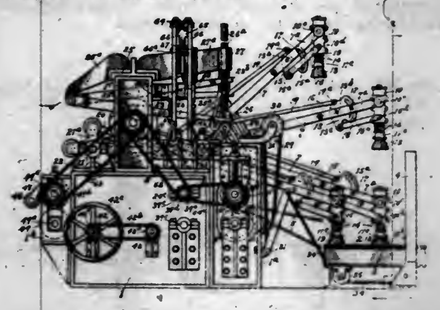
1. The combination in a railway car having a door opening in its wall, of a plurality of complementary door sections, guides extending vertically along the edges of said door opening, and longitudinal guides extending from said door opening toward both ends of the car, and lugs secured to each end of said door sections and adapted to engage said guides, whereby said door sections may be moved vertically and also be moved from said vertical guides toward either end of said car on said longitudinal guides.

1,480,009. BOW HOLDER. ALSTON L. PRESTON, Leominster, Mass. Filed June 1, 1923. Serial No. 642,833. 4 Claims. (Cl. 132—47.)



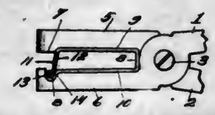
1. As an article of manufacture, a bow holder for application to a hair holding support comprising a body of sheet material having two opposite projections for connecting it with the body of the support and having two other opposite projections at an angle to the first two spaced from the body of the support at their ends.

1,480,010. METHOD OF CASTING CEMENT OR FIBRO-CEMENT UNDER PRESSURE. EDWARD WILLIAM ROBERTS, Watford, and LOUIS FREDK. WM. LEESE, London, England. Filed Jan. 6, 1922. Serial No. 527,293. 1 Claim. (Cl. 25—41.)



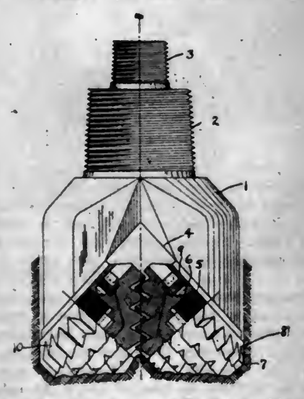
For use in casting or moulding cement or fibro-cement under pressure an expansible core member said core member consisting of a rigid support and an expansible envelope surrounding said support and adapted to be supplied with air under pressure, and a liner said liner including overlapping lengths of sheet metal or the like shaped to correspond with the internal form of the casting to be produced substantially as and for the purpose set forth.

1,480,011. ELECTRIC GASLIGHTER. JAMES H. RODEN, Toronto, Ontario, Canada. Filed Dec. 1, 1922. Serial No. 604,268. 2 Claims. (Cl. 219—32.)



1. An electric gas lighter, comprising, a transformer having its primary connected with a current circuit, a switch in said primary circuit, a casing enclosing said transformer and switch, a member projecting from said casing, and a heating element supported from said projecting member and connected with the secondary winding of said transformer.

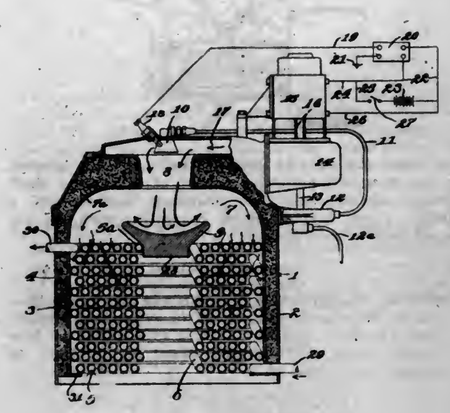
1,480,012. SHEET-FEEDING MACHINE. LEON A. RODEN, Canton, Ohio. Filed May 11, 1922. Serial No. 560,145. 21 Claims. (Cl. 271—27.)



1. In a sheet feeding machine, a plurality of pneumatically operated tubular plungers carrying sheet engaging and feeding gripper cups, and valves opened and closed by the inward and outward movements of said plungers and gripper cups.

1,480,013. STOCK TAG. CHARLES E. SALSBERY, Kansas City, Mo., assignor to The Jensen-Salsbery Laboratories, Inc., Kansas City, Mo., a Corporation of Missouri. Filed July 22, 1921. Serial No. 486,787. 2 Claims. (Cl. 40—3.)

1. A stock tag of relatively U-shape, one end terminating in an open hook and the other end terminating in a finger facing the open end of said hook and adapted to be interlocked with said hook by having its end curled away from the U-shaped end of the tag and within the hook, said hook being adapted to be partially closed simultaneously with the bending of said tongue.

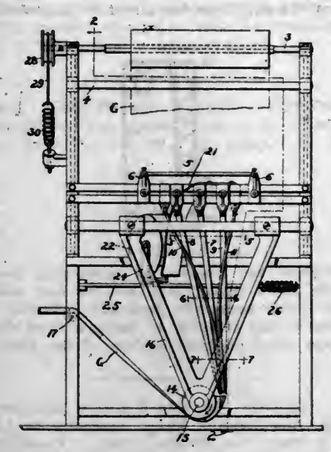


1,480,014. SELF-CLEANING ROLLER DRILL. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex. Filed Jan. 16, 1922. Serial No. 529,576. 4 Claims. (Cl. 255—71.)

1. In the roller earth-boring drill the combination of a head, two opposite, approximately frusto-conical shaped cutting rollers mounted on the forward end thereof and

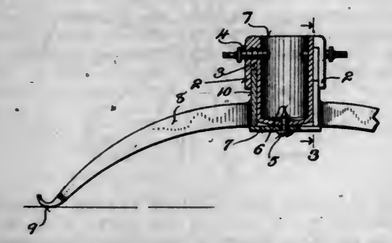
circumferential rows of teeth of approximately equal size formed on each cutter, the teeth on one cutter being adapted to interfit between those of the other for the purpose described.

1,480,015. STEAM-GENERATING APPARATUS. LEWIS L. SCOTT, St. Louis, Mo. Filed Mar. 6, 1920. Serial No. 363,691. 6 Claims. (Cl. 122—250.)



1. In a steam generating apparatus, a shell having a combustion chamber therein, a plurality of coils within said shell adjacent to the combustion chamber, said shell having an orifice leading into the combustion chamber and disposed substantially centrally with respect to said coils, means for projecting a flame through the orifice and into the combustion chamber in the direction of the coils, and a deflector of refractory material located opposite the orifice and directly in the path of the flame entering at the orifice, operating to deflect the flame and thereby prevent the same from passing along the central axis of the coils and operating to diffuse and deflect the flame in an outward direction in the combustion chamber, said shell operating to guide the deflected gases of combustion along the outer portions of the coils.

1,480,016. CELLULOSE SOLVENT AND RESULTING CELLULOSIC COMPOSITION. MAX Y. SEATON, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Jan. 31, 1920. Serial No. 355,398. 14 Claims. (Cl. 134—79.)



8. A new composition of matter, consisting of the following ingredients in approximately the proportions stated, viz 4 parts cellulose nitrate, 15 parts of amyl acetate, 15 parts acetone, 15 parts propylene chlorhydrin, and 55 parts benzol.

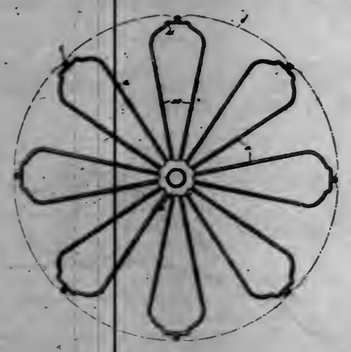
1,480,017. PROCESS AND MACHINE FOR MAKING BANDAGES. DANA O. SEWALL, Walpole, Mass., assignor to Lewis Manufacturing Company, Walpole, Mass., a Corporation of Massachusetts. Filed May 22, 1920. Serial No. 383,529. 12 Claims. (Cl. 270—41.)

1. That improvement in the process of making bandages which consists in feeding a continuous strip of gauze or the like, utilizing the feeding movement of the strip to fold it, and inserting absorbent pads in the strip at intervals during the feeding and folding thereof whereby said pads are held between the folds at spaced intervals.

1,480,018. TREE STAND. ANTHONY GEORGE SIEBENLIST, Alois, Wis. Filed Sept. 30, 1922. Serial No. 591,539. 2 Claims. (Cl. 248—38.)

1. A tree holder comprising a cup adapted to receive the butt of a tree, a plurality of winged set screws threaded through such cup and adapted to engage the butt of the tree, a plurality of lugs extending outwardly and downwardly from the outer portion of said cup and having a portion spaced from such cup, a plurality of legs having upright portions adapted to be positioned between such lugs and said cup, and a spider revolubly mounted upon the lower portion of such cup and having arms adapted to be positioned beneath the bottom of said upright portions, whereby said legs are held in position.

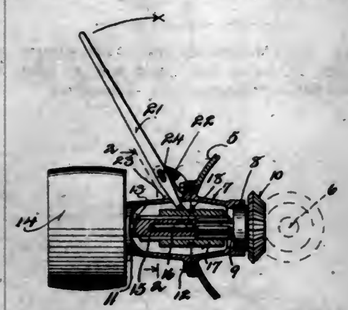
1,480,019. ILLUMINATED SIGN. TRACY W. SIMPSON, San Francisco, Calif., assignor to Federal Electric Company, Inc., Emeryville, Calif., a Corporation of New York. Filed Nov. 15, 1921. Serial No. 515,192. 2 Claims. (Cl. 40—133.)



1. An illuminated sign comprising a box-like frame fitted interiorly with lamps, sets of horizontal guides formed at the top and bottom of the frame adjacent the front thereof, a plurality of independent sign characters adapted to be received by one of said sets of guides, said sign characters being formed of sheet metal cut out to form desired characters, a sectional transilu-

cent partition positioned between said sign characters and the lamps and adapted to be supported by the second set of guides, the height of the sign characters and the sections of the partitions being such as to permit them

to be removed and inserted by telescoping the same within the upper guides, said sections and said sign characters being separately removable whereby access may be had to any point in the frame without removing all the sign characters and sections of the partition.



1,480,020. GUARD. CHARLES F. SMITH and ALONZO A. WARNER, New Britain, Conn., assignors to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 14, 1921. Serial No. 444,894. 2 Claims. (Cl. 219—34.)

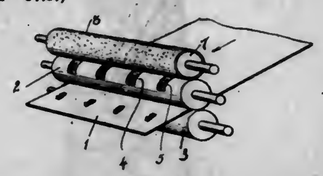
1. A guard for heaters of the reflector type, comprising a center piece, and a plurality of petals radiating from the center piece, each petal comprising a pair of diverging spring arms bent toward each other and connected together at their outer ends and bent thereat to provide a reinforced hook for engagement over the edge of a reflector, and means on the center piece engaging the inner ends of the petals to hold the same in opposition to the hooks for yieldingly binding the latter by the springiness of said arms on the reflector.

1,480,021. BELT-PULLEY CLUTCH CONTROL FOR TRACTORS. CLAUDE C. SMITH, North Lake, Wis., assignor to Dallman Machine and Manufacturing Company, Milwaukee, Wis. Filed Feb. 20, 1922. Serial No. 537,749. 1 Claim. (Cl. 192—67.)

In a tractor the combination of an enclosing housing having an aperture therethrough, an auxiliary housing having complementary inner and outer portions provided with flanges positioned adjacent said first mentioned housing with the inner of the portions of said auxiliary housing projecting into said first mentioned housing, fastening means passing through said flanges and into said first mentioned housing, a bearing carried by the inner end of said inner portion, a driving shaft carried in said bearing, the outer of said portions having a bearing at its outer end, a driven shaft carried in said last mentioned bearing, projecting inwardly and outwardly from said bearing, aligning with said driving shaft and having its inner end located closely adjacent

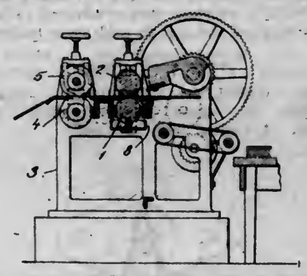
the outer end of said driving shaft, a pulley carried by the outwardly projecting portion of said driven shaft closely adjacent said last mentioned bearing, and a slidable sleeve having splined connection with the adjacent ends of each shaft.

1,480,022. ELECTRIC WELDING APPARATUS. HARLAN E. SNODGRASS, Summit, N. J., assignor to Newark Tube Company, Newark, N. J., a Corporation of New Jersey. Filed May 6, 1920. Serial No. 379,206. 16 Claims. (Cl. 219—6.)



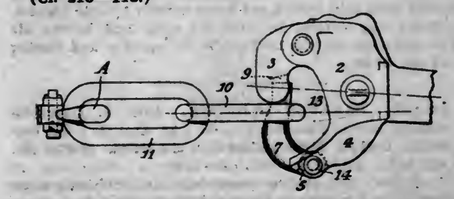
1. In an apparatus for welding two metallic abutting edges, a unitary welding roll comprising two welding members insulated from each other and secured together, and a transformer whose secondary includes stationary pole pieces having annular surfaces adjacent to and facing the sides of said welding roll.

1,480,023. COMPOSITION ROOFING. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to The Beaver Products Company, Inc., a Corporation of New York. Original application filed Dec. 28, 1920, Serial No. 433,623. Divided and this application filed May 19, 1921, Serial No. 470,914. Renewed Oct. 25, 1923. 8 Claims. (Cl. 91—67.9.)



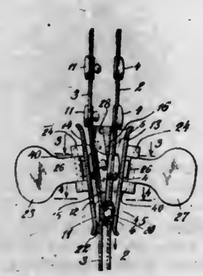
6. As an article of manufacture, a sheet of relatively soft building material provided on its under side with a design or trademark formed by relatively thin lines cut into the material.

1,480,024. COMPOSITION ROOFING AND METHOD OF MAKING THE SAME. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to The Beaver Products Company, Inc., a Corporation of New York. Filed Dec. 28, 1920, Serial No. 433,623. Renewed Oct. 9, 1922. Serial No. 593,461. 10 Claims. (Cl. 91—67.9.)



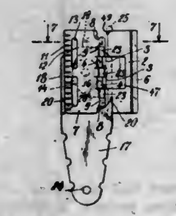
1. A method of impressing data on one face of sheets or webs of composition material without marring the other face, which consists in cutting the impression in the material by means of dies having raised characters of greater height than the depth of the cut desired.

1,480,025. BRANDING ROOFING. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to The Beaver Products Company, Inc., a Corporation of New York. Filed Dec. 28, 1920, Serial No. 433,624. Renewed Oct. 9, 1922. Serial No. 593,462. 10 Claims. (Cl. 101—23.)



1. Apparatus for impressing designs on webs of material of the kind described, comprising a printing or die member and a platen member between which the web is fed, the die member having depressions in its surface spaced to correspond with the spacing of the impressions desired, and dies in the depressions, the blank surfaces of the dies being within the surface of the die member and the impressing characters of the die extending beyond the surface thereof.

1,480,026. TRANSITIONAL COUPLING MECHANISM. HUBERT L. SPENCE and JOHN WILLISON, Cleveland, Ohio, assignors to The National Malleable Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 8, 1922. Serial No. 534,880. 3 Claims. (Cl. 213—112.)



1. In coupler mechanism, the combination with an automatic coupler having a pivoted knuckle, of a supplemental coupling member pivoted to the guard arm of the coupler head and adapted to be swung to the rear of the guard arm when in inoperative position, and having a bearing in a transversely-extending recess within the nose of the knuckle when in operative position, said supplemental member carrying a link for coupling with a coupler of the same or a different type.

1,480,027. FASTENER-OPERATING DEVICE. NOEL STATHAM, Hastings upon Hudson, N. Y. Filed Mar. 28, 1919. Serial No. 285,861. 17 Claims. (Cl. 24—205.)

1. In seam fasteners, a pair of flexible seam elements having thereon adjacent the seam edges rows of closely spaced cooperating snap fastener elements, a fastener operating device permanently held in engagement with one of said rows of fastener elements and formed with a separator and with cooperating guides on each side of said separator to hold said fastener units in engagement with the grooves in said separator and effect their substantial lateral alignment as the units of each fastener are gradually forced together during the closing movement of said operating device, said operating device having operating handles movably mounted on each side of the same and holding springs cooperating with said handles to yieldingly hold them in folded or in projecting operating position.

1,480,028. SAFETY RAZOR. NOEL STATHAM, Irvington, N. Y. Filed Dec. 19, 1919, Serial No. 346,132. Renewed Apr. 30, 1923. 17 Claims. (Cl. 30—12.)

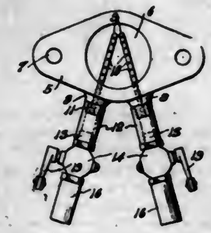
1. In safety razors and stroppers, a metal handle having a double thickness pivotal portion, a gripping retaining device cooperating with said pivotal portion, a hinge support pivoted between the double thickness portions of said handle, a gripping blade holder hinged to said hinge support, a guard pivoted to said blade holder and cam devices on said blade holder and guard to yieldably hold them in close cooperation and retain them in self supporting shaving position at a substantial

angle to said handle and allow their being folded into substantially the plane of said handle and a disengaging projection on said handle adjacent said retaining device to wedge between and disengage said blade holder and guard as the said blade holder swings into stropping position with the blade edge substantially parallel to said handle.

1,480,029. SAFETY RAZOR. NOEL STATHAM, Irvington, N. Y. Filed July 15, 1920. Serial No. 396,436. 10 Claims. (Cl. 30—12.)

1. In safety razors, a handle, a hinge support pivoted to said handle, a hinge pin embraced by integral portions of said hinge support, a sheet metal blade holder having portions extending around said hinge pin and having resilient gripping portions to engage and hold a razor blade, a sheet metal guard having pivotal portions extending around said hinge pin and having resilient connecting clip devices to engage said blade holder and a tightening nut on said hinge pin to force together and releasably hold the hinge portions of said blade holder and guard and prevent undesirable angular movement thereof about said hinge pin.

1,480,030. RAZOR AND STROPPING DEVICE. NOEL STATHAM, Irvington, N. Y. Filed Aug. 30, 1919. Serial No. 320,834. 12 Claims. (Cl. 30—12.)

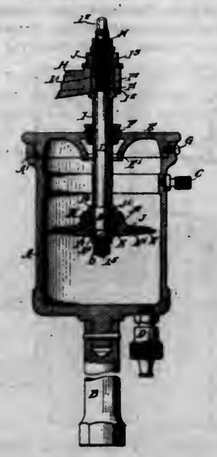


1. In safety razors and stroppers, a handle having a double thickness pivot portion, a resilient gripping sheet metal blade holder, a hinge support hinged to said blade holder and pivotally mounted between the double thickness of the pivot portion of said handle, a razor blade detachably held and aligned in said blade holder, a retaining device on said handle to hold one end of said blade holder when said holder and blade are swung substantially into the plane of the handle for sharpening purposes, and a guard member adapted to be detachably connected with said blade and holder and a resilient locking device on said guard member to detachably engage said handle and hold said guard member and blade in shaving position.

1,480,031. POCKET SAFETY RAZOR. NOEL STATHAM, Irvington, N. Y. Filed May 11, 1922. Serial No. 559,992. 10 Claims. (Cl. 30—12.)

10. In safety razors, a blade holder having resilient blade gripping lips to engage a razor blade and formed with a guard inserting slot and a resilient sheet metal guard having a retainer tongue adapted to be inserted into the enlarged end slot in said blade holder.

1,480,032. GASOLINE VAPORIZER. JOHN THRILL, Kankakee, Ill. Filed Mar. 27, 1923. Serial No. 628,109. 1 Claim. (Cl. 48—180.)

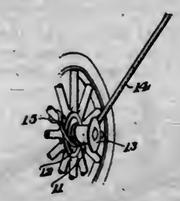


In a vaporiser including a plate adapted for application between a carburetor outlet and a manifold inlet of an internal combustion engine, said plate being formed with a relatively enlarged central opening, a pair of bosses formed upon one edge of said plate and having screw threaded openings extending therethrough, a pair of air outlet pipes within the said plate opening and secured within the said screw threaded openings of the bosses, nipples upon said bosses, pet cocks carried by said nipples, thimbles also carried by said pet cocks and having air inlet openings therein, and means for opening and closing said pet cocks.

1,480,033. DASHPOT PLUNGER. AXEL S. VOGT, deceased, late of Philadelphia, Pa.; by Axel G. Vogt, executor, Detroit, Mich. Filed Jan. 12, 1923. Serial No. 612,315. 2 Claims. (Cl. 188—96.)

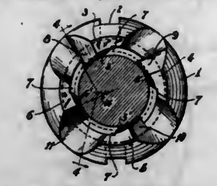
1. A dash pot plunger comprising in combination an actuating rod, a disc of greater diameter than the rod secured in fixed position on said rod, a second disc also of greater diameter than the rod adapted to fit on the face of the fixed disc, one of said discs being of larger diameter

than the other and formed with a plurality of perforations extending through its portion which extends beyond the



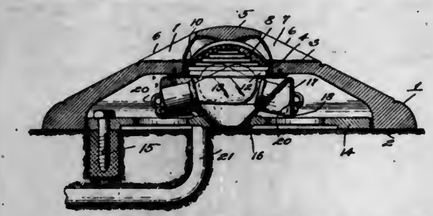
rod, and means for adjustably securing the second disc to the rod so as to shift the second disc from and to a position in which it contacts with the first disc.

1,480,034. WHEEL AND METHOD OF MAKING THE SAME. JAMES H. WAGENHORST, Akron, Ohio. Filed Nov. 15, 1918. Serial No. 262,649. 6 Claims. (Cl. 301—70.)



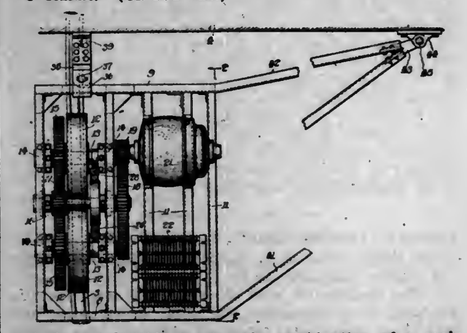
4. As a new article of manufacture, a wheel comprising a plurality of wooden spokes having their inner ends in contact, metallic caps upon the outer ends of said spokes, the ends of said caps being inclined, an endless metallic felly having an inclined base, said felly being laterally positioned upon the inclined spoke caps, a portion of said felly base being depressible into locked engagement with the end of cap.

1,480,035. VEHICLE EXTRICATING DEVICE. ORANGE S. WARRICK and SHADRACH H. HOUGHTON, Howard, Kans. Filed Sept. 3, 1921. Serial No. 498,292. 1 Claim. (Cl. 242—95.)



A vehicle extricating device comprising a drum adapted for engagement upon the outside of a rear wheel of a motor vehicle, the drum having a bore conformingly receiving and fitting closely upon the hub cap of the wheel, and a cable adapted to have one end secured to a stationary support and having its other end carrying a hook engageable upon one of the wheel spokes, the cable being initially given a few turns about the drum whereby to maintain tension on the cable between the drum and the spoke engaged by the hook, this tension and the close fit of the drum upon the hub being the sole means for retaining the drum in position.

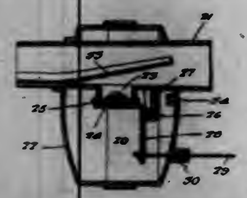
1,480,036. THREAD-CUTTING DIE. FRANK O. WELLS and DAVID B. MILLER, Greenfield, Mass., assignors to The Wells Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1921. Serial No. 454,400. 4 Claims. (Cl. 10—118.)



1. A thread forming tool comprising a body portion having an opening therethrough, a plurality of tapered prongs each formed with thread forming teeth, and recessed portions immediately in the rear of each of the teeth of the prongs.

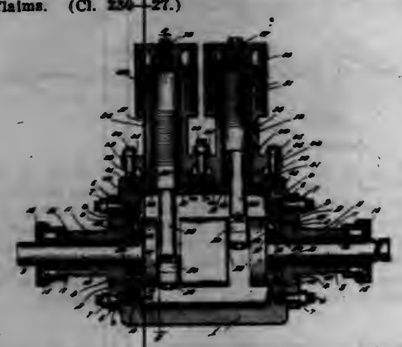
1,480,037. TRAFFIC INDICATOR. DE WITT H. WYATT, Columbus, Ohio, assignor to Clifford W. Ozias, Columbus, Ohio. Filed Dec. 8, 1922. Serial No. 605,723. 2 Claims. (Cl. 240—1.)

1. A traffic indicator comprising a dome, a disk anchored to the roadway and confined within the dome to limit the lateral movement of said dome, a crown, a reflector carried by the disk, an illuminating medium carried by the reflector, a lens fixed in the top of the dome below the crown, radial webs connecting the crown and top of the dome to produce independent chambers into which the light rays from the lens are projected.



1,480,038. TURNTABLE TRACTOR. ROBERT W. YOUNG, Wilmette, Ill. Filed Aug. 27, 1923. Serial No. 659,459. 5 Claims. (Cl. 104—43.)

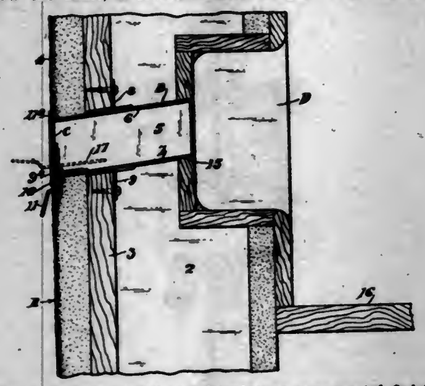
1. In a turntable tractor the combination of a main frame, a pair of supporting and driving wheels mounted in tandem relation on said frame, means of applying



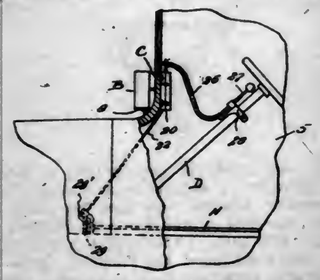
power to both of said wheels, means for flexibly connecting said frame to a turntable so that vertical movements of the turntable will not be imparted to the tractor, a triangular frame structure rigid with said main frame and extending laterally therefrom, and means at the apex of said frame structure for connecting the same to the turntable.

1,480,039. REED MUSICAL INSTRUMENT. HENRY ALPERS, Columbus, Nebr. Filed Feb. 13, 1922. Serial No. 536,226. 12 Claims. (Cl. 84—385.)

5. The combination with a C melody saxaphone, of means including a valve controlled chamber having communication with the interior of the neck of the instrument, whereby notes above F in the third octave may be played.



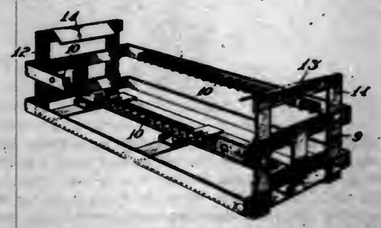
1,480,040. HIGH-PRESSURE CIRCULATING PUMP. EDWIN H. ARNOLD, Coventry, and WILLIAM T. WAKEFORD, Warwick Downs, R. I., assignors to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 29, 1921. Serial No. 481,206. 2 Claims. (Cl. 230—27.)



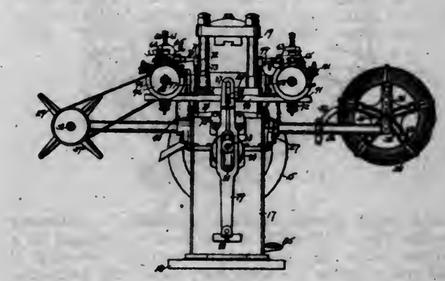
1. A high pressure circulating pump comprising a crank casing provided with openings at opposite ends thereof, end plates secured to said casing and serving as closures for said openings, said end plates being provided with bearings for supporting a crank shaft, a crank shaft positioned in said casing and rotatably supported by said bearings, integral cylinder secured to said casing and each provided with a main bore communicating with the interior of the casing and board inlet and outlet valve passages having their axes substantially parallel with the axis of the main bore, and pistons reciprocably mounted in the main bores of said cylinders and operatively connected with said crank shaft.t

1,480,041. LETTER DROP. THOMAS N. BADGER, Berkeley, Calif. Filed Nov. 1, 1922. Serial No. 598,329. 2 Claims. (Cl. 232—19.)

1. The combination with the outer wall structure of a dwelling, of a letter-drop extending therethrough, said letter-drop comprising connected side, top and bottom sections, forming an elongated casing rectangular shaped in cross section, means on said casing securing the casing to the wall structure and maintaining the casing in an angular position where the bottom and top sections assume an upward incline, a door hingedly secured to the bottom section and at the outer end thereof, a portion of the door projecting exterior of the bottom section and below the same, a frame formed integral with the exterior end of the casing and forming an ornamental finish for the exterior end, said frame overlapping the top and ends of the door and also forming a stop exterior of the door and a sounding member, and a spring engageable with the door to normally hold it in a vertical closed position.

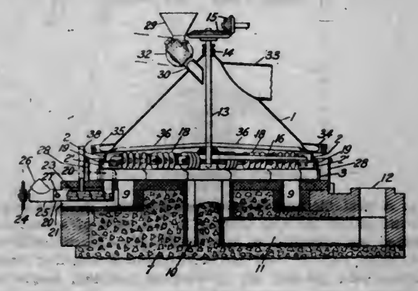


1,480,042. VEHICLE DIRECTION INDICATOR. OMER J. BETTES, Derry, N. H. Filed June 16, 1923. Serial No. 645,885. 5 Claims. (Cl. 116—52.)



1. A direction indicator for vehicles, a pair of signal boxes at the front and rear of the vehicle, each of said signal boxes including a casing provided with an opening, a shaft journaled within said casing, indicating elements loose upon said shaft, and means carried by said shaft whereby when the same is moved in opposite directions, the indicating elements will be raised and lowered.

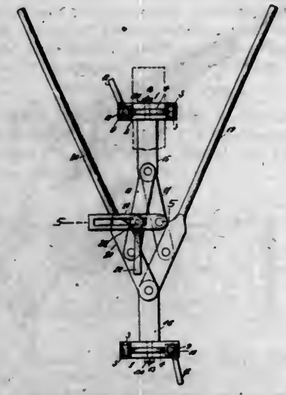
1,480,043. DISHWASHING APPARATUS. GEORGE S. BLAKESLEE, Chicago, Ill. Filed Sept. 10, 1918. Serial No. 253,390. 8 Claims. (Cl. 141—9.)



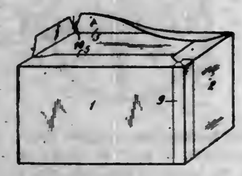
1. In a dishwashing apparatus, the combination with an open work receptacle adapted to contain the articles to be washed, of means outside of said receptacles for discharging water upon the articles therein and deflecting means carried by said receptacle for directing the water laterally against articles in said receptacles.

1,480,044. DIEING MACHINE. CHARLES L. BOWERS and HORACE J. BOONE, Hartford, Conn., assignors, by mesne assignments, to Henry & Wright Mfg. Co., Hartford, Conn. Filed Sept. 7, 1920. Serial No. 408,709. 26 Claims. (Cl. 164—89.)

1. A dieing machine including a frame with means to operatively support dies thereon, a reel supporting bar projecting from a side of the frame, a reel supported by said bar, and means for locating said reel in different positions along said bar.



1,480,045. APPARATUS FOR TREATING HYDROCARBON-CONTAINING MATERIALS. CLIFFORD P. BOWIE, Berkeley, Calif., and MARTIN J. GAVIN, Boulder, Colo. Filed June 1, 1922. Serial No. 565,179. 5 Claims. (Cl. 196—25.)



2. An apparatus for the described purpose comprising a retort to which the material to be treated is supplied; an underlying heating hearth upon which the base of the retort rests; a conduit leading from the peripheral region of the hearth for the discharge of the residual material; offtakes from the retort for the vaporous material; revolving disk-rabble gangs operating over the hearth for mixing the material being treated and directing it outwardly; scrapers associated with the rabble gangs at their outer extremities to deliver the residual material to the discharge conduit; and means for heating the hearth to a temperature increasing from the central region outwardly.

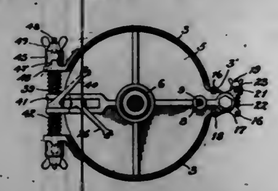
1,480,046. BELT TIGHTENER. THOMAS WINFIELD CARTER, Yarmouth, Nova Scotia. Filed Nov. 23, 1922. Serial No. 602,009. 2 Claims. (Cl. 254—52.)

2. A device of the kind described having two clamping means, a pair of levers pivotally connected to one of said clamping means, links connecting said levers to the other clamping means, whereby a movement of said levers will cause said clamps to approach, and means for locking said levers whereby said clamps will be maintained in fixed position.

1,480,047. CORRUGATED-BOARD CONTAINER AND BLANK THEREFOR. CHARLES H. CROWELL, Brooklyn, N. Y. Filed June 19, 1922. Serial No. 569,354. 10 Claims. (Cl. 229—23.)

1. The corrugated paper board shipping container comprising a four sided straight strip body blank of corrugated paper board having the corrugations arranged transversely of the length of the blank and formed with transverse folding creases between the adjacent sides, said blank being formed with stepped edges in which the outer facing of the corrugated board constitutes a projecting edge flange, seam reinforcing tape adhesively secured to said stepped edges to strengthen the same and minimize the splitting off of this flange under outward pressure, separate top and bottom members of corrugated paper board having the corrugations therein extending longitudinally of said members and transversely to the corrugations in the adjacent long sides of the container, said body blank having free sealing flaps pasted to the longitudinal edges thereof to be adhesively secured to the adjacent portions of said top and bottom members to secure them in place and form a substantially tight closure for the container.

1,480,048. SIGHT FOR FIREARMS. HAROLD G. DAVIS, Denver, Colo. Filed Apr. 24, 1922. Serial No. 556,324. 8 Claims. (Cl. 33—58.)

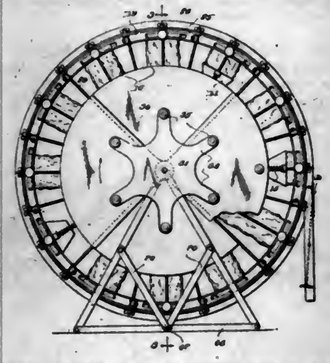


1. A fire arm having a barrel having a dove tail groove in the outer surface and extending in a direction parallel to the axis thereof, a slide in said groove, a stop means in said groove, a sight carried by said slide, means on said slide co-operating with the stop means in the groove

to limit the movement of the slide with respect to the barrel, said barrel also having a pair of spaced grooves

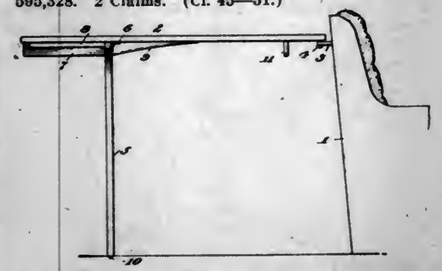
parallel with its axis, a slide in each groove, a sight carried by said slides, and means for limiting the movement of the slides with respect to the barrel.

1,480,049. BRAKE MECHANISM. HUGO DOTZER, Seattle, Wash. Filed Feb. 7, 1921. Serial No. 443,015. 5 Claims. (Cl. 188—75.)



1. In a brake mechanism, a brake drum, a non-rotative cover for the drum, a pair of brake shoes within the drum, means for contracting and expanding the shoes for braking purposes and an adjusting bolt mounted in the cover having laterally extending arms at its inner end with toggle link connections with adjacent ends of said shoes and means for locking the bolt at adjusted positions.

1,480,050. BRAKE MECHANISM. HUGO DOTZER, Seattle, Wash. Filed Jan. 9, 1922. Serial No. 528,029. 8 Claims. (Cl. 188—77.)



1. In a brake mechanism of the class described, the combination with a brake drum and a stationary cover therefor, of a pair of brake bands having adjacent ends pivotally connected with the cover, cam shoes at the other ends of said bands provided with alined apertures, a shaft extended rotatably through said apertures, cam heads fixed on the ends of said shaft to operatively engage the said shoes, a shaft rotating arm slidable thereon, and an arm support extended from the cover.

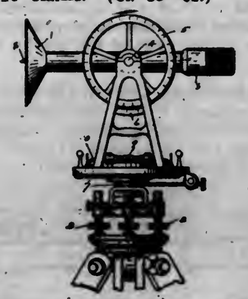
1,480,051. SLICING MACHINE. CARL DEWITT DYE, Detroit, Mich. Filed Jan. 22, 1923. Serial No. 614,300. 10 Claims. (Cl. 146—164.)

1. A bread slicing machine comprising a stationary annular rim, a plurality of loaf holders arranged in a circular series and mounted for rotation inwardly of said rim, a guide for each loaf, means for projecting each loaf within the rim, means for slicing each loaf in successive order as said loaves are rotated, said rim having an outlet opening through which the severed slices pass, and means for cutting each slice in halves just prior to its passage through said opening.

1,480,052. PORTABLE TABLE. CLARENCE WM. EPLEY, Gettysburg, Pa. Filed Oct. 18, 1922. Serial No. 595,328. 2 Claims. (Cl. 45—51.)

1. A portable and foldable table having means thereon for attaching one end thereof to the back of a seat and pivoted leg attached to the under side thereof adjacent the other end of said table, resilient means for maintaining said pivoted leg in vertical position, means on the end of said leg adapted to engage the supporting floor to prevent movement of the lower end of the leg and a drawer in the last mentioned end of said table, the drawer acting as a stop for said leg when said drawer is closed, said leg being adapted to be folded down against the under side of said table.

1,480,053. RAZOR-BLADE HOLDER. ERIC W. ERICSON, Brooklyn, N. Y. Filed Jan. 30, 1922. Serial No. 532,599. 2 Claims. (Cl. 30—25.)

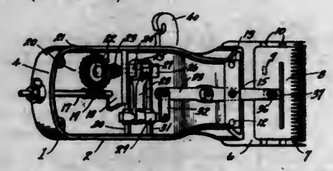


1. A holder of the class described comprising a handle member provided at one end with a threaded bore which flares outwardly, a jaw member provided at one end with a threaded extension and at its opposite end with a curved apertured portion, a supplemental jaw member provided at one end with a projection adapted to pass through the apertured end of the first named jaw member and the other end of said last named jaw member and the corresponding portion of the first named jaw member being tapered to conform with the flared bore of the handle member whereby said handle member serves to secure the separate jaw members together.

1,480,054. COTTON GIN. GEORGE E. EVANS, Waco, Tex. Original application filed Mar. 13, 1922, Serial No. 543,253. Divided and this application filed Feb. 26, 1923. Serial No. 621,442. 5 Claims. (Cl. 19—59.)

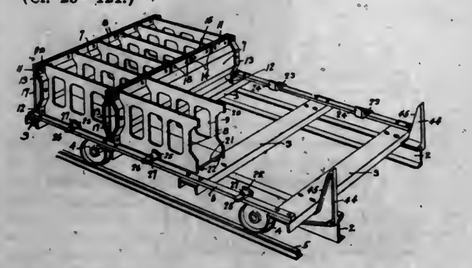
1. In an air blast cotton gin, a saw cylinder having circular saws and space blocks between the saws, and an air flue having its mouth under the space blocks, whereby dirt and extraneous matter falling by gravity are deflected from the mouth of the flue by said space blocks.

1,480,055. SOLAR COMPASS. FREDERICK W. FELLOWS, Los Angeles, Calif. Filed Feb. 9, 1922. Serial No. 535,377. 16 Claims. (Cl. 33—61.)



1. A solar compass comprising an element having a circular shadow-casting edge and a reading element adapted to receive the shadow cast by the sun's rays across said edge, said reading element being co-axial with said edge.

1,480,056. WOODEN SHAFT. DUTER W. FLINT, Cranston, R. I. Filed Oct. 9, 1922. Serial No. 593,214. 1 Claim. (Cl. 46—4.)

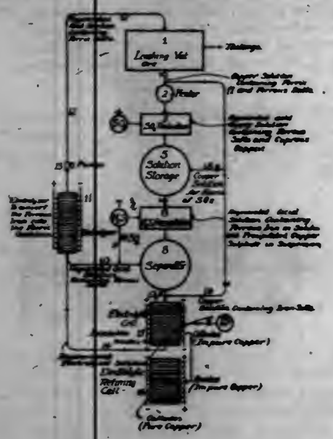


A shaft for golf clubs and the like comprising a composite body consisting of a plurality of strips of bamboo secured together side by side, the relatively soft inner portions of the respective strips being removed more or less to provide inclined surfaces, whereby when the strips are assembled with the inclined inner surfaces in abutted relation a taper is imparted to the body, and a wood sleeve surrounding and glued to the smaller end of said body, whereby separation of the contiguous ends of the strips is prevented and the shaft is reenforced at this locality, said sleeve having one end shaped to enter the socket of a head member.

1,480,057. HAIR CLIPPER. SYMON Z. GIBSON, Seattle, Wash., assignor of one-half to J. C. Gallagher, Seattle, Wash. Filed Mar. 13, 1922. Serial No. 543,344. 1 Claim. (Cl. 30—1.)

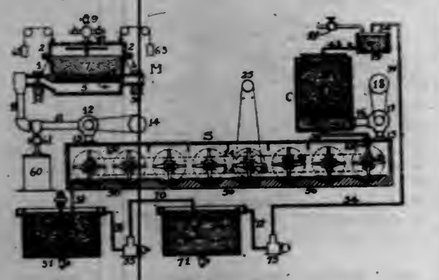
In a hair clipping device of the class described, a transmission mechanism comprising a lever pivotally mounted at a point between its ends and adapted to be operatively connected at its outer end to actuate a cutter blade, a driving shaft having an eccentric journal, a pair of guide rods, a cross-head slidable on said rods, a link connecting the crosshead with the inner end of the blade actuating lever, a pitman having one end mounted on the eccentric and connected at its other end with the cross-head.

1,480,058. MULTIPLE CEMENT-BLOCK MOLDING APPARATUS. WILLIAM GOLDIE, Wilkinsburg, Pa. Filed May 29, 1922. Serial No. 564,382. 16 Claims. (Cl. 25—121.)



15. A multiple block mold comprising a plurality of spaced transverse vertical partitions provided with spaced slots at their upper edges, longitudinal vertical partitions having projections received in said slots, bottom plates or pallets disposed in the cells formed by said vertical members and adapted to clamp said vertical members between them, means for exerting longitudinal compression on said members, and means for exerting transverse compression upon said longitudinal members, the said transverse compression means comprising a fixed stop disposed at one side of each set of longitudinal partition members and wedging means disposed at the other side of said set of longitudinal members and adapted to compress said longitudinal partition members, and the bottom pallets between them, toward the said fixed stop.

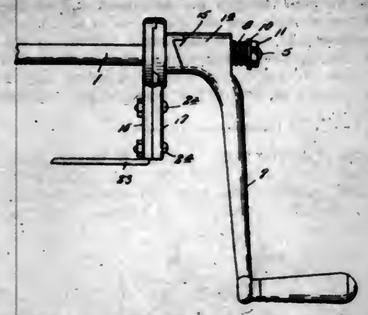
1,480,059. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Apr. 16, 1918. Serial No. 228,952. Renewed Mar. 7, 1921. Serial No. 450,460. 27 Claims. (Cl. 204—15.)



1. A metallurgical process comprising leaching ores of copper with an acid solution of ferric iron, generating hydrogen sulphide from acid and ferrous sulphide, precipitating the copper from the leach solutions with

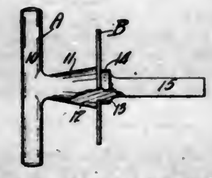
the hydrogen sulphide so formed, adding the ferrous sulphate formed in the generation of the hydrogen sulphide to the leach solutions, electrolysing the ferrous iron in

the leach solution in the presence of the regenerated acid to convert the ferrous iron into the ferric condition, and then applying the regenerated ferric iron solution to the ore.



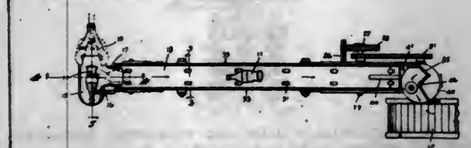
1,480,060. METALLURGICAL APPARATUS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Apr. 28, 1919. Serial No. 293,174. 19 Claims. (Cl. 266—12.)

1. In apparatus for treating liquids with gases, a lower section adapted to contain a liquid, an upper section engaging the lower section and forming a sealed chamber therewith, means for causing a flow of liquid through the lower section, means for causing a flow of gas through the upper section, rotary members within the chamber partly immersed in the gas and partly submerged in the liquid, and means alternating with the rotary members to give the liquid a sinuous flow through the chamber.



1,480,061. SAFETY CRANKING MEANS FOR INTERNAL-COMBUSTION ENGINES. GUSTAF OLOF GUSTAFSON, Branford, Conn. Filed Feb. 20, 1923. Serial No. 620,141. 2 Claims. (Cl. 123—185.)

1. In a safety cranking means, the combination with a shaft having a circumferential flange, a portion outwardly beyond the flange and bearing at its outer end an inclined tooth, and a reduced portion outwardly beyond said tooth-bearing portion; of a unit loosely surrounding said tooth-bearing portion of the shaft and having peripheral ratchet teeth and also having inclined clutch teeth, a crank loosely mounted on the reduced portion of the shaft and having comparatively deep inclined clutch teeth at its inner end to engage and be engaged

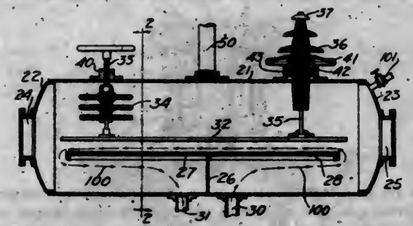


by the tooth of the shaft and to engage the clutch teeth of the said unit, and means on the shaft yieldingly pressing the crank inwardly.

1,480,062. LOCKHANDLE. SYLVESTER A. GUTMAN, Flint, Mich. Filed Jan. 16, 1922. Serial No. 529,484. 3 Claims. (Cl. 292—356.)

1. An article of the character described, comprising, a one piece body provided with a groove, and a rotatable member journaled in the bottom of said groove and confined endwise by the walls of said groove.

1,480,063. CONVEYER IN GLASS-MAKING APPARATUS. CLARENCE I. HALL and ALEXANDER SAMUELSON, Terre Haute, Ind., assignors to Chapman J. Root, Terre Haute, Ind. Filed Aug. 11, 1919. Serial No. 316,723. 14 Claims. (Cl. 198—22.)

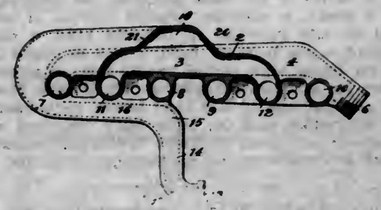


1. A conveyer for bottles after they have been formed and before they are cold, having a movable conveyer belt, and pairs of pins located at intervals thereon adapted to receive between them the necks of the bottles and hold them while being conveyed.

4. A conveyer for conveying glass articles, having a conveyer belt, means thereon for catching glass articles and conveying the same and holding them longitudinally of the belt as the belt moves, and means at the discharge end of said conveyer belt for separating and discharging the glass articles therefrom in a predetermined position.

1,480,064. ELECTRIC DEHYDRATOR. FORD W. HARRIS, Los Angeles, Calif., assignor to Petroleum Rectifying Company of California, San Francisco, Calif., a Corporation of California. Filed Nov. 23, 1921, Serial No. 517,404. Renewed May 9, 1923. 7 Claims. (Cl. 204—24.)

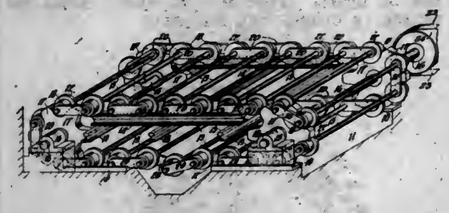
1. A method of dehydrating petroleum emulsions which comprises: establishing an electrostatic field between electrically charged surfaces immersed in an insulating fluid of sufficient dielectric strength to prevent disruptive discharges between said surfaces; and passing the emulsion to be treated through said field in such a manner that



the envelope of insulating fluid around one of said electrodes is unbroken and the dielectric strength is maintained at a value sufficiently high to prevent disruptive discharge.

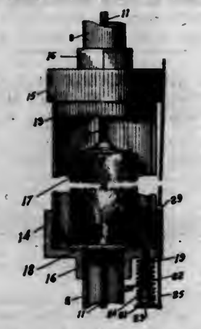
1,480,065. GARMENT HANGER. ELBRIDGE J. HART and DEANE L. HART, Cleveland, Ohio. Filed Apr. 17, 1922. Serial No. 553,905. 4 Claims. (Cl. 211—13.)

1. A garment hanger, comprising a base plate, a clamping bail having arms pivotally connected with said plate, a clamping bar slidably connected with said arms parallel with the middle portion of the bail, and braces pivotally connected with said bar and also said base plate adapting the parts to be folded and unfolded.



1,480,066. MANIFOLD FOR MOTOR CARS. OSCAR HAYES, Johnstown, Pa. Filed Oct. 11, 1918. Serial No. 257,740. 10 Claims. (Cl. 123—122.)

1. In a manifold construction, the combination of an intake manifold chamber having at its ends fuel supply outlet ports, and intermediate its ends a fuel inlet port, said inlet port being arranged nearer one of said outlet ports than the other, and a deflector formed by the wall of said manifold extending into the path of the incoming fuel to equalize the delivery thereof to the outlet ports.

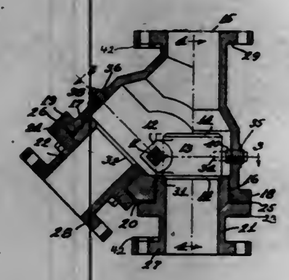


1,480,067. CONVEYER. CHRISTIAN F. HEINKEL, Cleveland, Ohio, assignor to The Stoney Foundry Engineering and Equipment Co., Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1922. Serial No. 542,260. 6 Claims. (Cl. 198—195.)

1. A conveyer comprising, a pair of upper track rails and a pair of lower track rails, track wheels arranged in pairs adapted to run on said track rails, a plurality of shafts extending across both of said pairs of track rails, each of said pairs of track wheels journaled on the ends of one of said shafts, and each of said shafts connected to the next of said shafts by one pair of links journaled on these shafts alternately on the inside and the outside of said track wheels.

5. A conveyer including, a chain and rollers therefor, an upper track for said rollers, and a lower track for for said rollers interrupted to provide a gap or space therein to permit said chain to sag and thereby take up the slack thereof.

1,480,068. ANTIFREEZE VENT FOR PUMPS. CLAUDE C. HERRELL, Vona, Colo., assignor of one-fourth to Charlie H. Davis and one-fourth to William O. Davis, both of Kiowa, Colo. Filed Nov. 3, 1922. Serial No. 598,816. 2 Claims. (Cl. 137—34.)

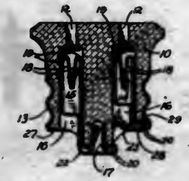


1. A safety device for pumps comprising a tubular section, a cap threadedly connected to each end thereof and adapted to connect said tubular section to the pump pipe so that it will be incorporated therein, a vent in one of said caps, said vent having a tubular member secured therein, a valve member slidably connected to said tubular member, means carried by the valve member for closing the opening in the tubular member, a spring surrounding said tubular member and engaging the valve member for holding the latter in open position and means for moving the valve member to closed position.

1,480,069. CIGARETTE EXTINGUISHER. WILLIAM HENRY JOSEPH HIPPLE, Jr., Philadelphia, Pa. Filed July 8, 1921. Serial No. 483,294. 1 Claim. (Cl. 131—51.)

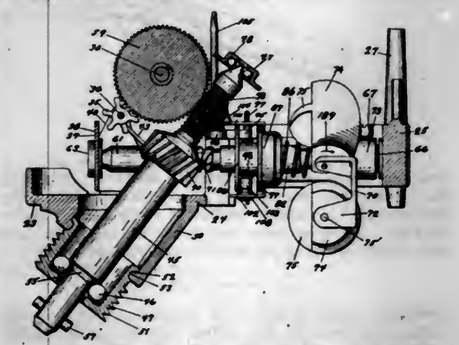
A cigarette extinguisher comprising a device having inner, outer, upper and lower faces, each face forming a junction with two of the other faces, there being a plurality of tapered sockets extending through the device from the upper to the lower faces, the lower face being so shaped that the sockets open at their lower ends above a plane extending through the lowest portion of the lower face to form an air space communicating with the bottoms of the sockets when the device is placed on a plane surface.

1,480,070. SWITCHING VALVE. FRITZ HOVING, Chicago, Ill., assignor, by mesne assignments, to Raymond Bros. Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed May 22, 1922. Serial No. 562,852. 6 Claims. (Cl. 251—36.)



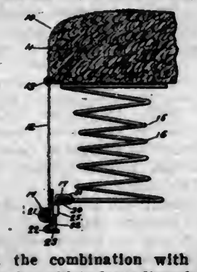
2. In combination, a fixture, a pipe rotatably mounted in said fixture, a valve seat on the end of said pipe toward said fixture, a valve cooperating with said seat, and means for holding said valve from rotating during the rotation of said pipe.

1,480,071. BED ATTACHMENT FOR AUTOMOBILES. VINCENT F. HRACHOVINA, St. Paul, Minn. Filed May 31, 1923. Serial No. 642,531. 6 Claims. (Cl. 5—119.)



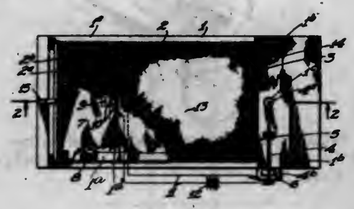
5. In a device of the class described, comprising in combination, a bed frame including a device adapted to be attached to an automobile running board, said device having a bottom, end walls, and a rear wall and forming one end of the bed frame, said bed frame being constructed to detachably support a flexible bed spring at the ends of the latter and comprising side rails, an end rail connecting the outer ends of said side rails and including a readily detachable and pivotal connection, respectively, with said side rails to render the same swingable horizontally, each of said side rails having a leg adapted to be folded thereagainst and being formed of an inner and outer rail member disposed in overlapping relation and being connected in a manner to be slidable one upon the other, separate manually operated mechanism for each of said side rails, operatively connected, respectively, with the component parts thereof, for sliding one rail member upon the other to effect an extension of the side rails when the mechanisms are actuated, said mechanisms including reciprocatory pins having readily detachable connections, respectively, with the inner rail members to stretch said spring taut when the recited mechanisms are actuated, a plurality of slidably overlapping interconnected table top plates pivotally mounted in the end walls of said device in a manner to be extended over said side rails to and into engagement with said end rail to be held against longitudinal movement thereby, and an opening and means in each of said inner rail members adapted to engage, respectively, said pins to change the location of the point of attachment of the latter for the purpose of pulling said interconnected table top plates collectively taut by virtue of the actuation of said mechanisms.

1,480,072. SEPARABLE ATTACHMENT PLUG. HARVEY HUBBELL, Bridgeport, Conn. Filed Feb. 16, 1921. Serial No. 445,407. 4 Claims. (Cl. 173—343.)



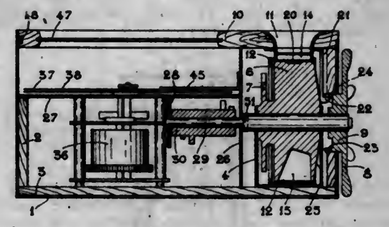
1. In an attachment plug, a blade receiving contact comprising a pair of spring plates, attaching flanges on said plates, and a tie plate having a slot to receive the spring plates and a depression which receives said flanges in superimposed relation and keeps their outer surface flush with the surface of the tie plate.

1,480,073. SPEEDOMETER. ERNEST R. HUNTLEY, Toledo, Ohio, assignor, by mesne assignments, to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 2, 1919. Serial No. 269,339. 1 Claim. (Cl. 264—3.)



In a device of the class described, the combination with a frame, a governor mounted thereon, a sleeve moved by said governor, an indicator hand, a pinion connected to the indicator hand, a pair of spaced lugs upon the frame, a pin carried by said lugs, an actuating member for said pinion having a pair of arms pivoted upon said pin, one of said arms having teeth meshing with said pinion and the other being connected with said sleeve, and means yieldingly holding said actuating member in a predetermined position upon said lugs.

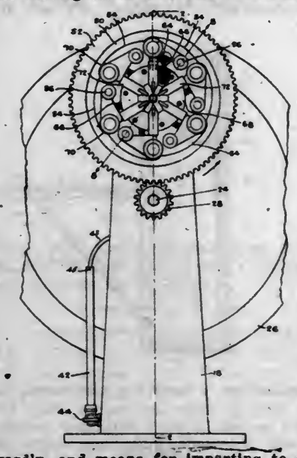
1,480,074. SPRING SEAT. ERNEST R. HUNTLEY, Toledo, Ohio, assignor, by mesne assignments, to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 2, 1919. Serial No. 269,338. 15 Claims. (Cl. 155—180.)



1. In a seat, the combination with a border frame and a cushion, of a skirt depending from said cushion enclosing said frame, a strip secured to the inner face of said skirt adjacent to the lower edge thereof and a plurality of downwardly extending hooks secured to said border frame for engaging said strip.

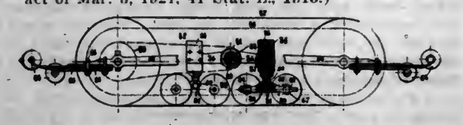
1,480,075. ANIMAL TRAP. RUDOLF JACOBI, San Diego, Calif. Filed Oct. 16, 1922. Serial No. 594,800. 5 Claims. (Cl. 43—61.)

5. An apparatus of the class described, including a supporting frame provided with a base and a frame portion, a cage provided with an opening in one end supported by said supporting frame, retaining means positioning said cage and said supporting frame relatively to each other, a door pivotally mounted on said cage over the opening therein, an electromagnet mounted on the frame portion of said supporting frame, a tripping member pivotally mounted on the upper portion of said frame portion, so positioned and constructed as to engage said door when the latter is in open position and also adapted to be attracted by said electromagnet, a platform positioned within and at the rear portion of said cage, a resilient switch member mounted at the lower portion of said platform, a stationary switch member positioned contiguous to said resilient switch member and electrical conductors connecting said switch members to said electromagnet and a source of electrical energy.



1,480,076. CHECKING APPARATUS FOR PIGEON-FLYING COMPETITIONS. GEORGES JACQUET, Charleroi, Belgium. Filed Feb. 5, 1923. Serial No. 617,053. 10 Claims. (Cl. 234—36.)

1. In checking apparatus for pigeon flying competitions and the like, the combination of a casing, a clockwork in said casing, a dial adapted to be rotated by said clockwork, a rotary barrel for receiving the identification rings of the pigeons, a plurality of marking members arranged side by side, and means operatively connected with said barrel for successively causing each of said members to make a mark on said dial.

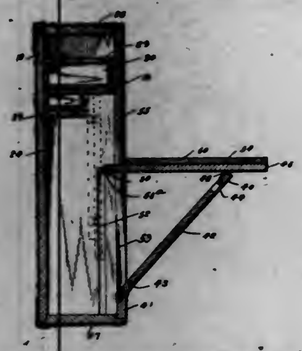


1,480,077. DIE-FORGING MACHINE. EDWARD E. JOHNSON, St. Paul, Minn. Filed Feb. 13, 1920. Serial No. 358,449. 7 Claims. (Cl. 78—21.)

1. A die forging machine comprising a rotatable member, a plurality of dies mounted for radial movement toward and away from the article operated upon, operating connections between said dies and said rotatable member for moving all of said dies in unison inwardly

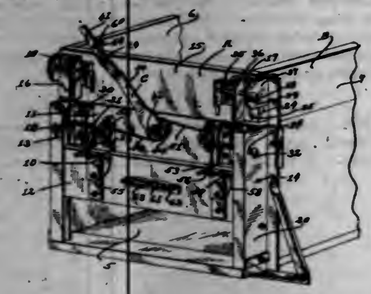
and outwardly, and means for imparting to said rotatable member a fractional part of a complete rotation corresponding to the number of said dies.

1,480,078. SUPPORTING AND DRIVING BAND FOR MOTOR CARS. ADOLPHE KÉGRESSE, Paris, France. Filed Mar. 30, 1921. Serial No. 457,109. 7 Claims. (Cl. 180—9.1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an automobile, an endless, flexible supporting and driving band; supporting wheels aroundd which the band passes; and a system of rollers supporting the weight of the axle and bearing upon the band; said supporting wheels being devoid of rigid connection with the roller system and being adapted to rest freely upon the band and to rock vertically about an axis without acting on the chassis or on said roller system.

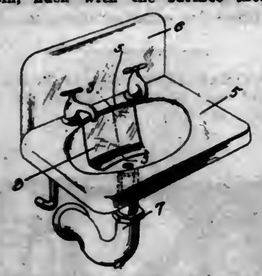
1,480,079. ARCH SUPPORT. HARVEY B. KENNEDY, Pittsburg, Kans. Filed Sept. 27, 1920. Serial No. 412,898. 9 Claims. (Cl. 36—71.)



1. An arch support comprising an insole provided with a flexible flap having a marginal connection with the insole, and a filler element adapted to be interposed between said flap and insole, said flap being provided with retaining pockets for removable engagement with the ends of said filler element.

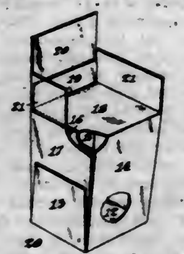
1,480,080. CABINET AND WARDROBE. WOOD DANIEL KENT, Kansas City, Mo. Filed Dec. 17, 1920. Serial No. 431,427. 2 Claims. (Cl. 45—51.)

1. In combination, a cabinet section having side walls and a rear wall, an upper door and a lower door at the front of the section, a shelf extending forwardly from the rear wall intermediate the side walls and above the lower edge of the upper door, a table having a portion normally disposed intermediate the shelf and upper door and projecting above the shelf to prevent escape of matter supported thereon, the space below the shelf intermediate the rear wall, table and side walls constituting a closet space, a frame for the lower door hinged on substantially horizontal axis to the table and to the cabinet section, the table being adapted for extension through the space normally closed by the upper and lower doors with the said frame diagonally disposed and constituting a brace for the table, coacting means between the table and cabinet to support the table in the latter position, and said lower door constituting a means of access to the closet space.



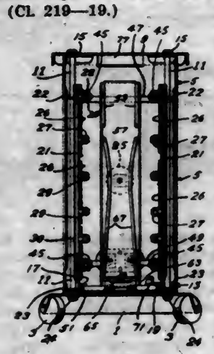
1,480,081. END GATE. GUSTAV KLOMHAUS, Plainfield, Ill. Filed Sept. 8, 1922. Serial No. 586,933. 6 Claims. (Cl. 296—52.)

1. An endgate comprising an upper section, a lower section, releasable locking members carried by the upper section for engaging a wagon body, a lever rotatably carried by the upper section, cables detachably connected to the lower section adjacent to the opposite ends thereof, means operatively connecting the cables with the lever whereby upon movement of the lever in one direction the lower section will be raised.



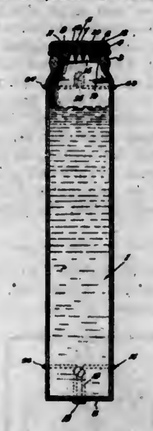
1,480,082. MIRROR WASHBASIN. FRANK A. KRATOCHVIL, Chicago, Ill. Filed Aug. 30, 1922. Serial No. 585,186. 2 Claims. (Cl. 4—166.)

1. In combination with a wash basin, a mirror aronated both longitudinally and vertically to conform to the curvature of said basin, said mirror being inlaid in said basin, flush with the surface thereof, and a



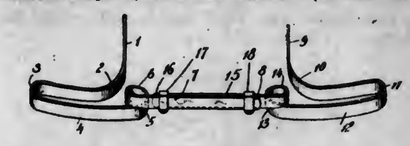
mirror flange formed integral with said mirror and adapted to extend in a longitudinal plane parallel to the top of said basin.

1,480,083. LIQUIDPROOF PAPER VESSEL. ELIE W. LABOMBARDE, Nashua, N. H. Filed Sept. 2, 1921. Serial No. 497,885. 11 Claims. (Cl. 229—3.1.)



4. A paper board blank for making a box, said blank of single thickness being interiorly impregnated with liquid-repellant material, both surfaces of the blank being in condition to enable overlapping portions thereof to be glued together.

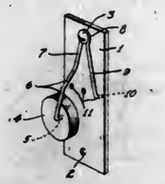
1,480,084. ELECTRIC TOASTER. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 21, 1922. Serial No. 589,521. 14 Claims. (Cl. 219—19.)



1. An electric toaster having a heat retaining casing provided with a door, heating conductors supported therein and lying in two vertical planes, a vertical toast holding rack movable through said door to and from the space between said planes, and a crumb tray beneath said rack and extending beyond the sides thereof, said door having lateral extensions at its bottom portion so as to conform substantially to the outline of the upper portion of said rack and admit said tray.

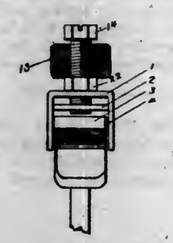
1,480,085. FIRE EXTINGUISHER. HOWARD W. LINARD, Dayton, Ohio, assignor to The Kanard Company, Dayton, Ohio, a Corporation of Ohio. Filed May 18, 1921. Serial No. 470,514. 1 Claim. (Cl. 299—103.)

In a fire extinguisher of the class described, a container having a mouth and a surrounding exterior bead, a sprinkling closure for the said mouth comprising a body of substantially circular form provided at its upper side with a circumscribing outstanding shoulder, a packing ring fitted about the body and engaged at its upper edge by the shoulder, the said body and its ring being fitted into the mouth of the container with the surface of the ring contacting the wall to provide a fluid-tight connection between the parts, the body being provided with a plurality of discharge orifices opening through its upper and lower faces and thruogh which the fluid contained within the container is to be discharged, and a closure for the container comprising a cap removably fitted on to the mouth thereof and retained by said bead and contacting at its inner side with the upper side of the closure body whereby to normally seal the discharge ends of the said orifices.



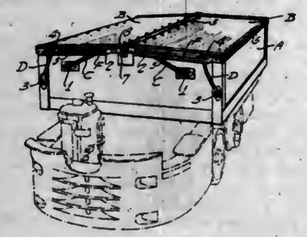
1,480,086. BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Aug. 18, 1921, Serial No. 493,215. Renewed Apr. 6, 1923. 18 Claims. (Cl. 293—55.)

2. The automobile buffer formed of flat spring steel strip and comprising attaching members and connected end loops and adjacent outer impact receiving portions of the buffer front, intermediate spiral bent portions formed in the flat spring strip between the end loops and resiliently supporting the connected central contact portions of the buffer front, and a front contact portion substantially in line with the outer impact receiving portions of the buffer front and connected at one end to an outer impact receiving portion.



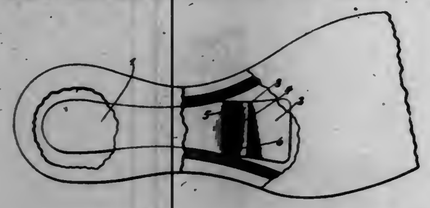
1,480,087. ANTIRATTLING DEVICE. JAMES L. MCCLINTOCK, Wichita, Kans., assignor of one-third to R. C. Wellman and one-third to W. H. McCoin, both of Wichita, Kans. Filed Apr. 14, 1922. Serial No. 552,687. 6 Claims. (Cl. 292—77.)

3. An anti-rattling device including a base provided with an opening for the reception of means for securing it in place; a spring member having a portion formed to cooperate with the securing means to hold the spring in place; an arm on the spring member adapted to be secured to the base to vary the tension of the spring



member, said base being provided with openings in spaced relation; and the arm having a portion adapted to be placed in certain of the openings.

1,480,088. ANTIWEAR DEVICE FOR CONTROLLING LEVERS. WARNER A. MADISON and WILLIAM HARRY DUNSTON, Des Moines, Iowa. Filed Feb. 19, 1923. Serial No. 619,869. 3 Claims. (Cl. 74—39.)



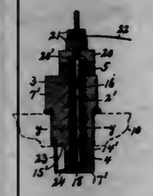
1. The combination of a movable bolt supporting arm, a rocker arm adjacent thereto having a cam plate thereon, with a device supported on said bolt comprising a yoke having a cross member on the bolt and a pair of spaced arms arranged on opposite sides of said plate, a cross brace between said arms mounted on the bolt, said cross member and cross brace and bolt having screw-threaded connection for adjustment, a spindle between said arms bearing on said cam plate.

1,480,089. BATTERY BOX FOR STORAGE-BATTERY LOCOMOTIVES. RAYMOND MANCHA, St. Louis, Mo., assignor to Mancha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 11, 1922. Serial No. 593,931. 7 Claims. (Cl. 220—32.)

1. A battery box provided with a pair of lids that are adapted to be arranged over the upper end of the box, and pairs of swinging links pivotally connected to each lid and to the box for guiding, said lids in such a way that they will clear the upper edges of the side walls of the box when said lids are moved into their open position and for thereafter rigidly holding said lids in an upright position.

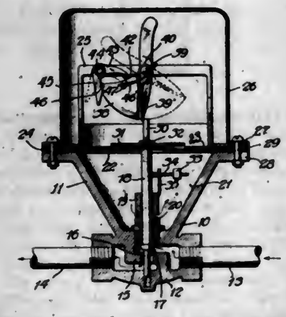
1,480,090. SHANK STIFFENER. FREDERICK P. MARX, St. Louis, Mo. Filed Oct. 2, 1922. Serial No. 591,820. 5 Claims. (Cl. 36—76.)

1. In a shoe, a shank stiffener comprising a rear section having about half of its length over the heel of the shoe and behind the breast wall of the shoe, a front section extending under the forward end of the rear section, and a pivot device uniting said two sections and limiting relative longitudinal movement thereof and permitting vertical and lateral pivotal movement.



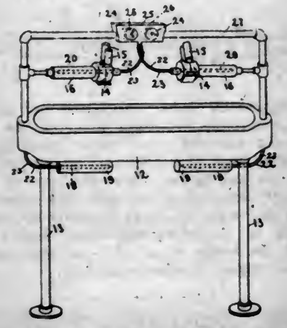
5. A shank stiffener comprising a rear section having a hole in its forward end, a front section extending under the forward end of the rear section and having a portion extending upwardly through the hole in the rear section, and means in connection with said two sections limiting both their longitudinal and lateral movements.

1,480,091. DEHYDRATOR. WYNN MEREDITH, Alameda, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Feb. 14, 1921. Serial No. 444,948. 2 Claims. (Cl. 196—25.)



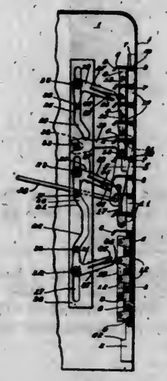
2. A process of agglomerating water particles from an emulsion which comprises forcing the emulsion upwardly in a series of fine jets through a loosely held mass of comminuted material.

1,480,092. SPARK PLUG. RAYMOND E. MEYER, Syracuse, N. Y. Filed Oct. 8, 1920. Serial No. 415,619. 1 Claim. (Cl. 123—169.)



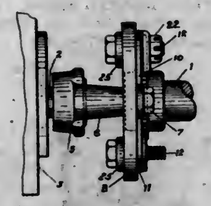
A spark plug comprising a bushing having a lengthwise bore mainly at one side of its axis, said bushing having a reduced inner end concentric with the bore, a spark terminal secured to and projecting inwardly from the inner end of the bushing at the opposite side of said axis and in spaced relation to the reduced extension, an insulator sleeve extending through the bore, a conductor extending through the sleeve, a head secured to the inner end of the conductor and provided with a spark terminal cooperating with the first named terminal for ignition purposes, said head having an annular groove for receiving the inner end of the sleeve, an insulator disk adjustable lengthwise of and upon the inner end of the sleeve between the head and reduced end of the bushing, a collar loosely surrounding the outer end of the conductor and provided with an annular groove for receiving the outer end of the sleeve, an insulator disk adjustable lengthwise of and upon the outer end of the sleeve between said collar and outer end of the bushing, and means for adjusting the collar and conductor axially relatively to each other for tightening the disks in place, one of said grooves being of sufficient axial depth to allow its end wall to clear the adjacent end of the sleeve when the disks are tightened against the adjacent ends of the bushing.

1,480,093. AUTOMATIC SAFETY CUT-OFF. ALBERT L. MILLER, Johnstown, Pa. Filed Apr. 30, 1923. Serial No. 635,580. 5 Claims. (Cl. 67—115.)



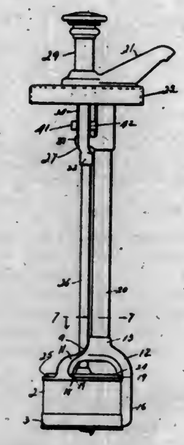
1. An automatic gas cutoff mechanism comprising the combination with a valve casing valve seat and vertically reciprocating valve of a stem extending above said casing, a weighted locking segment pivoted above the valve stem, means for normally retaining said locking segment in inoperative position, said means being adapted to engage the upper portion of the valve stem in its raised position.

1,480,094. BOTTOM-FILLING MACHINE. LAWRENCE L. MILLER, Brockton, Mass., assignor to Oscar L. Redifer, Philadelphia, Pa. Filed Dec. 5, 1921. Serial No. 519,901. 2 Claims. (Cl. 18—1.)



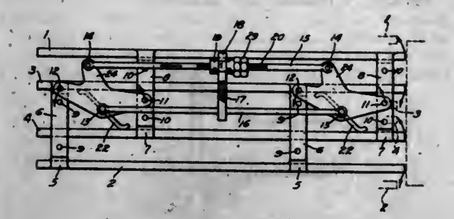
1. A bottom-filling machine, comprising an oblong pot, means for supporting the same horizontally with its longer sides unobstructed, so that stations are provided for two operators, standing one at one side, and the other at the opposite side of the pot, each facing one of said longer sides, two groups of machine elements supported above the pot in axial alinement with each other, and substantially parallel with, and equidistant from the longer sides of the pot, each group including a filler-applying knife-holder, and a filler-spreading member, one group being arranged over one end portion of the pot for use by one of the operators, and the other group over the opposite end portion, for use by the other operator, and heating apparatus adapted to heat the pot and the said groups.

1,480,095. RADIATOR SHUTTER. EDWARD A. MOLLER, Baltimore, Md. Filed May 5, 1921. Serial No. 467,083. 15 Claims. (Cl. 257—132.)



3. In a radiator shutter in combination, a series of swinging plates mounted to open and close and means for moving them from open to closed position and vice versa, the same comprising a plurality of members, the plates being divided into a corresponding number of groups of adjacent plates and means for connecting each of the plates of each group to the said corresponding member and a plurality of operating members, one for each said group and means for operating said members successively whereby the respective groups of plates from the bottom to the top are closed successively and opened in reverse order.

1,480,096. ADJUSTABLE FLEXIBLE SHAFT COUPLING. EDWARD MOORE, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 7, 1921. Serial No. 506,065. 8 Claims. (Cl. 64—96.)

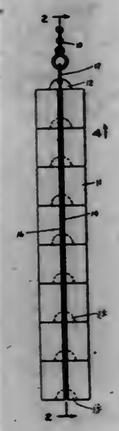


1. An adjustable coupling comprising a disc, a driven shaft coupling member secured thereto, a driving hub rotatably adjustable with respect to said disc, teeth on said hub, clamping members having a peripherally disposed lip terminating in a pair of teeth at its free ends for engaging said teeth on the hub at points a considerable distance apart, and means passing through said disc and clamping members for securing the parts together in cooperative relationship.

1,480,097. SIRUP PUMP. WILLIAM MORLOK, Philadelphia, Pa., assignor to L. A. Prouty Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1922. Serial No. 534,130. 7 Claims. (Cl. 225—35.)

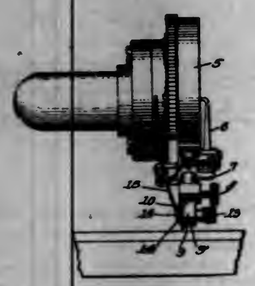
1. A pump comprising a cup and a notched plunger therein, a portion of the notch in said plunger lying beyond the cup only when the plunger is in its outermost position.

1,480,098. MOLDING MACHINE. LEO F. MULQUEEN and PATRICK WALSH, Los Angeles, Calif. Filed July 17, 1922. Serial No. 575,487. 7 Claims. (Cl. 25—131.)



1. In a machine of the class described, comprising 2 sets of molding plates, the second set of molding plates thereof being alternately meshed between the first set of molding plates, in combination with a supporting means for each set of molding plates, adapted to regulate the spaces lying between the said respective sets of plates and individual plates, a pair of crank means operatively positioned between the said holding means for the two sets of plates, adapted to open and close the said sets of plates, crank arms integral with the said crank means, a separating means, adapted to control the space between the said pair of crank means, a supporting arm integral with the central portion of the said separating means, as set forth.

1,480,099. SECTIONAL SASH WEIGHT. JAMES A. MURPHY, Hamilton, Ohio. Filed Nov. 20, 1922. Serial No. 602,135. 1 Claim. (Cl. 16—218.)



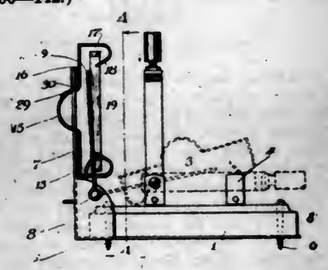
A sectional sash weight comprising a plurality of sectional members, each of said members having a projecting portion on one side thereof and a corresponding recess on the opposite side thereof for receiving the projecting

portion of the next adjacent member, each of said members being further provided with diametrically opposed slots extending parallel with the axis on opposite sides and across the top and bottom thereof, and a binding band

adapted to extend about all of said sections when mounted one upon the other through the aligned slots in the sides, top and bottom of the combined sections for securing said sections together, substantially as and for the purpose described.

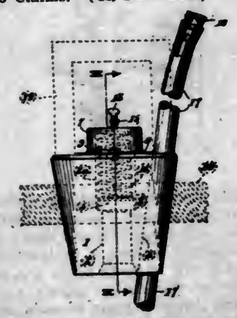
1,480,100. PHONOGRAPH NEEDLE. SAMUEL NELSON, Waterloo, Iowa. Filed Apr. 9, 1923. Serial No. 630,856. 2 Claims. (Cl. 274—37.)

2. A phonograph needle comprising a body portion having an opening, a shank carried by the body portion, a pin mounted within said opening and having an opening formed therein, a nut carried by the pin, and a longitudinally adjustable playing element arranged within the opening of said pin.



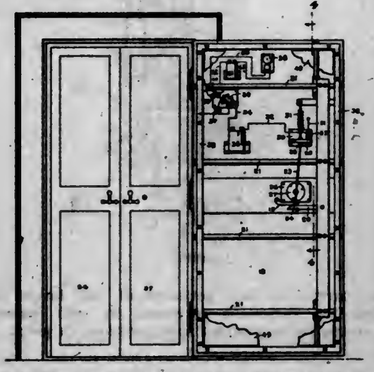
1,480,101. DENTAL FLOSS APPLIANCE. JOHN G. OGDEN, Plainfield, N. J. Filed Mar. 22, 1922. Serial No. 545,708. 2 Claims. (Cl. 132—92.)

1. A dental floss appliance embodying a handle provided interiorly with a chamber adapted to contain a supply of dental floss, a yoke associated with the open end of said chamber and having a co-axial opening, the free ends of the arms of said yoke having tapering V-shaped slots with constricted places in which the end of the floss after



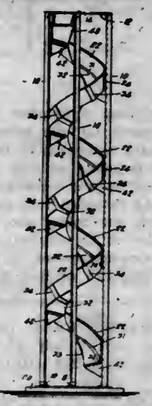
passing through said opening may be stretched across said yoke and held taut in said slots by frictional engagement solely therein.

1,480,102. CIRCUIT CLOSER. JOHN CHRIS OLSEN, Minneapolis, Minn.; Sinev C. Olsen administratrix of said John Chris Olsen, deceased. Filed Apr. 7, 1920, Serial No. 371,863. Renewed Sept. 28, 1923. 4 Claims. (Cl. 200—142.)



4. A device of the class described comprising a holder having inwardly directed end portions, a breakable vial connected to said end portions, a spring actuated member engaged with said breakable vial and normally held in a retracted position thereby, and fusible means normally retaining said holder in a retracted position.

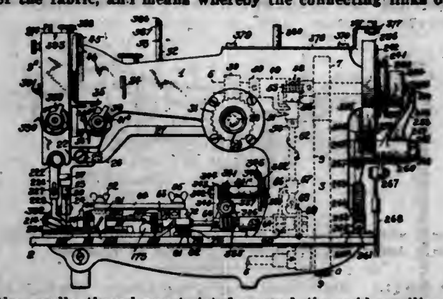
1,480,103. VENTED BARREL BUNG. JOSEPH OROSS, Cleveland, Ohio. Filed Nov. 28, 1922. Serial No. 602,842. 6 Claims. (Cl. 217—100.)



1. In a barrel bung having an air vent passage, an outwardly opening disk valve closing said passage, a frame secured to the outer end of the bung and overlying the passage and valve, and a spring interposed between the frame and outer side of the valve.

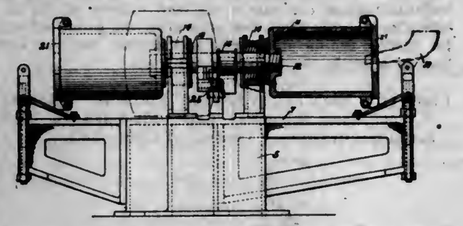
1,480,104. LOCKING MEANS FOR THE BOLT SYSTEM OF VAULT OR SAFE DOORS OR THE LIKE. EMMET SMITH PALMER, Seattle, Wash. Filed Mar. 16, 1920, Serial No. 366,197. Renewed Apr. 2, 1923. 14 Claims. (Cl. 109—8.)

1. A locking mechanism for a vault door bolt system embodying a bolt blocking means, an electromagnet operatively disposed with respect to said bolt blocking means, a switch, a combination lock, and a connecting means, one end of which is releasably secured to the combination lock and the other end of which is secured to said switch which is thereby maintained normally in open position.



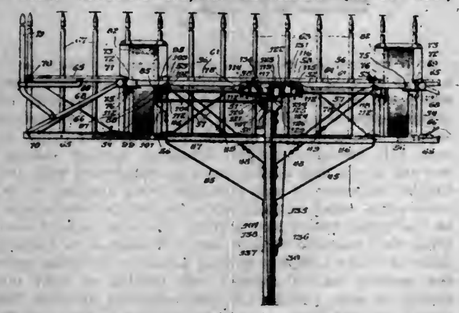
1,480,105. SPIRAL LOWERING CHUTE. FRANK PARDEE and FRANK PARDEE, Jr., Hazleton, Pa. Filed Apr. 28, 1922. Serial No. 557,063. 7 Claims. (Cl. 193—12.)

1. A skeleton frame for supporting a spiral runway comprising a plurality of uprights and a spiral flange secured to and forming the sole bracing for said uprights.



1,480,106. SEWING MACHINE. WILLIAM N. PARKES, Brooklyn, N. Y. Filed Feb. 1, 1919. Serial No. 274,532. 25 Claims. (Cl. 112—98.)

14. In a sewing machine, a vertically reciprocating needle, means for producing a relative lateral movement between said needle and the work so that stitches are made in and off the edge of the fabric, means for producing a second relative lateral movement between the needle and the work to dispose said stitches in embroidered scallops with the stitches of the outer edge of the scallops located off the edge of the fabric, means for looping an auxiliary thread around the stitches made off the edge of the fabric, and means whereby the connecting links of

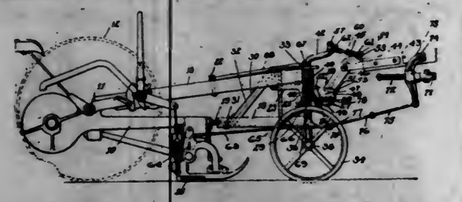


the needle thread are twisted around the said auxiliary thread along the edge of the scallops which is located off the edge of the fabric.

1,480,107. CASTING MACHINE. WILLIAM H. PASHLEY, New York, N. Y. Filed Jan. 4, 1922. Serial No. 527,015. 3 Claims. (Cl. 22—65.)

1. In a casting apparatus, in combination, a shaft, means for rotating said shaft and casting drums detachably secured one at each end of said shaft.

1,480,108. SHOCK GATHERER. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,080. 42 Claims. (Cl. 56—398.)



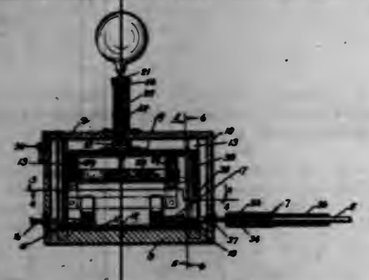
1. In a shock gathering machine, a frame, a rake carried thereby, single means for first tilting said rake, and then raising said rake relative to said frame.

40. In a shock gathering machine, a frame, a rake carried thereby and power actuated means for first tilting said rake and then simultaneously tilting and raising said rake, and manually controlled means for adjusting the angularity of said tilting.

1,480,109. TONGUE TRUCK. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed July 8, 1919. Serial No. 309,354. 19 Claims. (Cl. 280—82.)

1. In combination, a wheeled vehicle, a draft member carried thereby, a tongue pivoted to said draft member

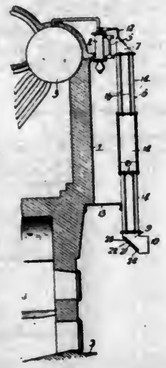
for longitudinal and lateral movement, a wheeled support for said tongue and operative connections between



said support and said tongue for automatically aligning said draft member with said tongue in backing.

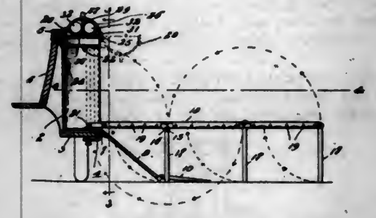
1,480,110. PROCESS FOR PRODUCING METALLIC LEAD FROM ORES, PRODUCTS, AND COMPOUNDS. MAXWELL GEORGE PLATTEN, Salt Lake City, Utah. Filed Nov. 8, 1920. Serial No. 422,490. 2 Claims. (Cl. 75—18.)

1. A process for treating lead ores which consists of subjecting the crushed ore to leaching in a saline solvent, then passing the solution thus obtained over and around metallic iron to precipitate the lead content of the solution as metallic lead, then separating the saline solvent for further use on other ores, and melting the iron and lead to separate the lead from the iron.



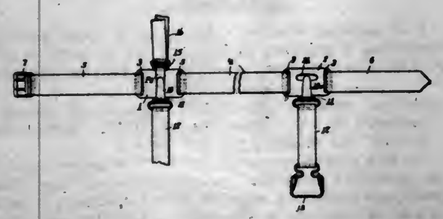
1,480,111. SAFETY ELECTRIC SWITCH. RAPHAEL F. POLI, Camp Schumway, Colo. Filed Jan. 18, 1923. Serial No. 613,375. 2 Claims. (Cl. 200—50.)

1. A switch comprising in combination a switch box; a cover hingedly connected thereto; an insulating switch base secured to the bottom of the box; a plurality of contact clips secured to said base in pairs; conductors secured to one member of each pair, the other clips of each pair having a tubular connector secured thereto, one end of the box having openings registering with the tubular connections, said openings being adapted to receive plugs which connect with the tubular connectors; an insulating switch base movably mounted in said box; conductors mounted on said base and adapted to connect pairs of contact clips; resilient means cooperating with the movable switch member and tending to hold the switch in open position; a rod extending through the switch box and having one end connected to the movable insulated base whereby the same may be moved from open to closed position; a plate of insulating material secured to one end of the movable plate and adapted to obstruct the passage from said openings to said tubular connectors when the switch is in closed position; and openings in the lower edge of said plate.



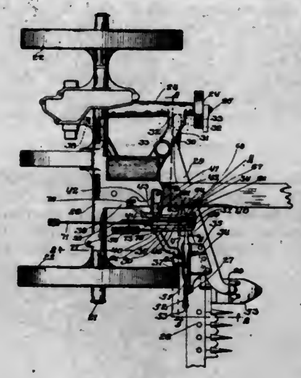
1,480,112. PERISCOPE. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed July 15, 1922. Serial No. 575,244. 6 Claims. (Cl. 88—1.)

1. The combination with an instrument adapted to indicate varying conditions and located at a point remote from the station of the observer, of a periscope extending between said instrument and the observer's station, said periscope being arranged to cause an image of said instrument to be visible at said station, adjustable indi-



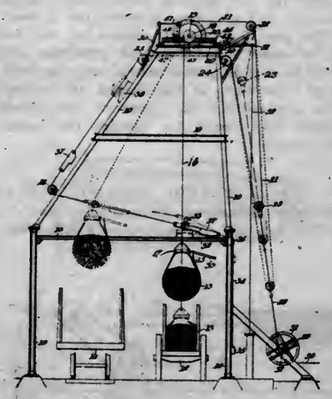
cators carried by said periscope at said image for recording the variations registered by said instrument, and means for supporting said periscope in place.

1,480,113. AUTOMOBILE CAMP EQUIPMENT. GEORGE C. POWELL, Bancroft, Mich. Filed Mar. 6, 1922. Serial No. 541,601. 1 Claim. (Cl. 190—12.)



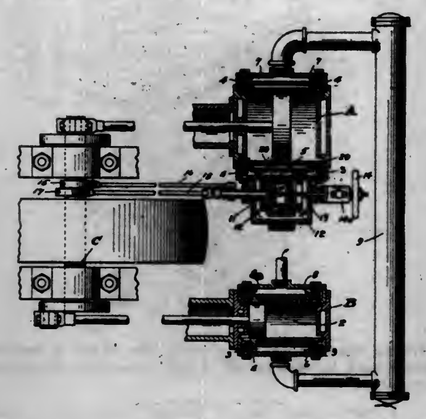
In an automobile camp equipment, the combination of a casing body, adapted for the reception of a folding bed, a holder hingedly connected to the front top corner of the casing body to swing onto or off of the latter, a threaded rod carried by and arranged centrally in the holder, a nut on said threaded rod, and retainers in and hingedly connected to the holder and aperture to receive said rod and adapted to be secured on the rod by said nut to removably secure thermos bottles or the like in and against the holder and against casual movement.

1,480,114. COMBINATION BELT. GEORGE A. PROCTOR, Watertown, Mass. Filed July 17, 1922. Serial No. 575,741. 2 Claims. (Cl. 241—10.)



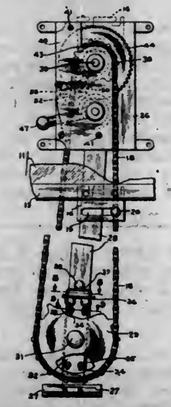
1. A combination belt comprising flexible portions, and a plate uniting the same, said plate having an upwardly projecting hook rising from its lower edge, and a slot into which the tip of said hook projects.

1,480,115. MOWER. CHARLES A. A. RAND, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 2, 1919. Serial No. 294,195. 11 Claims. (Cl. 56—285.)



1. In a mower, a frame, cutting apparatus carried thereby, lifting mechanism carried by said frame and operatively connected to said cutting apparatus, said lifting mechanism comprising a lifting member pivoted on said frame, operative connections between said lifting member and said cutting apparatus, a lifting lever carried by said lifting member and having a plurality of upwardly extending portions and means for adjusting said cutting apparatus by manipulating any of said portions.

1,480,116. TRANSFERRING AND WEIGHING TOWER. CLAUDE CARTER REASONER, Habana, Cuba. Filed Mar. 13, 1922. Serial No. 543,362. 12 Claims. (Cl. 212—2.)

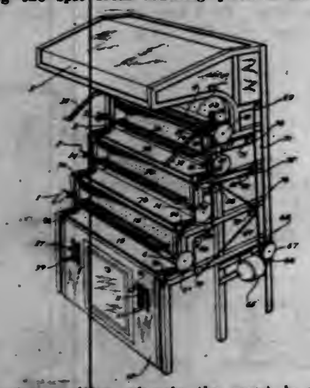


1. In a load transfer system, a line forming a bight intermediate its end, one end portion being supported for hoisting a load and the other end portion being supported for movement in a direction transversely of the hoist portion, a sheave mounted in the bight, means for exerting a pull on the sheave, means for limiting the upward movement of the hoist portion, means for releasably anchoring the transverse end portion and a loose connection between the two end portions allowing free movement of the hoist portion in vertical direction but causing lateral movement thereof when the transverse end portion is moved.

1,480,117. METHOD OF COMPRESSING GAS AND APPARATUS THEREFOR. EDWARD A. RIX, San Francisco, Calif. Filed July 13, 1922. Serial No. 574,622. 8 Claims. (Cl. 230—32.)

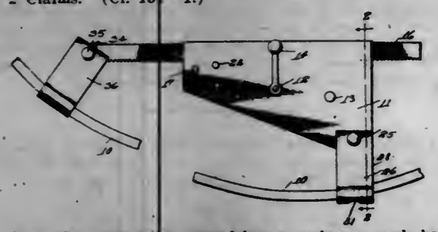
2. In a compressing unit of the character described the combination with the inlet ports of the low pressure cylinder, of means connecting said inlet ports with a source of gas supply delivering gas under varying pressures, and means cooperating with said delivering means for controlling the volume of gas delivered to the low pressure cylinder during each suction stroke.

1,480,118. WINDOW-OPERATING DEVICE. WILLIAM N. RUSSELL, New Haven, Conn. Filed Sept. 23, 1921. Serial No. 502,717. 8 Claims. (Cl. 268—4.)



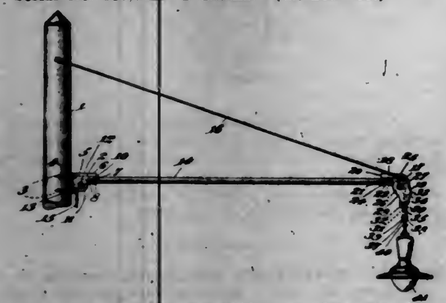
1. A window raising and lowering device including a rotating shaft, a split ring embracing said shaft and being adapted to frictionally engage the same, said ring having its ends free to be drawn together to bring about such engagement, and means for drawing said ends together upon the rotation of said shaft.

1,480,119. ROTISSERIE. MAX SCHEY, Brooklyn, N. Y. Filed Oct. 28, 1920. Serial No. 420,190. 21 Claims. (Cl. 126—41.)



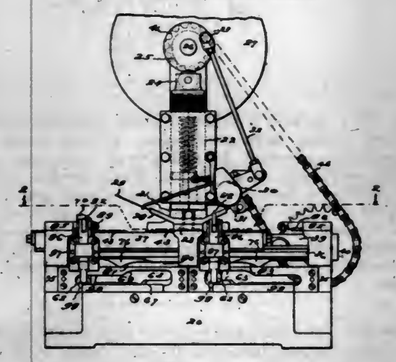
1. A rotisserie embodying a spit adapted to support a roast, a receptacle adapted to contain grease posi-

tioned below the spit, and means for bodily lowering and raising the spit from roasting position before the



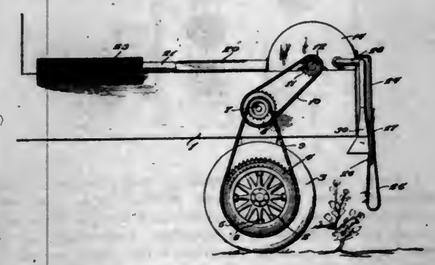
fire to basting position wherein the roast is partially submerged in the grease in said receptacle, and lifted therefrom.

1,480,120. RIM CONTRACTOR. HOWARD SCHOLL, Millerstown, Pa. Filed Jan. 5, 1923. Serial No. 610,789. 2 Claims. (Cl. 157—1.)



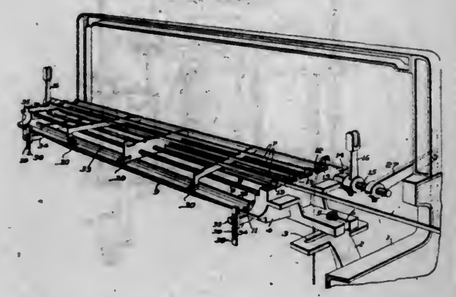
1. A rim contractor comprising a casing, a rack bar slidable in the casing, a gear in the casing engaged with the rack bar, means for rotating the gear to move the rack bar in one direction, a pawl engaged with the rack bar to prevent movement thereof in the other direction, a support on one end of the rack bar, a shaft in the support, rim end engaging clips on the shaft, a shaft in the end of the casing remote from the first shaft, and rim end engaging clips on the second shaft, each of said clips having elongated openings loosely receiving the shaft.

1,480,121. MAST ARM. HOWARD A. SELAH, Johnstown, Pa., assignor to Erie Electrical Equipment Company, a Corporation of Pennsylvania. Filed Apr. 22, 1921. Serial No. 463,732. 2 Claims. (Cl. 240—63.)



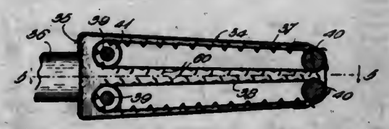
1. An outer bracket immovably secured to a mast arm by a two-part clamp-support having a hook and a cooperating projection at one end and a pair of opposed bolted lugs at the other end, one part of said clamp-support having a pair of side members with their lower portions inclined to deflect an entering lamp hanger, a horizontal transverse flange near the lower end and an inclined flange above the same on the inner side of each of said side members, all of said flanges being spaced apart a predetermined distance, in combination with a lamp hanger provided with a body portion having an enlarged annular flange at or near its upper end, the predetermined distance aforesaid being slightly greater than the diameter of the body of the hanger but less than the diameter of the annular flange thereof.

1,480,122. MACHINE FOR FORMING SHEET-METAL LOOPS. JOHN R. SEXTON, Hartford, Conn., assignor to The Sexton Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 27, 1922. Serial No. 590,963. 35 Claims. (Cl. 153—2.)



1. A machine for forming sheet metal loops having stock feeding and punching mechanisms, a nest for receiving the punched blanks, mechanism for reciprocating the nest toward and from the punching mechanism, a mandrel for bending the blanks into the nest, means engaged by the edges of the blanks as the nest is reciprocated for folding the edges of the blanks about the mandrel, and means for ejecting the folded blanks from the mandrel.

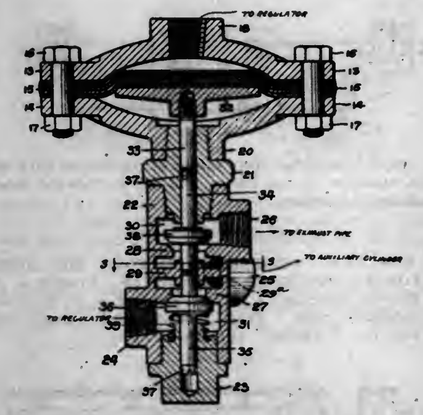
1,480,123. BOLL-WEEVIL DESTROYER. JOHN A. STEPHENSON, Blanchard, Okla. Filed Mar. 14, 1923. Serial No. 625,040. 2 Claims. (Cl. 43—140.)



1. A mechanism for the purpose set forth comprising a drum adapted to be secured upon a vehicle body, a fan within the drum, means for driving the fan from the wheels of the vehicle, a plate secured to the rear side of the drum above the inlet thereof and depending from the drum in spaced relation to said inlet, a receptacle disposed in front of the drum and connected with the outlet of the drum, and a beater carried by the said plate.

1,480,124. WARP STOP MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Original application filed Dec. 29, 1921, Serial No. 525,705. Divided and this application filed Nov. 10, 1922. Serial No. 599,973. 9 Claims. (Cl. 28—41.)

1. In a warp stop mechanism for looms, the combination of a series of drop wires, drop wire guides for guiding the drop wires of a row, supports at each side of the loom forming a permanent part of the stop mechanism and unobstructed for the endwise introduction of the drop wire guides, and a drop wire aligning device for aligning the drop wires of a row between the supports in the position relative thereto that they occupy during weaving that the drop wire guides may be introduced endwise into its supports and also in guiding relation to the aligned drop wires.



1,480,125. COTTON PICKER. WALTER A. STONE, Memphis, Tenn. Filed June 9, 1921. Serial No. 476,293. 2 Claims. (Cl. 56—38.)

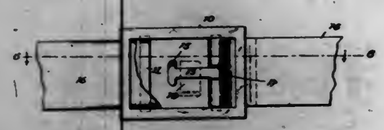
1. A cotton picker nozzle including a housing open at its ends to provide an inlet and an outlet, slotted conveyor belts extending longitudinally in said housing from the inlet, inner and outer rollers for said conveyors, the inner rollers having annular grooves and the outer rollers being solid, and cotton engaging hooks pivotally connected with said belts and projected through said slots when in engagement with said outer rollers and passing through the grooves of the inner rollers when in a retracted inoperative position.

1,480,126. MASTER VALVE. JOSEPH M. SULLIVAN, Detroit, Mich. Filed Feb. 7, 1921. Serial No. 443,234. 2 Claims. (Cl. 137—139.)

1. A valve body having an inlet connection, a drain connection, an outlet connection, valve seat partitions between all of said body connections, a baffle between said partitions, valve rods slidable in said valve body, valves on said rods adapted to seat against said parti-

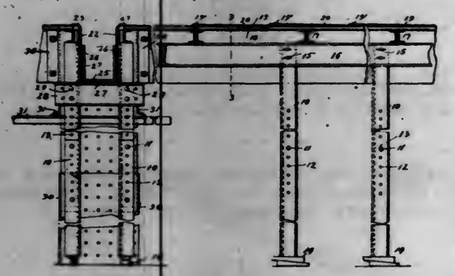
tions, a diaphragm adapted to shift said valves in one direction, and means in said valve body adapted to shift said valves in an opposite direction.

1,480,127. OIL-WELL-PUMP PISTON. BURCHARD D. THOMPSON, Cyclone, Pa. Filed Nov. 20, 1922. Serial No. 602,004. 12 Claims. (Cl. 103—225.)



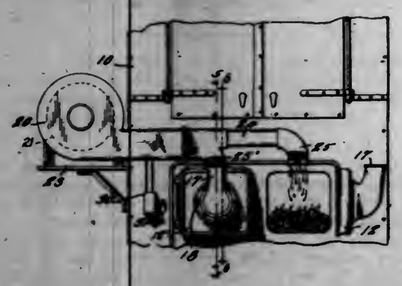
1. An apparatus for elevating oil in a well, comprising a piston within a working barrel, movably mounted packing elements and slidably mounted packing expanding means mounted on said piston, means for yieldingly placing the expanding means in an operative position actuated by the pressure exerted on the packing element by the oil being elevated, and means for retracting the movement of the expanding means by the release of the oil pressure.

1,480,128. BUCKLE. HARRY A. TIEMANN, Fort Collins, Colo. Filed June 7, 1923. Serial No. 644,017. 5 Claims. (Cl. 24—176.)



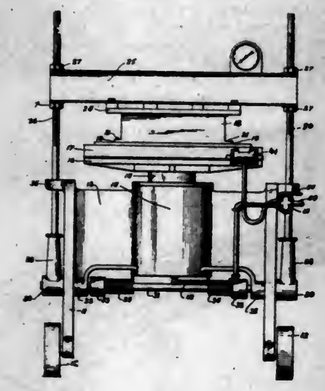
1. A buckle of the clamping type comprising in one piece an open rectangular frame, bowed longitudinally to produce a convex front face; and two cross bars

spaced from the end members of said frame and substantially parallel thereto, said members being offset



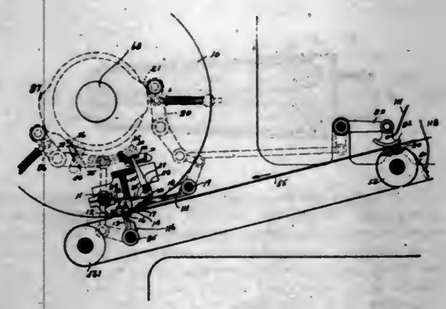
to the rear adjacent their points of connection with the side members of the frame, and bowed forward intermediate said offsets.

1,480,129. CENTERING OR FORM FOR REENFORCED CONCRETE STRUCTURES. CLAUDE A. P. TURNER, Minneapolis, Minn., assignor to T. Wegener, Columbus, Ohio. Filed June 1, 1920. Serial No. 385,571. 2 Claims. (Cl. 25—131.5.)



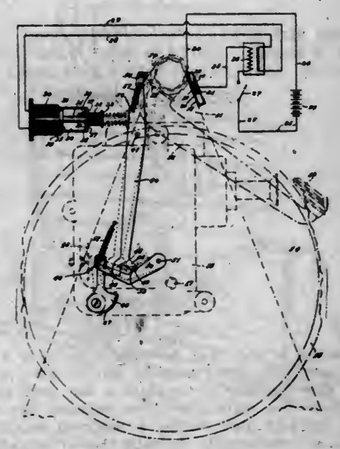
1. Centering for concrete comprising a floor having an under corrugated member and an upper flat plate member resting on the corrugations of the under member, such upper member being provided with water drainage holes.

1,480,130. APPARATUS FOR SMOKELESS COMBUSTION. NATHANIEL B. WALES, Boston, Mass., assignor to Wales Stoker Company, Hillsdale, Mich., a Corporation of Michigan. Filed Mar. 18, 1921. Serial No. 453,422. 3 Claims. (Cl. 110—55.)



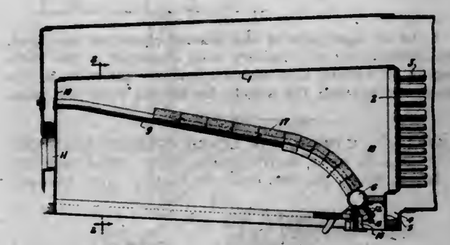
1. Apparatus for effecting smokeless combustion of a solid fuel in a combustion chamber provided with the usual fire door, comprising a motor-actuated blower, a manifold connected thereto and terminating in an air nozzle positioned above the fire door and directed inwardly toward the opening thereof, an air hopper fastened to said fire door and registering with said nozzle when the door is closed, said hopper protruding through said door and terminating in a second nozzle.

1,480,131. SQUEEZE MACHINE. TOWNER K. WEBSTER, Jr., Winnetka, Ill., assignor to Frank D. Chase, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 26, 1921. Serial No. 472,791. 12 Claims. (Cl. 22—30.)



1. In a machine for forming sand molds, the combination of squeezing mechanism for compressing the sand in the mold a support with respect to which a part of the mold is transversely movable, and means for vibrating the sand during its compression by reciprocation of said movable mold part.

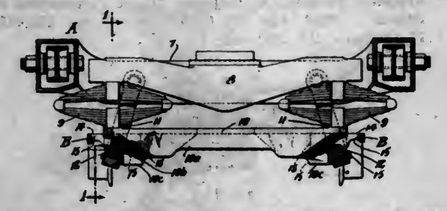
1,480,132. PRINTING PRESS AND METHOD OF OPERATING THE SAME. JOSEPH WHITE, Middlesex, and WILLIAM ECKHARD, Plainfield, N. J., assignors to Hall Printing Press Company, Dunellen, N. J., a Corporation of New Jersey. Filed Jan. 9, 1920, Serial No. 350,339. Renewed Mar. 21, 1923. 43 Claims. (Cl. 271—47.)



5. The method of operating a printing press having an automatic sheet feeder which consists in presenting a sheet to the press, determining its relation to the press gage, giving a signal when the sheet is nearer than a predetermined large distance from the gage and farther than a predetermined small distance from the gage and separating the printing couple and stopping the automatic feeder when the sheet is farther than the large distance from the gage.

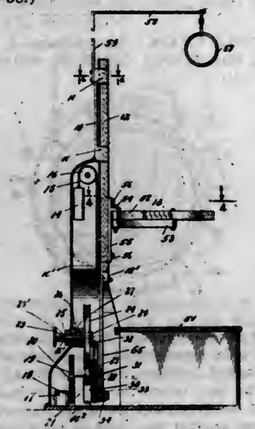
1,480,133. CONTROL MECHANISM. RAY B. WHITMAN, Bridgeport, Conn. Filed Dec. 12, 1921. Serial No. 521,804. 30 Claims. (Cl. 192—118.)

1. In a sound-producing means, a mechanism, sound-sensitive means, and stopping means for the mechanism adapted to be rendered inoperative by the sound-sensitive means during the production of sound, and adapted to be made operative through the cessation of sound.



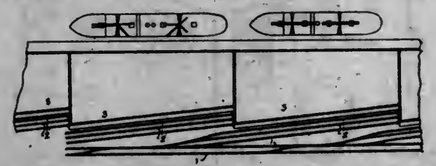
1,480,134. FIRE-BOX CONSTRUCTION. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Sept. 2, 1919. Serial No. 321,273. 3 Claims. (Cl. 122—68.)

1. In a shallow throated locomotive fire box, the combination of a circulation header located to the rear of the throat, a fire grate extending rearwardly from the header, an arch supporting circulation tube communicating with the header and extending rearwardly from said header above said grate, and a plugged clean-out opening in the header opposite the end of said tube accessible from the exterior of the fire box between the forward end of the grate and the throat.



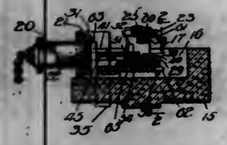
1,480,135. CAR TRUCK. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Jan. 7, 1922. Serial No. 527,555. 12 Claims. (Cl. 105—190.)

1. In a car truck, the combination of a frame, a lateral motion bolster, swing hangers by which said bolster is suspended from the frame, and adjusting blocks between the swing hangers and the bolster, each of said



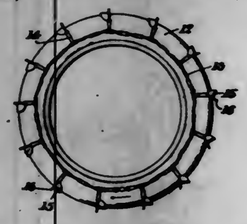
blocks being provided with a plurality of stepped seats and the blocks being adjustable by movement toward and away from each other longitudinally of the bolster.

1,480,136. MASSAGE APPARATUS. PAUL WÜRTZ, New York, N. Y., and ALOIS STEINER, Hoboken, N. J. Filed May 3, 1922. Serial No. 558,049. 10 Claims. (Cl. 128—58.)



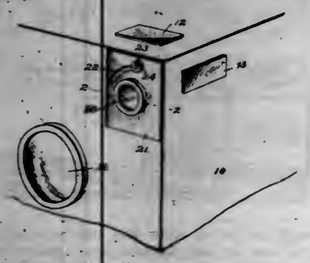
1. A message apparatus comprising a reciprocating member and an expansible belt carried by said member and composed of individual members formed with sockets, massage balls rotatively supported in and projecting from said sockets, resilient means connecting said members together and means for detachably joining the end members of said belt in the form of a ring.

1,480,137. LOADING PLATFORM AND WHARF ARRANGEMENT. BENJAMIN C. ALLIN, Houston, Tex. Filed July 17, 1923. Serial No. 652,198. 12 Claims. (Cl. 104—29.)



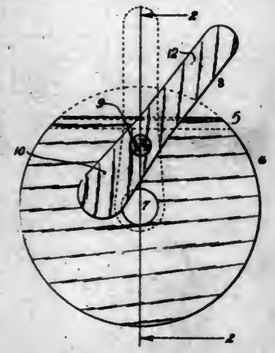
2. In combination, a main line track, a plurality of platforms in end to end relation, and substantially parallel with said main line, a plurality of switch tracks, diverging at an angle from the main line, separate switch tracks ranging alongside the respective platforms, the edges of said platforms adjacent the respective switch tracks being substantially parallel with the corresponding switch tracks, and diagonal with respect to the main line.

1,480,138. ELECTRIC SWITCH. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1918. Serial No. 226,419. 17 Claims. (Cl. 200—68.)



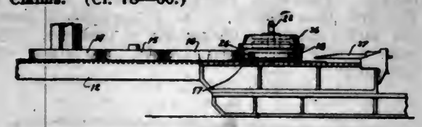
1. An electric switch comprising, in combination with suitable circuit closing members, a frame therefor, an actuating device mounted in the frame for universal swinging movement and for axial movement, said actuating device being provided with an extended seat face, and a switch controlling member having an extended seat adapted for coaction with the seat of the actuating device.

1,480,139. TIRE CHAIN. GUY ANDERSON, Haynesville, Me. Filed Mar. 5, 1923. Serial No. 622,818. 1 Claim. (Cl. 152—14.)



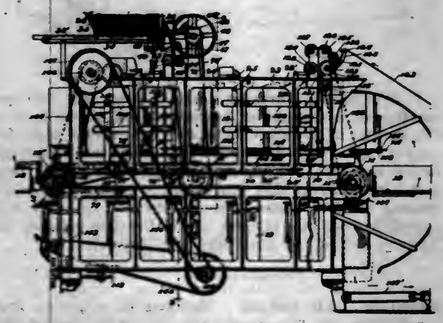
A non-skid or driving chain for vehicle wheels comprising annular side members and a series of transverse, pivotally mounted traction members fitting against the tread of a tire and connected with the said side members, each of said traction members comprising a part adapted to rest against the tread of the tire and provided with a flange adapted to sink into a soft roadway surface, said part and flange being at right angles to each other, or approximately so, and being joined by a rounded corner part adjacent the tread of the tire.

1,480,140. SINGLE-APERTURE, SINGLE-MIRROR VIEW FINDER. WALTER R. ANDERSON, Chicago, Ill. Filed Dec. 3, 1920. Serial No. 428,008. 3 Claims. (Cl. 88—1.5.)



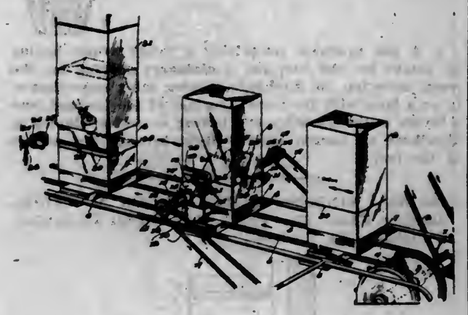
1. In a view finder for photographic cameras, a reflector holder consisting of a cylindrical body cut away centrally of one end to provide a reflector-supporting surface inclined at an angle of forty-five degrees to the cylindrical axis of the body, and plano-convex extensions at opposite sides of said inclined surface.

1,480,141. WATER DISTRIBUTING AND REGULATING DEVICE. JOSEPH ARTESE, Wheat Ridge, Colo. Filed June 16, 1921. Serial No. 477,946. 1 Claim. (Cl. 61—29.)



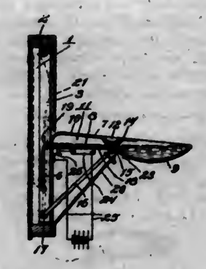
A device of the class described comprising a circular plate having an upper segment bent to form a suitable angle with the body of the plate, a flat cutoff device fulcrumed on the plate below and adjacent the said segment, the said plate having a relatively small opening positioned substantially centrally thereof and adapted to be controlled by the said cutoff, the latter having a part extending above the bent segment of the plate to facilitate manipulation.

1,480,142. APPARATUS FOR REMOVING ARTICLES FROM FORGING DIES OR THE LIKE. FRANK B. BELL, Pittsburgh, Pa., assignor to Edgewater Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 11, 1920. Serial No. 388,123. 14 Claims. (Cl. 78—60.)



1. In an apparatus of the general character described, the combination of a unitary mold employed in the forming of an article, and means insertable laterally in the mold and beneath the article for freeing it of the mold.

1,480,143. CARTON AND LINER FORMING MACHINE. GEORGE H. BENT, Battle Creek, Mich. Filed Sept. 26, 1921. Serial No. 503,194. 65 Claims. (Cl. 93—44.)

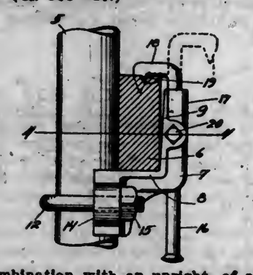


1. In combination, a movable conveyor, a continously moving form carried thereby and about which a paper blank is adapted to be wrapped, yielding guide rails between which said form passes and which act to force the blank into engagement with the sides of the form and hold it in said relation, and means positioned on either side of said conveyor and operating transversely of said rails and closing the paper blank against the rear face of said form.

1,480,144. METHOD AND APPARATUS FOR ASSOCIATING LINERS WITH CARTONS. GEORGE H. BENT, Battle Creek, Mich. Filed Jan. 23, 1923. Serial No. 614,423. 8 Claims. (Cl. 93—55.)

1. In a device of the character described, the combination of a former on which liners and cartons are placed one over the other, and means for applying a strip of adhesive to the liner on each side of the same adjacent the line where the carton flaps are bent with respect to the carton proper.

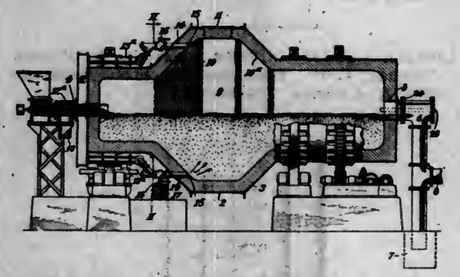
1,480,145. PORTABLE WASHBOWL. SIGURD O. BERVEN, Seattle, Wash. Filed May 12, 1923. Serial No. 638,676. 2 Claims. (Cl. 45—38.)



1. A portable wash bowl, comprising an elongated hollow container having a forward projecting portion depressed to form a bowl, the bottom of the bowl being on a plane below the bottom of the container, and means for mounting the container for swinging movement to permit the water from the bowl to flow into the container or the water from the container to flow freely into the bowl.

1,480,146. PROCESS OF AND APPARATUS FOR BURNING GAS. GRANT D. BRADSHAW, Pittsburgh, Pa. Filed Dec. 4, 1919. Serial No. 342,414. 6 Claims. (Cl. 158—99.)

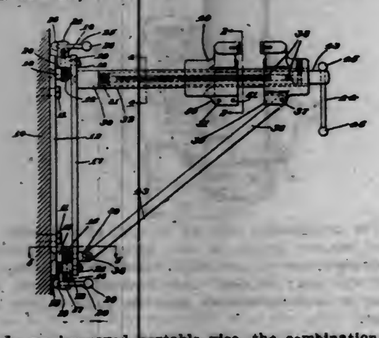
1. A gas burner comprising a gas inlet passage, an air inlet passage adjacent thereto, each of said passages being controlled by a valve, said valves being connected together and automatically regulated by the gas pressure, whereby substantially unform gas pressure is maintained at the gas inlet.



1,480,147. STRINGER CLAMP. FOKKO BRANDT, Kansas City, Kans., assignor to The Brandt & Krell Engineering Company, Kansas City, Kans., a Corporation of Kansas. Filed June 28, 1920. Serial No. 392,384. 3 Claims. (Cl. 304—40.)

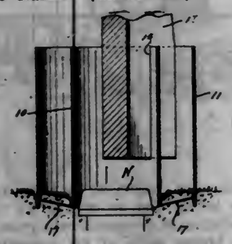
1. The combination with an upright, of a stringer, an angular bracket carried by said upright and supporting said stringer, and a vertically adjustable anchoring rod carried by said bracket and formed with an arm adapted to be clamped down upon the upper edge of said stringer.

1,480,148. GAS PRODUCER. ERNEST L. BROOME, Tarrytown, N. Y., assignor to General Reduction, Gas and By-Products Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 14, 1917, Serial No. 161,972. Renewed June 29, 1923. 3 Claims. (Cl. 48—85.1.)



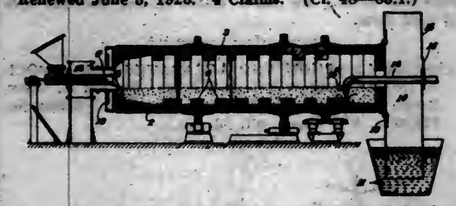
1. In apparatus for gasifying materials, a rotary vessel having an intake and an offtake for the material and having a plurality of compartments arranged around its periphery in blocks made of fire resisting material, said compartments being connected with a source of supply for an oxygen bearing agent and having also openings therefrom to admit the oxygen bearing agent into the vessel, and automatic means for cutting off and admitting the oxygen bearing agent into each of said compartments with each revolution of the vessel.

1,480,149. AUTOMOBILE PEDAL LOCK. CHARLES W. CARPENTER, Lawrenceville, Pa. Filed Mar. 23, 1922. Serial No. 546,026. 3 Claims. (Cl. 70—128.)



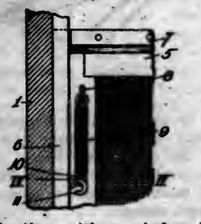
1. A pedal lock comprising a pivoted arm, a padlock connected with the outer end of the arm, the shackle of the padlock being designed to encircle the shank of the pedal, and a spring tension retainer connected with the outer end of the arm for engagement with the lock-shackle to prevent undue movement of the lock relative to said arm.

1,480,150. PORTABLE VISE. WILFRED A. COLLINS, Winthrop, and WILFRED E. TAIT, Wollaston, Mass., assignors of one-third to Clement Booth, Worcester, Mass. Filed Aug. 24, 1922. Serial No. 584,158. 2 Claims. (Cl. 81—41.)



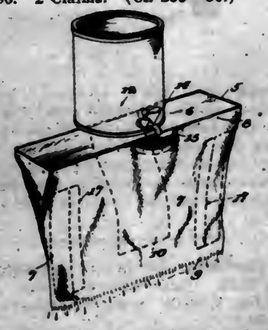
1. In an improved portable vise, the combination of a plate, means for securing said plate in position, a frame, connections thereon, pivotal connections at each end of said plate cooperating with the connections on the frame, a projecting arm attached to one end of said frame, a vise having a portion thereof formed integral with said arm, and means for supporting the outer end of said vise extending between the vise and the lower end of the frame.

1,480,151. GRASS CUTTER. NATHAN G. COSMAN, Coronado, Calif. Filed Apr. 16, 1923. Serial No. 632,477. 3 Claims. (Cl. 55—18.)



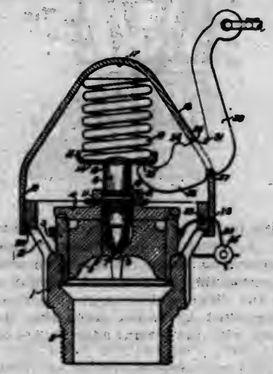
1. In a device of the type described, concentric cylinders having their lower ends arranged in approximately the same plane, a handle connecting the upper ends of the cylinders and maintaining the same in concentric relation and radially directed blades connecting the lower ends of the cylinders.

1,480,152. GAS PRODUCER. ABRAHAM B. COX, Cherry Valley, N. Y., assignor to General Reduction, Gas & By-Products Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 14, 1917. Serial No. 162,041. Renewed June 5, 1923. 4 Claims. (Cl. 48—85.1.)



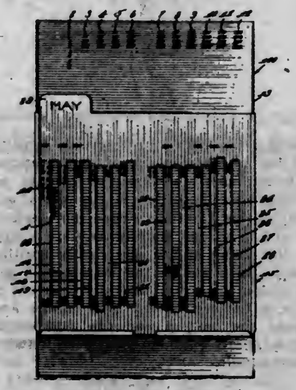
4. A gas producer comprising a rotary vessel having an intake for the fuel and a discharge opening for the waste material, the discharge opening being approximately on a level with the normal surface of the fuel bed, and a tuyère at the discharge end having an orifice adapted to distribute an oxygen bearing agent beneath the surface of the fuel.

1,480,153. WINDOW SCREEN. JUDSON M. CRAMER, Gardner, Kans. Filed Feb. 6, 1922. Serial No. 534,383. 3 Claims. (Cl. 156—14.)



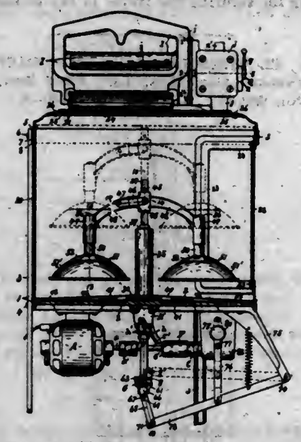
2. The combination with a window having an upper and lower sash and downwardly opening hooks disposed within and at the sides of the casing below the plane of the upper rail of the sash to be screened, of a screen provided with a pair of eyes, and coil springs connected to said eyes and to said hooks; and extending vertically upward in stretched condition to hold the screen in operative position, and downwardly and outwardly from said hooks to said eyes, in relaxed condition to suspend the screen in inoperative position; the springs where engaged with said hooks, having end-loops which converge outwardly or diverge outwardly accordingly as the screen is in operative or inoperative position.

1,480,154. POISON DISTRIBUTOR. PHILLIPS EUGENE CRUTCHFIELD, Conyers, Ga., assignor of one-third to Chas. E. Reagan and one-third to Reuben L. Blackwell, both of Conyers, Ga. Filed Sept. 27, 1921. Serial No. 503,686. 2 Claims. (Cl. 299—30.)



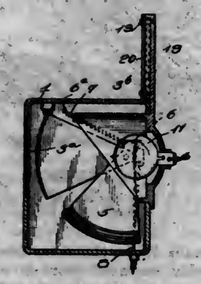
1. A poison distributor comprising a top board, a fabric body secured to the top board and constituting an open-ended receiver and distributor adapted for the reception of a poison liquid, a poison container mounted on said board, and a distributing tongue extending through said receiver and distributor.

1,480,155. VALVE-LIFTING DEVICE. PHILIP G. DARLING, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Apr. 14, 1922. Serial No. 552,475. 9 Claims. (Cl. 137—53.)



1. In combination with a valve casing having an elongated slot therein, a valve controlling lever comprising a lifting arm and an actuating arm, the lever having a pivoting notch adjacent to the junction of said arms, the width of the actuating arm adjacent to the notch being slightly less than the length of the slot, and the width of the lifting arm adjacent to the notch being greater than the length of the slot.

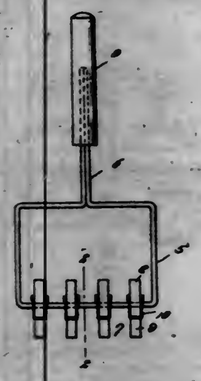
1,480,156. TIME CALCULATOR. JOHN T. DENNIS, Jr., Elberton, Ga. Filed July 13, 1922. Serial No. 574,715. 2 Claims. (Cl. 235—89.)



1. A device of the class described comprising two substantially rectangular cards one slidable longitudinally on the other, one containing especially arranged columns of figures and the other having slots to overlie said columns and provided along the edges of said slots with cooperating columns of dates, whereby said dates and figures cooperate to furnish the correct time between two dates on the date card when one card is moved on the other a predetermined distance, said slidable card being for the month that the time is to be computed from.

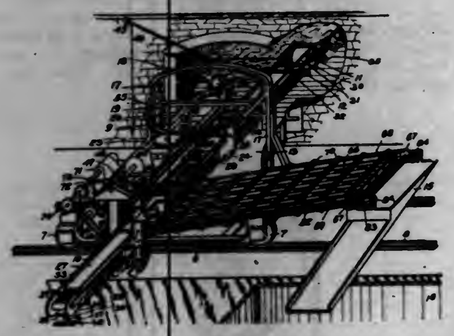
1,480,157. CLOTHES-WASHING MACHINE. JOHN NICHOLAS DRESCHUG, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of New York. Filed Jan. 31, 1920. Serial No. 355,515. 15 Claims. (Cl. 68—19.)

12. In a washing machine of the character described, the combination of a main supporting frame having a substantially horizontal platform, a vat having its bottom resting upon the platform, a post resting upon the bottom of the vat and rising therefrom, said post having a reduced lower end projecting through registering apertures in the bottom of the vat and platform, a nut engaged with the lower reduced end of the post and underside of the platform, a plunger extending through the post, a perforated plate around the post and covering the major portion of the bottom of the vat in spaced relation thereto, a sleeve surrounding the post and rotatable relative thereto, a yoke carried by the plunger, dashers mounted on the yoke and having the concave lower sides facing the perforated plate, and means for reciprocating the plunger.



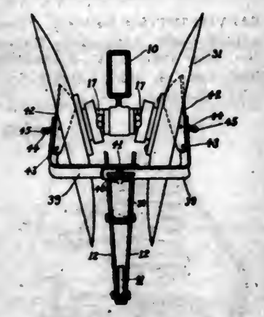
1,480,158. SIGNAL FOR VEHICLES. ARTHUR B. ELLIS, Seattle, Wash., assignor to The Reliable Signal Co., a Corporation of Washington. Filed Feb. 24, 1923. Serial No. 621,039. 1 Claim. (Cl. 116—45.)

A signal device for vehicles, comprising a housing formed with front and rear openings, a plurality of nested balls mounted in the housing, the transverse portion of each ball being cut out to indicate a signal, trunnions extending from the sides of the housing to support the balls, lugs extending from each ball, springs connected to the rear portion of the lugs and secured at their front ends to the housing, flexible means connected to the forward ends of the lugs for operating the balls, a bumper at the top of the housing against which the balls contact



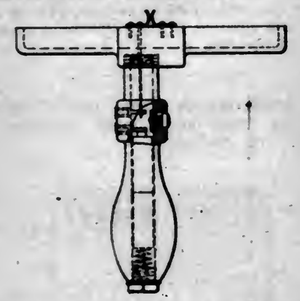
when thrown up into signal position, a frame supported in the forward opening in the housing, said frame having depressions and sockets for lamps to illuminate the interior of the housing, the frame having an extension projecting above the housing to form a license support, and means for securing the frame to the housing.

1,480,159. CLOTHES-HANDLING IMPLEMENT. MARY R. FENNELLY, Alexandria, La. Filed Sept. 1, 1923. Serial No. 660,531. 1 Claim. (Cl. 68—6.)



A clothes handling implement of the class described comprising an open substantially rectangular frame composed of substantially rigid top, bottom and side members, a handle rigid with the top member of the frame, and a plurality of resilient clothes pins suspended upon the bottom frame member.

1,480,160. COKE-OVEN-CLEARING MECHANISM. DAVID FERGUSON, Pittsburgh, Pa. Filed Apr. 17, 1920. Serial No. 374,537. 10 Claims. (Cl. 214—21.)

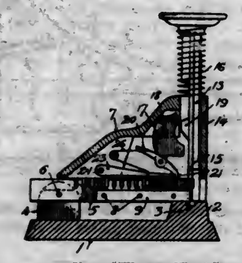


1. In an apparatus of the character described, a frame, a carriage pivotally mounted thereon, a ram movably mounted on the carriage, a breaker mounted on the ram, material conveying devices mounted on the ram and movable longitudinally thereof, toward and away from said breaker, a power shaft journalled on said carriage, separated gear-trains for moving said ram, for actuating said breaker, and for swinging said carriage, and a separate clutch mechanism for operatively coupling each gear-train to said power shaft, propelling wheels on said frame, a conveyer on said frame for receiving material from said devices, and means for actuating said wheels and said conveyer.

1,480,161. DISK AND SCRAPER MOUNTING. RALPH L. FORD, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 7, 1920. Serial No. 379,594. 10 Claims. (Cl. 97—228.)

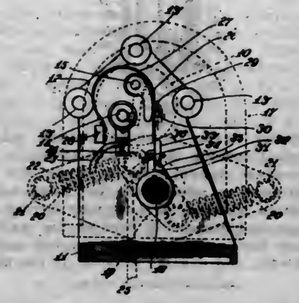
1. In a disk furrow-opener, the combination of a support, a pair of oppositely disposed stub-axles, disks on the axles, connecting means between each stub axle and the support permitting vertical and angular adjustment of the axles and disks, and scrapers in contact with the disks and supported by means permitting their adjustment in accord with the several adjustments of the disks.

1,480,162. DEVICE FOR IGNITING FLASH-LIGHT POWDER. BENNETT GROTTA, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 7, 1922. Serial No. 541,878. 3 Claims. (Cl. 67—3.)



1. In combination with an electrically ignitible matchhead including a non-conducting shank, strips of conducting material upon the opposite faces of said shank and a match-head composition at the end of said shank, a hollow supporting handle, an open top powder pan supported therefrom, spaced metallic contact strips adapted to receive the shank of the electrically ignitible matchheads between them and to frictionally hold said matchheads in position to project laterally over the top of the powder pan, a battery within said handle and connections between the battery and the said contact strips including a manually operable push button switch mounted upon said handle.

1,480,163. STAPLING MACHINE. SIDNEY H. HART, Brooklyn, N. Y., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Jan. 17, 1920. Serial No. 352,021. 4 Claims. (Cl. 1—23.)

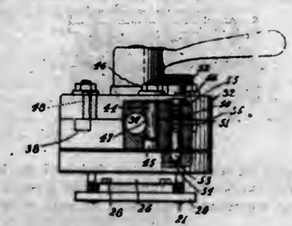


1. A stapling machine in which individual staples are cut from a strip, comprising a cutter bar and a movable member cooperating therewith to sever the staples from a strip, means for advancing a staple strip over

said cutter bar to project the endmost staple of said strip beyond said cutter bar to be severed and a projection at the cutting end of the cutter bar interposed in the path of the prongs of the staples and over which projection said prongs are adapted to rise, said pro-

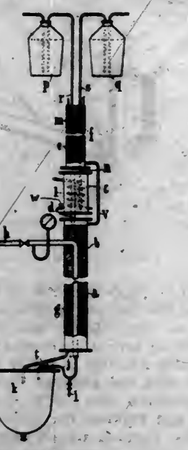
jection forming an abutment for engaging the rear edge of the prongs of the staple which projects beyond the cutting bar and adapted to rigidly resist rearward movement of said prongs while the endmost staple is being severed.

1,480,164. IGNITION EQUIPMENT. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,981. 9 Claims. (Cl. 123—149.)



1. An ignition equipment comprising an igniter plug, stationary and rocking electrodes carried by said plug, contacts carried by said electrodes, an arm carried by the outer end of the rocking electrode, a leaf spring having one end fixed with respect to the igniter plug and being attached near its other end to said arm, said spring normally holding the contacts separated, and means adapted to engage said leaf spring to close the contacts against the action of said leaf spring and then to disengage said spring to permit same to open the contacts.

1,480,165. UNIVERSAL TOOL TURRET. JOHN L. JENKINS, Port Chester, N. Y. Filed Sept. 30, 1920. Serial No. 413,837. 13 Claims. (Cl. 29—49.)



1. In a universal tool turret, the combination, with a lathe slide, of a circular base threaded on its periphery; a turret rotatable horizontally on said base provided with tool carriers; an interiorly threaded ring engaging said base for raising or lowering the base and turret for alinement of said tool-carriers with the axis of the lathe live spindle; and means for removably attaching said base to the slide.

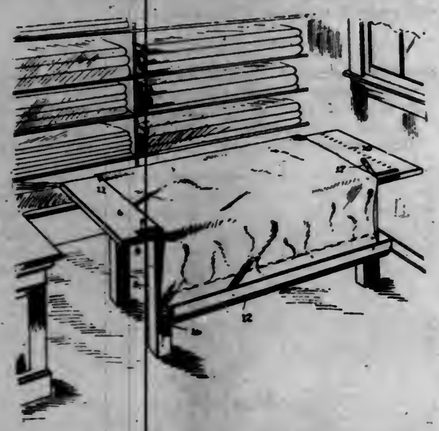
10. In a universal turret tool having a supporting base, the combination, with a lathe slide provided with an attachment slot of inverted T-shape, of the supporting base of the turret tool; a turret on said base provided with tool carriers; and means for clamping said base to the slide slot; said means comprising clamping members carried by said base engageable with the transverse portion of the slide slot, and co-operating members carried by said base engageable with the side walls of the stem

of the slide slot; one of said members being fixedly positionable on the base, and the other of said members being movable on the base and adjustable by slot and pin means for regulating the space between said members for spacing them apart for engagement with the side walls of the stem of the slide slot.

1,480,166. MANUFACTURE OF HYDRAZINE. REGINALD ARTHUR JOYNER, Stevenston, Scotland, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 18, 1923. Serial No. 613,481. 4 Claims. (Cl. 23—31.)

1. In the process for producing hydrazine by the reaction between ammonia and a hypochlorite in the presence of a catalyst, the steps of initiating the reaction without material excess of ammonia, and then passing the reacting substances into a body of concentrated excess ammonia, thus to provide, without material excess of ammonia in the initial reaction, for the reaction between the chloramine and ammonia in a high local concentration of ammonia.

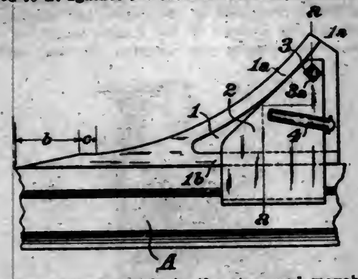
1,480,167. SHINGLE-LOCK-APPLYING MACHINE. BERNIE CHARLES KRIDLER and JAMES C. BOYLD, Flint, Mich., assignors to The Shingle Lock Company, Flint, Mich., a Corporation of Michigan. Filed Sept. 18, 1922. Serial No. 589,035. 5 Claims. (Cl. 1—4.)



4. A machine as characterized comprising a base board for supporting shingles; a reciprocating frame disposed above said board; a series of lock supporting heads mounted on said frame, said heads being each provided with engaging recesses for holding wedges on the locks

being handled by said machine; a plurality of resilient strippers adapted for holding said shingles on said base board after said locks have been secured to said shingles;

and a plurality of anvil members disposed in line with said heads for overturning the clip ends formed on said locks and for receiving the impact of said strippers.

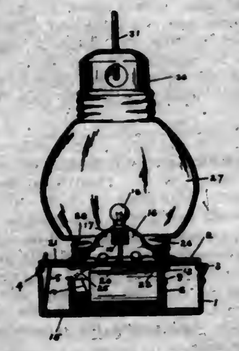


1,480,168. TABLE. WALTER SCOVILLE LAMBERT, Geneseo, Ill. Filed Feb. 6, 1922. Serial No. 534,485. 1 Claim. (Cl. 45—91.)

In a table, a supported top, a rack supported below the plane of the top and substantially in vertical alinement with one edge thereof, said rack being adapted to receive a roll or belt of oil cloth or like fabric, said top having a guide slot for a cutter blade therein extending parallel with and adjacent to said one edge thereof, a cleat secured on the top in spaced parallel relation to the slot and between the latter and the edge of the table opposite the first named edge, said top being provided with a scale thereon comprising a series of graduations extending at right angles to said slot and said cleat from one end of the former to the corresponding end of the latter, said graduations having values based on a unit of linear measurement, and a second rack positioned below the plane of the top and beneath the second named edge of the top, said second named rack being adapted to receive rods upon which the end portion of a length of material drawn across the top from the first named edge may be wound.

1,480,169. SAFETY CRANE STOP. W BRITTON LANE, Dunkirk, N. Y. Filed Sept. 18, 1923. Serial No. 663,327. 3 Claims. (Cl. 104—258.)

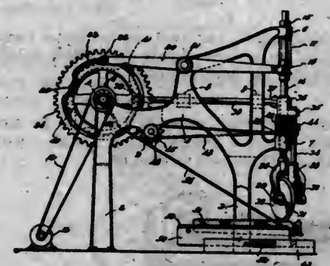
2. The combination, with a crane track rail, of a stop, fitting freely thereon and having an upper bearing surface in the form of a plane upwardly inclined from one end of the base of the stop, an adjoining portion parallel with the base, and a succeeding portion, curved to present a bearing for the periphery of a crane wheel; clamping plates, pivoted transversely on the stop, and adapted to fit against the sides of the rail; and a coupling



yoke, pivoted transversely in the stop, and movable into position to hold the clamping plates in contact with the rail.

1,480,170. SAFETY CONTROL DEVICE. HENRY H. LOGAN, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,602. 4 Claims. (Cl. 188—97.)

1. A cylinder having a piston therein, said piston having a small opening therein and having a plurality of larger openings therein, a spring pressed disc disposed on the underside of said piston and being adapted to close the larger openings, said cylinder having a groove in the upper end thereof, a bore in the wall of said cylinder and communicating with the top and bottom of said cylinder, and a valve disposed in the bore.

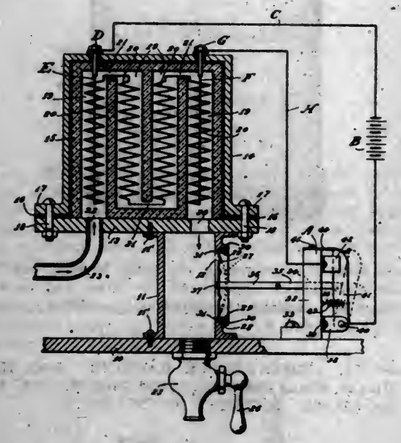


1,480,171. LANTERN. EDWARD J. MCDADE, Warsaw, N. Y., assignor to Embury Manufacturing Company, Warsaw, N. Y., a Corporation of New York. Filed Aug. 24, 1922. Serial No. 584,111. 3 Claims. (Cl. 240—8.5.)

1. In an electric lantern, the combination of a hollow base, a battery container formed in said base, said battery container comprising a frame having its walls formed by a strip of insulating material, partitions made

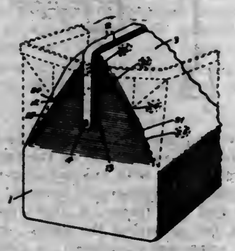
up of electrical connecting members mounted within said frame, a pair of contact members on the end of each of said partitions, one of said contact members being located in the end of one of the compartments formed by said partition and the other of said contact members being located in the opposite end of the other of said compartments formed by said partition, dry cells adapted to be yieldingly held in place in the compartments formed in said container, said partitions and said contact members connecting said dry cells in series with each other, an electric light bulb mounted on top of said base and connected in series with the dry cells in said base, a switch member mounted on said base and adapted to control the current from said battery of dry cells to light said electric light bulb.

1,480,172. SAW-SHARPENING MACHINE. CONSTANT MAJEWICZ, Detroit, Mich. Filed Aug. 7, 1922. Serial No. 580,004. 1 Claim. (Cl. 76—41.)



In a saw sharpening machine, a rotary sharpening instrumentality adapted to be raised and lowered relative to a saw blade and positioned at different angles relative thereto, a support for said sharpening instrumentality, a walking beam adapted to raise and lower said support, a rotary sharpening instrumentality on said support, a reciprocatory rod adapted to turn said support to place said sharpening instrumentality at different angles relative to a saw, and a gear wheel adapted to constantly rotate said sharpening instrumentality and actuate said rod and walking beam in timed relation, said gear wheel having its faces provided with cam grooves, one for causing actuation of said walking beam and the other causing actuation of said reciprocatory rod.

1,480,173. ANIMAL CATCHER. JASPER NEWTON MANSFIELD, Cub Run, Ky. Filed Apr. 11, 1923. Serial No. 631,396. 1 Claim. (Cl. 119—152.)

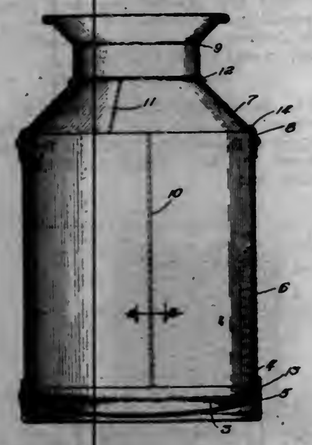


An animal catcher comprising a staff terminating with a crook at one end and with a looped handle at the other end, a resilient element rigidly secured at one end to the free shank of the crook, said element being coiled and having a transversely directed portion substantially closing the entry to said crook and terminating with a finger grip, a coiled loop being formed on said shank providing a guide for said transverse portion and normally abutting against said grip limiting the closing movement of said resilient element.

1,480,174. ELECTRIC WATER HEATER. FRANK E. MATTHEWS, Bridgeport, Conn., assignor to The Connecticut Tool & Engineering Company, Bridgeport, Conn. Filed Oct. 31, 1921. Serial No. 511,868. 9 Claims. (Cl. 219—38.)

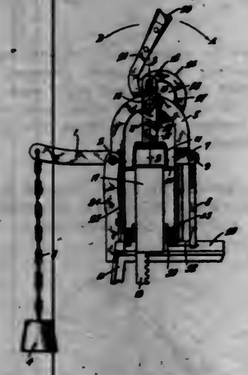
1. An electric water heater comprising a body normally containing water under pressure, a diaphragm associated with said body and acted upon by said water, and means for heating said water, said means being arranged to become operative when the pressure in the body is relieved.

1,480,175. TRAVELING BAG. EDWARD G. MERWIN, San Francisco, Calif. Filed Jan. 19, 1922. Serial No. 530,417. 4 Claims. (Cl. 190—50.)



1. A hinge for a traveling bag having means associated therewith for forming two small folds in the adjacent bag material during the closing operation and for placing the two folds flat against the end of the bag.

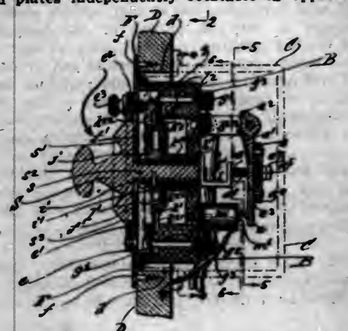
1,480,176. CONTAINER. ARTHUR MILLER, Oak Park, Ill. Filed June 28, 1922. Serial No. 571,426. 12 Claims. (Cl. 220—66.)



1. A container comprising a lower section presenting a bottom proper from which rises at the marginal edges

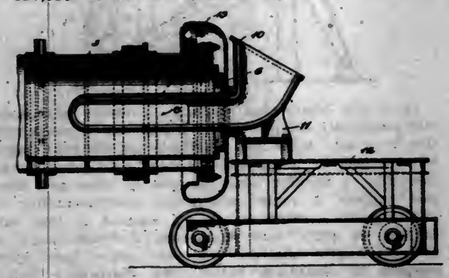
of the latter, a continuous flange portion, a side-wall-forming section superposing said lower section, and a

band member surrounding the joint between said sections and flatwise opposed by the latter and to which both of said sections are united as by welding.



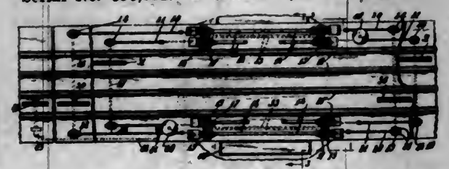
1,480,177. CEMENT-BLOCK MACHINE. JOHN HENRY MILLER, Rising Sun, Ohio. Filed June 13, 1922. Serial No. 568,022. 5 Claims. (Cl. 25—88.)

1. In a device of the class described, a frame; a lever fulcrumed intermediate its ends on the frame; a counterpoise weight assembled with one end of the lever; a latch forming a releasable connection between the other end of the lever and the frame; a shaft journaled in the lever; means for operating the shaft; an eccentric on the shaft; a compression member; a guide on the compression member and receiving the shaft slidably; a strap surrounding the eccentric; and means for mounting the strap pivotally on the compression member.



1,480,178. SAFETY APPLIANCE FOR AUTOMOBILES, ETC. LEONARD MORDANO, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,592. 17 Claims. (Cl. 200—45.)

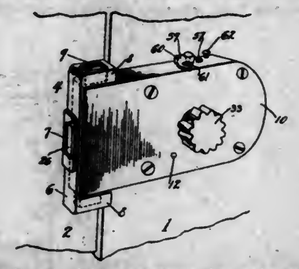
1. In a safety appliance of the character designated, the combination of a permutation dial spindle, a shifter arm rigidly connected therewith, an insulating sleeve interposed between said spindle and said shifting arm, switch plates independently rotatable in opposite direc-



tions on said spindle and fixed contact plates forming the terminals of an electric circuit controlling motor sparking means, for the purpose described.

1,480,179. CASTING MACHINE. JOHN F. MORRISON, Glendale, N. Y. Filed Jan. 4, 1922. Serial No. 527,016. 3 Claims. (Cl. 22—65.)

1. A spout for use in centrifugal casting machines having a movable base, a hopper, a horizontal elongated portion connected with said hopper, said last mentioned portion having a horizontally disposed elongated opening out through which the molten metal is adapted to pass.

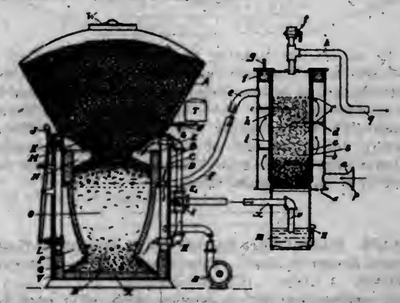


1,480,180. RAILROAD-CROSSING GATE. JOHAN MORTKA, Poughkeepsie, N. Y. Filed Aug. 9, 1923. Serial No. 656,531. 3 Claims. (Cl. 246—293.)

2. In a device of the class described, a vertically swingable gate bar, a shiftable weight therein, and means adapted for operation by a passing train to shift said weight and cause said gate to swing, said means including a rack element formed on said weight, a pinion engaging said rack element, and a part adapted for actuation by a train and operatively connected to said pinion.

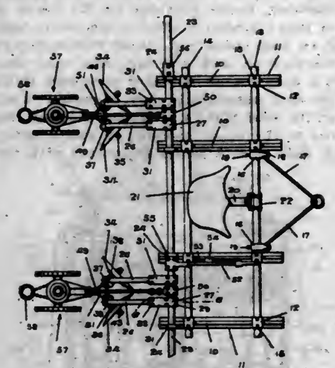
1,480,181. LOCK. WILLIAM A. MUELLER, Washington, D. C. Filed July 24, 1920. Serial No. 398,621. 6 Claims. (Cl. 70—74.)

5. The combination of a keeper having end extensions and a lock adapted to overlap the door jamb and be overlapped by the extensions on the keeper, the said lock having a main bolt adapted to engage the keeper and two bolts at right angles to the main bolt to engage recessed seats in the said extensions of the keeper, the



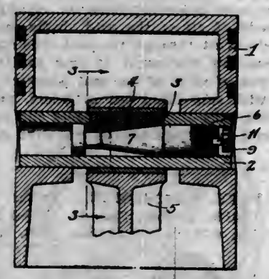
said two bolts at right angles to the main bolt being positively actuated in both directions by the movements of the said main bolt.

1,480,182. WEIGHTING DEVICE FOR SPINNING MACHINES AND THE LIKE. ISAAC C. NOBLE, New Bedford, Mass. Filed Apr. 4, 1922. Serial No. 549,417. 6 Claims. (Cl. 19—135.)



1. A weighting device for spinning machines and the like comprising a strip adapted to have a weighting member connected thereto, a plurality of pairs of rotatable bearing members on said strip, the individual members of the pairs being positioned on opposite sides of the strip, the bearing members being adapted to engage a spinning machine roll and to maintain said strip spaced from the roll.

1,480,183. GAS PRODUCER FOR USE WITH AUTOMOTIVE MECHANISMS. WILLIAM W. ODELL, Washington, D. C. Filed Dec. 7, 1921. Serial No. 520,580. 24 Claims. (Cl. 48—76.)

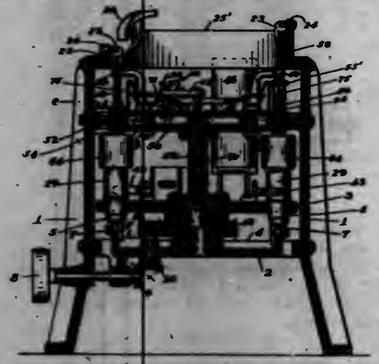


3. A gas producer adapted for use with automotive mechanisms, including a generator lining cushion suspended in the air used for gas making.

1,480,184. CULTIVATOR. GEORGE W. REUST, Goodwell, Okla. Filed July 29, 1922. Serial No. 578,273. 9 Claims. (Cl. 97—56.)

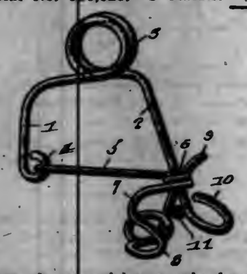
1. A cultivator comprising runners having vertical plates with runner flanges extending therefrom to run on the ground, said plates extending below said flanges to enter the ground and prevent transverse displacement of the runners, and soil working elements carried from said runners.

1,480,185. SELF-ADJUSTING BEARING. MICHAEL B. SETTER, Chicago, Ill. Filed Dec. 16, 1921. Serial No. 522,728. 5 Claims. (Cl. 74—108.)



1. In means for automatically taking up wear in a bearing, a movable wearing member forming a part of the bearing, a pitman engaging said member, and a rotary element engaging said member and formed to gradually force said member outward against the pitman and thereby take up wear and prevent lost motion in the bearing.

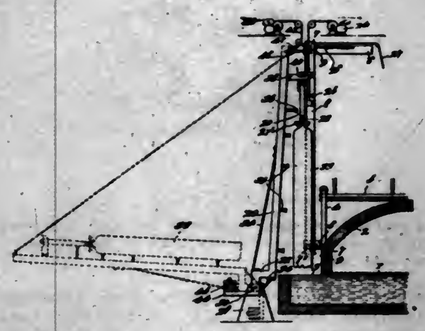
1,480,186. COOKER. FRANK WENDELL SMITH, Portland, Me. Filed Jan. 6, 1922. Serial No. 527,424. 1 Claim. (Cl. 126—272.)



In a machine for cooking or sterilizing food products, consisting of a base member, a ring portion projecting upwardly from said base with a cammed surface on its upper face, a hollow upwardly extending trunnion located centrally of and integral with said base, a circular table centrally journalled over said trunnion, means for rotating said table, a plurality of holes extending through said table near its outer circumference and with their axes in vertical alignment with the said cammed surface plungers adapted to reciprocate in said holes, rolls attached to the bottom ends of said plungers and in contact with the said cammed surface, a second table placed above and at a spaced distance from, and rigidly connected to, said first mentioned table, a plurality of holes in said second table in alignment with the holes in said

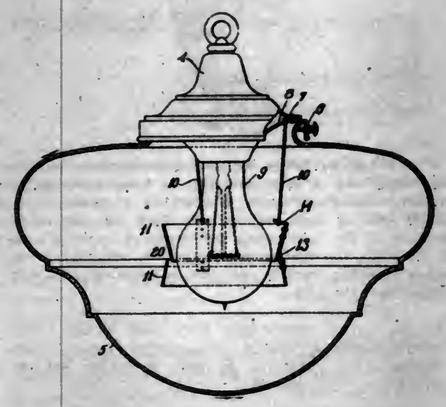
first mentioned table, shafts extending through the holes in said second mentioned table, their lower ends protruding into a bracketed cylinder, the latter constituting an overflow chamber, means provided on the lower end of the wall of said cylinder to effect a temporary seal over the top of an open ended can placed thereunder, pinions slidably mounted on and rotating with said shafts, a ring, with a gear cut on its inner periphery rigidly secured to the said frames, said gear to encircle and mesh with all of the said pinions, a second cammed ring rigidly secured to the upper portions of said frames, rolls on the top ends of said shafts in contact with the cam

surface of the said second mentioned cammed ring, whereby a vertical movement may be given to said shafts, an electric resistance coil unit, housed in protecting shells and with one or more depending elements, rigidly secured to the lower ends of all of the said shafts, means for keeping a closed circuit through the said coils during the vertical and rotatable movement of said shafts, means on the upper ends of each of the said plungers to align a can axially with said bracketed cylinders, means for locating in-feeding cans over said plungers and means for deflecting the said cans from off the said first mentioned table.



1,480,187. SAFETY CLOTHESPIN. HENRI EDMOND SOULARD, St. Ubalde, Quebec, Canada. Filed Mar. 21, 1923. Serial No. 626,625. 3 Claims. (Cl. 24—139.)

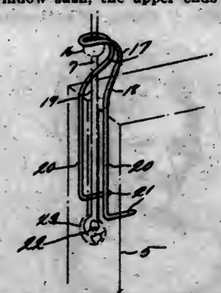
1. A clothes pin comprising a yoke having a pair of branches, a locking finger pivoted to one of said branches, and coiled around the other, an extension from said coiled portion and formed with a bifurcated portion adapted to straddle the last named branch, the end of said extension being bent at substantially right angles to the finger.



1,480,188. APPARATUS FOR DRAWING AND TAKING DOWN GLASS CYLINDERS. ARTHUR E. SPINASSE, Mount Vernon, Ohio. Filed Mar. 29, 1917. Serial No. 158,425. 15 Claims. (Cl. 49—17.1.)

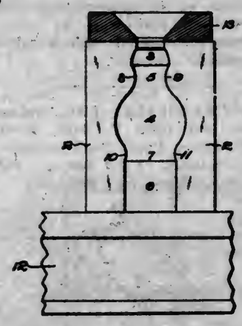
14. In glass drawing apparatus, in combination, a bait, a pipe handle for said bait, a single-point support idle during draw, to said bait handle, a tilting take-down apparatus having yielding supports for the bait and cylinder at an angle thereto, and a single arm on said take-down apparatus arranged to engage and lift said single-point support of the bait, whereby the bait and cylinder are

supported free to swing or move in any arc at the beginning of the take-down act, until they come to be supported entirely by the yielding support of the take-down frame.



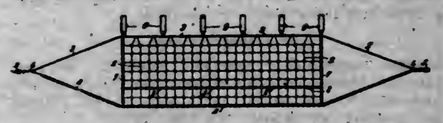
1,480,189. ELECTRIC-LIGHT FIXTURE. WALTER E. WALSH, Winthrop, and HOWARD C. JONES, Watertown, Mass. Filed Mar. 17, 1922. Serial No. 544,450. 3 Claims. (Cl. 240—78.)

1. In an electric lighting fixture the combination of an electric lamp and two frusto-conical rings surrounding the same and in close relation thereto, said rings being supported one above the other, the lower ring flaring downwardly and outwardly and the upper ring flaring upwardly, the upper edge of the lower ring overlapping the lower edge of the upper ring, said rings being separated by a small annular space.



1,480,190. SASH-CORD FASTENER. ANDREW J. WAHLQUIST, Roosevelt, Utah. Filed May 5, 1921. Serial No. 466,933. 1 Claim. (Cl. 16—207.)

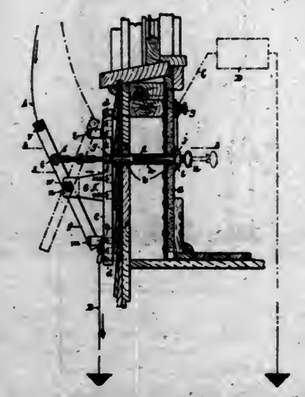
The combination with a window sash, of a cord fastener therefor, said cord fastener being formed from a single piece of wire bent upon itself so as to form vertically disposed arms, said arms being provided with inwardly extending sharpened prongs adapted to be imbedded in the window sash, the upper ends of said arms ex-



tending inwardly, upwardly and then outwardly at a point above the window sash thereby forming clamping jaws for the reception of the sash cord.

1,480,191. MOLD AND METHOD FOR MAKING CASTINGS. THOMAS E. P. WILSON, Lynn, Mass. Filed July 12, 1920. Serial No. 395,631. 16 Claims. (Cl. 22—156.)

1. A mold comprising a plurality of parts so fashioned that when assembled the parts will be unrestrained to move in various directions under the influence of pressure exerted from within the mold, and means for locking the parts together.



1,480,192. BOWLDER DREDGE. CUTHBERT C. WORSFOLD, New Westminster, British Columbia, Canada. Filed Apr. 20, 1923. Serial No. 633,476. 3 Claims. (Cl. 37—54.)

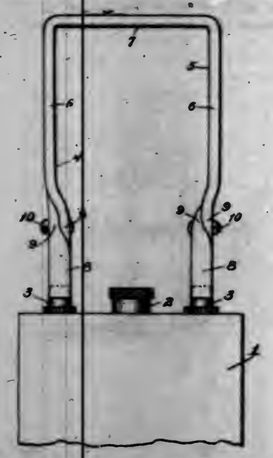
1. A means for dredging bowlders from below water, said means comprising a wire rope net, a relatively stronger wire rope connected to the net along one edge, a chain connected to the net along the other edge, the ends of which wire rope and chain are produced beyond the ends of the net and connected together and to hauling lines, and a series of floats connected to the wire rope along one edge of the net.

1,480,193. CUT-OUT. ALBERT L. WYMAN, Paterson, N. J. Filed June 26, 1922. Serial No. 570,887. 4 Claims. (Cl. 200—153.)

1. In a means for electrically connecting and disconnecting from one side of a wall conductors one of which is at the other side of the wall, the combination of a mounting adapted to be secured to the wall at said other side thereof and having a projecting part adapted to extend into the wall, a lever fulcrumed in the mounting and movable back and forth to establish and disestablish

electrical connection of the conductors, and means to move the lever on its fulcrum including a sliding member adapted to penetrate the wall and guided in and by said part.

1,480,194. HYDRAULIC BRAKE. RALPH B. BIXLER and WILLIAM E. STEADMAN, Denver, Colo. Filed Oct. 23, 1922. Serial No. 596,288. 12 Claims. (Cl. 188—91.)

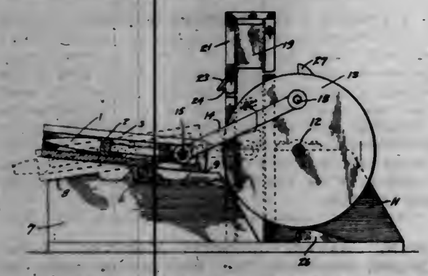


1. A hydraulic brake comprising in combination with a rotary element, a relatively stationary housing having a reservoir and a plurality of pairs of opposed piston-chambers communicating therewith, a liquid body in the reservoir, a plurality of independent piston-units each having two connected pistons fitted for reciprocation in the chambers of one of the pairs, an eccentric on the rotary element acting upon the piston-units for their synchronous operation, and an adjustable valve controlling the passage of the liquid between the reservoir and the piston chambers.

1,480,195. BATTERY-ELEMENT REMOVER. HARRY COLLINS, Sweetwater, Tex. Filed May 31, 1922. Serial No. 564,781. 1 Claim. (Cl. 29—84.)

A battery element remover comprising a pair of tongs, each consisting of a looped handle member embodying side arms and a transverse grip portion, the free ends of said arms being crossed and pivotally connected and

provided with terminal jaws, said jaws being arranged parallel to said arms and being of less length than the



body portions of the arms, the free ends of said jaws being provided with sharp edge biting projections extending across the inner faces thereof.

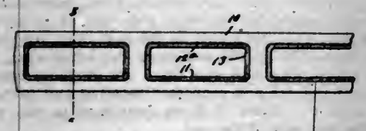
1,480,196. CHECK-BOOK CLAMP. ROYAL W. CUDWORTH, San Francisco, Calif. Filed Mar. 1, 1923. Serial No. 622,153. 2 Claims. (Cl. 24—66.)

1. A clamp for a book of the character described comprising a back member adapted to lie against the back of the book, flanges rising from said member on opposite edges of the book, and a leaf spring secured to either flange having curled ends adapted to bear on the leaves of the book for flattening the same.

1,480,197. SLAUGHTERING DEVICE. ROYAL W. CUDWORTH, San Francisco, Calif. Filed Mar. 1, 1923. Serial No. 622,155. 6 Claims. (Cl. 17—1.)

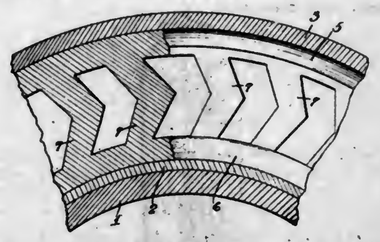
1. In a slaughtering device, a knife blade adapted to cut at its point, a guide for the blade, and means for moving the blade in the guide thrusting the point into an animal to be slaughtered and of then giving a cutting motion to the blade.

1,480,198. PHOTOGRAPH AND THE LIKE. JOSEPHINE DENKHOFF, Sausalito, Calif. Filed Apr. 26, 1922. Serial No. 556,631. 1 Claim. (Cl. 41—24.)



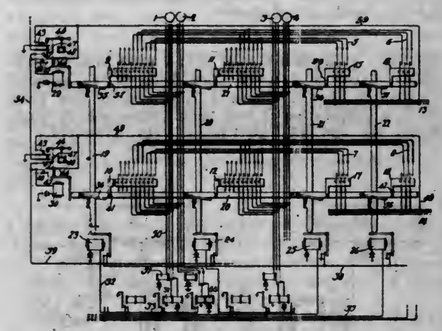
The herein described method of producing photographs and the like in relief, which consists in placing the photograph upon a pliable backing, using a stylus to apply pressure to the area of the backing corresponding to the area of the likeness on the photograph so as to cause the likeness to stand out in relief and thereafter filling in the hollow of the likeness with moldable material cutting away the photograph to leave a margin around the likeness and folding said margin back over the molding material.

1,480,199. FOLDING DISPLAY BOX. HENRY C. DURICK, Worcester, and JOHN T. BIRD, Boston, Mass., assignors to Worcester Paper Box Company, a Corporation of Massachusetts. Filed Feb. 27, 1922. Serial No. 539,376. 8 Claims. (Cl. 206—44.)



1. A folding box formed from a blank cut and scored to form an outer bottom, extensions at the side thereof forming outer and inner sides for the box and locking side flaps therefor, an extension from the end of one inner side forming an inner upper end, an extension from the end of the opposite outer side forming an outer upper end and having an end locking flap thereon, and an extension from the lower end of the outer bottom forming outer and inner lower end portions.

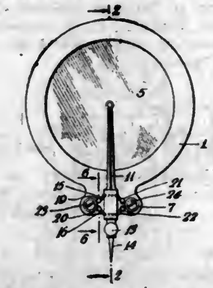
1,480,200. STENCIL. STERLING ELLIOTT, deceased, late of Newton, Mass.; by Harriet Adell Elliott, executrix, Newton, Mass. Filed Aug. 7, 1922. Serial No. 580,066. 6 Claims. (Cl. 101—127.)



1. As a new article of manufacture, a stencil frame comprising two structurally identical superimposed paper sheets of equal thickness having their contiguous faces adhesively united, whereby to form a unitary frame structure, both of said sheets having windows of differing dimensions therein, that sheet having the smaller window extended inwardly beyond the boundaries of the larger window to form a ledge.

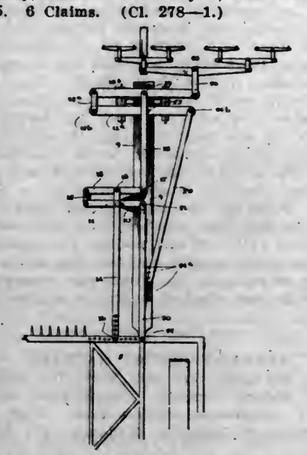
1,480,201. CUSHION TIRE. STUART L. EVERHART, Dowagiac, Mich. Filed May 15, 1920, Serial No. 381,539. Renewed June 13, 1923. 1 Claim. (Cl. 152—5.)

A tire filler comprising radially spaced resilient annular sections, substantially V-shaped supporting members vertically arranged between the said sections in spaced relation and integrally formed therewith, said members having their apexes intermediate the sections and projecting in circumferential alignment with each other whereby radial flexing of said members will be permitted.



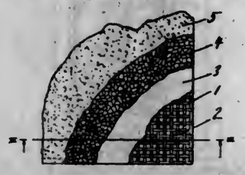
1,480,202. TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 17, 1919. Serial No. 345,490. 15 Claims. (Cl. 179—275.)

1. In a telephone system, groups of lines, groups of transfer circuits, a switching mechanism at the crossing point of each group of lines and group of transfer circuits for connecting said lines to said transfer circuits, a trunk line associated with each group of transfer circuits, a switching mechanism individual to each transfer circuit for connecting said transfer circuit to said trunk, a bar individual to each group of lines for preparing the switching mechanisms associated therewith for operation, a bar individual to each transfer circuit of a group and common to the corresponding transfer circuits of each group for preparing the switching mechanisms associated therewith for operation, and a bar individual to each group of transfer circuits for actuating the prepared switching mechanism.



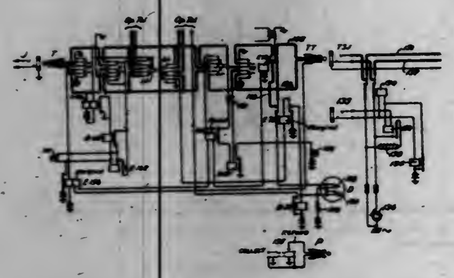
1,480,203. PHONOGRAPH AND ANALOGOUS APPARATUS. ELWOOD GRISSINGER, Buffalo, N. Y., assignor to Lucy Ash Grissinger, Buffalo, N. Y. Filed May 27, 1918. Serial No. 236,735. 9 Claims. (Cl. 274—35.)

1. In a phonographic sound box, a pivoted lever in combination with means for resiliently pivoting said lever, said means comprising piano steel wires symmetrically arranged and clamped on opposite sides of



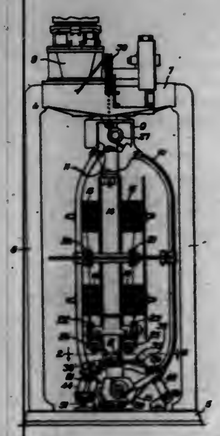
the pivotal axis and stretched to a tension approximating the safe elastic limit of said wire, for the purpose described.

1,480,204. DRAFT EVENER. CORNELIUS T. HANSEN, Big Sandy, Mont. Filed July 5, 1921. Serial No. 482,445. 6 Claims. (Cl. 278—1.)



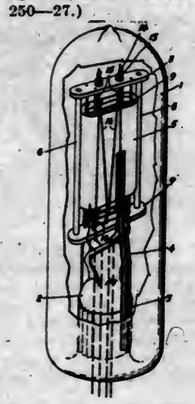
1. A draft equalizer assembly comprising a draw bar and a draft lever arranged in parallel relation, said draw bar and lever having a link connection at one end, means for connecting the other end of the draw bar to a four horse evener, pull means acting from the center of said draw bar on the implement drawn and pull means acting from the free end of said draft lever on the implement drawn.

1,480,205. MOTION-PICTURE SCREEN AND METHOD OF PRODUCING SAME. LINCOLN W. HILL, San Francisco, Calif. Filed Feb. 23, 1921. Serial No. 447,099. 3 Claims. (Cl. 88—24.)



1. A screen for exhibiting motion pictures consisting substantially of a flexible backing, a coat of adhesive material applied thereto, small particles of dry vegetal material imbedded therein, the latter being coated with paint and a metallic powder.

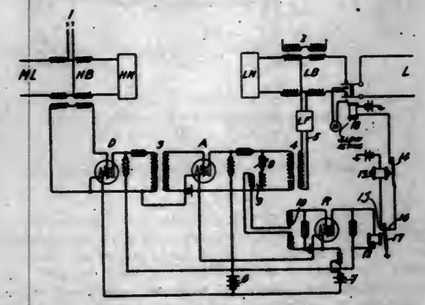
1,480,206. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. HENRY L. HOFFMANN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec 24, 1920. Serial No. 433,026. 11 Claims. (Cl. 179—6.3.)



1. In a telephone system the combination of subscribers' lines, an operator's position, means including toll switching trunks and automatic switches for extending a call from said position to a subscriber's line, a coin box at the substation of said line having a coin disposal magnet, collect and refund current sources associated with one of said trunks, a coin current applying relay associated with said trunk, an alternating current source at said position, a manual switch at said position for applying alternating current from said source to said trunk to cause the operation of said relay to apply current from one of said sources to the connected substation to operate the coin disposal magnet in one manner, a shifting relay also associated with said trunk, and a manual switch at said position for operating said coin current applying relay and also said shifting relay, the latter substituting the other coin current source to operate the coin disposal magnet in another manner.

1,480,207. STRAND-TWISTING MACHINE. CHARLES GUNNAR HOLMBERG, Jr., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1921. Serial No. 489,974. 7 Claims. (Cl. 117—46.)

1. In a strand twisting mechanism, a flier and a strand supply reel support normally rotatable about the same axis, and magnetic means for securing the relative rotation of the flier and the strand reel support.

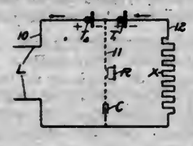


1,480,208. VACUUM TUBE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 15, 1921. Serial No. 461,727. 15 Claims. (Cl. 250—27.)

1. In combination, a suspension element and a support therefor comprising a resilient portion and a portion embracing said suspension element, said embracing portion and suspension element being crimped together.

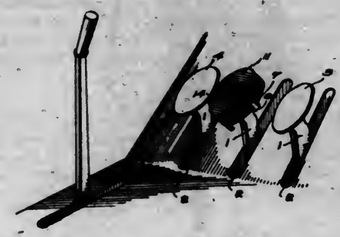
4. In combination, a suspension element and a support therefor comprising a loosely wound wire helix, and a closely wound wire helix integral therewith, said closely wound helix embracing said suspension element and being rigidly joined thereto.

1,480,209. CARRIER-WAVE CALL-SIGNALING SYSTEM. JACOB S. JAMMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1020. Serial No. 433,748. 20 Claims. (Cl. 179—171.)



1. A signal transmission system comprising a transmission medium, a signal element associated with said transmission medium, means for normally transmitting energy individual to said signal element continuously over said medium, means for actuating said signal element, and means dependent only upon the interruption of said normally transmitted energy for preventing the actuation of said signal element.

1,480,210. TELEPHONE CIRCUITS AND METHOD OF OPERATING THE SAME. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1919. Serial No. 321,890. 11 Claims. (Cl. 179—81.)



1. A circuit comprising three branches, a device for converting sound waves into electric waves in each of two of said branches, and means for simultaneously

actuating said devices, the electromotive forces generated by said actuation being so proportioned that substantially no current variations will flow in one of said

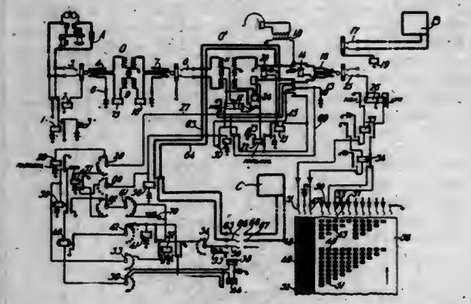
branches, a receiver in said last mentioned branch and a line circuit included in one of the others of said branches.

1,480,211. PEDAL ATTACHMENT. JAMES A. KAUFFMAN, Ashland, Ohio. Filed Oct. 28, 1921. Serial No. 511,188. 1 Claim. (Cl. 74—81.)

A pedal attachment comprising a base, downwardly extending lugs arranged on opposite sides of said base, said lugs being provided with inturned flanges, a downwardly extending lug arranged at one end of said base, said base being provided with a threaded opening, a screw arranged therein and adapted to engage the face of the pedal, a plurality of posts extending upwardly from said base, and an extension plate secured to said posts, said extension plate being provided with an opening in alinement with said screw for the reception of a tool.

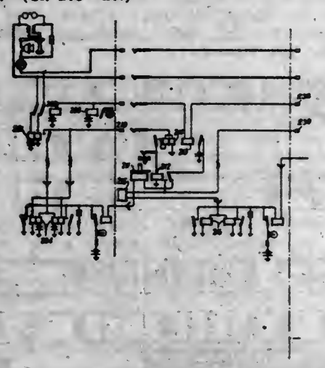
1,480,212. PROCESS OF MANUFACTURE OF INGOTS OF PURE NICKEL FROM IMPURE OXIDES OF NICKEL. JACQUES DE FONDS LAMOTHE, Paris, France. Filed July 12, 1921. Serial No. 484,165. 1 Claim. (Cl. 75—17.)

The improved process for the manufacture of ingots of pure nickel from impure oxide of nickel; the said process comprising effecting the partial reduction of impure and pulverized oxide of nickel by means of a suitable reducing agent intimately mixed with the oxide; then levigating the powdered nickel when partly reduced, using weak solutions of hydrochloric and hydro-fluoric acids, then drying and agglomerating the powder of nickel in the form of ingots, then effecting, in two distinct operations, first an oxidising calcination, and then a simultaneous reducing and desulphurising calcination, of the ingots prepared as above set forth, the said oxidizing action being due to the small proportion of oxide of nickel which remains in the product after the partial preliminary reduction, and the reducing and desulphurizing actions being simultaneously obtained by introducing into the receptacles which contain the ingots a quantity of powdered charcoal mixed with any other body which can form a stable sulphide at the temperature of the calcination and in the presence of an excess of carbon.



1,480,213. NUT LOCK. FOSTER A. LEUI, Comstock, Nebr. Filed June 13, 1923. Serial No. 645,181. 4 Claims. (Cl. 151—30.)

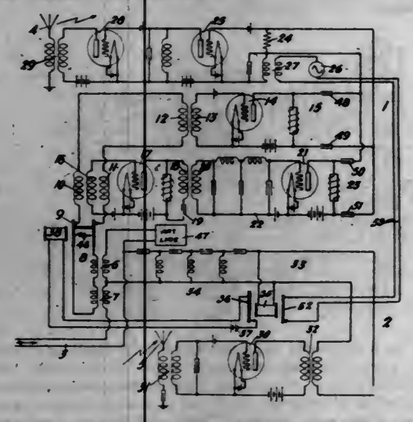
1. A device for locking nuts on bolts consisting of a split resilient ring provided on its inner circumference with eccentric teeth adapted to ride freely on the bolt when turned in one direction but bind upon the bolt



when turned in the opposite direction, the ring being provided with means whereby to engage the nut and turn with the same.

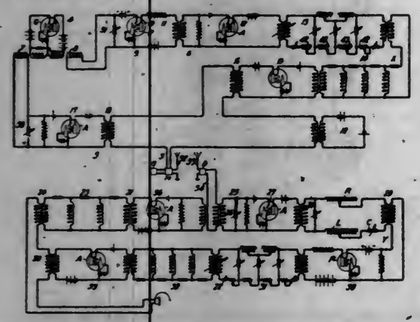
1,480,214. TELEPHONE-EXCHANGE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,256. 12 Claims. (Cl. 179—27.)

1. In a telephone exchange system, an operator's position, groups of outgoing trunk lines, an incoming line terminating in a connecting plug, a jack individual to each group of outgoing lines, an automatic switch associated with said incoming line, and means operative upon the insertion of said plug into a desired one of said jacks to operate said automatic switch to select the group of trunks to which said jack is individual.



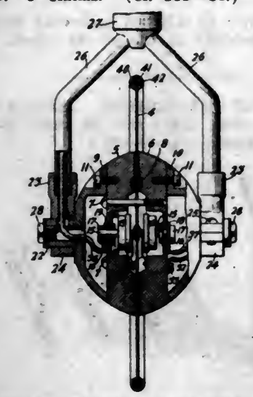
1,480,215. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. WILLIAM H. MATTHIES, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,700. 4 Claims. (Cl. 179—27.)

1. In a telephone system, a calling line, a plurality of called lines of different character, a selective switch, a register device comprising a plurality of variably oper-



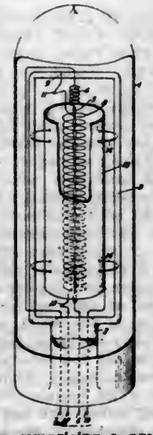
able registers for governing the operation of said switch to extend a connection from the calling line to any one of said called lines, an auxiliary switch for controlling the operation of said selective switch arranged to assume one position when a connection is extended to called lines of one character and another position when a connection is extended to called lines of another character, a signal and means controlled by the calling subscriber for releasing said selective switch when the auxiliary switch is standing in one of its positions and for operating said signal without releasing the selective switch when the auxiliary switch is standing in another of its positions.

1,480,216. TRANSMISSION SYSTEM. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1916. Serial No. 124,958. 82 Claims. (Cl. 250—6.)



81. The method of signaling by electromagnetic waves which comprises radiating signaling waves from one station and thereby rendering inoperative another transmitting station during the continuance of signal radiation from the first-named station.

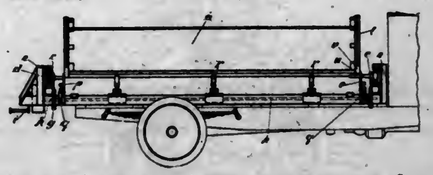
1,480,217. METHOD AND MEANS FOR SIGNALING. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Substitute for application Serial No. 139,541, filed Dec. 29, 1916. This application filed Jan. 20, 1922. Serial No. 530,528. 43 Claims. (Cl. 250—6.)



1. The method of secret telephony which comprises generating currents representing speech, generating confusion currents, having at least one frequency coinciding with the frequency range of said first mentioned currents, transmitting simultaneously and together the superposed speech and confusion currents, and receiving a relatively wide band of frequencies of the speech representing currents free from the confusion currents.

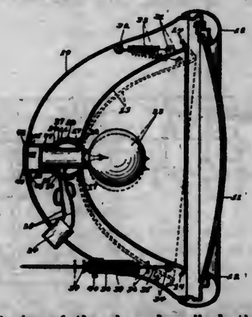
1,480,218. SUBMARINE SIGNALING. CHARLES R. MOORE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1919. Serial No. 324,803. 9 Claims. (Cl. 181—31.)

1. A vibration responsive device comprising a vibrating diaphragm, a non-vibrating housing clamped about the central portion of the diaphragm, the outer portion of said diaphragm extending outside of said housing and means within the housing to alter the electrical characteristics of a circuit upon vibration of the diaphragm.



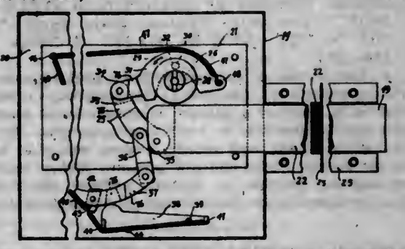
1,480,219. VACUUM TUBE. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 25, 1917. Serial No. 176,738. 9 Claims. (Cl. 250—27.)

1. A vacuum tube comprising a press, a helical electrode supported from said press, and means for maintaining said electrode under tension in the direction of its axis.



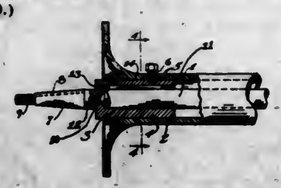
3. A vacuum tube comprising a press, an electrode, a pair of supports extending thereabove, and an electrode mounted on said supports and comprising a continuous surface surrounding said first electrode, said supports being located outside of said second electrode.

1,480,220. CART WITH SIDEWARDS-TILTABLE BRIDGE. JACOB OCHSNER, Zurich, Switzerland. Filed Nov. 16, 1921. Serial No. 515,445. 4 Claims. (Cl. 298—18.)



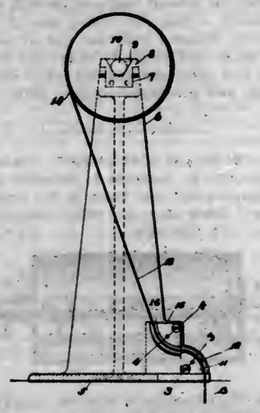
1. In a dumping arrangement for vehicle bodies, the combination with a fixed guide frame, of a body frame slidably mounted in said guide frame, a tiltable body carried by the second frame, means for moving the second frame transversely with respect to the fixed frame, and complementary engaging means carried by the fixed frame and the said body for limiting the travel of the body frame and for providing a fulcrum about which the inclination of the body frame is adjusted.

1,480,221. AUTOMOBILE HEADLIGHT. PERCY W. POMEROY and HAROLD P. SCHNEIDER, Toledo, Ohio, assignors, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 1, 1917, Serial No. 194,171. Renewed June 2, 1923. 8 Claims. (Cl. 240—41.)



1. In a device of the class described, the combination of a casing, a reflector pivotally mounted at the rear thereof within said casing, means tending to move said reflector in one direction, and means connected to said reflector to move it in the opposite direction.

1,480,222. LOCK. LASZLO PONGRACS, New York, N. Y. Filed Nov. 3, 1922. Serial No. 598,710. 3 Claims. (Cl. 70—14.)

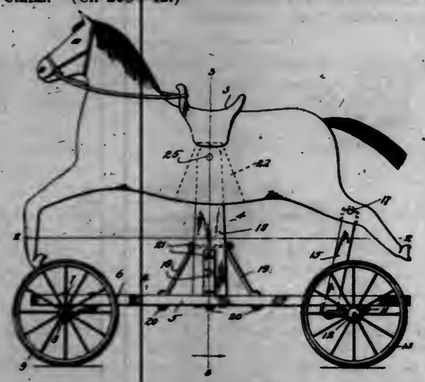


1. In a lock of the class described, a casing, a bolt within said casing, an excenter in said casing connected to said bolt by a link mechanism; a key adapted to turn said excenter and set said link mechanism and said bolt into motion in an inward or outward direction; a pivotally mounted plate within said casing connected with said link mechanism and adapted to terminate its motion, and springs within said casing secured to said link mechanism, said excenter and said plate and adapted to steady and regulate their movements.

1,480,223. EMERGENCY SPINDLE FOR AUTOMOBILES. ALCIDE ROBECHAUD, Milwaukee, Wis. Filed Nov. 26, 1921. Serial No. 518,088. 4 Claims. (Cl. 301—130.)

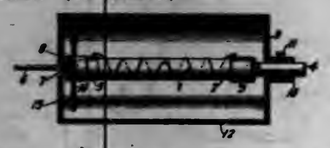
2. In combination, an automobile axle and housing therefor, a spindle having a hollow portion adapted to receive a portion of the axle and having an eccentric recess merging into said hollow portion, and an externally opening hole in communication with said eccentric recess, a pin adapted to be inserted through said hole and positioned within said eccentric recess, and means for retaining the spindle in position within said housing.

1,480,224. UNWINDER. CAMILLE A. SENTOU and ETIENNE JACQUET, Fort Lee, N. J., assignors, by mesne assignments, to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 27, 1921. Serial No. 503,552. 6 Claims. (Cl. 242—76.)



4. In a device of the class described, a support for a roll of film, facing quadrants secured to the supports, said quadrants having facing curvilinear V-notches each forming a fraction of a circle, means secured to the support presenting convex beveled surfaces for guiding the edges of a film into the V-notches of the quadrants.

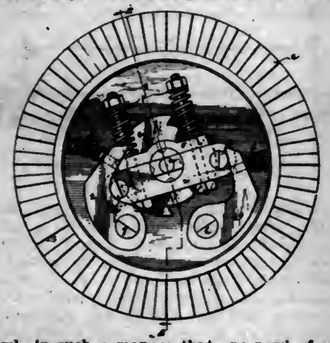
1,480,225. ELECTRICAL CUT-OUT. HOMER CLYDE SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1921. Serial No. 499,267. 5 Claims. (Cl. 200—120.)



1. An electric fuse having a filling material comprising a gelatinous gas adsorbing material.

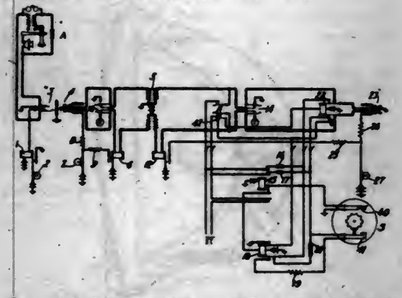
1,480,226. TOY. GEORGE F. SPANGLER, New Lexington, Ohio. Filed Feb. 24, 1921. Serial No. 447,446. 1 Claim. (Cl. 208—42.)

In a vehicular toy, a wheel base including a platform, a steering axle pivotally connected with the forward end of the platform, a crank shaft carried by the rear end of the platform, wheels on the shaft, said platform having an opening therein in which the crank of said shaft revolves, a standard rising centrally from the platform, a seat structure having a centrally downwardly tapered socket for receiving the upper end of the standard, the side walls of said socket having aligned openings formed therein, a cross pin engaged in the openings and bridging the socket for pivotal engagement with the upper end of the standard, a plug for closing one of the openings, said plug being engaged with one end of the pin, a link having its upper end pivotally connected to a rear portion of the seat structure and its lower end operable in said opening and pivotally engaged with the crank of said shaft.



1,480,227. IMPEDANCE ELEMENT. GEORGE H. STEVENSON, Rye, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 460,826. 3 Claims. (Cl. 250—16.)

1. An electrical impedance element comprising a winding and means to adjust the reactance of said element comprising, an enclosing casing forming an electrostatic shield for said winding and connected to one end of said winding, and an adjustable member within the casing connected to the other end of said winding and forming with said casing a variable condenser.



1,480,228. DIFFERENTIAL MECHANISM. JAMES A. STREET, Pontiac, Mich., assignor of one-half to Hugo C. Zeitz, Detroit, Mich. Filed June 23, 1921. Serial No. 479,867. 6 Claims. (Cl. 74—7.)

1. In a differential, an axle divided into two sections, toothed disks secured to adjacent ends of said sections to rotate therewith, a rotatably-driven ring-gear encircling said toothed disks, a pair of pawls for each toothed disk carried by said gear adapted to engage said toothed disks to rotate as one piece with said gear but in such a manner as to permit either toothed disk to overrun said gear, pawl-controlling means comprising a spindle journaled freely in one axle section and engaged with the other section to rotate therewith, and a pawl-engaging portion carried by the spindle releasably engaged thereto to rotate therewith, said pawl-engaging portion adapted to engage

said pawls in such a manner that one pawl of each pair is held out of engagement with its toothed disk permitting the other pawl in pair to engage the toothed disk for rotation.

1,480,229. TELEPHONE-EXCHANGE SYSTEM. WALTER B. STRICKLER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 15, 1920. Serial No. 417,209. 13 Claims. (Cl. 179—27.)

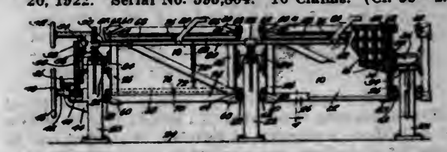
1. In a telephone system, a cord circuit having normally continuous talking conductors terminating in an answering and a calling plug, an operator's key, an impulse sender, means responsive to the actuation of the key and the sender for rendering the talking conductors of the cord circuit discontinuous, and a talking path provided differing from the normally continuous talking conductors of the cord circuit if the operator's key is not restored to normal.

1,480,230. PROCESS OF CARBURIZING STEEL AND IRON. TOYOKICHIRO TASHIRO, Tokyo, Japan. Filed May 24, 1921. Serial No. 472,282. 7 Claims. (Cl. 148—19.)

1. The process of carbonizing iron, steel and the like, which consists in embedding the material to be carburized in a bed of a mixture of carboniferous substance and metallic peroxide in a carburizing chamber that can be tightly closed, and causing carbon monoxide to act in its nascent state under a pressure higher than the atmospheric pressure by heating, utilizing the reaction heat produced when the said carbon monoxide is formed.

1,480,231. WRENCH. JAMES ARTHUR THOMPSON, Rushville, Ill. Filed Feb. 9, 1922. Serial No. 535,142. 12 Claims. (Cl. 145—68.)

1. A tool comprising a socketed member, an arm with respect to which said socketed member is transversely journaled, a second arm with respect to which said first mentioned arm is transversely journaled and rotatable upon its axis, a latch for adjustably securing said arms

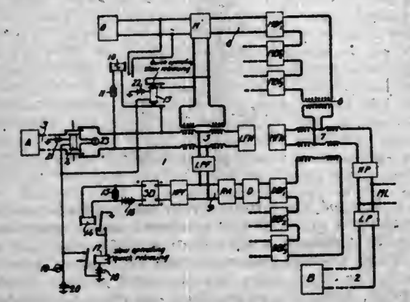


in any desired relative position, a right angled arm extending from said second arm, and a knob revolubly mounted on the extended end of said right angled arm.

1,480,232. APPARATUS FOR DISTRIBUTING CONCRETE. JOHN TRIMBLE, Philadelphia, Pa. Filed Mar. 17, 1922. Serial No. 544,598. 11 Claims. (Cl. 104—95.)

1. In apparatus for distributing concrete, a plurality of supports each comprising spaced legs united at the top to give a free space between the legs, a track supported thereby, a carrier adapted to travel along the length of the track, a walk for the operator beneath the track parallel with it and between the legs, permitting the operator to shove the carrier and a mount for the walk transverse to the legs and supported from them.

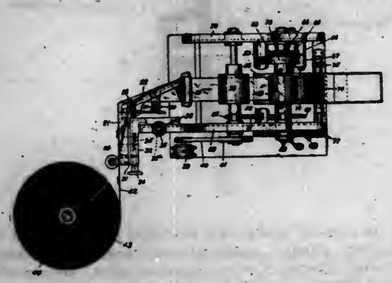
1,480,233. MACHINE FOR PRESERVING EGGS. OSCAR BOPP VON OBERSTADT, McHenry, Ill. Filed Oct. 20, 1922. Serial No. 595,804. 10 Claims. (Cl. 99—2.)



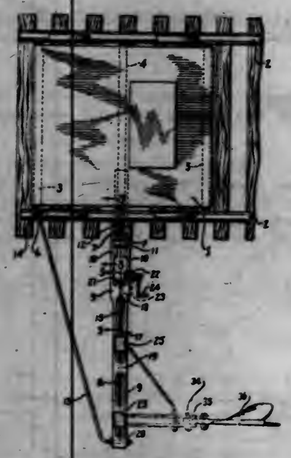
2. In mechanism of the class described, a crate carrying frame, initially open in two opposite directions, means at each opening for detachably fastening a crate therein, means rotatable mounting the frame so that said openings are successively moved to top position, means normally clear of the case as it rotates capable of being moved to release the crate securing mechanism which is then in top position, means for rotating the frame and means interlocking the rotating and releasing mechanisms for the purposes set forth.

1,480,234. SHOE. BENJAMIN G. WEDD, Mortimer, N. Y. Filed Mar. 14, 1922. Serial No. 543,710. 4 Claims. (Cl. 36—59.)

2. A shoe comprising an outer sole of substantially uniform thickness having a small circular depression cut therein near the inside of the sole immediately beneath the metatarsal joint of the great toe, an inner sole having an opening surrounding said depression and a layer inserted in said opening over said depression.



1,480,235. CARRIER-WAVE SIGNALING SYSTEM. CHARLES WHITE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1920. Serial No. 432,191. 10 Claims. (Cl. 179—15.)

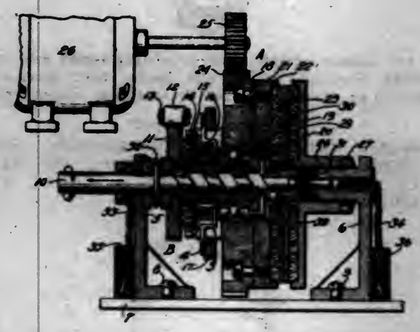


1. A method of signaling in a carrier wave signaling system employing a two-position relay, a controlled element and a second relay for controlling said element, which method comprises receiving impulses of carrier waves at a predetermined impulse periodicity, actuating the controlled element only when the two-positioned relay is changing from one position to the other and vice versa at a predetermined rate, and energizing the second relay to prevent actuation of the controlled element when the first relay remains in either position for a duration of time exceeding a definite minimum period.

1,480,236. PAPER-FOLDING MACHINE. CHARLES ARELT, Brooklyn, N. Y., assignor, by mesne assignments, to Independent Paper Mills, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,256. 7 Claims. (Cl. 270—65.)

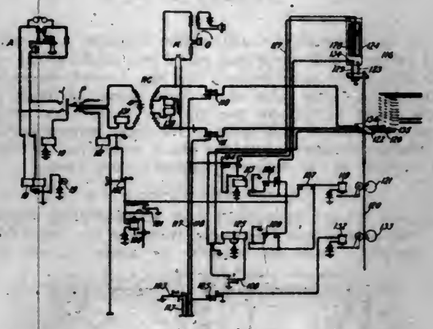
1. In a machine for holding a traveling web of paper, a folding device comprising a member formed with an intermediate section and inclined side sections, and a second member extending at an angle to said first member and provided with slots converging toward each other from the line of junction of said two members.

1,480,237. SOD-LINE CUTTER FOR RAILROADS. ALBERT J. BRANCHEAU and PHILIP BOGAIR, Flint, Mich. Filed Mar. 19, 1923. Serial No. 626,019. 4 Claims. (Cl. 97—230.)



1. In a sod line cutter for railroads, a boom adapted to be attached to the side of a railroad car to extend horizontally therefrom, a screw shaft carried by the boom and rotatably mounted therein, a crank for rotating the screw shaft, the boom being provided with a pair of slots through which the screw shaft extends, a nut slidably mounted in each slot through which the screw shaft is threaded, an arm pivoted to one of the said nuts, a brace rod supporting the arm and connected to the other of said nuts, the depending end of the said arm being adapted for the attachment of a cutting device.

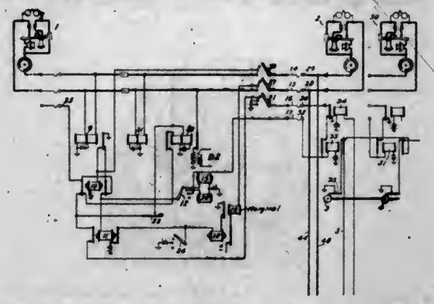
1,480,238. DIAL MOUNTING FOR ELECTRICAL INSTRUMENTS. FRANK H. BURNS, Hoosick Falls, N. Y., assignor to Hoosick Falls Radio Parts Manufacturing Company, Inc., Hoosick Falls, N. Y., a Corporation of New York. Filed May 20, 1922. Serial No. 562,542. 2 Claims. (Cl. 74—33.)



1. In a device of the class described and in combination, a rotatory spindle; a dial of insulating material having a central exteriorly screw-threaded boss, and provided with a central opening extending through the body of the dial and into said boss, said boss being provided with a lateral screw-threaded opening communicating with said central opening; a set-screw fitting said lateral opening in the boss engageable with the spindle inserted in said central opening; and a cap of insulating material fitting said screw-threaded boss, and enclosing and protecting said set-screw.

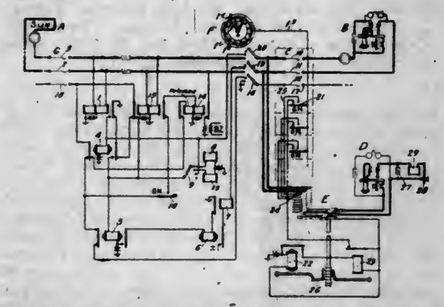
1,480,239. FRICTION CLUTCH. MERLE P. CHAPLIN, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1921. Serial No. 507,336. 11 Claims. (Cl. 192—35.)

1. In combination, a driving member, a driven member normally tending to rotate, a shaft also to be driven, and a driving coupling on said shaft rendered effective upon the release of said driven member, whereby power is communicated to said shaft independent of said driven member.



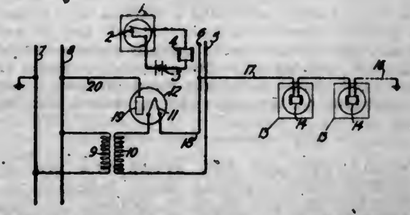
1,480,240. TELEPHONE-EXCHANGE SYSTEM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1920. Serial No. 375,704. 15 Claims. (Cl. 179—27.)

14. In a telephone exchange system, a plurality of offices, a plurality of switches of a certain type in certain of said offices, a plurality of switches, of another type in other of said offices, and a switch controlling mechanism associated with each of said certain offices, said mechanism being provided with means for controlling the switches of said certain offices by impulses received from said switches during the setting thereof and for controlling the switches of said other offices by transmitting impulses thereto.



1,480,241. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 16, 1918. Serial No. 245,145. 7 Claims. (Cl. 179—18.)

1. In a telephone system, telephone lines each including a calling signal, a secondary calling signal common to said lines, means individual to each of said lines for automatically operating said secondary calling signal in a different characteristic manner, means for selecting said

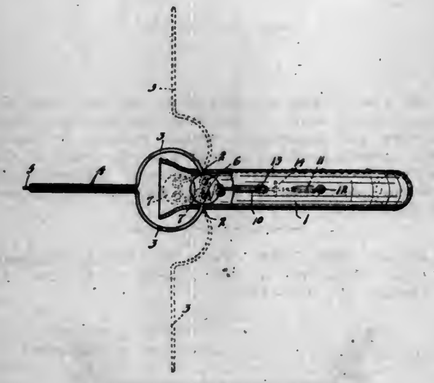


lines and operating said signals, and means responsive to an additional operation of said selecting means for subsequently causing the actuation of said first means.

1,480,242. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, a Corporation of New York. Filed July 19, 1919. Serial No. 311,958. 10 Claims. (Cl. 179—27.)

1. In a telephone system, calling and called lines, an attendant's position, switching means for interconnecting said calling and called lines, and means automatically operated simultaneously with said switching means during predetermined intervals for connecting said attendant's position to said calling and called lines.

1,480,243. SIGNALING SYSTEM. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1921. Serial No. 513,018. 6 Claims. (Cl. 58—24.)

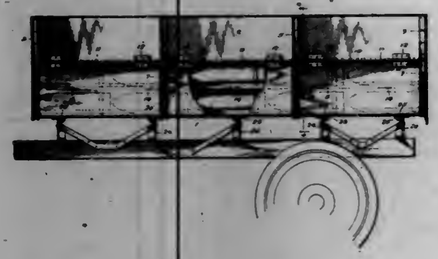


1. In an electric control system, the combination with a controlling device, of a series of auxiliary devices to be controlled, electromagnetic means for controlling said auxiliary devices, means for operating said electromagnetic means comprising a source of alternating current, and a thermionic rectifying device, and means associated with said controlling device for rendering said rectifying device operative.

1,480,244. GUARD FOR HARVESTERS. UDO H. CREMER, Minonk, Ill., assignor of one-third to Herman F. Cremer and one-third to Fred H. Cremer, both of Minonk, Ill. Filed June 27, 1922. Serial No. 571,130. 1 Claim. (Cl. 198—102.)

As an article of manufacture, an attachment for harvesters comprising a substantially flat body having parallel longitudinal edges and having a wing extension at one end thereof, said extension being bent at right angles to the body, the longitudinal edge portions of the body being reversely curved and one of said curved longitudinal edge portions constituting a hook, a longitudinal reinforcing element secured to the body and to the wing extension and extending beyond the end of the body remote from the wing extension, said extending portion of the reinforcing element being bent into parallel relation to the wing portion, said reinforced wing portion of the body and said extending portion of the reinforcing element being provided with openings to receive fastening elements whereby the body may be secured to the frame of the harvester, and a plurality of transversely extending reinforcing elements secured to the body and having offset end portions spaced from the second longitudinal edge portion of the body to cooperate with the latter in engaging a fixed part of the harvester, as and for the purpose set forth.

1,480,245. DEVICE FOR CATCHING FLIES OR OTHER INSECTS. OWEN R. DAILEY, Nichols, Wis. Filed Sept. 29, 1922. Serial No. 591,402. 6 Claims. (Cl. 43—135.)

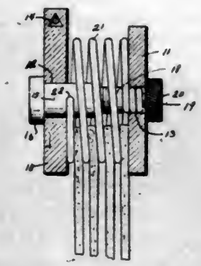


1. A fly catching device in a form of a gun, comprising a barrel, a member movable in said barrel, a pair of reticulate members pivoted to said movable member for movement toward and from each other, resilient means for suddenly moving said movable member, means for holding said means under tension and suddenly releasing the same and a cam action device for suddenly moving said reticulate members together when said resilient means are released.

1,480,246. EDGING FOR ROOF COVERINGS. CHARLES E. DOUGLAS, Nashua, N. H. Filed Apr. 13, 1923. Serial No. 631,842. 5 Claims. (Cl. 108—26.)

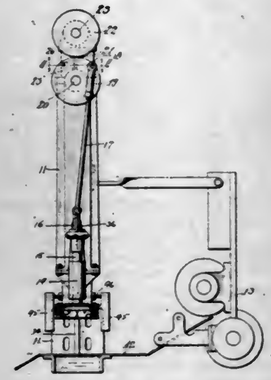
1. The combination with sheathing, of an edging formed of a strap of sheet metal so bent as to form a holding fold extending along the edge of the sheathing and having a water lip at its lower edge, said strip being bent back on top of the sheating, thence in a fold back upon itself over the edge of the sheathing, thence in a second fold back upon itself beyond the first fold forming a pocket and down to form a biting edge, sheet roofing which extends into said pocket, elastic cement which substantially fills the rest of said pocket, nails which pass through the top edge of the edging and the sheet roofing into the sheathing, and nails which pass through the holding fold into the sheathing.

1,480,247. TRUCK BODY. WALTER T. DOVE, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed June 10, 1919. Serial No. 303,220. 1 Claim. (Cl. 296—19.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



An army truck, including seats, movable parts attached to the seats for converting the seats into litter carriers and ammunition carriers beneath the seats, said carriers provided with grooves, the sides of the grooves formed of curved surfaces of different radii whereby ammunition of different sizes may be retained in the grooves.

1,480,248. ASH GATE. FRANK H. DUNBAR, Cleveland, Ohio. Filed Mar. 5, 1923. Serial No. 622,728. 12 Claims. (Cl. 110—171.)

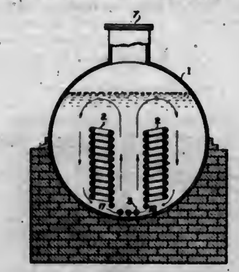


1. The combination in a closure mechanism for bottom discharge hoppers, of a frame and a door reciprocable thereon, said door having drain troughs along its sides and means for scraping material from said side troughs upon relative movement of said door and said means.

1,480,249. CLOTHES HOLDER FOR CLOTHESLINES. JANIE EDWARDS, Cardin, Okla. Filed May 21, 1923. Serial No. 640,495. 6 Claims. (Cl. 24—137.)

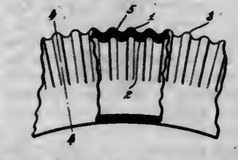
6. A garment holder for clothes lines comprising a helical spring, between the coils of which the garments are adapted to be placed, and means operatively supported in conjunction with the coil for compressing the coil or permitting the expansion thereof.

1,480,250. PIE MARKER. WILLIAM EHRLICH, Chicago, Ill., assignor to Case & Martin Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1922. Serial No. 530,583. 14 Claims. (Cl. 107—1.).



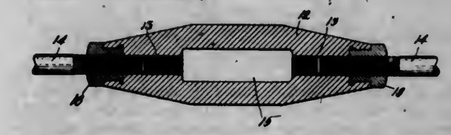
2. A pie marker comprising a marking die; a shaft; an operable connection between the shaft and pie marking die; power driving means normally disconnected from said shaft; and manual means connected with said connection and adapted to initially rotate the shaft to effect a connection of the power driving means with said shaft.

1,480,251. PROCESS AND APPARATUS FOR HYDROGENATION. CARLETON ELLIS, Montclair, N. J. Filed Nov. 25, 1918. Serial No. 264,005. 12 Claims. (Cl. 87—12.)



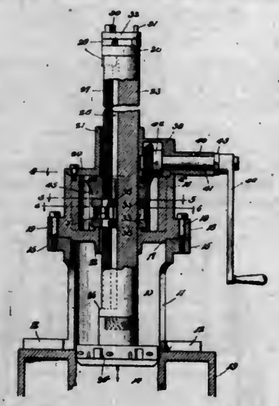
1. In the hydrogenation of fatty oils containing unsaturated constituents, the step of maintaining an elongated substantially horizontal body of such oil while causing a defined circulation therein in a vertical plane, such oil carrying in suspension therein a catalyst which carried about in the oil by currents of the oil, and introducing thereinto, at a level well below the surface

of such oil, at a plurality of points in the length of such body, a hydrogen-containing gas, while such oil



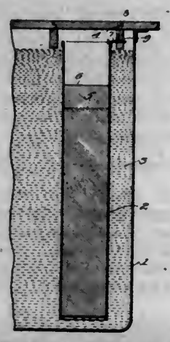
is at a temperature at which such catalyst is capable of causing a union of hydrogen with constituents of such oil.

1,480,252. INNER TUBE. EDWARD FETTER, Baltimore, Md. Filed Nov. 3, 1922. Serial No. 598,947. 2 Claims. (Cl. 152—13.)



2. An inner tube for pneumatic tires having a portion of the wall thereof formed in plaits, extending transversely to the length of the tube, the plaits being so disposed that they are flattened when the tube is inflated within the casing, the plaited portion of the wall being formed of two layers spaced apart and a quantity of adhesive material between said two layers the flattening of the plaits providing surplus material which prevents stretching and tends to expand and close any punctures which may be formed, the flattening of the plaits also serving to further compress the adhesive material and provide an extra supply thereof to be forced into the punctures when formed.

1,480,253. TURNBUCKLE. DANIEL C. FISHER, Boston, Mass. Filed May 11, 1923. Serial No. 638,353. 1 Claim. (Cl. 287—60.)

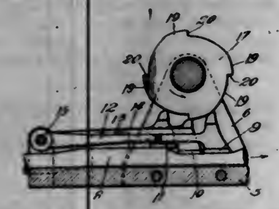


A turn-buckle comprising a body having the usual alined spaced apart internal screwthreaded sockets, adapted to engage externally threaded rods connected by the body, the inclination of the thread of one socket being opposite that of the thread of the other socket, the end portions of the body being provided with internally threaded socket enlargements; and nut members having wrench-engaging faces, external threads adapted to engage the internal threads of the socket enlargements, and internal threads adapted to engage the external threads of said rods, the arrangement being such that the nut members are adjustable, first, to permit the simultaneous rotation of the body and the nut members on said rods, and the engagement of the rods with the socket threads and with the internal threads of the nut members, and secondly, to lock the body and the nut members against rotation on the rods, the threads of the said socket enlargements and the external threads of said nut members being of finer pitch than the internal threads of the nut members and of the said sockets; the inclination of the threads of the socket enlargements being opposite that of the internal threads of said sockets; and the inclination of the external threads of said nut members corresponding to that of the threads of the socket enlargements.

1,480,254. CYLINDER-REBORING MACHINE. FREDERICK T. FLINCHBAUGH, York, Pa. Filed Feb. 8, 1921. Serial No. 443,392. 12 Claims. (Cl. 77—2.)

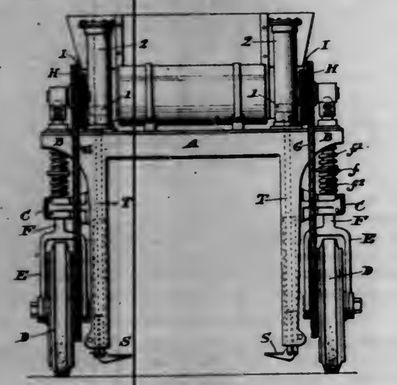
1. A cylinder reboring machine including supporting means, a boring bar journaled thereon, a feed screw carried by the bar, bearing plates slidable upon the bar, a feed star upon the screw confined between said plates, and means upon the supporting means disposed to engage said star for advancing the bar upon rotation thereof.

1,480,255. ART OF MANUFACTURING ICE. HERMAN FRIEDL, Chicago, Ill. Filed Oct. 22, 1923. Serial No. 670,003. 3 Claims. (Cl. 62—172.)



1. The method of manufacturing ice, which consists in subjecting the receptacle in which the water is to be frozen to a refrigerating bath the level of which extends to such a height relative to the water in the receptacle that when all of the water is frozen the top of the ice cake is a substantial distance below the level of the refrigerating bath.

1,480,256. FLUID-CONTROLLING DEVICE. MAJOR E. GATES, Terra Cotta, Ill. Filed Sept. 19, 1919. Serial No. 325,041. 13 Claims. (Cl. 103—149.)

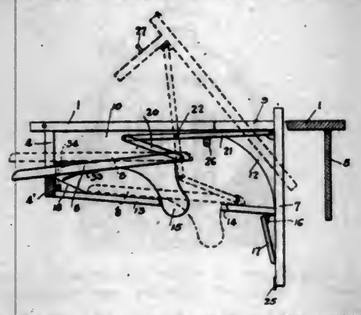


1. In a device of the character described, the combination of a flexible pipe through which the fluid is to pass, a series of presser-devices, the said series extending

lengthwise of said pipe, said presser-devices being movable in planes substantially at right angles to the axis

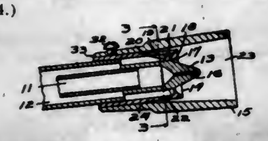
of the said pipe into and out of engagement with the side of said pipe, and means for operating said presser devices in succession, for the purpose set forth.

1,480,257. LUMBER CARRIER. CARL F. GERLINGER, Dallas, Oreg. Filed July 17, 1922. Serial No. 575,678 2 Claims. (Cl. 212—141.)



2. A lumber carrier comprising a frame, hydraulic cylinders carried thereby, a piston in each cylinder, means connected to the pistons for raising a load of lumber, means for operating the pistons in either direction, automatic means for controlling the power exerted by the operating means, and means for cutting off the operating means and thereby holding the pistons in any position to which they have been moved.

1,480,258. PRESS PLATE OR DIE FOR MANUFACTURING PHONOGRAPH RECORDS. TRUMAN J. GLOVER, Caldwell, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Sept. 7, 1921. Serial No. 499,017. 12 Claims. (Cl. 18—5.3.)

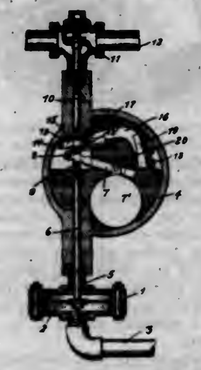


1. A die for shaping thermoplastic material comprising a body having an inlet passage therein, a series of fluid conducting channels of varying cross-sectional area communicating with said passage and an outlet passage communicating with said channels.

1,480,259. CABINET FOR CALCULATING MACHINES. LOUIS C. GREINER, Evansville, Ind. Filed Sept. 20, 1921. Serial No. 501,911. 1 Claim. (Cl. 45—52.)

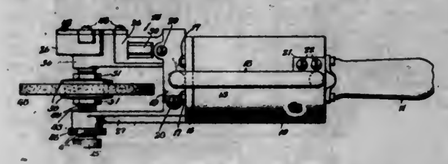
In a cabinet for keyboard machines, the combination of a cover arranged to be movable from forward horizontal position to rearward vertical position, a supporting platform for the keyboard machine having a downwardly extending projection on its under side, a fixed bottom board adapted to receive and support the supporting platform in its rearward position having an opening therein to receive said downwardly extending projection, means operated by the cover for moving the supporting platform bodily forward on the bottom board, raising its rear end and sustaining it in raised position, comprising levers having fixed pivots between their ends and having pivoted connection at one end with the forward end of the cover and links pivoted at one end to the free end of a lever and at the other end pivoted to the rear end of the supporting platform, and means for sustaining the front end of the supporting platform, the downwardly extending projection, on the supporting platform cooperating with the opening in the bottom board to guide the supporting platform in its forward and rearward movement and pivoted supporting means near the front edge of the bottom board for supporting the front edge of the supporting platform above the front board.

1,480,260. BLOWPIPE. VICTOR E. HAAS, Toledo, Ohio, assignor of one-half to William E. Waldo and one-half to Samuel E. Starr, both of Toledo, Ohio. Filed Mar. 16, 1922. Serial No. 544,108. 4 Claims. (Cl. 158—27.4.)



1. In a blow pipe, a burner having a conical inner tip and a concentric shell, means for connecting a source of fuel and air under pressure with the tip and with the shell of the burner, the shell having an opening near the base of the cone of the tip, a second shell surrounding the said shell and tip and extending beyond the edge and end of the shell and tip.

1,480,261. ROOF GUTTER AND HOLDER. FREDERICK J. HACKER, Waterloo, Iowa. Filed July 5, 1922. Serial No. 572,880. 2 Claims. (Cl. 108—28.)

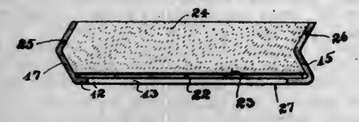


1. The combination, a metal support of longitudinally trough-ed form with one longitudinal margin laid closely upon a pitched roof and the other longitudinal margin shaped with an incurved tubular roll, a gutter made of flexible waterproof material fitted within said troughed support and upheld thereby, the upper longitudinal edge of the gutter inserted into and clipped by the opposite walls of the split of said tubular roll.

1,480,262. HOT-WATER-HEATER GAS REGULATOR. BENJAMIN A. HAWKINS, Providence, R. I., assignor to Gaia E. Hawkins, Providence, R. I. Filed Jan. 18, 1922. Serial No. 530,213. 5 Claims. (Cl. 236—25.)

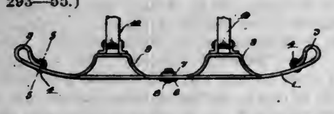
4. In a gas regulator, a water pressure responsive member, a gas controlling member, a pivoted link coacting with each member at points between the ends of the respective links, the opposite ends of the links being spaced apart, means to tension one link to normally hold same spaced from the other link, and a cam having connection with the other link and engageable by said opposite end of the tensioned link so as to effect operation of the gas controlling member upon predetermined movement of the water responsive member.

1,480,263. PORTABLE BUFFING TOOL. WILLIE HOFFMAN, Chicago, Ill. Filed Jan. 16, 1922. Serial No. 529,724. 2 Claims. (Cl. 51—170.)



1. A portable electric motor operated hand tool, comprising an electric motor, including its casing, its motor driven shaft at one end, and a handle at its other end, and an attachment for converting said motor into a handtool, comprising a forked gear casing secured to said motor casing, a tool driving shaft extending transversely of said motor driven shaft, journaled solely in one fork of said gear casing and secured therein against endwise movement, said tool driving shaft projecting into the space between the forks of said gear casing, a tool holding screw threadedly secured in the other fork of the gear casing, and coaxial with said tool driving shaft, a rotative working tool located between said forks and extending in a plane parallel with the axis of the motor, and being operatively connectible with and disconnectible from said tool driving shaft, and with said screw, and gearing between said motor driven shaft and tool driving shaft contained in the fork of said gear casing which contains said tool driving shaft.

1,480,264. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Apr. 16, 1923. Serial No. 632,235. 10 Claims. (Cl. 197—136.)

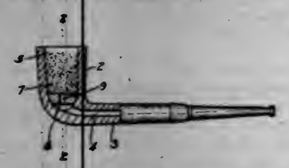


1. The combination of a cylindrical platen and clamping means carried thereby and releasable at will, said clamping means comprising a rod contained within and extending longitudinally of the platen, one or more clamping fingers carried by said rod and extending through the platen to the outer surface thereof, means for supporting the rod at one end in the platen so that the rod may swing with a pivotal movement around said point of support at one end of the platen and thus cause the clamping fingers to engage or release the sheet to be clamped to the platen, and a finger piece carried by the platen and co-acting with said rod to control its pivotal movement.

1,480,265. FILM LETTERING AND TITLING DEVICE. HARRISON H. HOOD, Los Angeles, Calif., assignor to Thimmeway Titles, Inc., Hollywood, Calif. Filed Aug. 31, 1922. Serial No. 585,471. 8 Claims. (Cl. 95—1.1.)

1. In a device of the class described, a film having detail characters impressed thereon disposed in a protecting holding member adapted to be arranged in a combination of holding members to be photographed for lettering, identifications, titles, and inscriptions of moving pictures.

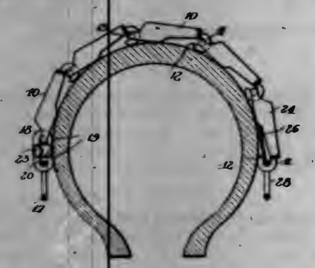
1,480,266. BUMPER FOR MOTOR VEHICLES. CHARLES J. IVEN, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed June 6, 1923. Serial No. 643,776. 8 Claims. (Cl. 293—55.)



1. A bumper comprising two substantially parallel bars, arranged one above the other, each having its ends bent rearwardly, inwardly and toward the other, and supporting means for the bumper secured to said ends and also to the two bars at a point between the ends of each of the bars.

1,480,267. PROCESS FOR THE MANUFACTURE OF MANGANESE OR OF MANGANESE ALLOYS POOR IN CARBON AND SILICON. BO MICHAEL STURE KALLING and SVEN DAGOBERT DANIELI, Trollhattan, Sweden, assignors to Aktiebolaget Ferrolegeringar, Stockholm, Sweden, a Limited Joint Stock Company. Filed Feb. 1, 1922. Serial No. 533,382. 8 Claims. (Cl. 204—64.)

1. The process of manufacturing manganese poor in carbon and silicon, and having low percentages of phosphorus and iron, which consists in smelting manganese ores in which the principal content of manganese occurs in the form of manganese oxides having an average degree of oxidation of the manganese higher than is represented by the formula MnO in an electric furnace with a quantity

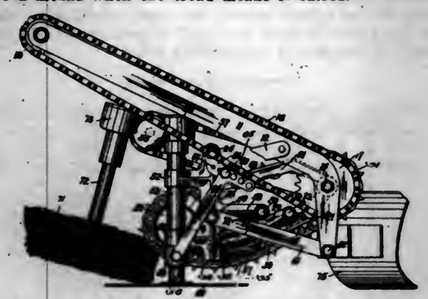


of reduction-carbon adapted to reduce the main part of the higher manganese oxides of the ore into manganous oxide, a part of the eventually occurring iron oxides to iron and a part of the eventually occurring phosphoric combinations to phosphorus, then reducing the prereduced manganese ore in an electric furnace by silicon in the form of alloys preferably having more than 10% of silicon, the latter reduction taking place under such conditions that the metal formed has no opportunity to absorb any appreciable quantity of carbon.

1,480,268. SMOKER'S APPLIANCE. JOHN W. KIDWELL, Hartford, Conn. Filed Mar. 10, 1922. Serial No. 542,704. 1 Claim. (Cl. 131—12.)

A smoker's appliance comprising a frusto-conical plug of clay, having a channel extending entirely across its under side, the upper face of the plug being flat, the plug having a port leading centrally from said flat surface to and intersecting the passage.

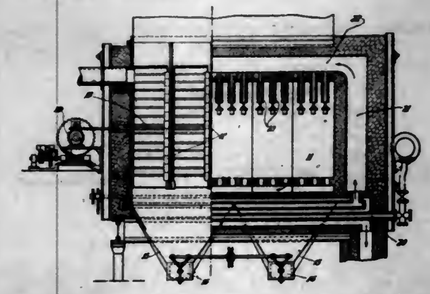
1,480,269. NONSKID CHAIN. HARRY KLONICK, Rochester, N. Y. Filed Oct. 4, 1922. Serial No. 592,432. 9 Claims. (Cl. 152—14.)



7. In a non-skid chain, a pair of side chains, cross chains therebetween having a plurality of links of substantially rectangular shape with relatively high sides forming wear resisting portions, each of said links having a hook at one end and a hook receiving bar at the other having a flattened side adapted for detachment from the hook of an adjacent link with the links in substantially back to back relation, said hook being adapted in engagement with an adjacent link to obstruct movement of the latter to said position for detachment, and a member detachably connecting an end of said cross chain to the adjacent side chain.

1,480,270. BEET-HARVESTING MACHINE. WILLIAM H. KOPITKE, Toledo, Ohio, assignor to American Beet Harvester Company, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 20, 1920. Serial No. 425,321. 25 Claims. (Cl. 55—107.)

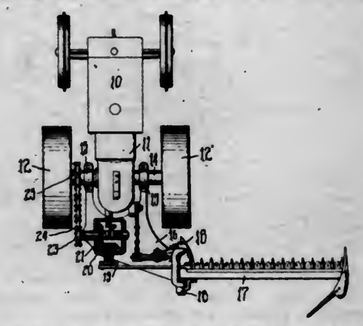
5. In a machine of the class described, a frame, a tread means and a topping means in operable combination trailing therefrom, and means for holding the tread means and topping means in a predetermined normally operable relation to one another independent of contact with the surface over which operating.



12. In a machine of the class described, a frame, a tread means carried by the frame, a cutting element permanently projecting under the tread means, and means connecting the cutting element, tread means and frame and operable to advance the cutting means under the tread means when the tread means is raised.

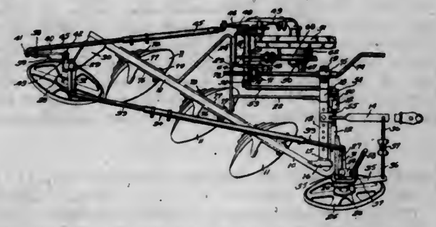
16. In a machine of the class described, a frame, a tread means carried by the frame for vertical swinging movements relative thereto and including a tread belt having its lower run straight for a distance outward from the inner end of the tread means and then formed with a prolonged curve at its outer end, a topping means carried by the tread means for swinging movements therewith and having its cutting element projecting under the curved portion of the tread belt, means for driving the tread belt and topping means, and means exerting a yielding downward pressure on the outer end of the tread means to normally retain it at a predetermined lowered position.

20. In a machine of the class described, a trailing tread means, a topping element extending beneath the tread means for relative movements therewith, and means maintaining the contour of the tread means substantially parallel to the cutting edge of the topping element at all times.



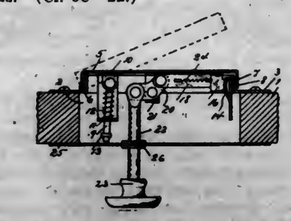
1,480,271. INSTALLATION FOR DEGASIFYING NONCOKING, BITUMINOUS MATERIALS AT LOW TEMPERATURE. HEINRICH KOPPERS, Essen-Ruhr, Germany. Filed Jan. 2, 1923. Serial No. 610,341. 14 Claims. (Cl. 202—9.)

1. An installation for continuous distillation of noncoking bituminous materials at low temperature consisting of retorts chambers of rectangular cross-section; heating walls for said chambers; jalousie walls arranged alongside said heating walls to force the materials to be distilled to move downward along the heating walls in thin layers.



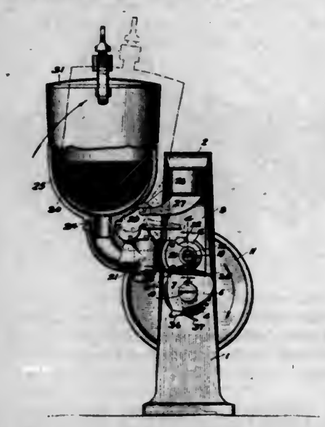
1,480,272. TRACTOR-DRAWN IMPLEMENT. ALVARO S. KROTZ, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 5, 1920. Serial No. 349,696. 9 Claims. (Cl. 56—25.)

9. The combination of a forward vehicle, a trailer structure pivotally connected to said vehicle, cutter mechanism carried by said trailer structure, gearing on the trailer structure for driving said cutter mechanism and including a clutch, means on the forward vehicle for lifting the cutter mechanism and trailer structure,



and thereby giving the said gearing and clutch a bodily swinging movement, and means actuated by the said swinging movement to release the clutch as the trailer structure is lifted.

1,480,273. POWER-LIFT PLOW. ALVARO S. KROTZ, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 8, 1920. Serial No. 429,205. 16 Claims. (Cl. 97—72.)



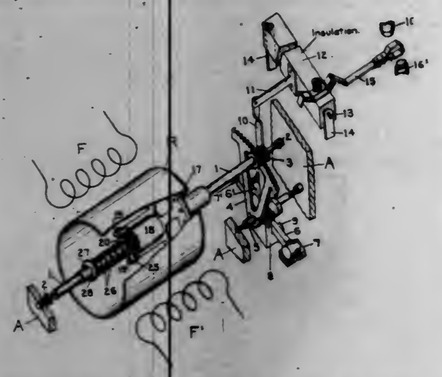
1. In a plow of the class described, a diagonally arranged bar extending fore and aft of the plow and adapted to support a plurality of furrow turning elements, and the forward end of which is bent inward toward the center of the plow and extends transverse to the path of travel thereof; wheels for supporting said bar from the ground; a brace member extending between the inner free end of said bent in portion and the middle portion of said supporting bar; and draft mechanism connected with said inwardly bent portion and with the front end of said supporting bar and through which the plow is drawn.

1,480,274. VENTILATOR FOR CLOSED CARS. RAYMOND A. LA BARRE, Detroit, Mich., assignor to C. R. Wilson Body Company, Detroit, Mich., a Corporation of Michigan. Filed May 27, 1920. Serial No. 384,526. 9 Claims. (Cl. 98—22.)

1. A ventilator for vehicles comprising an open frame, a closure hinged to said frame inclined at an angle to said frame in open position, means limiting the opening movement of the closure, yieldable means engaging said limiting means and actuating said movement, and means for maintaining the closed position of the closure.

1,480,275. CEMENTING MACHINE. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to Lorenz Muther, Newton, Mass. Filed Apr. 22, 1920. Serial No. 375,834. 4 Claims. (Cl. 91—40.)

2. In a cement applying machine, a cement supplying head providing a horizontal conduit having a semi-cylindrical seat surface about the outlet opening at the end of said conduit, a rotary cement distributing roll journaled in the end of said conduit and engaging said seat surface to provide a closure for said outlet opening, the roll periphery and seat surface extending above said opening to a degree preventing cement permeation or seepage upwardly between and through the joint of said roll and seat surface, and a rotative cement-applying brush journaled beneath and brushing said roll.



4. In a cement applying machine, a frame, a pair of parallel shafts journaled in said frame, a cement supply reservoir having an outlet conduit, a rotatable cement distributing roll journaled upon said conduit providing a valve closure for the outlet opening thereof and having a tubular axis adapted to be removably engaged upon the end of one of said shafts adapting the reservoir and roll to be removed from the machine as a unit, and a cement applying brush mounted upon the end of said second shaft for cooperating with said cement distributing roll.

1,480,276. RELAY. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 17, 1919. Serial No. 283,136. 10 Claims. (Cl. 200—91.)

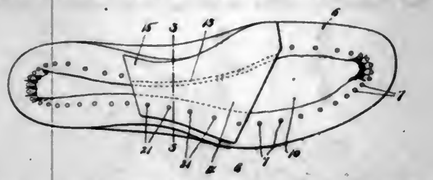
6. In a relay of the rotor type, the combination with a rotor and its operating shaft, a biased relay movement positively connected to said shaft, field windings adapted if energized to cause rotation of said rotor, of a friction clutch and lost motion connection between the rotor and the shaft for permitting free movement of the rotor relatively to the shaft to a limited extent, and for producing a frictional connection between the rotor and its shaft at the limits of said free run, whereby the rotor may freely over-run the operating shaft and the relay movement to a limited extent upon deenergization of the relay.

9. In a relay, circuit controlling means and associated operating parts constituting a relay movement, means adapted when energized to cause operation of the relay movement and including a movable operating element, and a lost motion connection between said operating element and the relay movement, which permits free

movement of said operating element with respect to the other parts of the relay movement, and means for causing electro-magnetic braking of said operating parts,

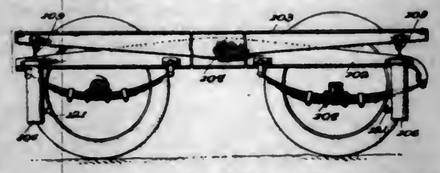
whereby upon deenergization of the relay said operating element may continue its movement by itself and be brought to rest gradually while the parts of the relay movement stop in their biased position.

1,480,277. TRACTION GRADING MACHINE. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor, by mesne assignments, to Kreebring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 26, 1919. Serial No. 279,235. 20 Claims. (Cl. 37—97.)



1. In a grading machine of the class described, the combination of a movable support, a grading device mounted thereon, and a single means for raising and lowering said grading device and for preventing lateral movement of the same.

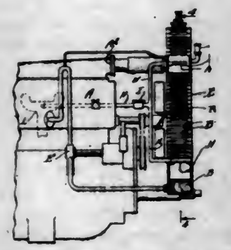
8. A grading device of the character described including a rotary drum, transversely disposed excavating buckets mounted thereon in a peripheral series, each bucket having its entering edges of a formation reversely angled from a median point with respect to a line of cut at right angles to the direction of movement of the device to thereby progressively apply its cutting edge to the work.



10. In an excavating and grading machine, the combination of an excavating and grading device, means to operate the same, stopping means for discontinuing operation of the excavating and grading device, and trip means in the path of certain materials excavated by the grading device for operating the stopping means.

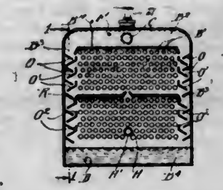
1,480,278. BOOT OR SHOE AND PROCESS OF MAKING. GEORGE T. MCLEOD, Boston, Mass., assignor to Thomas G. Plant Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 11, 1923. Serial No. 611,943. 3 Claims. (Cl. 36—19.)

3. An improved boot or shoe, having an insole with the edge adjacent the inner arch portion of the shank narrowed, the upper materials at the corresponding shank portion having an extension adapted to secure this part of the upper to the opposite edge of the insole, said upper and insole being attached excepting at the narrowed insole portion, and the upper, insole and outsole being secured by through and through stitching, excepting at said narrowed insole portion.



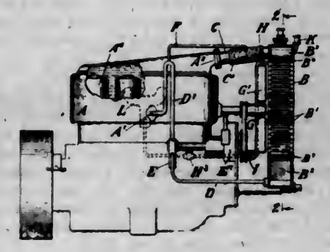
1,480,279. VEHICLE. WILLIAM B. MACLACHLAN, Minneapolis, Minn. Filed Feb. 10, 1923. Serial No. 618,368. 2 Claims. (Cl. 280—106.5.)

1. The combination with main and auxiliary frames pivotally connected intermediate their ends, of cylinders connected to the ends of said main frame, plungers connected to said auxiliary frames and having piston heads, tubular members arranged in said cylinders and having chambers slidably receiving said head, coiled springs confined between said head and the ends of said cylinders, and valves communicating with said chambers.



1,480,280. ENGINE-COOLING SYSTEM. HARRY C. MALLORY, New York, N. Y.; Sue R. Mallory administratrix of said Harry C. Mallory, deceased. Filed July 2, 1921. Serial No. 482,090. 6 Claims. (Cl. 123—174.)

1. In a cooling system, the combination with a liquid cooling jacket having a top outlet, of a surface condenser comprising distributed condensing surfaces, a connection from said outlet to the upper portion of the condenser for passing liquid and vapor into the latter, means within the condenser for diverting liquid away from the condensing surfaces and a pump for passing liquid from the bottom of the condenser into said jacket.

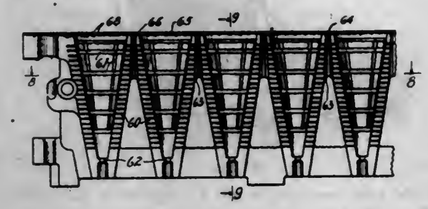


1,480,281. CONDENSER FOR ENGINE-COOLING SYSTEMS. HARRY C. MALLORY, New York, N. Y.; Sue R. Mallory administratrix of said Harry C. Mallory, deceased. Filed July 30, 1921, Serial No. 488,595. Renewed Dec. 6, 1923. 3 Claims. (Cl. 257—25.)

3. A condenser for an engine cooling system, comprising a shell and distributed condensing surfaces arranged therein to provide an upper inlet space, a lower hot well space, and channels leading downward past the condensing surfaces from the inlet space to the hot well, means for diverting liquid entering said inlet space into

said channels, and baffles in said channels arranged to retard and break up streams of liquid flowing downward through the channels.

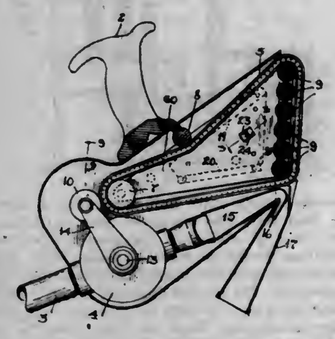
1,480,282. ENGINE-COOLING SYSTEM. HARRY C. MALLORY, New York, N. Y.; Sue R. Mallory administratrix of said Harry C. Mallory, deceased. Filed Sept. 3, 1921. Serial No. 498,265. 8 Claims. (Cl. 123—174.)



1. In an engine cooling system, the combination with an engine cooling jacket, of a surface condenser comprising a shell and distributed condensing surfaces therein interposed between an inlet chamber at the top of the condenser and a water space at the bottom of the condenser, a connection leading from the jacket to said inlet chamber, means for returning water from said water space to the jacket, an air outlet opening from the condenser adjacent to its top and a baffle in said condenser interposed between said inlet chamber and said air outlet, said baffle, air outlet and condensing surfaces being so relatively disposed as to compel air or vapor passing to said outlet from said inlet chamber to follow an elongated path of flow through which said condensing surfaces are interspersed.

1,480,283. ROOFING STRUCTURE. AUGUST MEYER, Hicksville, N. Y., assignor of one-half to William A. Kielmann, Hicksville, N. Y. Filed Jan. 12, 1922. Serial No. 528,664. 1 Claim. (Cl. 108—10.)

A roofing structure comprised of a plurality of cooperating pairs of elements, each of said elements being provided with a central projecting rib extending longitudinally the full length of the element, a reduced portion extending alongside of and projecting laterally from said rib, and a downwardly projecting lug adapted to be engaged over a purlin to hold said elements in position, said reduced portions having one of the faces thereof inclined, and said central rib and inclined faces of the respective members of each pair of elements facing in opposite directions and being so proportioned that said elements may be arranged in substantially horizontally extending series with the longitudinally extending edges of said ribs and reduced portions in contacting engagement, whereby the outer surfaces of said elements will be in a common plane.

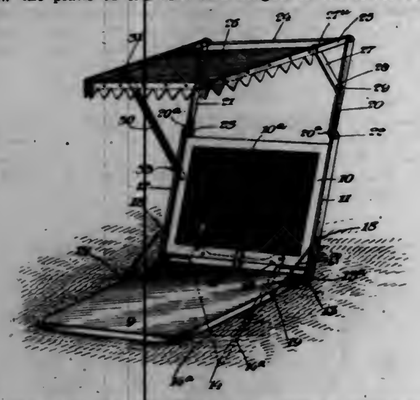


1,480,284. ICE-CREAM-CONE MACHINE. CHARLES MIGNEREY, Union Course, N. Y., assignor to Consolidated Wafer Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 17, 1921. Serial No. 492,905. 11 Claims. (Cl. 107—58.)

1. In an ice-cream cone machine two rows of coacting cone sections, stiffening means extending longitudinally along the outer side of each cone section, and means for pressing the said stiffening means snugly against the central portion of the said side.

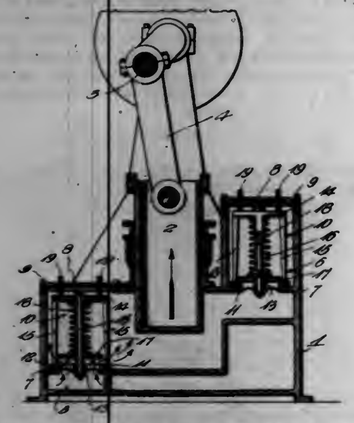
10. In an ice-cream cone machine a plurality of banks of cores arranged to revolve about a common center, a scraper pivotally associated with each bank of cores and revolving therewith, and means for moving the edge of each scraper across the open ends of the molds with which the scraper is associated after the baked cones are removed from the cores.

1,480,285. PORTABLE SANDING MACHINE. ROBERT A. MOORE, Detroit, Mich. Filed Dec. 31, 1917. Serial No. 209,756. 3 Claims. (Cl. 51—170.)



1. In a machine of the character described, the combination of a casing, a motor therein, a roller operated by said motor, a frame removably mounted therein, a series of spaced rollers on said frame, an endless belt mounted around said rollers on said frame and removable therewith, and means adapted to lock said frame in said casing with said belt in operative relation with said first named roller.

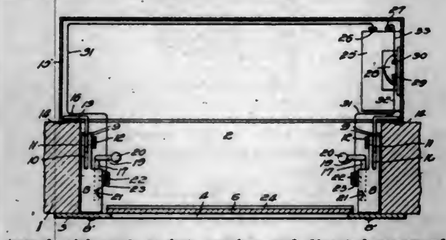
1,480,286. SAND OR OUTING REST OR THE LIKE. ALICE MORGANSTERN, New York, N. Y. Filed Jan. 16, 1923. Serial No. 612,935. 5 Claims. (Cl. 155—153.)



1. In a seating device the combination of a seat, a back rest hinged thereto, flexible means connecting said

back rest and seat, a wedge-shaped anchor extending below the plane of the seat and hinged to the lower edge

of said back rest, and means for releasably maintaining said anchor and back rest against relative movement.

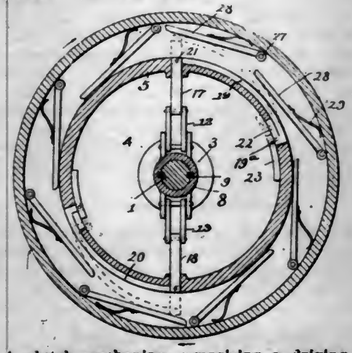


1,480,287. REMOVABLE CHECK VALVE. FRANK M. MORTON, Phenix City, Ala. Filed Nov. 25, 1921. Serial No. 517,656. 1 Claim. (Cl. 251—144.

A removable check valve unit comprising a valve cage having a head plate and elongated arms extending from said head plate, a valve seat engaging the free ends of said arms and having a central opening and fluid passages about the central opening, a connecting bolt extending axially of the cage and passing through the center of the head plate and through the central opening of said valve seat to securely hold the valve seat in contact with said arms, a check valve freely slidable upon said bolt between said head plate and valve seat, and a spring coiled about said bolt having one end engaging said head plate and the other engaging said check valve to yieldably hold the check valve in engagement with said valve seat and close the fluid passages thereof.

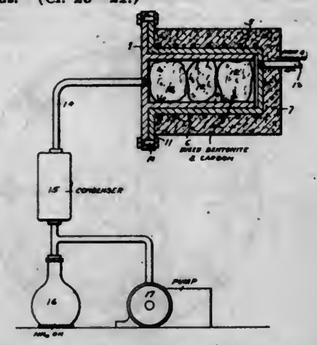
1,480,288. LETTER PLATE FOR DOORS AND MAIL BOXES. GEORGE D. MURRAY, St. Louis, Mo. Filed July 21, 1920. Serial No. 397,977. 1 Claim. (Cl. 200—57.)

In a mail alarm structure, a mail box, a plate having a hinged mail slot flap fixed to a door having a slot therein, a bridging conductor fixed to the rear face of the flap and extending from end to end thereof, a socket member fixed at its forward end to the flap plate adjacent the end of the flap, a pair of conductors directed rearwardly therefrom and provided with an upwardly and inwardly directed arm provided with a spherical contact head, means for longitudinally and rotatably adjusting said conductor arms with relation to its respective socket member and the flap conductor strip, a bifurcated arm in-



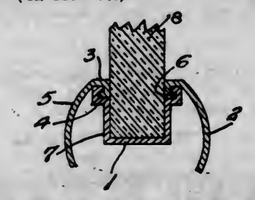
tegral with each socket member and directed rearwardly therefrom, a pair of L-shaped supporting arms fixed at their rear ends to the mail box and adjustably fixed at their forward ends to the bifurcated arms of the socket member for adjustably supporting the mail box with relation to the inner face of the door, said flap conductor strip when raised to contact with the spherical heads of the conductor arms.

1,480,289. METHOD OF IMPREGNATING CLOTHES AND THE LIKE AS A PROTECTION FROM MOTHS. ERWIN NAEFE, Berlin-Britz, Germany. Filed Sept. 5, 1922. Serial No. 586,326. 2 Claims. (Cl. 167—6.)



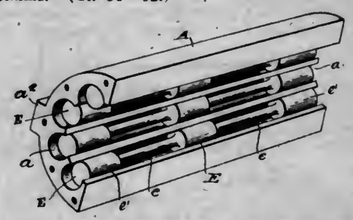
1. A method of impregnating clothes, upholstered furniture, furs, tapestry and the like as a protection from moths, consisting in applying to them by means of a spraying device or the like, an alcoholic solution of antimony-tannate, substantially as set forth.

1,480,290. CLUTCH MECHANISM. OSCAR T. NELSON, Cleveland, Ohio, assignor to Christian A. Barnholth, Akron, Ohio. Filed Oct. 9, 1920. Serial No. 415,928. 5 Claims. (Cl. 192—58.)



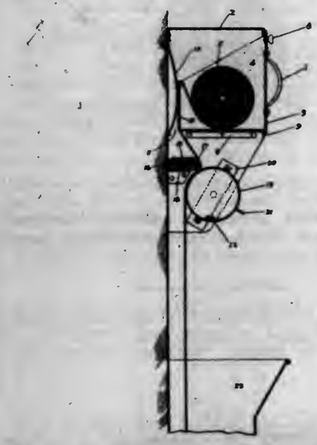
5. A clutch mechanism comprising a driving member and a driven member having laterally extending cylindrical flanges, the flange of one member being concentric with the flange of the other member, a closure member rotatable with one of said flanged members and cooperating with said flanged members to form an outer annular closed chamber and an inner chamber, both chambers being adapted to be filled with liquid, vanes pivoted adjacent the outer flange and bearing against the inner flange, a radially movable gate slidably mounted in the inner flange and adapted to be moved into the annular chamber, means within the inner chamber for shifting said gate, and means extending through said closure member for operating said shifting means.

1,480,291. PROCESS FOR OBTAINING NITROGEN FROM THE AIR. WILBUR ARMISTEAD NELSON, Nashville, Tenn. Filed July 13, 1923. Serial No. 651,258. 7 Claims. (Cl. 23—21.)



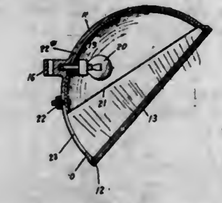
1. The herein described process which consists of heating a mass of moisture-bearing clay and carbon, passing a current of air in contact therewith thereby forming ammonia and condensing the water vapor which absorbs the ammonia whereby ammonium hydroxide is recovered.

1,480,292. WINDSHIELD TUBING. HUGO NEUMAN, Detroit, Mich. Filed Feb. 21, 1921. Serial No. 446,721. 2 Claims. (Cl. 189—77.)



1. A device of the class described comprising a channel member adapted to receive an edge of a transparent member, the edges of said channel member extending inwardly, and a tube enclosing the channel member and having inwardly extending portions return-bent around the inwardly extending edges of said channel member.

1,480,293. ROLLER BEARING. FRANK O. NORRIS, Baltimore, Md. Filed Feb. 16, 1922. Serial No. 536,999. 3 Claims. (Cl. 64—62.)

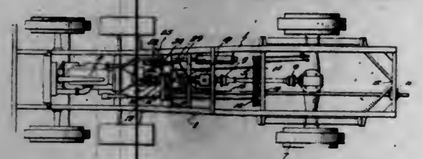


1. A roller bearing comprising a non-rotating cylindrical body composed of separable substantially semi-cylindrical parts each having in its inner bearing surface a circularly spaced series of longitudinal grooves which are interiorly enlarged or widened in circular form so as to provide open fronts of reduced width, a series of independent rollers inserted endwise within said grooves and having their peripheries projecting slightly through said open fronts and adapted to anti-frictionally bear upon the entire bearing surface of the periphery of a shaft journaled therein, and removable means at one end of said body to prevent the withdrawal or endwise movement of said rollers.

1,480,294. TOWEL CABINET. ALBERT L. OVERHOLT, Minneapolis, Minn., assignor, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed July 15, 1921. Serial No. 484,843. 15 Claims. (Cl. 45—32.)

9. A towel holder comprising means for holding a web of towel so that portions may be fed off by pulling on the towel in a certain direction, and means for automatically gripping the towel as it is fed in the same direction, said gripping means preventing the further feed thereof when a predetermined length of towel has been delivered until said gripping means is re-set, said gripping means including a stationary member and an oscillating member, substantially as described.

1,480,295. SIDE LAMP FOR VEHICLES. WILLIAM F. O'CONNOR, Tariffville, Conn., assignor to Robbins, Gamwell & Company, a Copartnership composed of Eugene H. Robbins, Richard H. Gamwell, and Loring G. Robbins, all of Pittsfield, Mass. Filed June 24, 1920. Serial No. 391,444. 1 Claim. (Cl. 240—44.)



A side lamp for a vehicle, including a substantially semi-spherical casing with a window and having on its interior a fixed socket disposed toward the center of the window, an approximately semi-spherical reflector movable on the inner surface of the wall of the casing surrounding the socket, said reflector having a slot through which the socket is disposed to allow the reflector to be adjusted upwardly and downwardly, and a handle protruding from the reflector through a slot in the casing so that the reflector may be manually adjusted from the exterior of the casing.

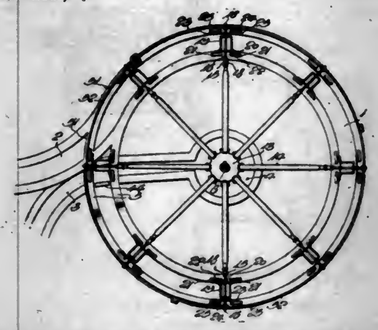
1,480,296. TRUCK. ELMER H. OVERSMITH, Buffalo, N. Y., assignor to The Buffalo Truck & Tractor Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 21, 1920. Serial No. 383,050. 6 Claims. (Cl. 180—70.)

1. In a motor vehicle, the combination with the engine and the transmission gearing connected thereto, of a drive shaft, an auxiliary transmission gearing between

said drive shaft and first mentioned transmission gearing and supported independently of said first-mentioned transmission gearing, a power transmission gearing intermediate said first-mentioned transmission gearing and

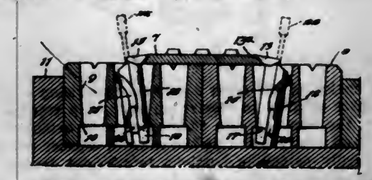
auxiliary transmission gearing and mounted independently thereof, and means for selectively driving either said power transmission gearing or auxiliary transmission gearing from said first-mentioned transmission gearing independently of each other.

1,480,297. FLUID-PRESSURE-CONTROLLING MEANS. ARTHUR A. PARKER, Portland, Oreg. Filed Dec. 28, 1922. Serial No. 609,498. 10 Claims. (Cl. 50—11.)



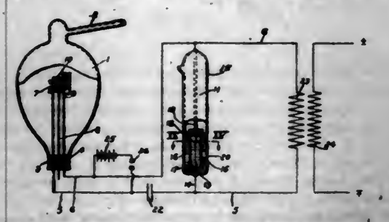
1. A device of the character described, comprising a chamber provided with an inlet port and an escape port, the inlet port being adapted to be connected with a source of fluid under pressure, valves controlling said ports respectively, a member movable in said chamber by the pressure in the latter, means between such member and said valves adapted to position the latter relatively to the position of said member, said chamber provided with an outlet orifice, a tube connected thereto, a hose connection at the free end of said tube, said hose connection having an outlet bore, a valve controlling the latter.

1,480,298. BEZEL. GEORGE A. PEARSON, Chicago, Ill. Filed Oct. 14, 1922. Serial No. 594,665. 2 Claims. (Cl. 156—14.)



1. A device of the character described, comprising a pair of annular bands of thin resilient sheet metal, the one band being tapered and provided at one edge with an outwardly disposed peripheral flange, the other band being of substantially uniform diameter and provided at one edge with an outwardly disposed flange, said bands adapted to telescope yieldingly, with the flanges engaging opposite sides of a panel, and a flexible diaphragm within the first mentioned band adapted to be held in place through contraction of said band induced by the telescoping of the bands.

1,480,299. WATER-POWER PLANT. GEORGE W. PRISBREY, St. George, Utah, assignor of thirty-four seventy-seconds to Wicks Larson & Co., St. George, Utah. Filed Aug. 7, 1922. Serial No. 580,167. 11 Claims. (Cl. 170—116.)

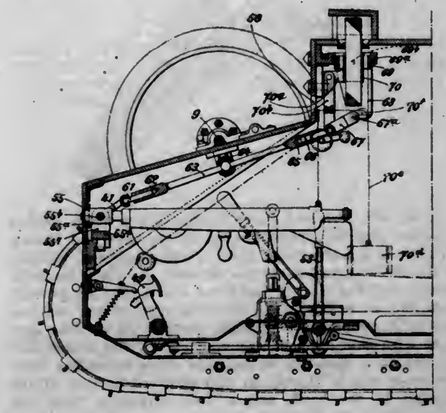


1. A current motor comprising a substantially circular trough open at its ends and pitched at a downward incline from its inlet end to its outlet end, a bridge extending upwardly from the outlet end portion of the trough to the inlet end portion thereof, a rotatable operating element, arms radiating from said operating element, carriages carried by said arms and moving upon said trough, and paddle elements carried by said carriages for extending into said trough whereby water flowing through the trough may impart movement to said carriages.

1,480,300. PRINTING APPLIANCE. JOHN P. QUIGGAN, Brooklyn, N. Y. Filed May 26, 1923. Serial No. 641,566. 7 Claims. (Cl. 101—385.)

1. A clamping device for printing plates comprising a shank having a plate-engaging jaw formed at one end thereof, a shoulder on the other end of said shank adapted to engage a part of the plate support, an element mounted for movement on said shank adjacent to the jaw-end thereof, and positively actuated means contained within said shank for controlling the movement of said element.

1,480,301. FURNACE. HARVEY C. RENTSCHLER, Pittsburgh, Pa., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 13, 1920. Serial No. 430,118. 34 Claims. (Cl. 204—64.)

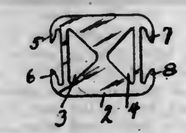


1. A furnace comprising a chamber having an inert environment, an induction coil within said chamber and adapted to heat a resistor and means for passing high-frequency current through said coil.

1,480,302. FOUNTAIN DRAWING PEN. ERNST RICHARD GUSTAV ALBERT RÖSLER, Hamburg, Germany, assignor to the Firm of Simplo Füllfeder Gesellschaft Voss, Lansen & Dziambor, Hamburg, Germany. Filed Mar. 12, 1923. Serial No. 624,610. 6 Claims. (Cl. 120—109.5.)

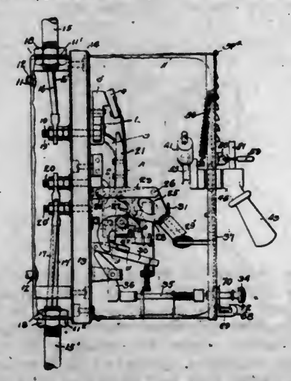
1. A fountain drawing pen comprising a fountain, a tube communicating with the fountain and having an oblique opening at its end adapted to impinge against the inside of one of the shanks of the drawing pen, a set screw screwed into the other shank of the pen and adapted to engage the said tube to press its end against the first named shank.

1,480,303. MILITARY VEHICLE. IRÈNE ROY, Paris, France. Original application filed June 28, 1920, Serial No. 392,308. Divided and this application filed July 14, 1921. Serial No. 484,754. 3 Claims. (Cl. 89—40.)



2. In a motor vehicle, the combination of an armoured body, a gun adapted to be pointed by hand and mounted for universal movement, a periscope, a pivoted support for the said periscope adapted to allow horizontal turning and vertical tilting movement, and an articulated system formed of rigid rods connecting the gun with the periscope and adapted to maintain the periscope in the direction of firing.

1,480,304. RAMMER. ANTON SALIGER, St. Louis, Mo. Filed July 5, 1921. Serial No. 482,302. 9 Claims. (Cl. 22—187.)



1. A rammer-head comprising a body member and an impact piece therefor, said body member and said impact piece being formed with mating undercut portions, whereby they are detachably secured together.

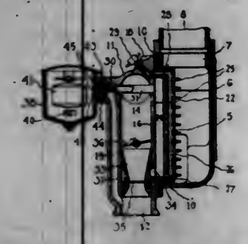
1,480,305. GARTER. SUSANA A. SCHECK, San Francisco, Calif. Filed May 2, 1922. Serial No. 557,884. 2 Claims. (Cl. 24—74.)

1. A garter fastener comprising a plate having two openings therein and having two oppositely placed prongs at each end whereby the ends of a garter tape may be passed through the two openings and then under the prongs to secure the garter in a desired adjustment.

1,480,306. ELECTRICAL-SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin Township, Chester County, Pa. Filed Oct. 2, 1919. Serial No. 328,056. 42 Claims. (Cl. 200—107.)

2. In a resetting mechanism for circuit breakers and other switches, a switch, an operating lever therefor, a box enclosing the switch and having a movable cover, a resetting mechanism for the switch carried by the cover and movable, when the cover is in closed position, through the path of movement of the operating lever, and wedge-fastening mechanism insuring complete closure of the cover and the operative positioning of the resetting lever.

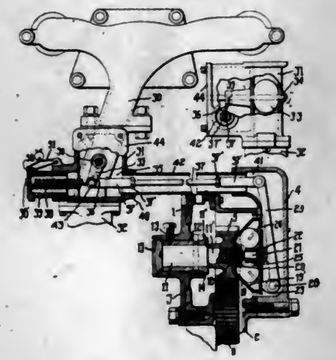
42. The combination with movable contact structure and restraining means therefor, of an enclosing housing, resetting mechanism carried by said housing in detached relation to said contact structure and operable from the exterior of said housing for moving said contact structure to circuit closing position, means for preventing circuit closure by said contact structure when actuated by said resetting mechanism during existence of a predetermined electrical condition, means for locking said



resetting mechanism to said housing, and manually operated tripping means independent of said resetting mechanism carried by said housing in detached relation to said restraining means for actuating said restraining means independently of said resetting mechanism to trip said contact structure.

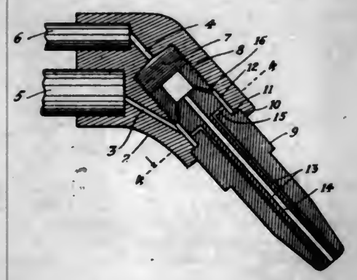
1,480,307. LABEL FOR WOUND OR ROLLED FABRICS. FREDERICK W. SEATON, Lonsdale, R. I., assignor to Sayles Finishing Plants, Inc., Saylesville, R. I., a Corporation of Rhode Island. Filed May 3, 1923. Serial No. 636,372. 3 Claims. (Cl. 40—2.)

1. A label for cloth wound upon a holder, comprising a card-board label bearing portion having an exposed face for the label, a card-board leg portion to be inserted between a surface of the holder and the cloth wound thereon and having the part which extends beyond the end of the holder and edges of the cloth bent to provide a hinge leaf integral with the leg portion and connected to the leg portion by a line of fold of increased flexibility, and an adhesive connecting the outer surface of the hinge leaf to the back of the label bearing portion.



1,480,308. FUEL-SUPPLY DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES R. SHORT and CALEB E. SUMMERS, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 31, 1919. Serial No. 301,076. 22 Claims. (Cl. 261—12.)

1. In a carbureting device for internal combustion engines, a casing having an air inlet passage leading thereinto and a mixture outlet passage leading therefrom, a vaporizing chamber, means for heating said vaporizing chamber, means for supplying atomized liquid fuel to said vaporizing chamber to be vaporized therein, a passage leading from said vaporizing chamber and discharging into said air inlet passage, a passage leading from said vaporizing chamber and discharging into said casing, and a throttle valve for controlling the flow through said casing.

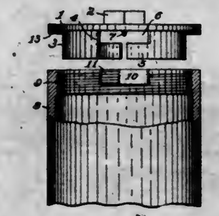


1,480,309. GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. CHARLES R. SHORT and ALEX TAUB, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 25, 1919. Serial No. 333,290. 2 Claims. (Cl. 264—8.)

2. In an internal combustion engine, an intake passage, a throttle valve for controlling the flow therethrough, an operating arm for said valve, a casing within which said arm is located and which casing is provided with an opening leading thereinto, a screw cap in threaded engagement with the wall of said casing, a spring connected at one end to said arm and the other end of which is connected with said screw cap, a removable cover for closing the opening aforesaid, a ball governor actuated by the engine, a lever actuated by said governor, a link intermediate the free end of

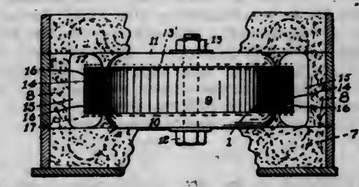
said lever and the free end of the operating arm for said valve, a tubular member surrounding said link, a hollow cover plate within which said link is housed and which cover plate provides a pivotal support for one end thereof and which casing fits over the governor aforesaid to thereby enclose the same.

1,480,310. CUTTING TORCH TIP. ELMER H. SMITH, Minneapolis, Minn. Filed May 12, 1919. Serial No. 296,490. 5 Claims. (Cl. 158—27.4.)



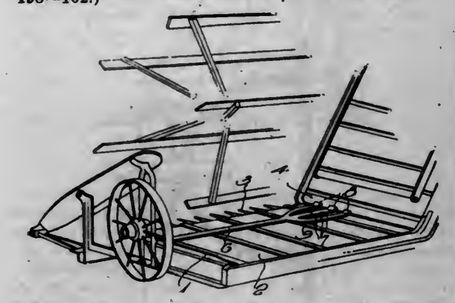
1. An oxy-acetylene torch comprising a head having a socket therein screw-threaded at its base and having an inter-fitting outer end and a portion enlarged relative to the screw-threaded portion between the screw-threaded portion and the inter-fitting outer end, a tip open at both ends and all in one piece screw-threaded at one end and having a peripherally enlarged portion inter-fitting gas-tight with said outer inter-fitting end of the socket said tip having a plurality of separate ducts extending from the outer end of the tip to said enlarged portion of the opening in the head, and a duct extending from the outer end of the tip entirely through the tip lengthwise thereof and opening into the socket in the head.

1,480,311. QUICK-REMOVAL COVER. JAMES H. STEBBINS, Waterloo, Iowa, assignor to George H. Quest and Sidney C. Smith. Filed Mar. 12, 1923. Serial No. 624,581. 4 Claims. (Cl. 137—13.)



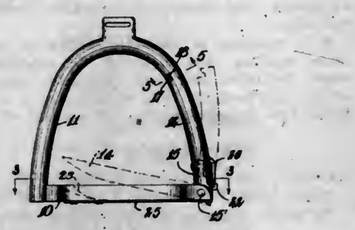
1. In combination, a container having an interiorly-threaded open end, a cross-bar having its opposite ends

threaded with the threads in mesh with the container threads, and a cover having projections depending into



the container on opposite sides of said cross-bar, the projections each having a lateral opening to receive and interlock with the cross-bar releasably.

1,480,312. METHOD OF MAKING STATORS. HARRY F. STRATTON, Cleveland Heights, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 26, 1922. Serial No. 577,702. 5 Claims. (Cl. 171—252.)

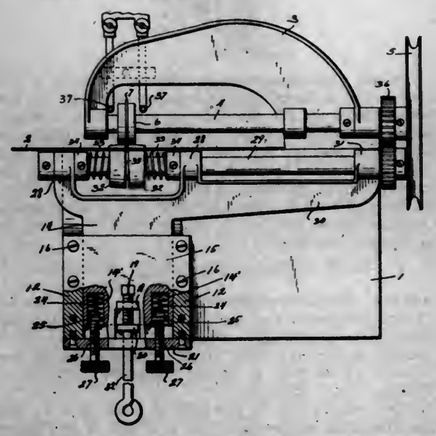


2. The method of making stators for induction motors with frames cast around the laminations which consists in forming a core containing an assembly of laminations, forming a mold with a molding space for the frame around the periphery of the core and adjacent portions of the sides thereof, and pouring molten metal into the molding space, yieldable material having been previously disposed in the molding space to receive strains due to the shrinking of the cast metal toward the core.

1,480,313. SHORT-GRAIN-HANDLING ATTACHMENT FOR BINDERS. THOMAS SVOBODNY, Svea, Minn. Filed Jan. 18, 1923. Serial No. 613,470. 4 Claims. (Cl. 198—102.)

1. The combination with a grain binder having the usual platform apron and elevator inclining therefrom; of a bar over the front portion of said apron and of negligible width with respect to the width of said apron, said bar extending from the outer end of the platform frame toward the elevator in rearwardly spaced relation with the front edge of said apron, the inner end of said bar having a plurality of horizontally spaced tines whose free ends turn upwardly to guide short grain onto said elevator.

1,480,314. SADDLE STIRRUP. BERNARD SZYMANSKI, Rawl, W. Va. Filed Jan. 3, 1922. Serial No. 526,517. 5 Claims. (Cl. 54—40.)

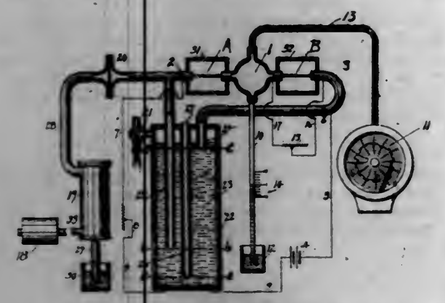


1. A stirrup comprising a bottom bar, a yoke section fixed to one end thereof, an arm extending along said bar and hinged to the opposite end thereof and having its top face flush with the top face of said bar, and a complementary yoke section having its base portion formed on and rigid with said arm.

1,480,315. MAGNETIC SEPARATOR. HERBERT HUBAND THOMPSON, Birmingham, and ALFRED EVAN DAVIES, Tanworth-in-Arden, England. Filed Sept. 30, 1921. Serial No. 504,433. 2 Claims. (Cl. 83—71.)

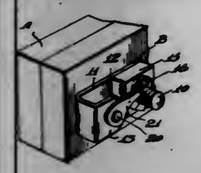
1. In a magnetic separator, a trough for the material to be separated provided at its bottom with magnetic surfaces, magnets arranged below the bottom of the trough and operating to magnetize the said magnetic surfaces, and a frame provided with stationary armature bars of magnetic metal arranged in the upper part of the trough and suitably distanced from the said magnetic surfaces below them, and energized by the said magnets.

1,480,316. SHOE MACHINERY. JAMES P. TIERNEY, Brockton, Mass. Filed Dec. 6, 1922. Serial No. 605,185. 8 Claims. (Cl. 12—96.)



1. A machine of the class described comprising a table, a vertically movable slide positioned below the table, a shaft carried by the slide, rolls keyed to the shaft for rotation therewith but having movement lengthwise

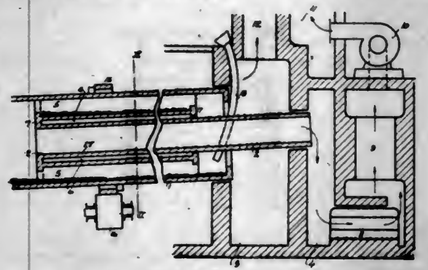
of the shaft, means for urging the rolls one toward the other, a roll supported above the table, said table having an opening through which the under rolls are adapted to extend, and means for constantly urging the slide upwardly.



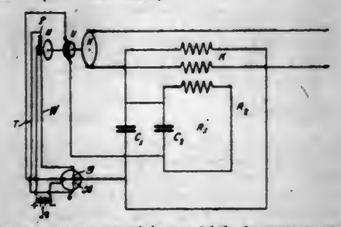
8. A machine of the class described comprising a table, coacting rolls supported for rotation above and below the table, said table having an opening through which certain of the rolls are adapted to extend, and a gauge arm extending across the opening of the table.

1,480,317. GAS-ANALYSIS APPARATUS. FRITZ FREDERICK UEHLING, Passaic, N. J. Filed Apr. 18, 1923. Serial No. 632,883. 17 Claims. (Cl. 23—3.)

1. In a combustible recorder, the combination with a chamber having an inlet and an outlet, means for passing gas through the same, means for heating the inlet and outlet, and means for measuring the tension of the gas in the chamber.



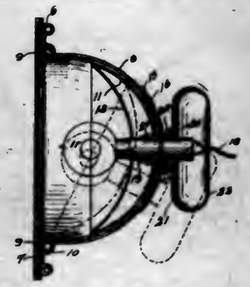
1,480,318. NUT LOCK. JOSEPH EMILE VALADE, Coaticook, Quebec, Canada. Filed May 13, 1922, Serial No. 560,807. Renewed Oct. 16, 1923. 2 Claims. (Cl. 151—13.)



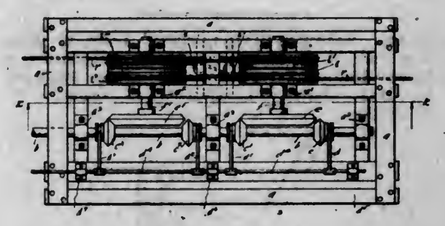
1. A nut lock comprising in combination with a bolt, a nut having a flange formed integral with the top face thereof, teeth on the top face of the nut, a U-shaped member having a long arm provided with an orifice designed to engage the bolt, and a short arm provided with a pin having three faces squared, a head on the pin, and a pawl pivotally mounted thereon engaging the teeth on the flange, the pawl being provided with orifices having a squared recess designed to engage the pin, as and for the purpose described.

1,480,319. ROTARY CEMENT-BURNING KILN. MIKAEL VOGEL-JÖRGENSEN and KRISTIAN MIDDELBOE, Frederiksberg, near Copenhagen, Denmark, assignors to F. L. Smidth & Co., New York, N. Y., a Corporaiton of New Jersey. Filed Jan. 6, 1923. Serial No. 611,201. 2 Claims. (Cl. 222—7.)

1. In a rotary kiln, a plurality of tubes open at both ends extending lengthwise of the kiln and of less length than the kiln arranged about a central tube adapted to serve as a flue for products of combustion from the burning zone of the kiln, means for drawing said products of combustion through said flue, the tubes surrounding the central flue having their upper ends in communication inside a chamber surrounding the central tube, said chamber being provided with an outlet for volatile products independent of the flue, and means for supplying material to be treated to the upper ends of said surrounding tubes.

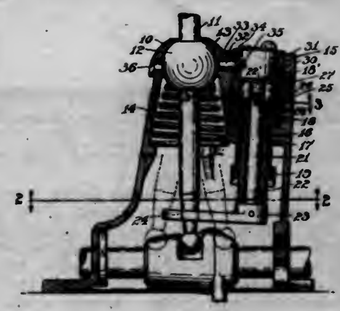


1,480,320. SPEED REGULATOR FOR HIGH-FREQUENCY MACHINES. GRAF GEORG VON ARCO, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie M. B. H., Hallesches Ufer 12/13 Berlin, Germany. Filed Oct. 25, 1922. Serial No. 596,861. 6 Claims. (Cl. 171—119.)



1. In a system comprising a high frequency generator, the combination of a rectifier driven synchronously with the generator, a resonant circuit supplied from the generator and connected to the rectifier, and means controlled by rectified current from said circuit for regulating the speed of the generator.

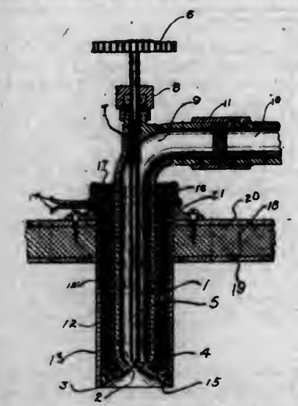
1,480,321. ADJUSTABLE SPOTLIGHT. MARTIN A. WALSH, Marmarth, N. Dak. Filed Sept. 28, 1922. Serial No. 591,072. 4 Claims. (Cl. 240—61.)



1. In combination with a vehicle having a windshield thereon, of a lamp within said vehicle comprising a retaining ring adapted to be held against the surface of said windshield, a housing rotatably supported by said ring and means for rotating said housing, said windshield adapted to serve as a closure for the housing and ring, a reflector associated with said housing for varying the direction of rays projected therefrom through said windshield, and means for securing said reflector in adjusted position with respect to the housing.

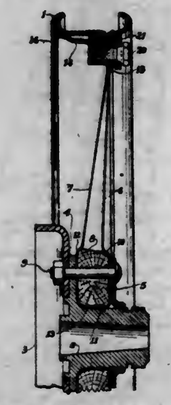
1,480,322. CABLE MECHANISM. FREDRICK C. WALTERS, Eugene, Oreg. Filed June 21, 1922. Serial No. 569,969. 8 Claims. (Cl. 74—21.)

1. A cable mechanism of the character described comprising, a frame, a pair of shafts journaled in the frame, two companion drums loosely mounted on each shaft, a cable running on said drums, releasable means adapted to connect operatively said companion drums individually with their respective shafts in either direction, automatic means restraining the operative connection of that one of two companion drums which, because of the reduction of its diameter by wear of the cable, revolves the faster, thereby permitting such faster drums to idle until the cable has worn the companion relatively slower drum to a traction diameter equal to that of the faster drum, and means for communicating power thru said shafts.



1,480,323. MOUNTING FOR GEAR-SHIFT LEVERS. SAMUEL O. WHITE, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Aug. 11, 1922. Serial No. 581,127. 13 Claims. (Cl. 70—128.)

1. A gear shift lever lock comprising a pedestal, a shifting lever mounted therein, a locking fork formed for separable interlocking engagement with the shifting lever, a shaft carrying said fork and journalled in the pedestal, a key-controlled lock pocketed in the pedestal in cooperative relation with said shaft and having a non-rotative engagement with said shaft, and a spring acting upon the shaft to hold the same axially in position in the pedestal.

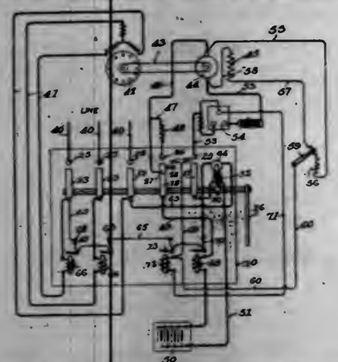


1,480,324. LIQUID ATOMIZER. RUSSELL A. WILLSON, Spokane, Wash., assignor of one-half to Fred N. Martin, Spokane, Wash. Filed Oct. 18, 1921. Serial No. 508,568. 1 Claim. (Cl. 299—107.)

The combination with an enclosure wall of an atomizer including a nozzle having a restricted end opening and outwardly flaring head, an external attaching flange on said head, a casing secured to said flange and forming a space around the nozzle, an electric heating element with-

in said space, an insulating medium between said element and casing, and a head closing the opposite open end of said casing.

1,480,325. DOUBLE-DISK WHEEL FOR AUTOMOBILES. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed June 4, 1920. Serial No. 386,448. 3 Claims. (Cl. 301—63.)

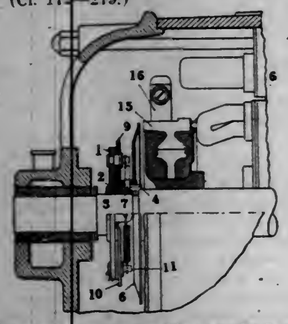


2. The combination with an annular felloe member having at one side a broad, plane, annular, inwardly-extending flange, of two disks having plane peripheral zones overlapping each other and said flange and bent laterally in contact with the inner side of said member, means rigidly uniting said zones at short intervals, said means securing the united zones to said flange, and means for detachably securing rim-attaching wedges to said flange and zones.

1,480,326. CONTROLLING APPARATUS FOR BATTERY-CHARGING MOTOR-GENERATOR SETS AND METHOD OF STARTING OPERATION OF THE SAME. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1920. Serial No. 369,990. 6 Claims. (Cl. 171—314).

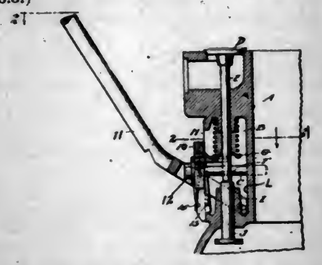
1. The combination of a motor, a generator, a storage-battery and a source of power, a circuit including said motor and source of power, a circuit including said generator and storage battery, switch members in said

circuits, a single means for holding said switch members in circuit-closing position, and means automatically op-



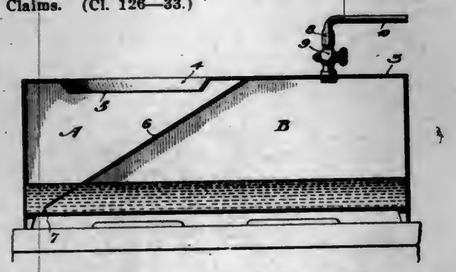
erable by adverse current conditions in either circuit for actuating said holding means to release all of said switch members.

1,480,327. AEROPLANE WING. OSCAR H. WISENANT, Colorado Springs, Colo. Filed May 10, 1920. Serial No. 380,250. 3 Claims. (Cl. 244—31.)



3. In an aeroplane wing a pocket formed in one face extending longitudinally of the wing but of less length than the wing, said pocket concaved relative its longitudinal axis and having end faces substantially perpendicular to the plane of the wings.

1,480,328. SHORT-CIRCUITING MECHANISM. CARL H. WOLFF, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 19, 1923. Serial No. 613,629. 4 Claims. (Cl. 172—279.)

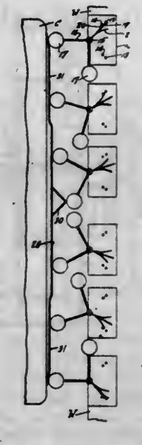


4. In a dynamo electric machine provided with a commutator having a vertical face, a circuit closing disk supported for sliding motion into contact with the commutator, and capable of tilting with respect to its support to adjust itself to the commutator face, means to prevent tilting of the disk when it is in retracted position, and centrifugal means for actuating the disk.

1,480,329. VALVE-SPRING LIFTER. LOUIS M. WOOD, New York, N. Y., assignor, by mesne assignments, to Speed-O-Multiple Valve Lifter Corporation. Filed Feb. 28, 1922. Serial No. 539,993. 22 Claims. (Cl. 29—86.3.)

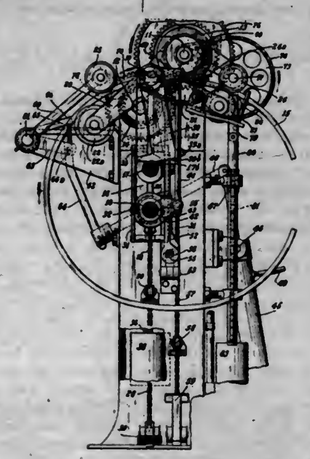
1. A valve spring lifter comprising a bar adapted to engage the under sides of a plurality of valve spring seats, means for lifting said bar and compressing the springs, and resilient locking means carried by said bar for retaining the same in lifted position and the springs under compression.

1,480,330. STEAMER. LEROY SAXON WORSLEY, Tampa, Fla. Filed Jan. 23, 1923. Serial No. 614,481. 4 Claims. (Cl. 126—33.)



1. A steamer comprising a casing having a top wall and being arranged to have heat applied to the bottom thereof, and a partition dividing the interior of said casing into a filling-chamber and a steam-chamber and extending in downwardly-inclined disposition from the top wall of said casing toward the bottom and under said filling-chamber, there being a passage in the lower portion of the steamer affording communication between said chambers, a filling-opening to said filling-chamber in the top wall of said casing, and a steam-outlet from said steam-chamber.

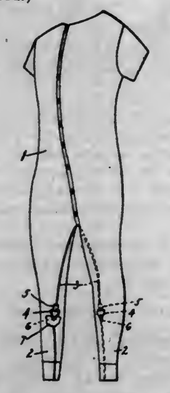
1,480,331. ELEVATOR SYSTEM. GEORGE R. ZORN, Baltimore, Md., assignor to General Elevator Company, Baltimore, Md. Filed Dec. 20, 1922. Serial No. 608,016. 13 Claims. (Cl. 187—29.)



5. The combination with an elevator well, a motor driven elevator within the well and a control switch for the motor mounted upon the well embodying a main blade and a pair of auxiliary blades, pairs of spaced contacts adapted for alternate engagement by said main blade and one of said auxiliary blades or said main blade and the other of said auxiliary blades, said auxiliary blades remaining in engagement with their contacts subsequently to the disengagement of the main blade from the associated contact of the pair, of a car

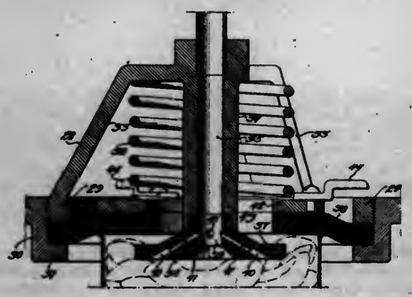
carried cam having a body portion operatively engaging said switch to shift the blades thereof to a point where they disengage from their contacts and upon its ends with portions adapted to operatively engage the switch

to shift the blades to a position disengaging the main blade from its engaged contact and maintaining the auxiliary blade in engagement with its engaged contact, said body portion being adjustable as to length.



1,480,332. ABRADING MACHINE. ROBERT R. AMBLER and GEORGE F. WILSON, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1922. Serial No. 551,467. 17 Claims. (Cl. 51—88.)

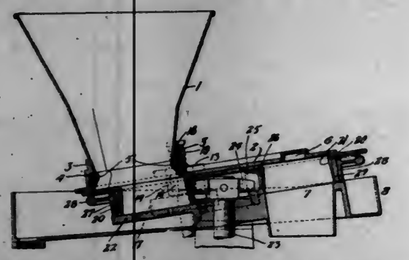
1. In an abrading machine for a resiliently flexible strip of material, the combination of a pair of abrading wheels spaced apart longitudinally of the work, said wheels being adapted simultaneously to abrade respective faces of the work as the latter passes between them, a work-engaging roller spaced from said wheels longitudinally of the work and so positioned as to cause the work to be progressively flexed against said wheels as it passes between them, driving means for said abrading wheels, and means associated with said driving means for causing the work to pass said wheels at a determinate, uniform speed with relation to the speed of said wheels.



2. In an abrading machine for a resiliently flexible, annular article, the combination of a pair of overhanging abrading wheels spaced apart longitudinally of the work, said wheels being adapted simultaneously to abrade respective faces of the work as the latter passes between them, and a work-supporting and guiding structure pivotally mounted adjacent said wheels and on an axis substantially parallel thereto, said structure being adapted in one angular position on its pivot to hold an annular article hung thereon with an upper reach of the article passing between but out of contact with said wheels, and in another angular position to hold the article flexed against both of said wheels.

1,480,333. UNION SUIT. DAVID ATWATER, Westfield, Mass. Filed Apr. 25, 1922. Serial No. 556,492. 4 Claims. (Cl. 2—144.)

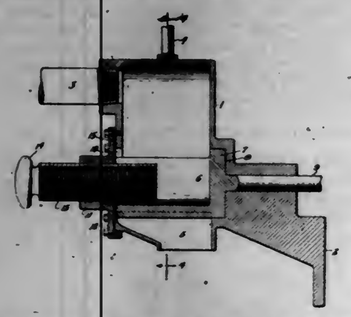
4. As an improved article of manufacture, a full-length union suit having seams on the insides of the legs thereof, looped tabs attached above the loops therein to the said legs across said seams, hose-engaging clasps having their top parts passed through the loops in said tabs, and hose-engaging buttons attached to said legs across said seams below said tabs.



1,480,334. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed May 6, 1922. Serial No. 558,866. 3 Claims. (Cl. 226—98.)

1. In a can filling machine, a tank having a discharge port; a depending annular flange surrounding the port and having an inwardly projecting annular shoulder, a disk mounted centrally of the port and having a flat

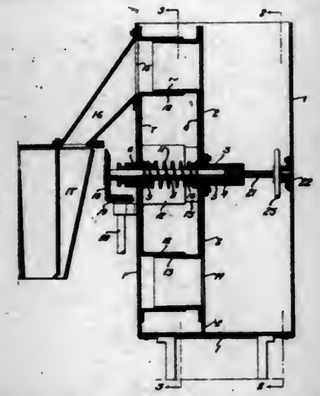
portion on its upper side; an elastic ring seated upon the annular shoulder and the disk; a housing having its base upon the outer part of the elastic ring, and a spring mounted in the housing and normally holding the elastic ring in its closed position.



1,480,335. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Feb. 27, 1923. Serial No. 621,527. 6 Claims. (Cl. 226—72.)

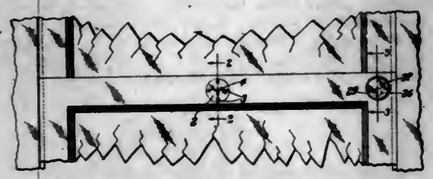
1. In a can filling machine, the combination with traveling measuring receptacles of a plate carrying a hopper and having a pivot, adjacent one edge, connecting it with the frame, and means for swinging the plate to and fro, with the discharge opening of the hopper over the measuring receptacles, with said pivot as an axis.

2. In a can filling machine, a plate carrying a hopper and a yielding compression member disposed under the throat of the hopper.



1,480,336. ROTARY MEASURING VALVE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Feb. 27, 1923. Serial No. 621,529. 1 Claim. (Cl. 221—107.)

A liquid measuring device consisting of a liquid receptacle; a U-shaped valve having one end seated in a circular recess in the wall of the casing and the other in a circular opening in said wall; a threaded collar having a flange partly closing the opening; a threaded plunger taking through the collar, and means for rotating the valve.

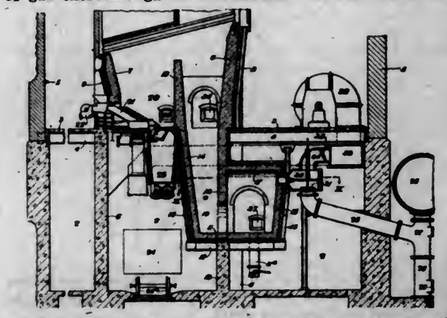


1,480,337. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Mar. 3, 1923. Serial No. 622,662. 3 Claims. (Cl. 221—97.)

1. Liquid measuring apparatus including a tank having a discharge opening; a measuring wheel mounted to rotate therein in a vertical plane and consisting of sections having corresponding series of telescoping sleeves with open ends; means for closing one end of the sleeves in the upper arc of rotation of the measuring wheel; means for closing the other end of the sleeves during said upper arc of rotation, except when in regie-

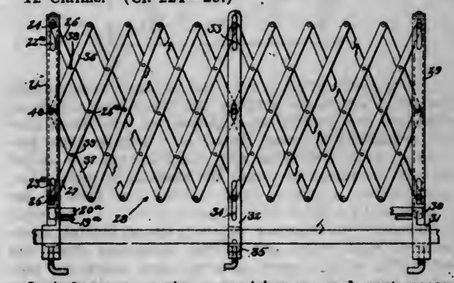
try with the discharge opening; means for adjusting the wheel sections relatively to each other to vary the capacity of the sleeves, and means for imparting rotation to the measuring wheel.

1,480,338. SASH LOCK. ALLAN H. BACON, St. Louis, Mo. Filed Dec. 5, 1921. Serial No. 519,824. 5 Claims. (Cl. 70—14.)



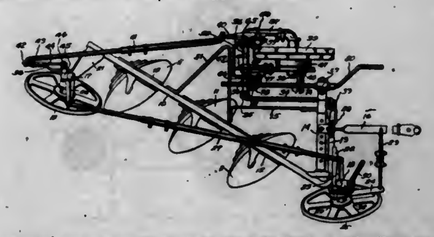
1. The combination with the adjacent horizontal members of upper and lower window sashes; of a lock for said members comprising a barrel mounted in the horizontal member of the lower sash, threads in the outer end of said barrel opposite the lower horizontal member of the upper sash, a stem mounted in said barrel of smaller diameter than the internal diameter of said threads, an enlarged threaded portion on the outer end of said stem arranged to engage with said threads, a flange near the outer end of said stem arranged to abut against the threads to prevent further outward movement of said stem, a barrel embedded in the lower horizontal member of the upper sash arranged to be alined with said barrel in the lower sash, threads in said second barrel arranged to engage the threads on said stem, and means for turning said stem to cause the threads thereon to pass wholly out of the first-named barrel and entirely within the second named barrel leaving the unthreaded portion of said stem entirely within the first-named barrel and said flange against the outer ends of the threads in the first-named barrel.

1,480,339. COMBINATION GAS AND COAL FIRED FURNACE. BRYANT BANNISTER, Pittsburgh, Pa. Filed Sept. 8, 1920. Serial No. 408,905. 5 Claims. (Cl. 110—22.)



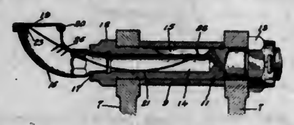
1. A combined coal and gas fired boiler furnace comprising in combination, a coal combustion chamber above the floor level, a back wall along the rear end of said chamber and extending upwardly an appreciable distance

so as to direct the products of combustion from said chamber against the boiler being heated, a gas combustion chamber located materially below the floor level at a point to the rear of said back wall, said chamber having an ignition wall therein for retarding the passage of gas therethrough until combustion is established, the



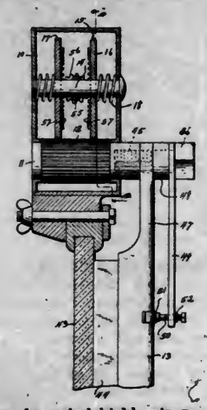
portion of said gas combustion chamber beyond said ignition wall being of constantly increasing cross sectional area towards the boiler to provide for the expansion of the gas as combustion takes place, and means for supplying air and gas to said gas combustion chamber.

1,480,340. LUGGAGE CARRIER. LOUIS I. BECKWITH, Boston, Mass. Filed Jan. 30, 1922. Serial No. 532,805. 12 Claims. (Cl. 224—29.)



8. A luggage carrier comprising an end post, means for securing said post to the running board of an automobile, a hinge bar, means for pivotally connecting said bar and post comprising elements extending substantially at right angles to the length of the bar, said elements having journal openings therein, and a luggage retainer device having one end thereof secured to said bar.

1,480,341. LIFTING MECHANISM FOR POWER-LIFT PLOWS. DAVID A. BIEBINGER, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 8, 1920. Serial No. 429,220. 2 Claims. (Cl. 97—73.)

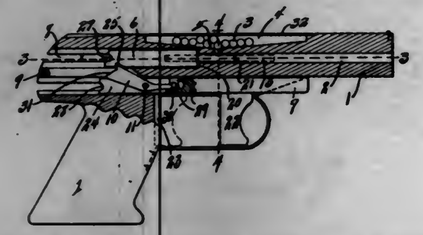


2. In a plow of the class described, a vertically movable main frame adapted to support one or more furrow turning elements; an auxiliary frame carried by said main frame; brackets carried by said auxiliary frame; an oscillating lifting shaft supported in bearings carried by said brackets; means for adjusting said brackets relative to one another; a ground wheel carried by said lifting shaft; clutch mechanism operated by said ground wheel; and means intermediate said clutch mechanism and said main frame and through which said main frame is lifted by power derived from said ground wheel.

1,480,342. SHACKLE BOLT. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 13, 1922. Serial No. 543,365. 6 Claims. (Cl. 64—27.)

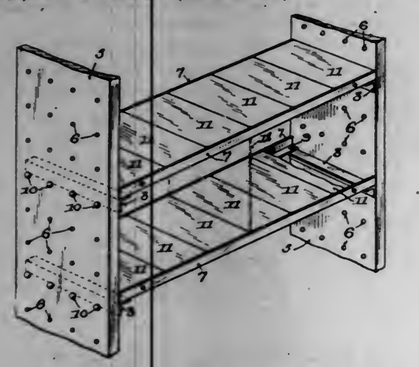
1. A shackle bolt having a passage extending longitudinally thereof, and a slot through which said passage communicates with the peripheral surface of the bolt; an oil cup communicating with said passage and through which oil may be supplied thereto; a cover pivotally connected with said oil cup for closing the same; and a curved and resilient reciprocating cleaning wire operating within said passage and the middle portion of which contacts with the interior thereof opposite said slot, one end of said wire being pivotally connected with said cover so as to be operated thereby and the other end thereof being held in place within said slot by the resilience of said wire, and which last mentioned end moves along said slot as said cover is operated.

1,480,343. WINDSHIELD WIPER. CHARLES M. BOLICH, Allentown, Pa. Filed May 24, 1922. Serial No. 563,327. 8 Claims. (Cl. 74—14.)



1. In a drive for windshield wipers, the combination with a geared wiper shaft, of a pair of synchronously rotatable mutilated gears engaged with the wiper shaft, means for oppositely rotating said gears embodying a drive shaft, and means connecting the drive shaft and gears for adjustably regulating the relative speeds thereof.

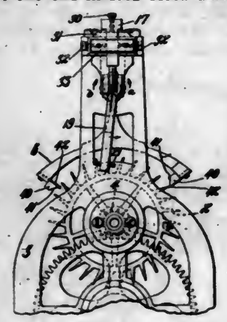
1,480,844. TOY PISTOL. LEVI M. BOWMAN, Fort Worth, Tex., assignor to Otto H. Lang, trustee, Dallas, Tex. Filed Dec. 16, 1922. Serial No. 607,321. 1 Claim. (Cl. 124—2.)



A toy pistol comprising a trigger plunger and a discharge plunger, a trip pivoted in said trigger plunger and operatively engaging said discharge plunger, elastic means

normally holding said trip in engagement with said discharge plunger, a frame for said plungers having a longitudinal bore therein forming a barrel for said discharge plunger and a longitudinal slot for said trigger plunger and having a magazine in the upper part for containing shot and for feeding shot one at a time to said barrel, means for preventing premature displacement of

a shot in said barrel, means for automatically releasing said trip from said discharge plunger when the trigger is forced backwardly by the operator, resilient means for actuating said discharge plunger when released from said trip, and means for restoring said trigger plunger to normal position and for causing said trip to engage said discharge plunger.

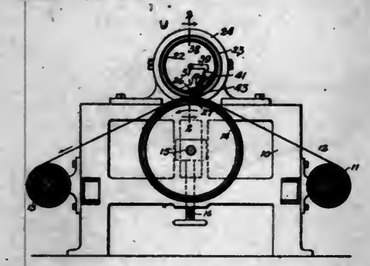


1,480,345. SHELF STRUCTURE. HARRY L. BRADLEY, Milwaukee, Wis., assignor of one-half to Lynde Bradley, Milwaukee, Wis. Filed Feb. 20, 1920. Serial No. 360,084. 2 Claims. (Cl. 211—27.)

1. A shelf structure comprising end supports, a plurality of shelf units each comprising longitudinal angle iron sections extending between and carried by said end supports and having their flanges extending repectively upwardly and inwardly and a series of transversely extending shelf boards having their ends seated on the inwardly extending flanges and confined between the upwardly extending flanges, certain of said shlef boards defining seating recesses therebetween, and partition members extending between the shelf units and having their edges engaged in said recesses.

1,480,346. ESCAPEMENT MECHANISM. CHARLES H. BRIGDEN, Waltham, Mass. Filed June 8, 1922. Serial No. 566,715. 4 Claims. (Cl. 58—123.)

1. In a mechanism of the class described, an escape wheel, a pallet shelf, a pallet carried by said shaft and cooperating with said wheel, a member having a pair of spaced arms at its outer end made fast to one end of said shaft, a block fixed between said arms adjacent their outer ends, a support having spaced arms straddling said block between the arms of said member, a pendulum, leaf springs forming the pivotal axis of said pendulum made fast to the arms of said support, and a leaf spring fixed at one end in said block and having its op-

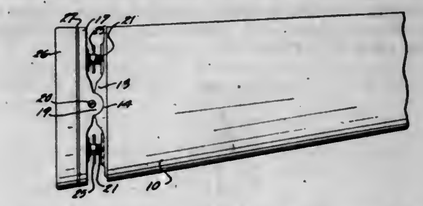


posite end in operative engagement with said pendulum and through which swinging impulses are imparted to said pendulum from said shaft.

1,480,347. BUCKLE. SOPHIE H. BROWN, Muskogee, Okla. Filed Mar. 9, 1923. Serial No. 623,905. 1 Claim. (Cl. 24—191.)

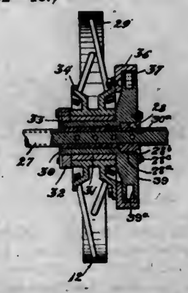
A buckle embodying a wire rod having a substantially straight intermediate portion, and the opposite ends of which rod are returned upon themselves into alined relation to constitute spaced trunnions, a locking plate provided at its lateral edges with tongues which are curled over the trunnions to mount the plate for pivotal movement thereon, a locking flange on the plate between the tongues and provided with a serrated edge eccentrically positioned with reference to the axis of pivotal movement of said plate, and prongs projecting from the under side of said plate and arranged along the free end thereof, said prongs being rounded and of relatively small cross section and adapted to impale the material with which the buckle is associated when the serrated edge of the locking flange is in locked relation with said material, whereby the material is doubly impaled, without cutting by the serrated edge and prongs.

1,480,348. FABRIC-PRINTING MACHINE. ERNEST CADGENE, Englewood Cliffs, and GEORGE DUPONT, Paterson, N. J. Filed Dec. 5, 1922. Serial No. 605,084. 18 Claims. (Cl. 101—120.)



1. In a fabric printing machine, a stationary support, a stencil freely mounted for rotation thereabout, means exerting a pressure against said stencil for rotating the same, and other means exerting a pressure against said stencil in opposition to the first named pressure for insuring a uniform rotation of said stencil about said stationary support, and for evenly distributing a composition to a fabric to be printed which is passed between said stencil and the first named means.

1,480,349. ADJUSTABLE BOOT AND SHOE LAST. MYRON STANLEY CADWALLADER, Olean, N. Y. Filed Feb. 21, 1922. Serial No. 538,277. 6 Claims. (Cl. 12—128.5.)

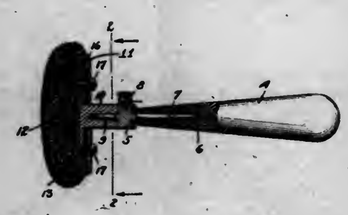


1. In a device of the class described, the combination of a frame provided with an apertured head and with a bifurcated extension, a sleeve in said bifurcated extension and provided at its inner end with an enlarged portion positioned between the bifurcated extension and the head, a rod threaded through said sleeve and head, toe jaws, means connecting said toe jaws to said rod, and a heel jaw adjustably mounted upon said frame.

1,480,350. GUN. GEORGE H. MARTIN, New York, N. Y., and ALBERT V. ARNOLD, Denville, N. J. Filed Nov. 7, 1921. Serial No. 513,267. 8 Claims. (Cl. 42—74.)

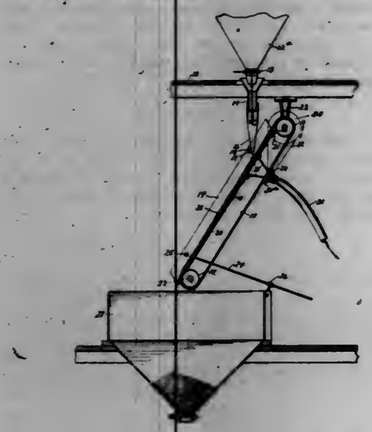
2. An attachment for gun stocks, comprising a base-plate arranged to be rigidly affixed to the rear end of a gun stock and having bearing parts, a shoulder pad pivoted to said base-plate and having bearing parts coacting with the bearing parts on said base-plate and means disposed on opposite sides of the bearing parts for bodily adjusting said shoulder pad pivotally on the base-plate.

1,480,351. RATCHET MECHANISM FOR AGRICULTURAL IMPLEMENTS. CHARLIE SANG, Castorville, Calif. Filed June 16, 1920. Serial No. 389,334. 1 Claim. (Cl. 192—46.)



In a device of the character described, a rotatable axle, an axle sleeve keyed to the axle and provided at its outer end with an enlargement, a hub sleeve mounted on the axle sleeve and provided with a counterbore to receive the enlargement, said hub sleeve being provided with projecting arms, means for securing the enlargement of the axle sleeve to the arms of the hub sleeve, a wheel mounted on the hub sleeve, means secured to the hub sleeve and cooperating with the said arms for retaining the wheel in position on the hub sleeve, a ratchet ring carried by the wheel, and pawls pivotally mounted on the arms and engaging the ratchet wheel whereby rotation of the axle will be produced only upon rotation of the wheel in one direction.

1,480,352. METHOD OF RESTORING FABRICS AND REMOVING SHINE THEREFROM. GEORGE K. SUZUKI, Oakland, Calif., assignor of one-half to Elmer T. Cox, San Francisco, Calif. Filed Nov. 1, 1922. Serial No. 598,326. 3 Claims. (Cl. 8—8.)

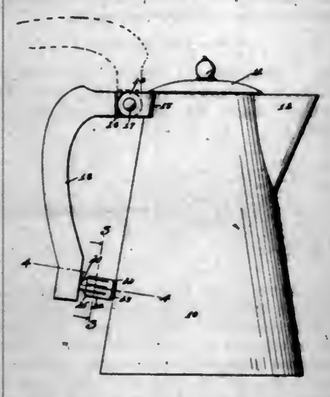


1. A method of restoring fabrics and removing shine therefrom, which consists in first impregnating the goods with a liquid which will moisten the goods and thereby swell the fiber and raise the nap, and then removing the shiny surface of the nap by rubbing the fabric with rubber containing an abrasive.

1,480,353. ELECTRODE. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Filed Jan. 19, 1921. Serial No. 438,298. 10 Claims. (Cl. 174—89.)

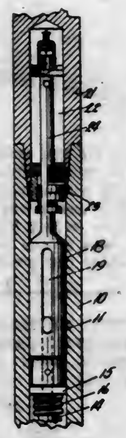
1. An electrode of the character described, comprising a holder, a pad member engaging said holder and made of such material as to become conducting when moistened, and a container enveloping said pad and made of conducting material, said container being in the form of a netting.

1,480,354. METHOD AND APPARATUS FOR REMOVING DUST FROM ROOFING GRIT. HENRY R. WARDELL, New York, N. Y., assignor to Staso Laminated Slate Company, Chicago, Ill., a Corporation of Massachusetts. Filed Sept. 16, 1919. Serial No. 324,169. 3 Claims. (Cl. 83—54.)



1. A method of separating pulverulent adhering matter from roofing grit, which consists of contacting the mass of grit and pulverulent matter with a moving adhering surface and thereby simultaneously causing said surface to polish and clean said roofing grit and causing the adherence of said pulverulent matter to said surface, and separately delivering said grit and said pulverulent matter from said surface.

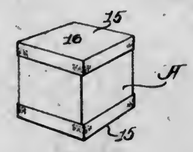
1,480,355. HOLDER FOR TOOLS. OSCAR A. WEBSTER, Cranston, R. I., assignor to Allen Wrench & Tool Company, Providence, R. I., a Corporation of Rhode Island. Filed May 31, 1923. Serial No. 642,492. 2 Claims. (Cl. 279—91.)



1. A tool holder having a body portion internally screw threaded and formed with a socket seat to receive the end of a tool shank, and a threaded cylindrical retaining nut having a helical opening through its side wall for the reception of the tool shank and adapted to be screwed into said body to bind the tool shank in its socket seat.

1,480,356. HANDLE FOR COOKING UTENSILS. FRANK C. WEGENER and JOHN F. LARSON, Des Moines, Iowa. Filed Jan. 25, 1923. Serial No. 614,773. 4 Claims. (Cl. 53—3.)

1. A cooking utensil provided with a handle having one end pivoted near the top of the utensil, means for yieldably holding the handle in an elevated position, a releasably connecting member for latching the lower end of the handle adjacent to the side of the cooking utensil.

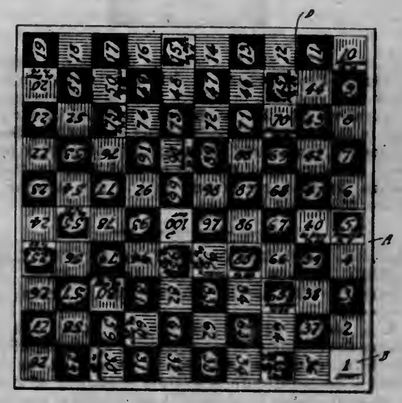


1,480,357. UNDERREAMER BLADE CHECK. ROBERT A. WILSON, Dallas, Tex. Filed Aug. 14, 1922. Serial No. 581,649. 8 Claims. (Cl. 255—75.)

1. In an underreamer blade check, the combination with a body structure and a relatively moveable mandrel and cutting blades carried by the mandrel, of means for checking a sudden relative upward movement of the body structure independently of the blades when the underreamer is moved thru its upward stroke.

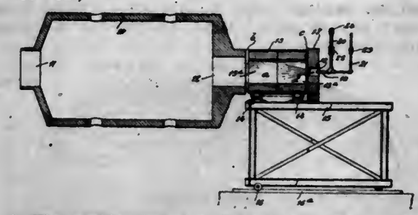
1,480,358. FOLDING CARTON. GEORGE M. WIRTZ, St. Paul, Minn. Filed Sept. 10, 1918. Serial No. 253,478. 8 Claims. (Cl. 229—47.)

7. A carton of the class described which is adapted to be folded into a flat, thin state when collapsed, a body portion, a closure for said body portion, interlocking flaps formed on said body portion and closure and means secured to said flaps at the corners of said carton adapted to be concealed by said flaps to lock said flaps and carton



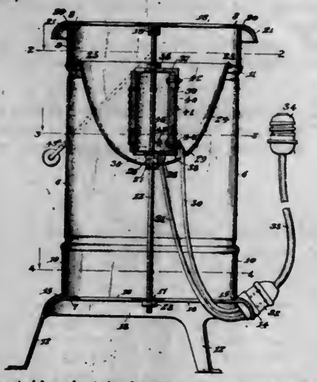
at the corners with the interlocked flaps folded flat against the side walls of the body portion of said carton to form a compact carton when concealed.

1,480,359. WHEEL. THOMAS W. WOOD, Chicago, Ill. Filed June 6, 1921, Serial No. 475,244. Renewed Nov. 30, 1923. 4 Claims. (Cl. 301—63.)



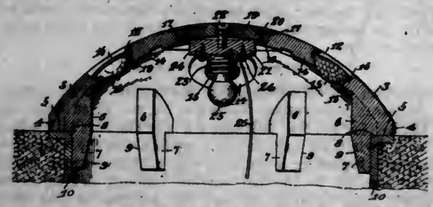
1. A wheel comprising a bushing and metal discs having edges formed into a compound tubular rim, engaging web portions extending from said rim portions, and central web portions curved outwardly from said engaging portions to the bushing, which is mounted by having its ends upset in ragged openings in said central portions.

1,480,360. GAME APPARATUS. WILLIAM P. AGEE, Jr., Hope, Ark. Filed Mar. 8, 1922. Serial No. 542,103. 5 Claims. (Cl. 46—63.)



2. A game apparatus comprising a die having differently colored faces, each face having a number thereon, and a board divided into spaces having the same colors as those on the die and being consecutively numbered, one of the spaces constituting a finishing point for the game and having the highest number, certain of the spaces having indicia thereon indicating the player arriving at that space is to go backward or move forward a certain number of spaces.

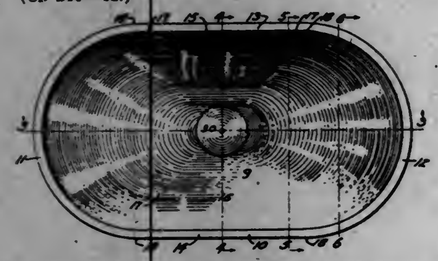
1,480,361. FURNACE. FRANK M. ALLEN, Claymont, Del., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1921. Serial No. 518,501. 12 Claims. (Cl. 263—32.)



1. The combination of a furnace, a burner for firing the same and a rotatable combustion chamber located between said furnace and burner and having its opposite ends duplicates of each other whereby said combustion chamber may be reversed with respect to said burner.

1,480,362. PORTABLE ELECTRIC HEATER. OLIVER N. ANDERSON, Minneapolis, Minn., assignor of one-half to E. S. Van Koughnet, St. Paul, Minn., and one-half to Ralph Parker, Minneapolis, Minn. Filed Oct. 2, 1922. Serial No. 592,093. 10 Claims. (Cl. 219—34.)

1. A portable electric heater comprising a body portion, a top, a base, a holding element connecting said base, body portion and top together, a reflector secured to said element, a pair of clamping elements carried by the holding element, a cylinder of refractory material interposed between and secured in position by said clamping element, said cylinder inclosed by said reflector, an electric heating element mounted in the periphery of said cylinder, a socket supported by said base, and electrical conductors leading from said socket to said heating element.



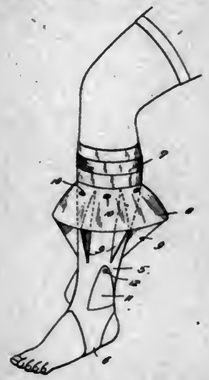
1,480,363. STREET MARKER. NOBLE G. ASHLEY, Fort Dodge, Iowa. Filed Dec. 9, 1922. Serial No. 605,886. 4 Claims. (Cl. 240—1.)

1. A device for the purpose set forth comprising a dome-shaped shell provided with a plurality of openings,

colored lenses mounted in said openings, a plurality of lugs depending from said shell, and an illuminating device suspended centrally from the top of the shell.

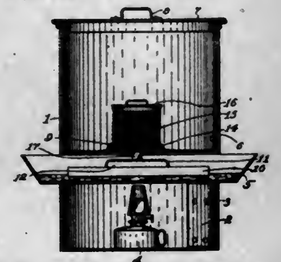
1,480,364. REFLECTOR. LOUIS A. BEAN, Denver, Colo. Filed Apr. 16, 1923. Serial No. 632,353. 3 Claims. (Cl. 240—41.)

1. The combination in a reflector, having an oblong opening defined by two parallel straight lines connected by semi-circular ends, of two triangular-shaped surfaces of a base equal to the length of, and coinciding with, said two parallel straight lines and extending back in a parabolic curve to a common apex on the axis of said reflector; and concave surfaces connecting with said semi-circular edges and extending back on a curve to tangential connection with said triangular shaped surfaces and terminating at the axis of said reflector.



1,480,365. DETACHABLE BROOM HANDLE. AMOS DEAN BENNETT, Independence, Colo. Filed June 6, 1922. Serial No. 566,334. 2 Claims. (Cl. 287—125.)

1. A coupling device of the class described including an outer cylindrical member and an inner cylindrical member in spaced relation, an annular member connected respectively to said outer and inner cylindrical member at one end, said inner cylindrical member being externally and internally threaded, a socket adapted to receive one end of a handle and having a reduced externally threaded portion to engage the internal threads of the inner cylindrical member and with a lateral shoulder at the junction of the socket and the reduced threaded portion thereof bearing on the annular connecting member of the inner and outer cylindrical members, and a stock member adapted to engage in the outer cylindrical member and having an internally threaded cavity to engage the external threads of the inner cylindrical member.

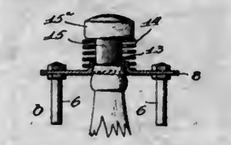


1,480,366. SWIMMING AND BATHING APPLIANCE. WILLIAM BERGERSON, Brooklyn, N. Y. Filed Sept. 13, 1923. Serial No. 662,442. 3 Claims. (Cl. 9—21.)

1. A swimming and bathing appliance of the character described including a sock having a downwardly flared collar secured to the leg portion thereof, flexible webs secured longitudinally of the leg portion of the sock and having their upper edges secured to the under surface of the collar for preventing turning of the latter upwardly to an undue extent, said webs being arranged in uniformly spaced relation in a circular series about the leg of the sock and dividing the space beneath the collar

into a plurality of compartments, and relatively small openings being provided thru the collar adjacent the inner edge of the latter, each opening communicating with one of said compartments.

1,480,367. WATERING DEVICE. CRENO P. BETTENGA, Waterloo, Iowa. Filed Mar. 31, 1923. Serial No. 629,000. 6 Claims. (Cl. 119—80.)



5. In a device of the character described, a reservoir having a discharge-port, a drinking trough supported below said reservoir to receive from said discharge-port, a reticulated container supported within said reservoir, a float in said drinking trough having a valve-head thereon adapted to control the discharge of said port, a reticulated inclosure upon the top of said float to initially receive the discharge of said port, and a filtering substance filling said inclosure.

1,480,368. PROCESS OF MANUFACTURING LIQUID FUEL. JOSEPH BLACK, Los Angeles, Calif. Filed Sept. 27, 1923. Serial No. 665,183. 5 Claims. (Cl. 44—9.)

1. A process of manufacturing a liquid fuel comprising the distilling of a composition consisting of crude petroleum untreated coal oil in approximately equal volumes combined with a mixture consisting of acetone in the approximate proportion of one-fiftieth of the volume of petroleum, benzole in the approximate proportion of one-fiftieth of the volume of the petroleum, sal soda in the approximate proportion of one-eightieth of the volume of the petroleum, and alcohol in the approximate proportion of one two-hundredth of the volume of the petroleum to a temperature of one hundred twenty degrees Fahr. to start a come-over or run, then collecting in a receiver the come-over or run until the temperature of the composition reaches four hundred twenty degrees Fahr., thereby providing a liquid fuel of fifty-eight proof gravity

and 437 end point, and then collecting in an independent receiver the come-over or run until the composition reaches a temperature of four hundred eighty degrees, thereby providing a liquid fuel of forty-five proof gravity and end point of 480.

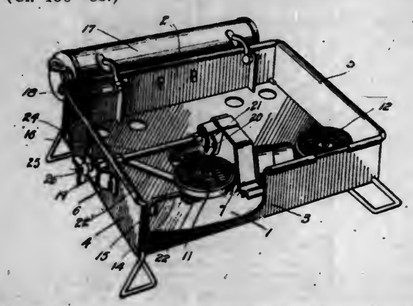
1,480,369. BOTTLE-CAPPING MACHINE. WILLIAM W. BURESCH, Baltimore, Md. Filed Aug. 18, 1922. Serial No. 582,690. 1 Claim. (Cl. 228—84.)

In a bottle capping machine, a supporting table, a reciprocating frame comprising parallel rods vertically movable through the table top and cross-heads at the upper and lower ends of the rods, the upper cross-head having a central opening the wall of which is adapted to bear upon the flange of a crimped bottle cap when the cap is pressed into the opening, a helical spring on said upper cross-head concentric with the opening and projecting above the opening, a plunger adapted to enter the opening and having a knob adapted to rest on said spring, and means for reciprocating the frame.

1,480,370. RAILWAY-TRACK STRUCTURE. CARROLL BURTON, Johnstown, Pa. Filed Sept. 13, 1923. Serial No. 662,524. 2 Claims. (Cl. 246—457.)

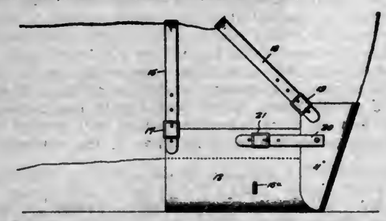
1. A railway track structure comprising, in combination, intersecting rails of the grooved rail type, and a hardened steel center wear plate secured at the intersection of said rails, said rails and said plate being provided with wheel flange grooves, said grooves having elevated floors tapered down towards the extreme ends to the normal depth of the groove in the connecting rail so as to provide a floor elevation through the intersection, which will engage the flange of a wheel passing through the intersection and raise the tread portion of the wheel above the rail head while passing over the intersection, thus preventing the shock due to the treads of the wheels passing over the interrupted head surfaces, and a ferrous metal base cast around said rails at their intersection after they are assembled to secure said rails together.

1,480,371. APPLIANCE FOR SETTING AND REMOVING TIRES. ALBINO CATTONI, Bradford, Pa. Filed Mar. 7, 1922. Serial No. 541,848. 1 Claim. (Cl. 157—6.)



An appliance for setting and removing tires comprising a member supported from the hub of the wheel and a companion member pivoted to the outer end of the aforesaid member, the last mentioned member consisting of a body portion having a handle at one end and a fixed jaw at the other end, the handle being rotatably connected to the body portion and the fixed jaw provided with a notch at its underside to engage the rim of the wheel, a movable jaw slidable on the fixed jaw and having a hook at its outer end, and a threaded rod extending rearwardly from the movable jaw and engaging a threaded bore in the handle for moving said jaw by means of the handle.

1,480,372. FUEL AND PROCESS OF PRODUCTION. EDWARD A. CHARBONNEAUX, San Francisco, Calif. Filed Dec. 20, 1920. Serial No. 432,043. 5 Claims. (Cl. 44—9.)



1. A method of making a liquid fuel comprising treating crude oil containing nitratable ingredients with nitric acid, separating the nitrated product and mixing it with suitable proportions of alcohol.

1,480,373. STOVE. WILLIAM C. COLEMAN, Wichita, Kans. Filed Apr. 23, 1923. Serial No. 634,138. 6 Claims. (Cl. 158—83.)

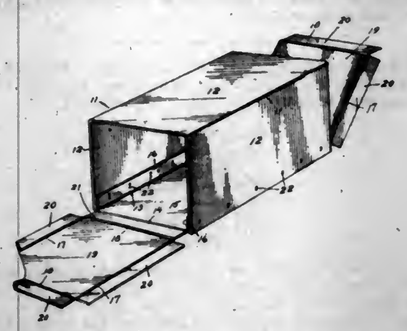
5. In an oil stove, the combination with an oil vaporizer, an oil burner, a valve for the oil burner having a stem provided with a right angular projection, and means for oscillating the burner into and out of line with the vaporizer, the stem of the valve being adapted to project through an opening n the stove case when the burner is in line with the vaporizer and to be received within the stove case when the burner is out of line with the vaporizer, the right angular projection on the valve for the burner being adapted to overlap the edge of the opening in the stove case when the valve is unseated and to be susceptible of being moved through the opening in the stove case when the valve is seated.

1,480,374. PNEUMATIC KNEE PAD. WILLIAM DAVIS COVINGTON, Vernon, Tex. Filed Apr. 5, 1921. Serial No. 458,812. 1 Claim. (Cl. 2—130.)

A knee pad comprising a horizontally disposed semi-oval shaped supporting element, a vertically disposed tapering protecting member hinged at the lower terminus of its front to the forward terminus of the bottom of said element, said member overlapping throughout and extending above the forward terminal portion of said element and further projecting forwardly from said terminal

portion, a vertical closure and a longitudinally extending flat strip secured together and arranged within and secured to said element and providing in connection therewith a semi-cylindrical pocket open at the forward end of said element and with said hinged member constituting the sole closure for the open end of said pocket, a cushioning element mounted in and conforming in contour to the shape of the pocket, and an attaching means for said element and member.

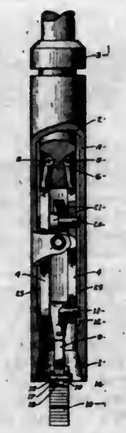
1,480,375. ILLUMINATED INTAGLIO DISPLAY DEVICE. CHARLES C. CRISTADORO, Los Angeles, Calif., assignor of one-half to Thos. H. Rosenberger, Los Angeles, Calif. Filed Jan. 29, 1917. Serial No. 145,008. Renewed June 8, 1923. 2 Claims. (Cl. 40—130.)



1. An intaglio consisting of the representation on an opaque surface of a given object formed in opaque material the prominent parts thereof being depressed, the degree of depression varying directly with the prominence of the detail to be emphasized and predetermined parts of the intaglio surface being permanently colored to give harmonic light and shadow effects when the face of the device as a whole is subjected to the action of light rays.

1,480,376. METHOD OF FORMING HOLLOW INFLATED RUBBER ARTICLES. ROBERT C. DABNEY, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 29, 1923. Serial No. 628,565. 4 Claims. (Cl. 18—53.)

4. The hereindescribed method of expanding hollow rubber articles during vulcanization, which consists in introducing into the hollow rubber article before vulcanization a dry mixture containing ingredients which will react in the presence of water to form a gas when heated, and containing also an ingredient containing water of crystallization which when heated will supply the necessary water, and an inert ingredient which will protect the mixture from the action of moisture in the atmosphere.

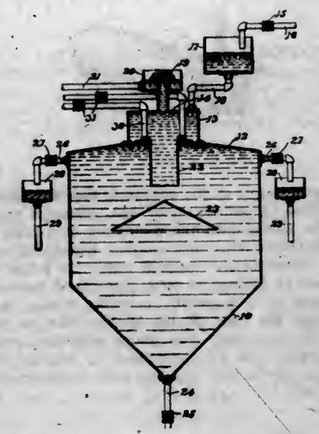


1,480,377. FIBER SHIPPING CASE. JAMES J. DALY, Three Rivers, Mich. Filed Feb. 7. 1922. Serial No. 534,712. 4 Claims. (Cl. 229—23.)

1. A collapsible box of the type having countersunk ends, comprising two attached sections of sheet material, one section being formed with three side panels defined by intervening scored fold lines, and the second section being formed with a fourth side panel and two integral end panels connected by folding strips or flanges, and short inwardly folding attaching flanges upon said fourth side panel and said end panels, all of said flanges being defined by scored fold lines, the two box sections

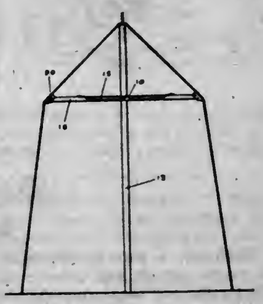
being secured together by attaching said short side flanges of said fourth side panel to the inner faces of the adjacent side panels of the other box section.

1,480,378. FISHING TOOL. CHARLES F. DE ARMOND, Elko, Nev., assignor to Elko Drill Co., Elko, Nev., a Corporation of Nevada. Filed Mar. 29, 1922. Serial No. 547,778. 14 Claims. (Cl. 294—102.)



1. A fishing tool comprising an elongated cylindrical shell, a plunger slidably mounted therein, a hammer head on said plunger engageable with the upper end of the shell, a pair of gripping jaws carried by the plunger and having a free vertical sliding movement with relation thereto, and a tapered portion on the lower end of the shell adapted to be driven downwardly over the jaws to increase their grip and to secure the jaws in gripping position.

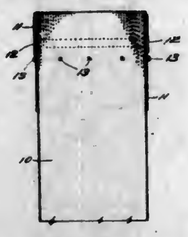
1,480,379. SETTLING TANK. ROY D. ELLIOTT and OTTO J. JACOBSEN, Crockett, Calif. Filed July 5, 1922. Serial No. 572,878. 4 Claims. (Cl. 183—2.6.)



1. A device of the character described comprising a container into which a liquid is poured, a settling tank to receive the liquid draining from the container, said tank being formed with a substantially cylindrical body portion, a central tubular passageway extending downwardly through the top of the tank and into the body

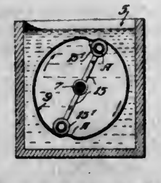
thereof, a dome carried upon the top of the tank and inclosing the opening in said tube and into which dome

the liquid directly drains from the filling tank, an overflow pipe extending upwardly from the dome, and a launder surrounding the mouth of said overflow pipe.



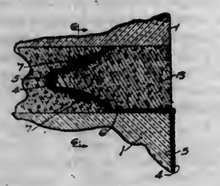
1,480,380. TENT. ROBERT B. ELROD, Lincoln, Nebr. Filed Dec. 7, 1922. Serial No. 605,432. 4 Claims. (Cl. 135—1.)

1. In a tent having a single centrally-positioned tent pole, a clamp adapted to be secured to the tent pole, said clamp consisting of a plurality of L-shaped straps each having a long and a short leg with the short leg of one strap bearing against the long leg of the adjacent strap to form ears at the corners of the clamp, connections between adjacent straps, through the ears, jointed arms pivotally connected to said ears, and means at the extremities of said jointed arms for engaging the tent at the corners formed by the junction of the walls and the roof of the tent.



1,480,381. STOCKING OR SOCK TOP. CURT FRIG, Philadelphia, Pa., assignor to Junior Hosiery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1922. Serial No. 555,690. 1 Claim. (Cl. 2—28.)

In an article of the character stated the combination of a sock having an integrally knit cuff exteriorly encircling the top of the leg portion of said sock, means between said cuff and leg portion securing the intermediate portion of the cuff to said leg portion at spaced intervals only and forming an upper annular passage, and a continuous rubber band loosely positioned in said

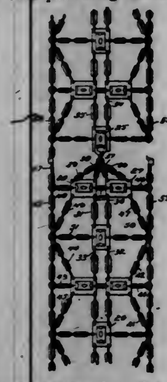


passage and normally of substantially the same length as the circumference of said leg portion, whereby the expansion of said rubber band in use causes the free, lower edge of said cuff to closely hug said leg portion.

1,480,382. METHOD OF CRYSTALLIZING FLUIDS. CROSBY FIELD, Yonkers, N. Y. Filed Jan. 24, 1922. Serial No. 531,502. 5 Claims. (Cl. 62—172.)

1. In the method of crystallizing fluids by heat transference, that step which consists in momentarily altering the normal conformation of a heat transfer element upon which a film of crystals is deposited and thereby effecting a separation of said element from said film to permit the fluid to enter between said film and the heat transfer element and directly contact with the latter.

1,480,383. FLASHING. CARROLL C. FIGGE, Chicago, Ill. Filed Jan. 26, 1922. Serial No. 531,847. 15 Claims. (Cl. 108—26.)

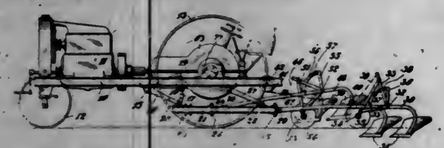


1. A flashing comprising strips of fabric secured together along one edge only of each fabric independent of its attachment to a wall.

1,480,384. TIRE CHAIN. OGDEN D. FOSBURGH, St. Joseph, Mo. Filed Dec. 27, 1922. Serial No. 609,239. 6 Claims. (Cl. 152—14.)

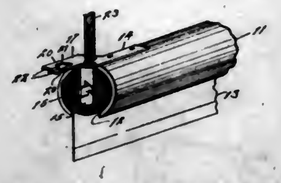
1. An anti-skid device comprising a set of anti-skid elements, two sets of traction elements, the traction elements of one set opposing the traction elements of the other set and flexibly connected therewith, means for flexibly connecting the anti-skid elements to the sets of traction elements, flexible members connected to and projecting outwardly from the elements of each set of traction elements, two sets of flexible elements, each set

of flexible elements connected to the outer ends of the flexible members which project outwardly from a set of traction elements and providing in connection with said



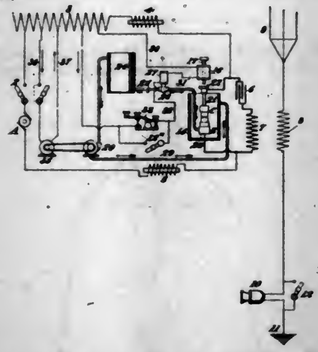
members sustaining means for the traction elements, and means for flexibly connecting the anti-skid elements to the said sets of flexible elements.

1,480,385. STOCKING AND LIKE GARMENT AND TO ATTACHMENTS THEREFOR. HANNAH CHISHOLM FRASER, Bournemouth, England. Filed Oct. 27, 1920. Serial No. 419,980. 1 Claim. (Cl. 2—23.)



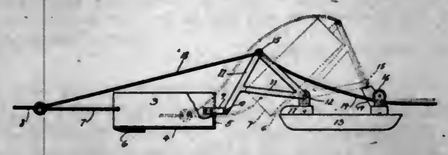
A new article of manufacture for use with stockings or similar garments and suspenders, comprising a length of fabric crossed to form a loop and secured at the crossing and enlarged tabs, formed on the fabric, spaced from each other and forming the only points of connection between the said length of fabric and the stocking or similar garment, so that the supporting pull is spaced around the circumference of the stocking or similar garment being exerted diagonally thereon and lateral stretching of the material of the said stocking or similar garment being permitted whilst the flexibility of the said material is preserved.

1,480,386. MOTOR PLOW. ÖDÖN GÁL, Budapest, Hungary. Filed Oct. 29, 1921. Serial No. 511,486. 4 Claims. (Cl. 97—237.)



1. In a soil-working machine, a wheeled frame, an auxiliary frame adjustable up and down relatively to the first-named frame means for adjusting said auxiliary frame, a swinging frame carried adjustably by said auxiliary frame and provided with soil-working devices, and mechanism for adjusting said swinging frame independently of said auxiliary frame.

1,480,387. ADJUSTABLE SHADE PROTECTOR. HENRY YOUNG GARRETT, Atlanta, Ga. Filed June 5, 1922. Serial No. 565,921. 5 Claims. (Cl. 156—27.)

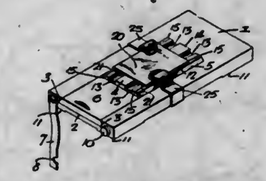


4. An attachment of the character specified, comprising spaced guides, a shade shield and protector positioned between the said guides and consisting of a tube of relatively adjustable telescopic sections presenting a longitudinally extending slot through which the rolled up part of the shade is adapted to pass, said shield having plates at each end with depending portions struck therefrom for engaging the ends of the shade roller to hold the shade within the tube, said plates extending outwardly from opposite ends of the shield to engage the said guides, and means for raising and lowering the said shield between the said guides.

1,480,388. OSCILLATOR. ALPHONSUS L. GOLDEN, Oakland, Calif., assignor to National Radio Company, San Francisco, Calif., a Corporation of Arizona. Filed Sept. 16, 1919. Serial No. 324,153. 5 Claims. (Cl. 250—36.)

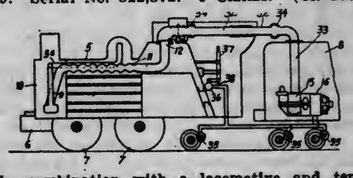
1. In an oscillator, a pair of electrodes, means for circulating a liquid through and between the electrodes, means for contacting and separating the electrodes, and means cooperating with said last mentioned means for stopping the circulation of liquid through the electrodes when they contact, and for re-establishing the circulation when the electrodes are separated.

1,480,389. SCRAPER. LESLIE P. GREEN, Chicago, Ill. Filed June 24, 1921, Serial No. 479,991. Renewed July 30, 1923. 6 Claims. (Cl. 37—122.)



1. A scraper comprising a sled-like member; a scraper member separate from and performing its scraping operations substantially independently of said sled; cables connected to drag said members forward and back; and means operable by said cables whereby said scraper member will be lifted onto said sled when said cables are operated to drag said members back and extended into operative position when said cables are operated to drag said members forward, substantially as described.

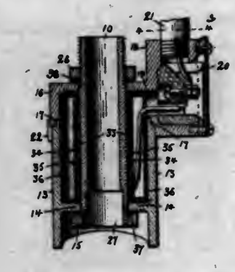
1,480,390. APPARATUS FOR INSPECTING AND GAUGING SCREW THREADS. JAMES HARTNESS, Springfield, Vt. Original application filed Jan. 16, 1919, Serial No. 271,540. Divided and this application filed Feb. 17, 1920. Serial No. 359,394. 16 Claims. (Cl. 88—24.)



12. An optical comparator comprising a chart or screen to receive a magnified image, a lantern having a source of light and a condensing lens for forming the magnified image, a stage located between said condensing lens and said second-mentioned lens and threaded or serrated cradles for engaging the sides of and supporting a threaded object to be gaged.

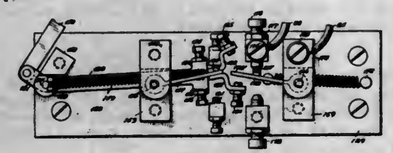
1,480,391. HÆMACYTOMETER. CARL ADOLPH HAUSSER, Philadelphia, Pa., assignor to C. A. Hausser & Son, Philadelphia, Pa., a Firm consisting of Carl Adolph Hausser and Anthony Adolph Hausser. Filed Apr. 11, 1921. Serial No. 460,564. 11 Claims. (Cl. 88—40.)

1. In a hæmacytometer, a slide comprising a frame of relatively non-breakable material, and a counting chamber structure detachably secured in said frame.



1,480,392. LOCOMOTIVE. HERBERT T. HERR, Merion, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 8, 1919. Serial No. 322,372. 9 Claims. (Cl. 105—36.)

7. In combination with a locomotive and tender, a boiler, an engine forming a part of the locomotive, a turbine mounted in the tender, an exhaust pipe extending from the engine to the turbine and longitudinally through at least a part of the steam space of the boiler and a flexible joint in said exhaust pipe between the boiler and the tender.

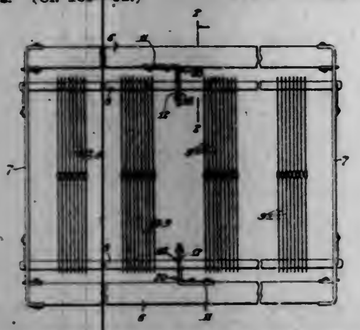


1,480,393. SAND-PIPE HEATER. CHILION BENJAMIN JOHNS, Ebensburg, Pa., assignor of one-half to Joseph O. Clark, Glen Campbell, Pa. Filed Apr. 28, 1923. Serial No. 635,403. 5 Claims. (Cl. 291—20.)

1. A device of the class described comprising a tubular conductor member adapted to be coupled to a sand pipe, a tubular guard member enclosing a portion of said conductor member and with an inwardly directed bearing flange spaced from the lower end of the guard member and supporting the conductor member, a cap member engaging around the conductor member and bearing upon the guard member, a housing extending from

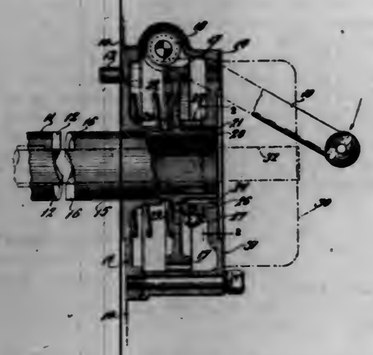
the cap member and communicating with the interior of the same and adapted to contain an electrically conductive coupling device, an electrical heating appliance within the guard member and externally of the tubular conductor and adapted to be coupled to the electrical coupling device within the housing.

1,480,394. SNAP SWITCH. ERNEST M. JOHNSON, Jersey City, N. J., assignor to Edward V. Hartford, Deal, N. J.; Henrietta Pollitzer Hartford administratrix of said Edward V. Hartford, deceased. Filed July 14, 1920. Serial No. 396,217. 16 Claims. (Cl. 200—67.)



1. In an electric switch, a pivotally mounted operating member, a pivotally mounted intermediate member, means on the first member to embrace the second member and provide lost motion therebetween, means to bias the intermediate member to one side or to the other side of its pivot, contact mechanism operated by the intermediate member, and fixed stops independent of the contact mechanism for limiting the movement of the intermediate member and holding the intermediate member out of contact with the operating member while the operating member is at rest.

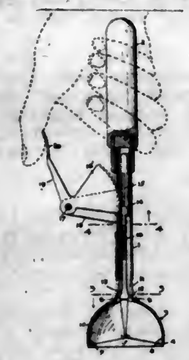
1,480,395. AUTOGRAPHIC SALES-CHECK-PRINTING MACHINE. CLARENCE L. JOHNSTON, Oakland, Calif., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed May 17, 1920. Serial No. 382,099. 70 Claims. (Cl. 101—76.)



1. A web printing press having, in combination, packing cylinders and plate cylinders cooperative to print successive impressions on the web while it is moving and a mechanism for consecutively numbering successive imprinted sections of the web; and means for intermittently withdrawing and restoring the numbering mechanism during the operation of the press so as to provide unnumbered printed sections.

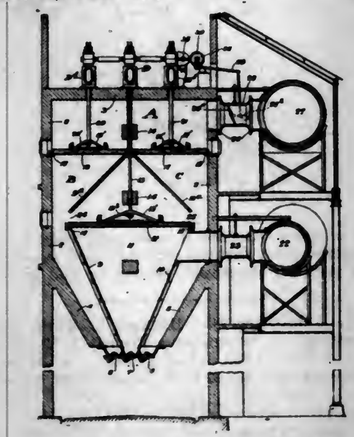
1,480,396. HEDDLE FRAME. JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1923. Serial No. 619,610. 7 Claims. (Cl. 139—92.)

1. In a heddle frame, the means for supporting the heddle bars intermediate their ends comprising a device secured to the heddle frame bar, said device having an extension provided with a recess adapted to receive and support the heddle bar, said recess being open to one side of said extension, a member pivoted to said extension having a recess open to the opposite side from that of the recess in the extension and adapted to engage the heddle bar when the same is mounted in the supporting device, said pivoted member also having a recess in the end thereof, and a leaf spring adapted to engage the recess in the end of said pivoted member to lock the same in closed position.



1,480,397. STARTING MECHANISM. ALEXANDER H. KING and HAROLD H. YOUNG, Keyport, N. J., assignors to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Dec. 21, 1922. Serial No. 608,158. 21 Claims. (Cl. 74—7.)

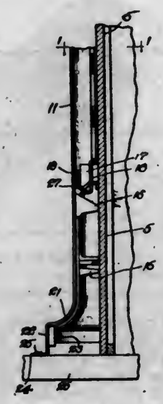
1. A starter arranged to co-act with a rotatable engine member provided with engaging means, said starter including a shaft having means to engage the engine member and mounted for rotation in a manner so as to permit of axial movement to effect an engagement with the engine member, means comprising an angularly guided friction member adapted to effect said axial movement.



1,480,398. ICE-CREAM SCOOP. FREDERICK C. KIRCHHOFF, San Francisco, Calif. Filed July 21, 1922. Serial No. 576,407. 2 Claims. (Cl. 107—48.)

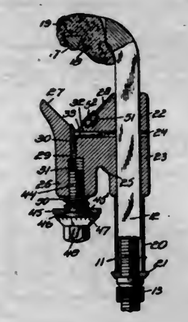
1. An ice cream scoop comprising a substantially semi-spherical body member, a handle fixed to and extending axially from said member, scoop segments pivoted within the body member and adapted when extended to form

with the said body member, a hollow spherical container and means associated with the handle for moving the said segments into and out of the body member.



1,480,399. DRY GAS CLEANER. FRED E. KLING, Youngstown, and LUTHER B. WEIDLEIN, Cleveland, Ohio. Filed Jan. 13, 1921. Serial No. 436,993. 6 Claims. (Cl. 183—54.)

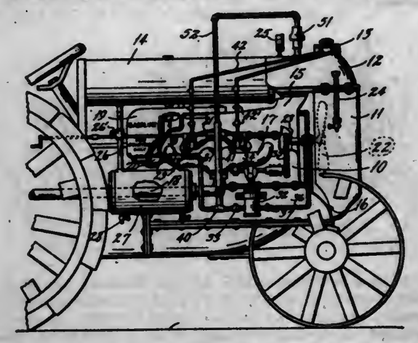
6. A dry gas cleaner for hot blast furnace gas comprising a plurality of units, each unit having a cleaning chamber, a metal wool filter mat arranged transversely within said chamber so as to form a porous wall completely dividing said chamber, flanges on the walls of said chamber for supporting said mat, a vibrating mechanism supported above said chamber and connected by a vertical shaft to said mat, an inlet pipe communicating with said chamber below said mat, an outlet pipe arranged above said mat, a butterfly valve adapted to close said outlet pipe, and means for automatically, simultaneously, closing said valve and setting said vibrating mechanism in motion to vibrate said mat.



1,480,400. METAL TRIM FOR PLASTERED WALLS. GEORGE A. KNAPP, Chicago, Ill., assignor to Knapp Brothers Manufacturing Company, a Corporation of Illinois. Filed Feb. 20, 1922. Serial No. 537,844. 4 Claims. (Cl. 189—85.)

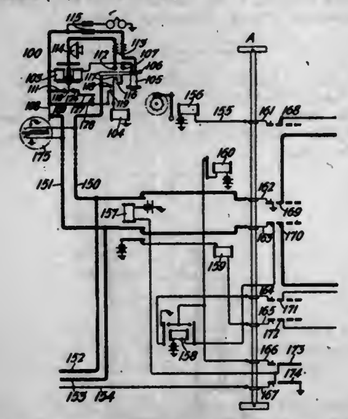
1. A sheet metal trim for bounding a plastered wall having an edge bent laterally to space the trim from an unplastered wall and to provide a knee to serve as a ground to gage the thickness of a plaster coating, the

bend at the knee being formed after bending into a sharp salient edge in a plane with the exposed face of the trim.



1,480,401. CRANK-PIN TOOL. GEORGE F. KRIEGER, Wisconsin Rapids, Wis. Filed Aug. 18, 1922. Serial No. 582,776. 11 Claims. (Cl. 82—4.)

1. A tool for the purpose set forth comprising an adjustable jaw body provided with a V-shaped jaw, an adjustable cutter positioned at the point of jointure between the working faces of said V-shaped jaw, means arranged exteriorly of said jaw body for adjusting said cutter, means arranged within said jaw body for clamping said cutter in adjusted position, and a lubricating element mounted in one of the working faces of said V-shaped jaw and means carried by said jaw body for securing said lubricating element thereto.

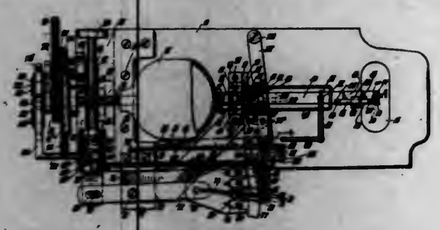


1,480,402. MOTOR FUEL AND COOLING SYSTEM. RUDOLPH KROLLAGE, McGregor, Tex., assignor of one-eighth to Martin A. Jones, McGregor, Tex. Filed Mar. 3, 1922. Serial No. 540,909. 5 Claims. (Cl. 123—122.)

1. In a motor fuel system, the combination with a radiator and circulatory jacket of a motor, of a preheating receptacle, the radiator and jacket containing a body of fuel oil, the radiator having a vapor dome at its upper end, means for supplying fuel oil to the receptacle, a conductor extending from the receptacle for conveying the preheated fuel oil to the jacket, and means for admitting air into the fuel oil conductor, said con-

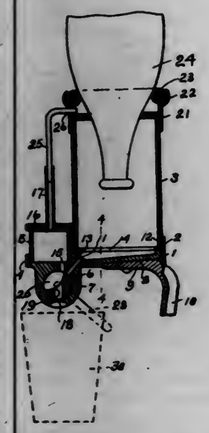
ductor including a manifold having means for introducing said preheated fuel oil and air into the said jacket at a plurality of points.

1,480,403. TELEPHONE-EXCHANGE SYSTEM. JACOB W. LATTIG, Bethlehem, Pa., and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1922. Serial No. 544,091. 59 Claims. (Cl. 179—6.3.)



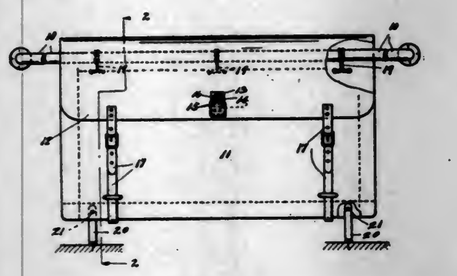
1. In a telephone system, subscribers' lines, automatic switches for establishing a connecting circuit through which a calling and a called subscriber may converse during predetermined time units, charging means, means associated with said automatic switches for operating the same, and automatic means for operating said charging means at different rates in accordance with the length of the conversational period.

1,480,404. MACHINE FOR SEWING SNAP FASTENERS. ARTHUR E. LINDNER, Brooklyn, N. Y., assignor to The L. and H. Special Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 20, 1919. Serial No. 339,393. 6 Claims. (Cl. 112—112.)



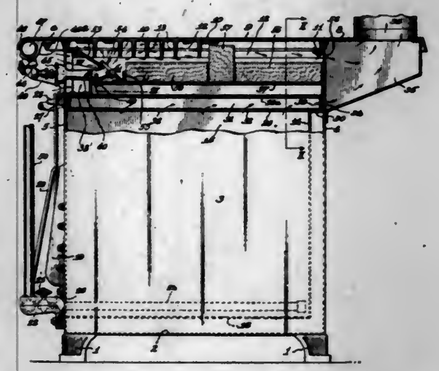
1. In a sewing machine of the character described, a stitch forming mechanism including a needle, a supporting member adapted to support an article to be sewed having eyelets, said member adapted to have longitudinal and transverse movement relatively to said needle, cam means for causing said transverse movement, said cam means having individual cam parts sepa-

rately adjustable to adjust the extent of said transverse movement, and cam means for causing said longitudinal movement.



6. In a sewing machine of the character described, a throat plate, a stitch forming mechanism including a needle, a supporting member provided with an opening adapted to receive and support an article to be sewed having eyelets, a pivotal support at one end of said supporting member, spring means adapted to yieldably engage its other end with said throat plate, means for raising said end from said throat plate, a laterally movable pin adapted to project into said opening to engage said article to retain the same therein against removal and turning movement, spring means adapted to yieldably project said pin into said opening, and means adapted to withdraw said pin from said opening upon the raising of said supporting member, to permit the removal of said article and the insertion of another one, said pin adapted to be projected into said opening upon the lowering of said supporting member.

1,480,405. LIQUID-DISPENSING DEVICE. GEORGE R. LONG, Waterbury, Conn., and HENRY G. CORDLEY, Glen Ridge, N. J. Filed Jan. 14, 1921, Serial No. 437,352. Renewed July 13, 1923. 7 Claims. (Cl. 221—116.)

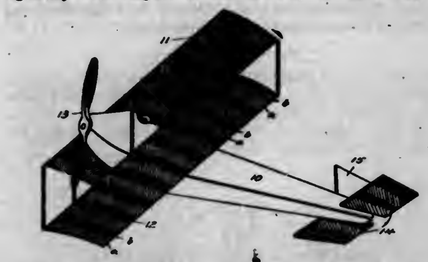


1. In a dispensing device, a base plate having the rear portion of its upper face adapted to receive a liquid container, having the front portion of its upper face adapted to receive a measuring vessel, and having on its lower face below the portion which receives the measuring vessel, a faucet casing integral with said base plate having a seat for a turning plug, ports leading from the container and measuring vessel to the seat for the turning plug, and a discharge port leading downward from the seat, and a turning plug in said seat having an operating handle provided with a laterally extending portion below the faucet.

1,480,406. AUTOMOBILE ATTACHMENT. FRANK MASHEK, Chicago, Ill. Filed Oct. 13, 1922. Serial No. 594,348. 3 Claims. (Cl. 224—29.)

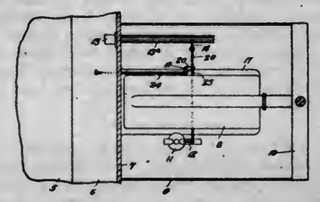
1. A case having means for securing the same on a supporting rod, said means consisting of hooks disposed and fixed on the inside of said case, the cover of said case being looped over said supporting rod and secured to said case; and means for locking said cover to said case and thereby lock said case on said rod.

1,480,407. HOTEL RANGE. HENRY C. MAUL, Detroit, Mich., assignor to The Michigan Stove Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 7, 1922. Serial No. 580,081. 16 Claims. (Cl. 126—39.)



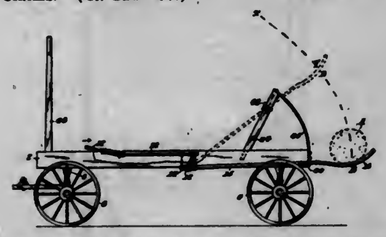
1. A cooking range comprising a cooking top, a combustion chamber below said cooking top communicating with the atmosphere and having a bottom wall composed of heat resisting members, one of which serves as a baffle and is surrounded and maintained in position by other members, and burners directing flames upwardly against said cooking top in front of said baffle, said burners being grouped at the front edge of one of said heat resisting members forming the bottom of said combustion chamber.

1,480,408. AIR-PRESSURE SURFACE CONSTRUCTION. PAUL K. MILLER, Covington, Ohio. Filed Nov. 14, 1921. Serial No. 515,016. 4 Claims. (Cl. 244—12.)



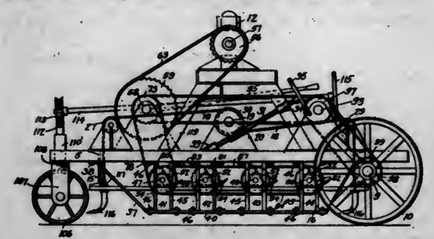
1. In air pressure surface construction in aerial navigation, means to provide the surface to be acted upon, and means for effecting the direction of the travel of the air current or stream on said surface, said means arranged in series, each series comprising two sets of spaced oppositely extending relatively thin rectangular

ribs of slab-like form projecting from and disposed diagonally with respect to said surface, certain of the ribs



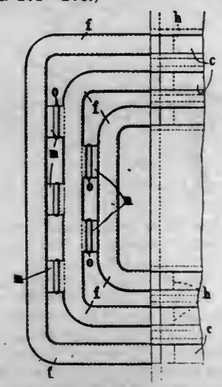
of each pair of sets abutting, and certain of the ribs of one set of ribs of one series abutting against certain of the ribs of one set of an adjacent series.

1,480,409. FOOT ACCELERATOR. CHARLES S. NELSON, Sandpoint, Idaho, assignor of one-half to Allen P. Asher, Sandpoint, Idaho. Filed Oct. 6, 1920, Serial No. 415,183. Renewed June 20, 1923. 2 Claims. (Cl. 74—89.)



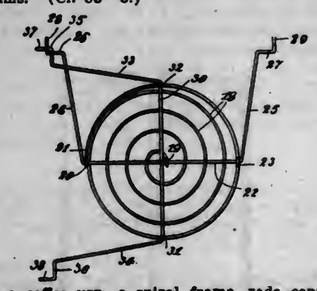
1. In a foot accelerator, a supporting post rising from the base of an engine, means for adjusting said post vertically, a lever supported for pivotal movement upon the post, spring means connecting the post with the lever and responsive to rotative adjustments of the post for varying the tension exerted upon the lever and normally maintain the latter in a predetermined position, and throttle valve actuating and foot operated rods connected with the lever.

1,480,410. FODDER LOADER. ROBERT NOSE, Fairmount, Ind. Filed Feb. 20, 1922. Serial No. 587,998. 2 Claims. (Cl. 214—77.)



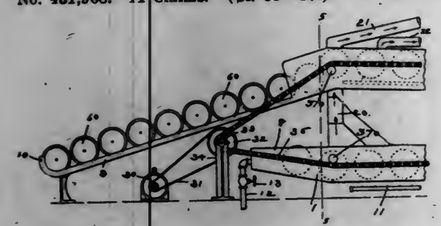
1. In a bundle loading apparatus, in combination with a receiving rack, a frame pivoted thereon and comprising a plurality of spaced arms, said arms being provided at their free ends with bundle receiving portions, means for swinging said frame on its pivot to initially carry said bundles through an arcuate lifting path, a transverse stop device supported on and above said receiving rack intermediate the ends of said frame, and arcuate tracks supported by said receiving rack and intermediate the ends of said pivoted frame and adapted to guide said bundles through their arcuate lifting path, said frame being adapted to be abruptly stopped by said transverse stop device to project the bundles in a line tangential to their arcuate lifting path.

1,480,411. ROTARY PLOW AND CULTIVATOR. RICHARD J. O'NEILL, Denver, Colo. Filed June 17, 1921. Serial No. 478,301. 4 Claims. (Cl. 97—40.)



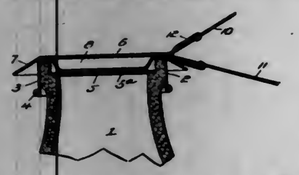
1. In a motor plow, the combination with a main frame having an auxiliary plow-carrying frame suspended therein for vertical adjustment, of rotary plow-carrying shafts journaled in each side member of said auxiliary frame and extending to engagement with vertically-slidable crossheads carried on said main frame.

1,480,412. DYNAMO-ELECTRIC MACHINERY. CHARLES ALGERNON PARSONS and JESSEL ROSEN, Newcastle-on-Tyne, England; said Rosen assignor to said Parsons. Filed Apr. 30, 1923. Serial No. 635,663. 5 Claims. (Cl. 171—206.)



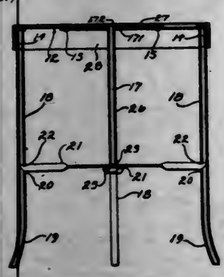
1. In dynamo-electric machinery, a rotor, coils held in slots in said rotor, and an individual shield covering the end of each coil, trough-shaped in cross section.

1,480,413. COFFEE URN. JOHANNES TH. PEDERSEN, Flushing, N. Y. Filed Oct. 5, 1922. Serial No. 592,494. 4 Claims. (Cl. 53—3.)



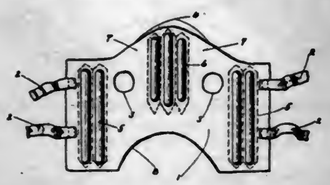
1. In a coffee urn, a spiral frame, rods connected to the spiral frame, and supporting means extending from the rods and turnable to lie in positions substantially parallel with the frame and to be extended to positions at substantial right angles thereto to support the frame in the coffee urn.

1,480,414. WASHING-MACHINE DEVICE. NICOLA PETTI, Cleveland, Ohio. Filed Dec. 20, 1920. Serial No. 431,968. 11 Claims. (Cl. 68—37.)



2. In a washing machine, the combination of a conveyor, a plurality of compartments, a plurality of containers, means for attaching said containers to said conveyor, means for operating said conveyor to cause said containers to pass through said compartments in succession, means for rotating said containers back and forth as they are carried through said compartments, and means for automatically detaching said containers from said conveyor when they pass through the last compartment.

1,480,415. MILK-BOTTLE COVER. HENRY M. PIERCE, Chippewa Falls, Wis. Filed Feb. 16, 1923. Serial No. 619,440. 3 Claims. (Cl. 215—38.)

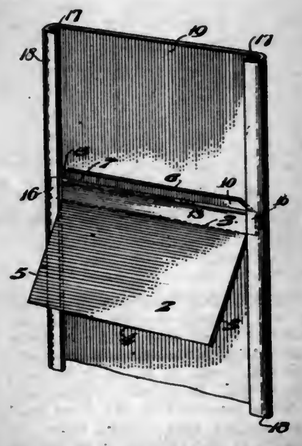


1. A milk bottle cover comprising, a top having a depending split collar adapted to frictionally engage the milk bottle about its mouth and further having a central portion inset to depend into the bottle mouth to provide a coin tray, a handle member extending outwardly and downwardly from said top between the ends of said split collar, a cover for said coin tray having a split flange extending outwardly and downwardly around said collar, a handle member extending upwardly and outwardly from said cover between the ends of said split flange, and in opposed relation to said first mentioned handle, and a spring member extending through both handle members and having each end in engagement with a handle member.

1,480,416. STOOL. CHARLES POHL, Los Angeles, Calif., assignor of one-half to A. L. Shipley, Venice, Calif. Filed Feb. 16, 1922. Serial No. 536,894. 3 Claims. (Cl. 155—196.)

1. In a stool, the combination of side seat members pivoted to one another at their ends, crossed seat members pivoted together at their centers and pivoted to opposite side members, legs loosely supporting the ends of the side seat members, braces, and means detachably connecting the braces with the crossed seat members and holding the braces engaged with the legs.

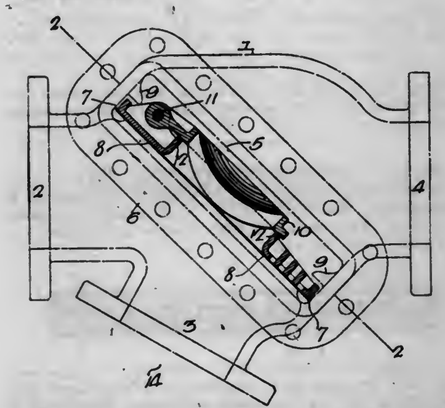
1,480,417. LIFE PRESERVER. THOMAS IRVING POTTER, East Orange, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed May 26, 1922. Serial No. 563,915. 5 Claims. (Cl. 9—17.)



1. A life preserver comprising a flexible body portion buoyantly reinforced adjacent its side edges, an integral head supporting extension at the intermediate portion of the upper edge of said body portion, buoyant reinforcing material arranged to extend from adjacent the top of said extension to the intermediate portion of said body at a point normally disposed well below wearer's shoulders whereby to effect a substantially rigid connection between the body portion and the head supporting extension.

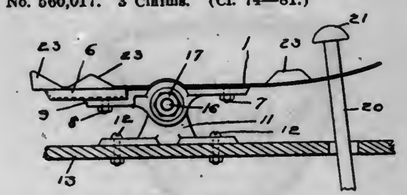
1,480,418. MATERIAL FOR CARBURIZING. GEORGE W. PRESSELL, Philadelphia, Pa., assignor to E. F. Houghton & Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1922. Serial No. 546,807. 5 Claims. (Cl. 148—30.)

1. A carburizing material of pasty consistency consisting of a liquid vehicle, carbon and at least one carbonate.



1,480,419. VISIBLE CARD SYSTEM. WILLIAM A. RINGLER, New York, N. Y., assignor to Globe Wernicke Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 25, 1920. Serial No. 412,855. 9 Claims. (Cl. 129—16.)

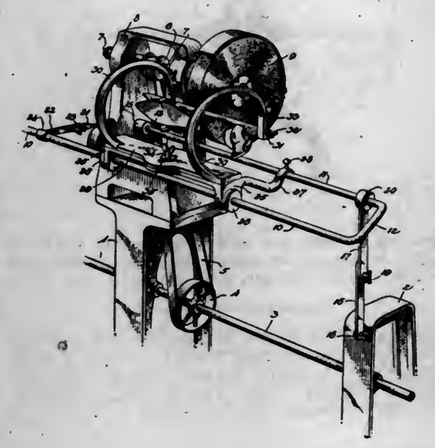
6. A filing card having a pair of weakened lines in parallelism to one of its edges and on which it is folded to provide an outwardly extending terminal tab the distance between said weakened lines being less than the width of said terminal tab.



7. The combination with a plurality of juxtaposed filing cards, of a signal comprising a strip of material having an overhanging lip insertable between and held in place by the juxtaposed cards and interlocking with one of them.

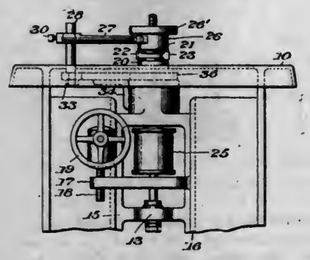
1,480,420. STRAINER. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1922. Serial No. 528,767. 2 Claims. (Cl. 210—164.)

1. The combination in a strainer having an inlet and an outlet; a strainer element mounted in the casing in a plane at an angle to the line of flow of liquid from the inlet to the outlet, said element including an annular perforated body; and a gate pivoted to said body in position to normally close the central opening therethrough but free to automatically open to permit passage of material when the perforations of the body become clogged.



1,480,421. FOOT-PEDAL MECHANISM. FREDERICK C. SMITH, Marion, Ohio. Filed May 11, 1922. Serial No. 560,017. 3 Claims. (Cl. 74—81.)

1. In a foot pedal mechanism for automobiles, the combination of a foot plate for supporting the foot of an automobile operator, a support upon which said plate rests, a bracket adapted to be attached to the floor of the automobile and containing a bearing upon which said support rocks, means associated with said bearing for holding said support and foot plate in any desired position independent of the foot of the operator, an accelerator rod passing through said foot plate so that it is engaged by the foot of the operator in accordance with the position of said foot plate, the movement of said accelerator being independent of said foot plate.

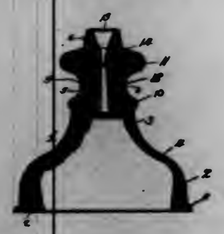


1,480,422. SKATE-GRINDING CLAMP. SVEN E. STROM, Detroit, Mich. Filed Feb. 2, 1923. Serial No. 616,482. 6 Claims. (Cl. 51—228.)

1. An attachment for grinding machines comprising a guide frame, means for attaching said guide frame to a grinding machine, reciprocable means guided by said frame, and holding means carried by said reciprocable means for holding a skate to present the blade thereof in right angular relation to a grinding wheel of the grinding machine, said reciprocable means being rockable upon said frame transversely of its reciprocating

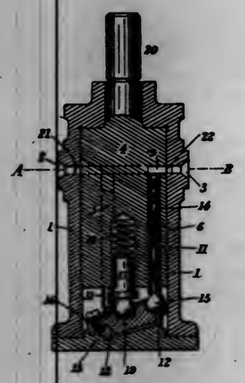
movement to move the skate held thereby toward and from the wheel, and said holding means being turnable about an upwardly extending axis relative to the frame to present a curved surface of the skate to the grinding wheel during the reciprocatory movement.

1,480,423. ATTACHMENT FOR SHAPING MACHINES. WILLIAM TATE, High Point, N. C. Filed July 6, 1923. Serial No. 649,845. 14 Claims. (Cl. 144—251.)



1. In a device of the class described, the combination of a spindle, a cutter head assembly carried by said spindle, a support at one side of the cutter head, a stationary guide device substantially encircling said spindle on the opposite side of said cutter head from said support, and means for adjusting said cutter head and simultaneously adjusting said guide.

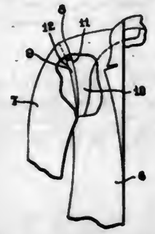
1,480,424. MASSAGE APPARATUS. RALPH S. THOMPSON, New York, and CARL F. DOSCHER, White Plains, N. Y., assignors to The Thompson-Barlow Company, Inc. Filed July 12, 1921. Serial No. 484,056. 6 Claims. (Cl. 128—300.)



1. A massage apparatus of the finger control type comprising a cup-shaped body formed throughout of resilient material and including a depressible outer portion and an inner portion of substantial rigidity to remain upright when the outer portion of said body is depressed to extend into the inner portion, and a

finger gripping handle integral with one end of said outer portion and formed of the same material throughout as said body and provided with a bore having its

inner end opening into said body and its outer end sealable by one of the fingers employed for depressing said outer portion into said inner portion.

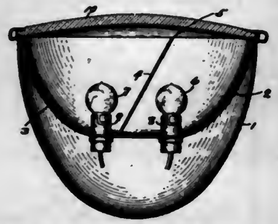


1,480,425. PUMPING APPARATUS FOR VISCOUS LIQUIDS. CHARLES FRED TOPHAM, Coventry, England, assignor to Courtaulds Limited, London, England, a British Company. Filed Feb. 6, 1923. Serial No. 617,315. 3 Claims. (Cl. 103—162.)

1. In apparatus for pumping viscous liquids, a pump casing having inlet and outlet ports, a rotatable body fitting within the casing, said body having longitudinally extending cylinder openings and associated ports, the latter successively establishing communication with the ports in the casing on the rotation of said body with respect to the casing, hollow plungers reciprocating in said cylinder openings, the length of said plungers being considerably greater than their diameter, a rotatable cam plate inclined to the axis of the rotatable body, and rods extending from said hollow plungers and flexibly connecting the latter with the inclined cam plate, and means for rotating the body member within the casing to cause the hollow plungers to reciprocate by reason of their connection with the cam plate.

1,480,426. BRACING MEMBER FOR LININGLESS COAT SLEEVES. ROCK TRISTANO, Chicago, Ill. Filed Dec. 8, 1920. Serial No. 429,244. 2 Claims. (Cl. 2—88.)

2. A reinforcing member for the sleeve of a tropical coat, consisting of an oval shaped piece of cloth, folded over and stitched with its joined edges to the connected material of the sleeve and the shoulder of the coat, and

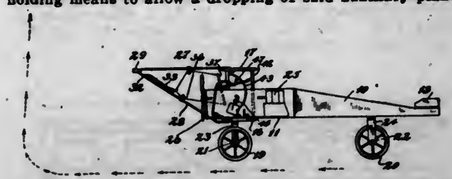


having its folded part protruding into the sleeve engaging and movably bearing beneath the upper part thereof.

1,480,427. COLLAR-BUTTON-DISPLAY TRAY. EARL UNDERWOOD, New York, N. Y., assignor to Krements & Company, New York, N. Y., a Corporation of New Jersey. Filed June 21, 1922. Serial No. 569,991. 1 Claim. (Cl. 211—28.)

A collar button display tray consisting of a base and rim, and provided with alternate parallel grooves and projections, the tops of which projections, extend laterally, a lining of suitable material, glued to the interior of the tray, excepting at the recesses that extend under the edges of the projecting portions, to provide a cushion spring for the collar buttons when they are inserted in the grooves, an inclined portion at the top of the tray to permit the insertion of the collar buttons in the grooves and their removal from same with facility.

1,480,428. LIGHTING STRUCTURE. CHARLES M. WALES, New York, N. Y. Filed Jan. 30, 1922. Serial No. 532,545. 4 Claims. (Cl. 240—41.)

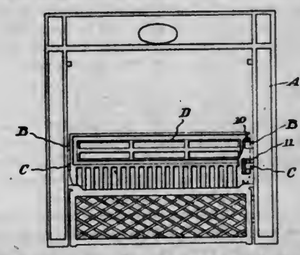


1. A lighting structure comprising side portions of two parabolic reflectors, said reflector portions being joined to each other by an intermediate portion, a vertically extending partition extending from said connecting portion to divide the structure into two compartments, and illuminative elements co-operating with said reflector portions, one element being located in the compartment at one side of said partition and the other being located in the compartment at the opposite side of said partition.

1,480,429. SELF-BALANCING AIRSHIP. SIMON YASULANTIS, Hoboken, N. J. Filed Nov. 18, 1922. Serial No. 601,798. 16 Claims. (Cl. 244—29.)

1. An air craft comprising an auxiliary plane, means for securing said plane in front of said craft, cables for normally holding said auxiliary plane in one plane with the plane of the fixed planes, means for normally holding

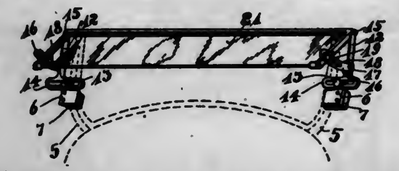
said cables taut, means for automatically releasing said holding means to allow a dropping of said auxiliary plane



into inclined position to the plane of the fixed planes for stabilizing the falling craft, and means for locking the parts after the operation of said releasing means.

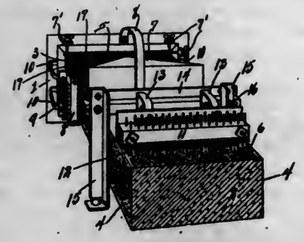
1,480,430. OIL BURNER. ELMER G. GIBSON, Herington, Kans. Filed Apr. 20, 1923. Serial No. 633,440. 8 Claims. (Cl. 158—4.)

2. An oil burner comprising, in combination with an oil conduit, an inclined spreader plate adapted to receive oil from the conduit, a trough at the lower end of said plate, an air supply conduit positioned below said plate, a damper pivotally mounted in said air supply conduit below said trough, and apertures in said trough permitting gravitation of said oil to said damper, substantially as described.



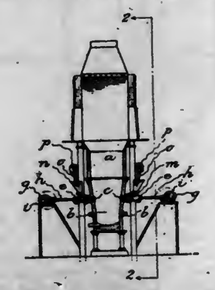
1,480,431. GRATE AND MOUNTING. THEODORE H. GRAF, Louisville, Ky., assignor to Southern Signal Company, Inc., Birmingham, Ala. Filed Apr. 29, 1922. Serial No. 557,860. 2 Claims. (Cl. 126—165.)

1. In combination, a fire place grate frame provided at its confronting edges with upper and lower lugs extending toward each other and formed integrally upon the frame, and a grate formed at the rear side of its upper corners with integral hooks engageable over the upper ones of said lugs, the grate being further formed on its rear side with brackets integral thereon and engageable over the lower lugs, said brackets being L-shaped in cross section with their free ends directed outwardly.



1,480,432. WINDSHIELD ATTACHMENT. GEORGE GLAUDEL, Los Angeles, Calif., assignor to Ben F. Forest, Los Angeles, Calif. Filed Mar. 8, 1922. Serial No. 542,087. 1 Claim. (Cl. 296—95.)

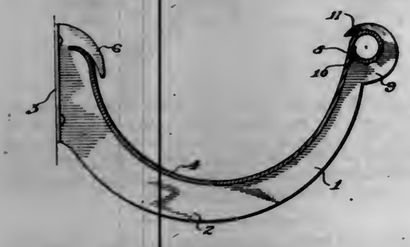
In a shading shield, a pair of clamping members at each end of the shading shield for engaging with the uprights of the framework of the wind shield of an automobile, one of the members in each pair having a lug projecting upwardly, a shading-shield proper, the shading shield proper being of standard width and nearly equal to the width of the wind-shield, a supporting arm pivotally engaged at each end with the shading shield proper, each arm having a slotted portion in its lower end forming in con-



junction with the lug of the clamping members the adjusting means for the standard-sizes shading shield so as to make the standard shading shield applicable to the windshields of different widths, and securing means inserted through the slotted portions of the supporting arms and the lugs of the clamping members.

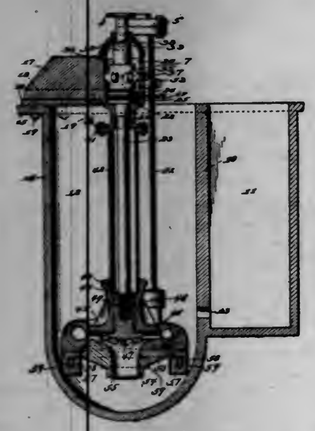
1,480,433. METHOD OF FORMING RUG TEXTURE SURFACES ON BRICK AND TILE AND THE LIKE. BOB GOBN, Millsap, Tex., assignor to Acme Brick Company, Fort Worth, Tex., a Corporation of Texas. Filed June 14, 1923. Serial No. 645,453. 3 Claims. (Cl. 25—156.)

1. A method of forming rug surfaces on the faces of brick and tile and the like which comprises treating the surfaces of green material while in motion to form matte surfaces and then scoring the matte surfaces while in motion to form the rug surfaces.



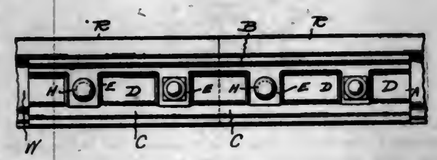
1,480,434. FEEDING OF FUEL TO BLAST FURNACES. EWART NOEL GOODE and MORGAN JONES JOHNS, Mount Morgan, Queensland, Australia. Filed June 30, 1923. Serial No. 648,788. 4 Claims. (Cl. 266—28.)

1. The combination with a blast furnace having a wall provided with tuyère openings near its lower end and fuel feeding openings arranged below the level of the charge and above the tuyère openings, of a series of tubular casings arranged to feed fuel through the fuel openings, a plunger reciprocatingly mounted in each cas-



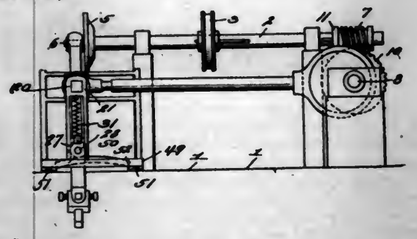
ing, a fuel throat supported above said casing and adapted to deliver fuel into the casing when the plunger is at the outermost end of its stroke, and fuel sealed means for preventing the admission of air or gas into the furnace through said casings and fuel feeding openings.

1,480,435. GUTTER BRACKET. IRVIN GREEN, Pontiac, Ill. Filed Mar. 18, 1921. Serial No. 453,314. 1 Claim. (Cl. 108—29.)



A gutter supporting bracket stamped from sheet metal and comprising an arcuate arm having an attaching portion on one end and having a hook-shaped gutter-roll engaging portion on its other end, said hook-shaped end forming more than three-fourths of a circle and adapted to be bent laterally of the bracket to be brought into engagement with the roll of a gutter.

1,480,436. PUMP. JAMES A. GRIFFIN, Baltimore, Md., assignor to E. S. Royster Guano Company, Norfolk, Va., a Corporation of Virginia. Filed Apr. 11, 1921. Serial No. 460,267. 3 Claims. (Cl. 103—103.)

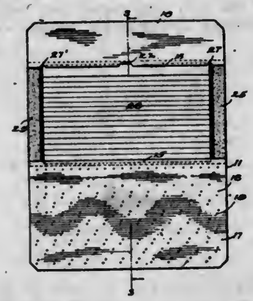


1. In a device of the class described, the combination of a receptacle containing the fluid to be pumped, a vertical driving shaft suspended from a thrust bearing and extending into said receptacle, a pump immersed in the fluid having an impeller secured to one end of said shaft, a casing for said impeller, having downwardly extending spaced lugs, a closure plate having wings received between and secured to the lugs, and a tubular housing for said driving shaft connected at one end to the pump casing, a bearing standard for supporting said thrust bearing and means for securing the bearing standard to said housing.

1,480,437. SPLICE BAR FOR RAIL JOINTS. EMORY L. GROFF, Washington, D. C., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Aug. 11, 1923. Serial No. 656,854. 13 Claims. (Cl. 238—243.)

1. A rail joint bar including a web having thinned sections and upright reinforcing enlargements located at the bolt-hole locations and alternating with said sections.

1,480,438. MACHINE FOR TRUING LENS-GRINDING LAPS. JOHN J. GUILFOYLE, FREDERICK W. WILKES, and BENJAMIN E. BRIERTON, Birmingham, Ala. Filed June 15, 1922. Serial No. 568,653. 10 Claims. (Cl. 29—76.)



1. A machine for truing lens-grinding laps comprising, in combination, a lap-support, means for reciprocating a tool across the face of a lap on said support, said tool being shaped to conform with the shape to be given the face of the lap on one diameter thereof, means for moving the tool in a direction transverse to its direction of reciprocation, and means governing the path of the latter movement of the tool in conformity with the curvature to be given the face of the lap on a diameter transverse to the diameter first mentioned.

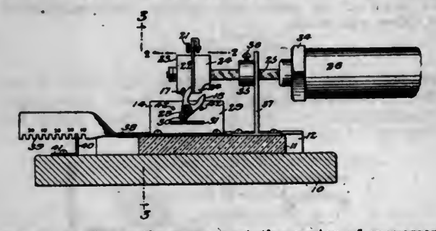
1,480,439. TREATMENT OF SULPHIDE AND OXIDIZED ORES. HENRY JOHN EDMUND HAMILTON, North Broken Hill, New South Wales, Australia. Filed July 16, 1920. Serial No. 396,782. 2 Claims. (Cl. 75—18.)

1. A process for separating metalliferous substances from each other and from their gangue constituents; characterized in that the ores, and ore products, containing such metalliferous substances are (a) subjected to a selective chloridizing roast at a temperature below or approximating 400 degrees centigrade in an open furnace to which air has free access; (b) then leached in the presence of a boiling or hot temperature solution of a chloride of an alkali metal, such as sodium chloride (common salt); and (c) then subjecting the resulting solution to the action of a metallic precipitant to deposit the lead and silver.

1,480,440. CARD HOLDER FOR TYPEWRITERS. WALTER A. HARDMAN, Brooklyn, N. Y. Filed Aug. 16, 1922. Serial No. 582,233. 2 Claims. (Cl. 197—135.)

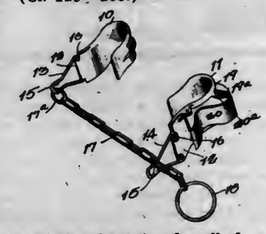
1. A device of the character described comprising a body portion, a rib crimped in said body portion adjacent one end and extending transversely of said body portion, a second rib formed by crimping the body portion, said second rib extending transversely of the body portion in spaced relation to the first-mentioned rib,

said first-mentioned rib being provided with a plurality of notches to facilitate the insertion and removal of the card between spaced ribs.



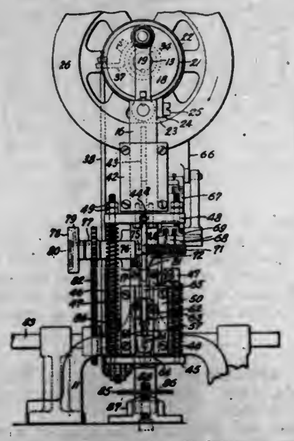
1,480,441. CENTRIFUGAL PUMP. FRANK P. HARMON, Lisbon, Tex., assignor of one-fourth to Thomas S. Pitcock, Dallas, Tex. Filed Jan. 6, 1922. Serial No. 527,434. 2 Claims. (Cl. 103—100.)

1. In a centrifugal pump, the combination of an upright supporting frame, a plate mounted on the upper end of the frame, a stuffing box carried by the plate, a pump housing mounted on the plate having an outlet, a tubular shaft passing through the stuffing box into the housing, a circular head mounted on the shaft within the housing and having a plurality of radial passages connecting with the tubular shaft, plugs in the outer ends of said passages having elevated discharge openings, whereby a level of fluid is maintained in said passages for priming said head, a transverse support in the frame, means connected with said tubular shaft and mounted on said support for rotating said tubular shaft, and a stationary tubular shaft coupled to the lower end of the rotatable shaft.



1,480,442. CIRCUIT BREAKER. JOHN THOMAS HECK, Hedrick, Ind. Filed June 9, 1922. Serial No. 567,039. 10 Claims. (Cl. 200—67.)

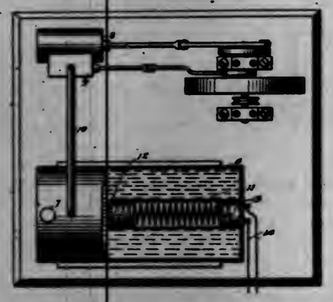
1. A circuit controller including a rockable element, a slidable and adjustable insulating member mounting said element, a plunger subject to fluid pressure, means on said plunger to rock said element, and means to make or break an electric circuit by the rocking of said element; together with a spring acting on said rockable



element to throw the same past the center of movement in either direction when said rockable element is moved to a given position by the movement of the plunger.

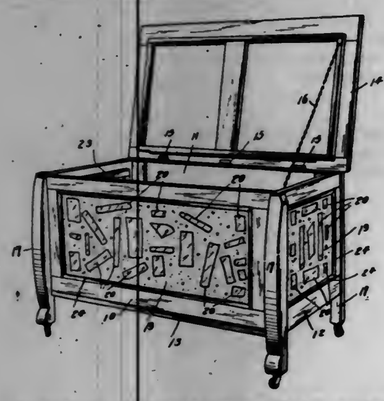
1,480,443. ANIMAL HOPPLE. EDGAR HERMAN, Fairfield, Iowa. Filed Dec. 7, 1922. Serial No. 605,415. 1 Claim. (Cl. 119—105.)

In a device of the character described, a substantially hook-shaped shackle having the inner surface thereof smooth, one of the side members of the shackle being longer than the other side member and having at its outer end at the outer side thereof a pair of tubular eyes, said tubular eyes being in alignment transversely of the shackle, and a clevis having the inturned end portions of the arms thereof journalled in said tubular eyes, said clevis having a relatively narrow free end portion adapted to engage with the links of a chain.



1,480,444. NAILING MACHINE. LESLIE A. HOLMAN, Waltham, Mass. Filed Dec. 6, 1919. Serial No. 343,018. 5 Claims. (Cl. 1—1.)

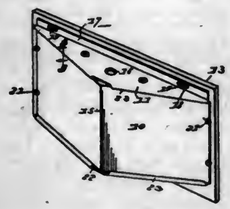
1. In a nailing machine, a nail driver, a nail holder positioned below the driver, a yoke on the nail holder, guide rods rigidly connected to the ends of said yoke



having slidable engagement with the nail driver, springs in compression between the yoke and driver, and adjustable stops on the guide rods limiting the separation of the driver and holder.

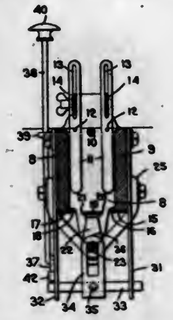
1,480,445. TOY ELECTROSTEAM ENGINE. SCOTT DEILY HOBLACHER and WILLIAM EDWIN HOBLACHER, Tunkhannock, Pa. Filed Mar. 13, 1922. Serial No. 543,506. 1 Claim. (Cl. 219—38.)

As an article of manufacture a toy comprising a steam engine, a steam generator, a tubular member mounted within the steam generator, and an electric heating element adapted to be received within said tubular member and retained therein in adjusted position, the position of the heating element relative to the tubular member determining the volume and pressure of the steam generated therein, and thus determine the speed of operation of the engine.



1,480,446. PACKING AND STORING CHEST. JULIUS HOWELL, St. Louis, Mo. Filed Jan. 27, 1923. Serial No. 615,260. 2 Claims. (Cl. 217—7.)

1. A chest of the character specified comprising a skeleton frame, a panel therein of plastic material having facial inserts of glass of irregular shape and varicolored, a molding preventing outward displacement of the molded frame, a lining covering the rear side of the panel, and strips retaining the lining in place.

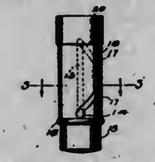


1,480,447. REFLECTOR BOX. MARTHA MAE HUSTON, Springfield, Ohio. Filed Oct. 3, 1921. Serial No. 505,063. 1 Claim. (Cl. 40—132.)

A reflector box for signs consisting of a rear wall formed with a single blank of sheet material and bent on an intermediate vertical line to form an angle to dispose the terminal portions of the back in angular relation to properly reflect and concentrate light supplied by a light unit, a frame having on its rear side edges headed studs with which notches formed in the side rear edges of the back wall engage, the material of the back wall providing spring action tending to keep said

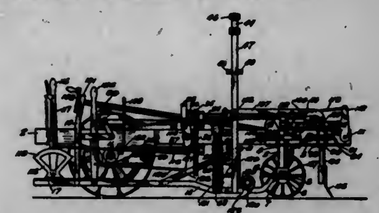
notches in engagement with the studs to preclude rattling, and top and bottom triangular walls having interlocking engagement with the edges of the rear wall at their rear ends and detachably secured to the frame at their front edges.

1,480,448. WARP STOP MOTION FOR LOOMS. PATRICK KEEGAN, Lowell, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 17, 1922. Serial No. 575,523. 1 Claim. (Cl. 139—351.)



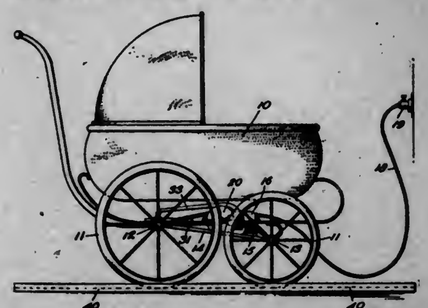
A warp stop motion for looms comprising a series of flat warp detectors normally supported in parallelism by the warps, a pair of parallel bars extending longitudinally of the edges of the series of detectors, means operated by a moving part of the loom to give a relative lateral reciprocation to said bars and cause them to grasp a dropped detector by its edges and thereby effect the stopping of the loom, a vertically movable handle rod mounted for vertical movement on a fixed part of the loom and extending upwardly above the warp sheet into a convenient position to be reached by the operator, and a lever connection between said handle rod and said bars acting upon movement of the handle rod to effect a relative longitudinal movement of the said bars whereby upon the movement of the handle rod by the operator after the loom is stopped the dropped detector will be twisted out of parallelism with the other detectors thereby to indicate the position of the dropped detector.

1,480,449. LIP-STICK HOLDER. WILLIAM G. KENDALL, Newark, N. J., assignor to Henri Rigaud, Paris, France, also known as Parfumerie Rigaud, New York, N. Y. Filed Aug. 2, 1922. Serial No. 579,242. 2 Claims. (Cl. 206—56.)



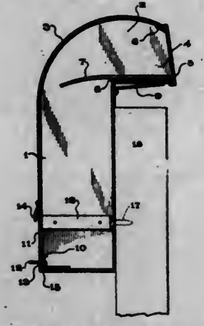
1. In a device of the character described, comprising an outer casing provided with a spiral slot, a tubular member mounted in said casing and provided with a straight slot, an article carrier mounted within said

second tubular member, and means carried by the article carrier and projecting through the straight slot of the



tubular member and the spiral slot of the outer member, whereby upon rotation of the tubular member the article carrier will be projected from the container.

1,480,450. ICE-HARVESTING MACHINE. ELMER E. KEYSER, Sioux City, Iowa. Filed May 8, 1922. Serial No. 559,269. 5 Claims. (Cl. 262—20.)

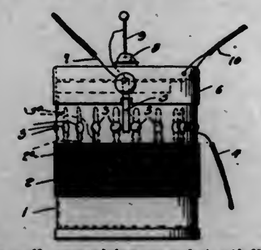


1. An ice harvesting machine comprising a portable frame, a vertical track secured to said frame, a sliding carriage guided by said track for vertical reciprocation, a horizontal mandrel journalled in bearings secured to said carriage, a saw carried by said mandrel, adapted to cut a groove in the surface of an ice-field, a shaft journalled in said frame in parallelism to said mandrel, said shaft being externally screw threaded, a guide having a screw threaded bore engaging the threaded portion of said shaft, said guide being normally depressible into the groove cut in the ice-field by said saw, said guide being lifted when confined within the sides of said groove by rotation of said shaft and transversely shiftable by rotation of said shaft when not so confined.

1,480,451. BABY CARRIAGE. CAMILLE J. KOCH, Bayou Goula, La., assignor of one-half to Edward G. Koch, Bayou Goula, La. Filed Aug. 29, 1922. Serial No. 584,978. 5 Claims. (Cl. 180—1.)

1. In an arrangement of the class described, a wheeled vehicle, a driving axle for a pair of said wheels, an electric motor mounted on said vehicle, a sleeve carrying a pinion loosely mounted on said axle, means for coupling said sleeve to said axle, a rack for oscillating said pinion and means for connecting said rack to said motor for reciprocating said rack.

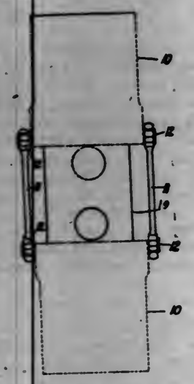
1,480,452. MAIL BOX. OLE O. KOLSTAD, Duluth, Minn. Filed Sept. 29, 1922. Serial No. 591,886. 3 Claims. (Cl. 232—17.)



1. A mail box of the character described having a laterally disposed extension formed at its upper end and the rear wall of the box being curved over said extension to form the top thereof, a flanged closure for the extension and being hingedly secured to the curved top, a substantially U-shaped reinforcing strip secured to the inner face and side walls of the box adjacent its bottom, a fastening element passing through the reinforced portion intermediate its ends and securing the box to a post so as to position the said extension in spaced relation from the top of the post and a substantially V-shaped spring having its ends secured to the box between the extension and post respectively for the purpose specified.

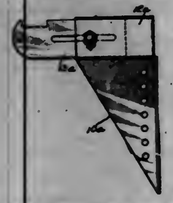
1,480,453. SASH-GEAR BALANCE. LOUIS LANE, Habana, Cuba. Filed Aug. 30, 1922. Serial No. 585,268. 3 Claims. (Cl. 20—52.)

1. In a window, a window frame having vertical jamb elements, stops outside of said jamb elements, sliding sashes, channel side members on said sashes, each channel member having a longer and a shorter leg, the longer legs extending between said jamb elements and said stops and formed with racks, the shorter legs of the channel members having their edges adjacent to the faces of said jamb elements, pinions meshing with said racks, and means to constrain the pinions to turn in unison in opposite directions.



1,480,454. RADIO TUNING COIL. JAMES L. MCLAUGHLIN, New York, N. Y., assignor to Sidney Gernsback, New York, N. Y. Filed June 29, 1922. Serial No. 571,606. 1 Claim. (Cl. 171—119.)

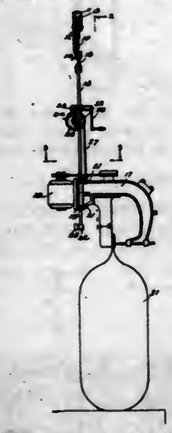
A tuning coil comprising a substantially cylindrical body member, a coil wrapped peripherally about the



body member, a top member on said body member, one of said members being turnable with respect to the other member, contacts in insulated relation to the coil, said contacts having heads disposed exteriorly of the body member and in a row about the body member intermediate the coil and top member, a contact blade carried by said top member for coacting engagement with said heads, said contacts having securing shanks extending from the heads through and interiorly of the body member, and conductors leading from the coil secured to the shanks interiorly of the body member.

1,480,455. CYLINDER MORE PARTICULARLY THOSE FOR COMBUSTION ENGINES. JOHN CAMPBELL MACCALL MACLAGAN, Drumchapel, Scotland, assignor to North British Diesel Engine Works (1922) Limited, Glasgow, Scotland. Filed Mar. 28, 1923. Serial No. 628,233. 3 Claims. (Cl. 74—108.)

1. A cylinder element more particularly for combustion engines comprising two end members connected together at their inner ends by a separate structure consisting of a series of links.

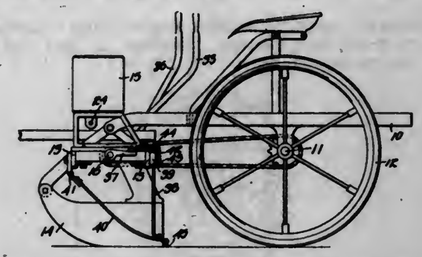


1,480,456. RADIATOR BRACKET. EDWARD J. MALLEN, New York, N. Y. Filed Jan. 20, 1922. Serial No. 530,711. 2 Claims. (Cl. 248—30.)

1. A radiator supporting bracket, comprising a triangular base member having at its rear vertical edge a right angular and apertured flange and provided at its upper end with a flange extending downwardly in parallel and spaced relation thereto, the base and flange having registering openings, a supporting arm slidable in the space between the base and flange and having a longitudinal slot, and a bolt passing through the openings of the base and the slot of the arm.

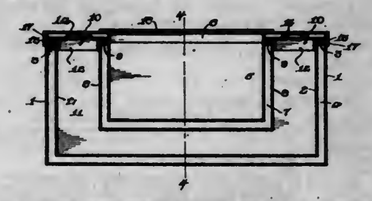
1,480,457. MOUNTING FOR SEWING-MACHINE HEADS. JEREMIAH F. MARTIN, Pawtucket, R. I. Filed June 21, 1922. Serial No. 569,979. 1 Claim. (Cl. 112—11.)

A swingable sewing machine for sewing filled bags adapted to be suspended by an overhead track and comprising a guide bar, means for supporting the guide bar upon the overhead track and providing for linear movement of the bar, means for removably connecting the bar with the supporting means and including means to permit rotation and swinging of the bar, a sewing machine head slidably mounted on the guide bar, means for connecting the sewing machine head to said bar and providing for vertical adjustment of the head on the bar, said sewing machine head being adapted to straddle the unsupported tops of the bags and adapted to be rocked in a plurality of directions to conform to the movements of the tops of the bags and support the tops of the bags when said bags are being sewed.



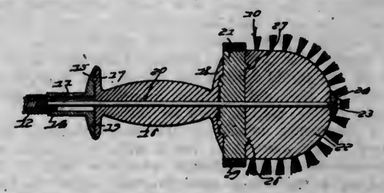
1,480,458. EDUCATIONAL APPLIANCE. SAMUEL D. MERSHON, Rahway, N. J., assignor of one-fourth to Theodore G. Auge, Rahway, N. J. Filed Sept. 17, 1921. Serial No. 501,432. 1 Claim. (Cl. 35—12.)

An educational appliance, comprising a plurality of sheets each having the representation of an object intended to be multi-colored, each object being sub-divided by outlined areas, and a plurality of sheets each having one side colored in a single color, the colors of the sheets being different, the other sides of the sheets being each provided with outlined sub-divisions, the sub-divisions of the several sheets corresponding in number with the areas of the several objects on the first sheets, said sub-divisions being adapted to be cut out and applied to the areas of the several objects of the first sheets to effect the multi-coloring of said objects.



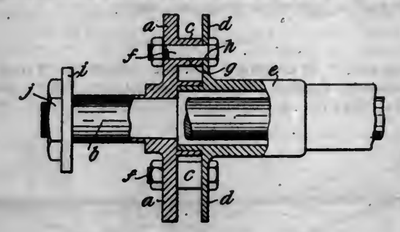
1,480,459. CORN PLANTER. HOWARD N. NAUGLE, Waynesboro, Pa., assignor of one-fourth to David R. Wishard and one-third to Maurice Harbaugh, both of Waynesboro, Pa. Filed Apr. 27, 1922. Serial No. 556,978. 1 Claim. (Cl. 111—30.)

In a wheel-supported corn planter having a pair of seed boxes and means for dropping predetermined amounts of seeds therefrom, a transverse shaft adjacent said seed boxes and driven from the supporting wheels of the machine, means on the shaft for operating the dropping mechanism, marking shoes normally contacting with the ground, a tie member associated with each of said shoes, each member being pivoted to the frame and extending downwardly for connection with each shoe, a vertically reciprocable rod fastened to each shoe and extending



through a bearing in the frame each rod having a bent over upper end, arms mounted on the shaft adapted to contact with the bent over ends of the rods to reciprocate the rods to move the shoes, and springs secured to the frame and adapted to return the shoes to their normal position adjacent the ground, substantially as set forth.

1,480,460. SAMPLE CASE. ARTHUR O. NUTTALL, Chicago, Ill. Filed Aug. 20, 1921. Serial No. 493,908. 4 Claims. (Cl. 220—16.)

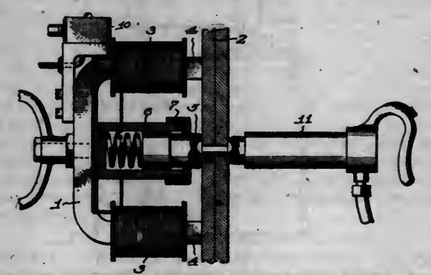


1. A sample carrying case comprising a sample containing compartment, a refrigerant compartment about said sample containing compartment, said compartments having double walls with air spaces therein, removable sealing covers for said refrigerant compartment, hinged covers mounted over said sealing covers, and a hinged cover for said sample containing compartment, said sample compartment cover having its edges overlapping the edges of the hinged covers of said refrigerant compartment.

1,480,461. SHOE-POLISHING MACHINE. WILLIAM H. NUTTER, Kearney, Nebr. Filed May 24, 1921. Serial No. 472,255. 2 Claims. (Cl. 15—23.)

1. A device for the purpose indicated having a rotatable spindle, a grip revolubly mounted on the spindle, a head carried by the spindle in abutting relation to the grip and polishing and brush units of which the former consists of a disk having a peripheral rubbing surface, the brush unit being removably seated upon the exterior surface of said disk, said brush unit and disk having interlocked engaging faces.

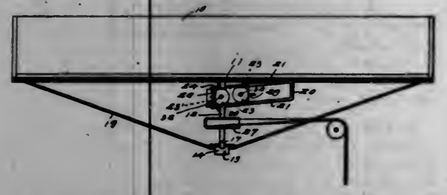
1,480,462. EMERGENCY AXLE FOR MOTOR VEHICLES. GEORGE STRANGE OWEN, Chelsea, London, England. Filed July 22, 1918. Serial No. 246,108. 1 Claim. (Cl. 301—130.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



An auxiliary axle unit comprising a body including an axle-boss, and an integral circular flange portion having tubular offset fastening receiving and spacing legs at the side opposite the boss and arranged in circumferentially spaced relation, and fastening bolts arranged in the tubular leg portions for attaching the unit to the housing flange of the axle construction.

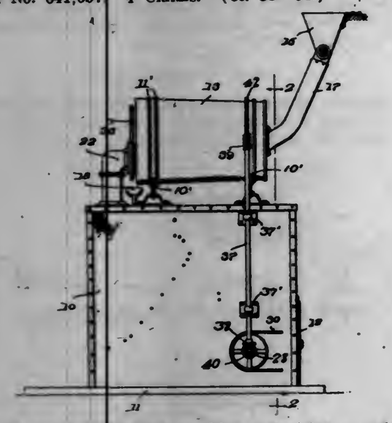
1,480,463. BODY FOR FILLING COLUMNS, TOWERS, ETC. GUSTAV PETZEL, Zurich, Switzerland, assignor to the Firm Gustav Weinmann, Zurich, Switzerland. Filed Mar. 25, 1921. Serial No. 455,563. 2 Claims. (Cl. 261—95.)

1. A body for filling columns, towers, etc., to enlarge the contacting surface of a liquid flowing in one direction and of a gas flowing in opposite direction having a number of wings arranged at suitable angles to each other the wings being provided with corners, the length of said body being approximately equal to the diameter of a cylinder encircling said body.



1,480,464. HOLDER-ON FOR RIVETING MACHINES. WILLIAM A. PUNGS, Detroit, Mich. Filed Oct. 16, 1920. Serial No. 417,345. 1 Claim. (Cl. 78—50.)

A device for the purpose described comprising a pair of electro-magnets, a tubular casing mounted between said magnets, a head having an enlarged inner end portion to slide within said tubular casing, an outer reduced end portion to project from the casing, a cap detachably secured to the end of the casing and having an opening through which the reduced outer end portion of the head

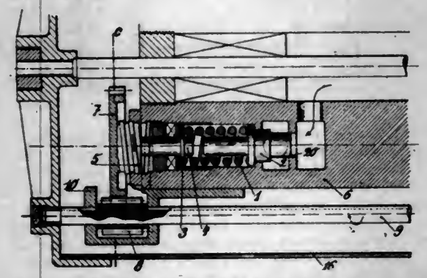


projects, said cap forming a stop to limit the outward movement of said head and being detachable for the ready removal of the head from the casing, and a spring within said tubular casing engaging the inner end of said head to normally hold the head with its reduced end portion projected from the casing.

1,480,465. GYRATORY FLOUR SIFTER. JACOB E. RAMSEY, Spokane, Wash. Filed Sept. 7, 1922. Serial No. 586,677. 1 Claim. (Cl. 83—38.)

In combination with a sifter box, a vibrating apparatus having a revolvible spindle arranged in substantially perpendicular relation with and seated at one end upon the bottom of the box, a foot bearing for the other end of said shaft, said foot bearing connected by braces with the bottom of the box, an eccentric weight carried by said spindle, the spindle being provided with a looped offset forming a radial guide which is inclined upward toward its outer end for directing the movement of the weight toward and from the axis of rotation, the spindle being provided with a looped retaining member for limiting the inward movement of the weight, the weight being provided at its inner end with a recess adapted to receive said loop, the looped retaining member and recess co-operating to permit said weight to project to both sides of the axis of rotation when said weight is in normal position, and a cushioning spring carried by said looped retaining member and adapted to contact with the weight when in normal position.

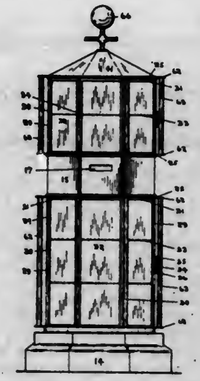
1,480,466. CONCENTRATING MACHINE. PHILIP F. REINHART, Meriden, Conn. Filed May 26, 1923. Serial No. 641,657. 4 Claims. (Cl. 83—54.)



1. An ore concentrating machine comprising a casing, a drum mounted for rotation thereon and adapted to receive the material to be dealt with, means for creating a suction in said casing, a perforated suction chamber horizontally disposed within the drum and communicating with said casing, means for adjusting said chamber horizontally and vertically with respect to the drum, means for holding said suction chamber fixed in any given position with relation to the drum, means for rotating said drum, and a baffle plate arranged within the casing and upon which the material conveyed from the drum is deposited, said drum having an outlet at one end, and a trough arranged beneath said outlet to receive the material passing through the drum.

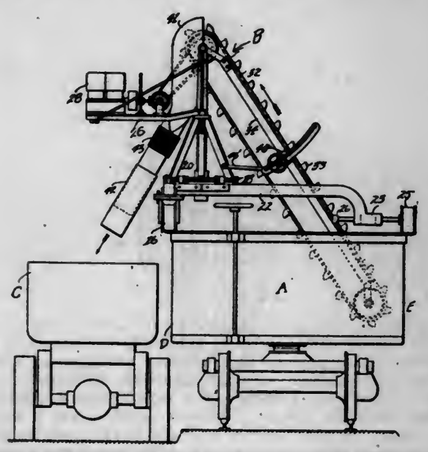
1,480,467. DRIVING WHEEL FOR CLOCKS. CLIFFORD G. RILEY, Sale, England. Filed Jan. 21, 1922. Serial No. 530,960. 1 Claim. (Cl. 58—46.)

In a weight driven clockwork mechanism a compound driving wheel stamped from sheet metal comprising a dished centre pierced out to form the teeth, half of the teeth being bent outwards at their base forming a serrated groove adapted to receive the weight cord and the periphery formed with pinion teeth adapted to mesh with the clock train substantially as described.



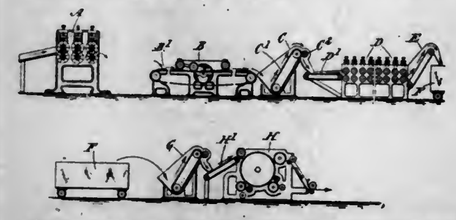
1,480,468. REGULATOR FOR THE OUTLET OF LIQUID IN ARTILLERY BRAKES. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Filed Oct. 2, 1923. Serial No. 666,145. 4 Claims. (Cl. 89—43.)

3. A regulating device for the outlet of liquid in an artillery brake adapted to recoil with the cannon in a cradle pivoted to the carriage when the shot is fired, comprising a throttling valve disposed upon the brake, a spring serving to close the said valve, a shaft disposed in the cradle and situated parallel with the direction of sliding of the cannon and brake controlling means slidable upon said shaft and adapted to impel the said spring against the said valve, said spring having a sufficient strength to balance pressure exercised upon the valve by the liquid during the recoil, and a mechanism for rotating the said shaft in accordance with the inclination of the cannon upon its carriage.



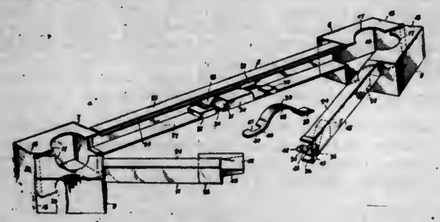
4. A regulating device for the outlet of liquid in an artillery brake adapted to recoil with the cannon in a cradle pivoted to the carriage when the shot is fired, comprising a throttling valve disposed upon the brake, a spring serving to close the said valve, a stop-rod limiting the lift of said valve, a nut disposed upon the brake, a screw turning therein and adapted to impel the said stop-rod towards the said valve, and controlling means for rotating the said screw in accordance with the pivoting movements of the cannon upon its carriage, said means being adapted to operate independently of the sliding of the cannon in its carriage.

1,480,469. COMBINED POSTAL AND ADVERTISING PILLAR. GREGOR ROBERTSON, Adelaide, South Australia, Australia. Filed Dec. 15, 1922. Serial No. 607,145. 7 Claims. (Cl. 40—33.)



1. A combined postal and advertising pillar comprising a stationary postal pillar adapted to receive the mail matter, said pillar having adjacent its upper end an opening for placing the mail therein and near the bottom a door for removing the mail, lower and upper frames rotatable about the upper and lower parts of the stationary pillar in spaced relation to each other, hinged frames attached to such main frames, and panels carried by the hinged frames upon which advertisements are displayed.

1,480,470. UNLOADING MACHINE FOR RAILROAD CARS AND THE LIKE. ROBERT C. ROSENBERG, Jr., San Francisco, Calif. Filed Dec. 12, 1921. Serial No. 521,717. 3 Claims. (Cl. 198—88.)

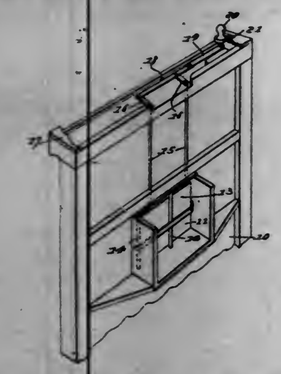


1. A machine of the character described adapted to rest and travel upon the top of the walls of a car, said machine comprising a supporting frame, a turn table connected to said frame, a vertical standard positioned in said turn table, a yoke connected to said standard, endless conveying means for receiving the material in the car and delivering the material outside the car, mechanism for actuating said conveying means, means for adjusting the conveyor to retain the same in a fixed receiving and delivering position, and means connected to said turn table for compensating for various widths of cars so that the machine may be balanced thereon, said means including a cross arm provided with a sleeve, and a shaft longitudinally movable in said sleeve.

1,480,471. TREATMENT OF JUTE AND LIKE FIBROUS MATERIAL. FREDERICK DAVID STEWART SANDEMAN, Dundee, Scotland, assignor to Jute Industries Limited, Dundee, Scotland, a Company of Great Britain. Filed Sept. 12, 1921. Serial No. 500,114. 8 Claims. (Cl. 19—65.)

3. A process for the treatment of fibrous material such as jute having long fibres according to which the material is first opened, next the fibres are cut so as to reduce them to a length of from seven inches to two feet, the cut fibres being delivered automatically into a hopper feed mechanism and thereby delivered to a softener, the fibres next being delivered automatically from the softener into barrows whence the fibres are taken and placed in a hopper feed mechanism which delivers them automatically on to the feed sheet of a breaker card.

1,480,472. GAS-METER-PROTECTING MEANS. GEORGE H. SAUTON, New Orleans, La., assignor of one-sixteenth to Edward H. Walsdorf and one-sixteenth to Louis Hufft, both of New Orleans, La. Filed Aug. 18, 1922. Serial No. 582,669. 10 Claims. (Cl. 70—122.)



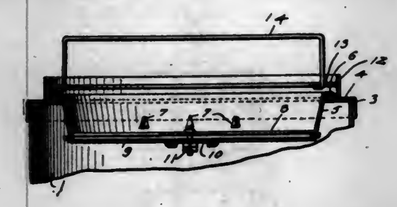
1. In a gas meter protecting means, the combination with the coupling joints of pipes communicating with a meter, of enclosing means completely covering each joint and having hollow members extending from one to the other of the said means, the hollow members being in part fixed to the enclosing means and in part movably associated with the latter and provided with interfitting extremities and movable to and from the fixed parts of the hollow members, and locking devices completely held and concealed within the said members and automatically secured when the movable members are closed to protect the locking devices against exterior manipulation.

1,480,473. PROCESS FOR THE WORKING UP OF LINOLEUM SCRAPS INTO NEW LINOLEUM. VICTOR SCHOLS, Tauer, Germany, assignor of one-half to the Firm Carl Tiedemann, Chemische Werke, Coswig-Dresden, Germany. Filed Aug. 8, 1921. Serial No. 490,766. 2 Claims. (Cl. 106—7.)

1. In a process for working up scrap linoleum of all kinds into new linoleum by treating the scrap with organic solvents, the using of so small a quantity of

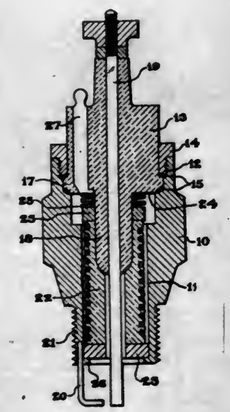
organic solvents that a mere softening of the scrap occurs which renders it possible to remove the jute fibres by a mechanical means, after which the regenerated basic linoleum pulp is reconverted into new linoleum.

1,480,474. WASHBOARD. ALECK SHIMKUS, Hamtramck, Detroit, Mich. Filed Sept. 25, 1922. Serial No. 590,412. 1 Claim. (Cl. 68—29.)



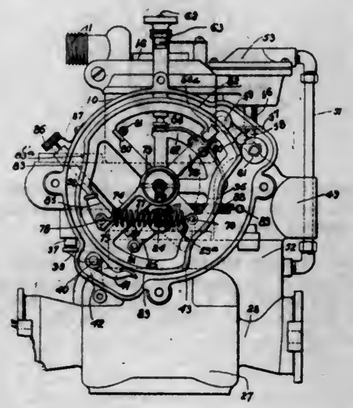
A washboard having a seat for receiving a soap cake with the front surface of the latter substantially in the plane of the rubbing surface of the board, a plunger movably mounted in said seat for contact with the rear surface of the soap cake, an operating knob mounted upon the head of the washboard within convenient reach of the hand of the operator, and operating connections between said knob and the plunger, whereby a progressive advance of the latter toward the plane of the rubbing surface may be effected, said connections including rock shafts having crank arms to which said plunger is attached and operating arms disposed adjacent to the head of the washboard, and a slide bar connected with said operating arms and having a link connection carrying said knob.

1,480,475. DOOR MOUNTING. WALTER S. SLANGERUP, Omaha, Nebr., assignor to Perfection Door Mounting Hinge Company, Omaha, Nebr. Filed June 23, 1923. Serial No. 647,382. 3 Claims. (Cl. 16—151.)



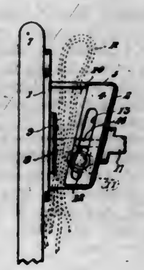
1. In a door mounting, a lower vertical sleeve, an upper vertical sleeve each being provided with a flange, a pair of wing-plates each being provided with a pintle for engaging in a sleeve and having a flange extending outwardly of its sides at its junction with the pintle for engaging the flange of the sleeve, each wing-plate being disposed in line with the longitudinal axis of its pintle to permit the door to engage a selected side of a wing-plate in engagement with the flange thereof.

1,480,476. SELF AND EVER SET TRAP. GEORGE WESLEY STEELE, Double Springs, Ala., assignor of one-half to John C. Steele, Double Springs, Ala. Filed May 12, 1923. Serial No. 638,556. 1 Claim. (Cl. 43—69.)



A self-set trap comprising a vessel, a rim fitted to the top of the vessel and having a flange engaging the outer side of the vessel at the upper edge thereof and having an inner flange projecting inwardly of the vessel, a tapering collar having an outer flange overlapping the inner flange of said rim and suspending the collar in the upper portion of the vessel in spaced relation from the sides thereof and with its smaller portion disposed lowermost, a trap door pivotally mounted in the lower portion of the collar and within the vessel, the pivotal mounting of the trap door comprising a shaft having its ends journaled in opposite sides of the collar and means clamping the trap door to the shaft, a second rim embracing the outer flange of the collar and resting upon the inner flange of the first mentioned rim, and said second rim having an inwardly disposed flange to form a ledge and a crosspiece mounted upon the inner flange of the second rim, and disposed over and spaced above said trap door.

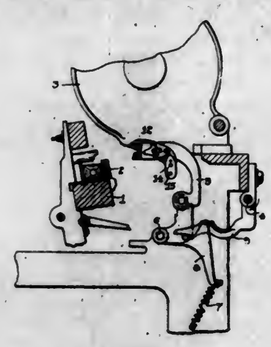
1,480,477. SPARK PLUG. JOHN CASIMIR SULB and WILLIAM WYATT, Philadelphia, Pa. Filed July 12, 1922. Serial No. 574,372. 1 Claim. (Cl. 123—169.)



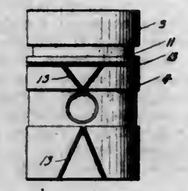
A spark plug embodying a housing, power and ground electrodes, a core secured to the housing and having a reduced extension projecting into one end of the housing and defining a shoulder at the inner end of said extension, a resistance coil located within the housing and having one end surrounding the core extension, a coiled spring surrounding said extension between the coil and shoulder, a stop within the housing for engagement with the opposite end of the coil and a terminal extending through the core and having one end engaging the spring.

1,480,478. CARBURETOR. GEORGE H. TABER, Binghamton, N. Y. Filed Apr. 11, 1919. Serial No. 289,350. 9 Claims. (Cl. 123—119.)

1. In a carburetor, the combination of a fuel feed manifold connection, down feed connections for gaseous or liquid fuels thereto, means to control the delivery of fuel and air through the carburetor and supplementary warm air delivery means through the carburetor and through the manifold connections aforesaid for supplying fresh heated air to the engine when the air and fuel supplies are shut off.



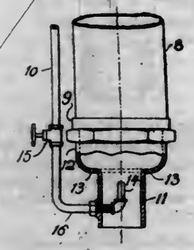
1,480,479. REIN HOLDER. PAUL TRUSKOWSKI, Remsen, N. Y. Filed Apr. 24, 1923. Serial No. 634,267. 2 Claims. (Cl. 280—183.)



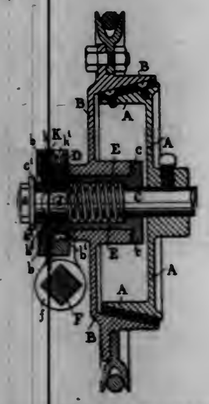
1. In a rein holder, a casing having an end opening and an outer wall extending on an incline to the inner wall, a roughened gripping plate therein, and a sliding cylinder wedge cooperating with the gripping plate, there being a slotted opening in the inclined outer wall of the casing and a finger extending through the slot, positioned above the wedging cylinder and operable exteriorly of the casing for forcing the wedging cylinder into operative engagement with reins.

1,480,480. THREAD-CLAMPING MECHANISM FOR LOOMS. ARTHUR C. VARNUM and JAMES ERNEST BIRDSALL, Southbridge, Mass. Filed Mar. 10, 1922. Serial No. 542,668. 5 Claims. (Cl. 139—264.)

1. In an automatic filling replenishing loom, the combination with a thread parter to act upon the thread of the filling supply to be abandoned, and comprising a movable blade and a surface of revolution, of means for moving said blade to clamp the thread by rolling friction between said blade and said surface of revolution.

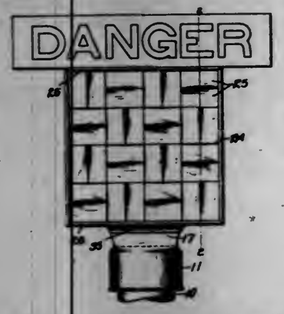


1,480,481. PISTON. ROBERT W. WAKEFIELD, Langeloth, Pa. Filed Sept. 23, 1921. Serial No. 502,733. 2 Claims. (Cl. 74—108.)



1. A piston having an annular oil collecting groove immediately below a piston ring groove, said piston having oil grooves intersecting the oil collecting groove and intersecting each other, said last named grooves intersecting at a point to deliver the collected oil, to the wrist pin bearing of the piston.

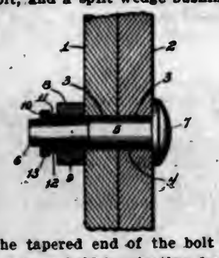
1,480,482. PUMPING APPARATUS. HERVEY J. WHEELER, Brooklyn, N. Y., assignor to H. J. Wheeler Salvage Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 16, 1921. Serial No. 492,698. 6 Claims. (Cl. 103—4.)



5. In an apparatus for pumping viscous material, a vacuum suction line, means for allowing air to expand into said suction line and mix with the viscous material to be pumped and means for heating the pumped mixture necessarily cooled by the air expansion.

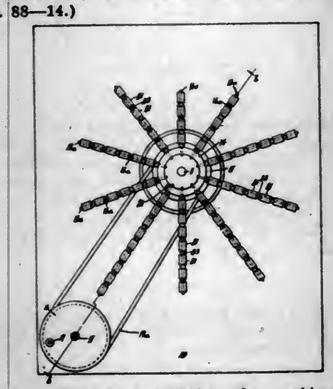
1,480,483. CLUTCH DRIVING MECHANISM. HENRY WEILDING, Belfast, Ireland, assignor to York Street Flax Spinning Company Limited, Belfast, Ireland. Filed Aug. 11, 1921. Serial No. 491,529. 1 Claim. (Cl. 192—66.)

A friction clutch driving mechanism for spinning frames and other machines comprising the combination with a driven clutch member adapted to be affixed to a shaft, a driving clutch member free to rotate around a shaft and a sleeve upon which the latter is free to rotate, formed with an internal recess, of a spring within the recess in the sleeve to move it and the clutch member mounted thereon in one direction, a bush within the sleeve against which one end of the spring abuts and adapted to be affixed to the shaft, a stop washer secured to the exterior of the sleeve to maintain the clutch member in position thereon and a ring on the stop washer provided with trunnions by which to move the sleeve against the pressure of the spring substantially as described.



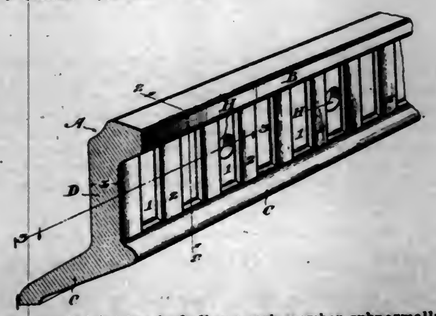
1,480,484. SIGNAL. JOHN A. WERTS, Canton, Ohio. Filed Dec. 9, 1922. Serial No. 605,941. 8 Claims. (Cl. 88—1.)

1. A signal comprising a plurality of rectangular reflecting surfaces arranged in pairs to cast sets of diverging beams, said pairs of surfaces being so arranged that the gap between each set of diverging beams is filled by beams from one or more adjacent reflecting surfaces, substantially as set forth.



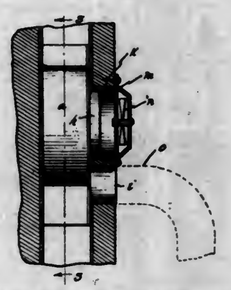
1,480,485. FASTENING BOLT OR RIVET. KELLEY G. YONCE, Ridge Spring, S. C. Filed Feb. 23, 1923. Serial No. 620,801. 2 Claims. (Cl. 85—5.)

1. A bolt or rivet having a shank provided with a cylindrical end portion and a tapered end portion, a head upon the cylindrical end portion, a collar having a tapered bore adapted to fit upon the tapered end portion of the bolt, and a split wedge bushing adapted to be



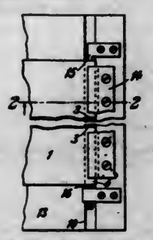
fitted upon the tapered end of the bolt and driven into said collar and to be held by riveting down the extremity of the tapered end of the bolt.

1,480,486. COLOR MODEL. ARTHUR S. ALLEN, North Tarrytown, N. Y., assignor to Munsell Color Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1921. Serial No. 438,106. 5 Claims. (Cl. 88—14.)



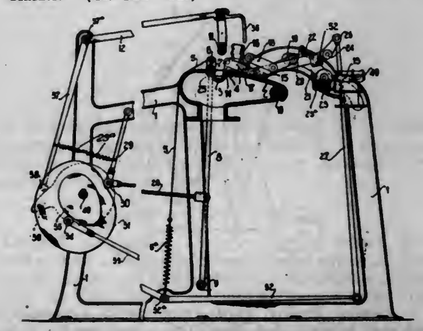
1. In a color display device, the combination of a standard, collars mounted thereon having radially extending arms, colored blocks detachably supported upon the arms, the colors of the blocks on the same arm having the same light value and each arm bearing a neutral gray color corresponding to the value of the colors of the blocks mounted thereon.

1,480,487. LIGHTENED CONSTRUCTION FOR RAIL JOINTS. VICTOR C. ARMSTRONG, New York, N. Y., and EMORY L. GROFF, Washington, D. C., assignors to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed June 28, 1923. Serial No. 648,315. 6 Claims. (Cl. 238—243.)



1. A rail joint bar including a web member subnormally thinned at intervals and a rail engaging top chord overhanging such member.

1,480,488. VENTILATOR OR AIR EJECTOR. KENNETH M. DE VOS and EARLE W. BAGG, Detroit, Mich. Filed Jan. 14, 1922. Serial No. 529,149. 5 Claims. (Cl. 98—25.)

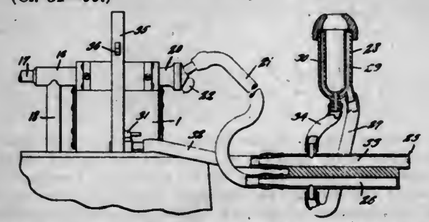


5. The combination with a chimney provided with a flue, of a ventilator, comprising a shell having a bulbous central portion having openings in the top and bottom thereof and provided with an air duct within said bulbous portion acting as a catch pocket, said duct and bulbous portion forming an annular by-pass flue communicating with the openings in said shell, the annulus of said flue having a horizontal axis.

1,480,489. PLATE-REGISTERING DEVICE. WILLIAM H. BANZETT, Bergenfield, N. J., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Oct. 28, 1919. Serial No. 333,972. 9 Claims. (Cl. 101—415.1.)

1. In a plate registering device the combination of a plate, a rail fixed to one edge thereof, a seat for said rail, means for locating said rail in predetermined position lengthwise in said seat, means for locating said rail in predetermined position transversely in said seat, and means for holding the rail so located, in said seat.

1,480,490. MACHINE FOR MAKING CIGARILLOS AND THE LIKE. ADOLF BARGEBOER, Rotterdam, Netherlands. Filed Nov. 5, 1921. Serial No. 513,173. 11 Claims. (Cl. 131—42.)

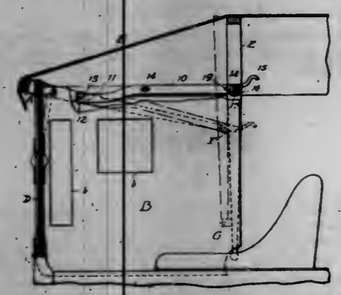


1. In a machine for manufacturing cigars and the like, a perforated rolling table having a groove, a perforated flexible band stretched over said table, means for actuating said band, a stamper for forcing tobacco into said groove, a frame carrying gumming means and a pneumatic transporter, means for supporting and actuating said frame and a stationary pneumatic receiver adapted to cooperate with said transporter and gumming means.

1,480,491. GARMENT SUPPORTER. JOHN W. BEASLEY, Jr., Los Angeles, Calif. Filed Apr. 23, 1920. Serial No. 376,085. 1 Claim. (Cl. 24—230.)

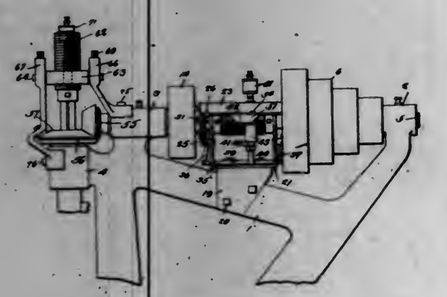
A fastener of the class described comprising a flexible body, a head secured to one end thereof, a rigid pin extending forwardly from said head, a head secured to the opposite end of the body, a socket member carried by said second named head, said socket member comprising a tubular member rigidly secured to said second named head and projecting forwardly therefrom and adapted to receive said pin, a shell having an opening in one end and a shoulder surrounding said opening, said tubular member projecting into said shell through said opening, said tubular member having a head forming a shoulder at its free end, balls arranged in radially extending openings in said head, said shell having tapering inner walls adapted when the shell is moved to engage and move said balls inwardly of said head to engage said rigid pin to secure it within said tubular member, a coil spring within said shell and surrounding said tubular member and having one of its ends engaging said head and having its other end engaging said shoulder and normally maintaining said shell in the position described, and said shell adapted to move independent of movement of the flexible body and in opposition to the action of said coil spring to release the rigid pin from the tubular member.

1,480,492. PULSATOR FOR MILKING MACHINES. ARTHUR BEHNKE and JENS C. JENSON, Royalton, Wis. Filed July 22, 1922. Serial No. 576,740. 4 Claims. (Cl. 31—99.)



1. A pulsator including single, independent, pistons, means for supplying vacuum direct to one of said pistons, a reciprocatory valve controlling the vacuum supply to the other piston, means for regulating the vacuum supplied to said second mentioned piston for controlling the speed of said piston, the direct vacuum operated piston being connected to alternate said valve, and means controlled by said second mentioned piston for controlling the pulsations in the teat cups without affecting the movement of said reciprocatory valve.

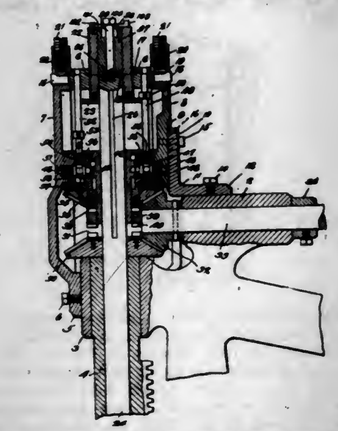
1,480,493. CURTAIN SWING. JOHN ZIEGLER BENSON, Des Moines, Iowa. Filed Sept. 15, 1922. Serial No. 588,458. 1 Claim. (Cl. 296—138.)



A curtain supporting attachment for automobile tops comprising an arm having a combined attaching and hinge plate hingedly connected thereto, a combined pivot and fastening bolt for pivotally connecting the attaching plate to a bow of the automobile top whereby the arm

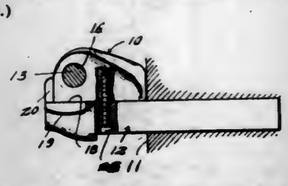
may swing about a vertical axis or into parallel relation to the bow to which it is connected, the rear portion of said arm being formed with an opening for the reception of a pin by means of which the rear portion of the arm may be secured to a bow of the top when the top is

folded, and a supporting clip carried by one of the top bows and having a slot opening out through the upper end thereof, said arm being provided with curtain supporting members, one of which is adapted to extend through the slot in said clip.



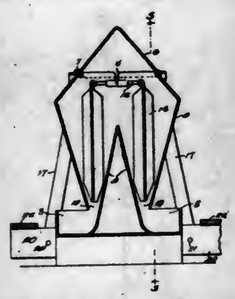
1,480,494. ATTACHMENT FOR DRILL PRESSES. FRANK E. BESSLER, Akron, Ohio. Filed May 2, 1921. Serial No. 466,064. 4 Claims. (Cl. 10—136.)

1. In a device of the class described, a tap shaft; a driven shaft disposed at an angle to the tap shaft; means for connecting the shafts operatively; means for raising and lowering the tap shaft responsive to a change in the direction of rotation of the tap shaft; rotatable members loose on the driven shaft; a screw on the driven shaft; a nut traversing the screw; clutch means on the driven shaft for connecting the rotatable members, one at a time, with the driven shaft; and mechanism operated by the nut for moving the clutch means in opposite directions toward the respective rotatable members—said mechanism comprising a shift bar supported for right line sliding movement; stops on the shift bar, for engagement by the nut; and movable elements operated by the shift bar and coacting with the clutch means to move the same in opposite directions.



1,480,495. ATTACHMENT FOR DRILL PRESSES. FRANK E. BESSLER, Akron, Ohio. Filed Apr. 27, 1923. Serial No. 635,176. 6 Claims. (Cl. 74—50.)

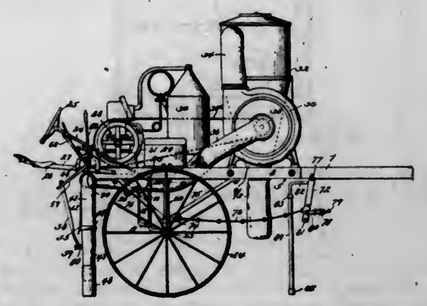
1. In a device of the class described, a frame; a first shaft journaled in the frame and movable longitudinally therein; means for establishing threaded connection between the first shaft and the frame; first pinions loose on the first shaft; a second shaft journaled in the frame; a pinion on the second shaft and meshing with the first



pinions; a clutch operating to connect either of the first pinions to the first shaft; and mechanism responsive to the rotation of the first shaft for actuating the clutch.

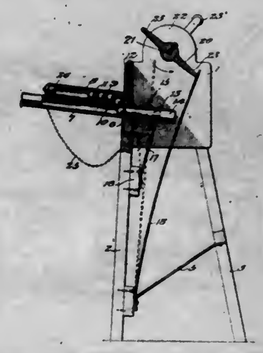
1,480,496. OILLESS BEARINGS FOR HARNESS ROLLS FOR LOOMS. JOHN L. BOBO, Greenville, S. C. Filed Mar. 7, 1921. Serial No. 450,374. 2 Claims. (Cl. 64—24.)

1. In a harness mechanism for looms, a supporting arm for the harness rod secured to and extending horizontally from the harness frame, said arm having an upper flat surface and provided at its outer end with a flange extending upwardly beyond said surface, and an oil impregnated block secured upon said flat surface between and engaging said flange and frame and having a bearing for said rod.



1,480,497. DRY-MASH-FEED HOPPER. MARTIN BRANDT, Toms River, N. J. Filed June 21, 1923. Serial No. 646,895. 1 Claim. (Cl. 119—55.)

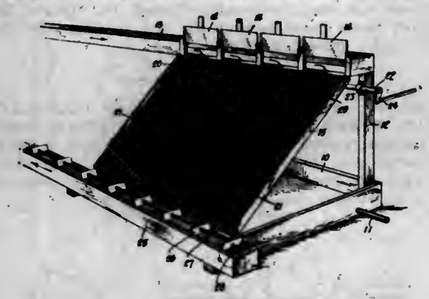
A chicken feeding device, comprising a hopper, a feed trough associated therewith, a rectangular frame, trunnions extending from the ends of said rectangular frame and forming means for pivotally mounting the



frame in the upper portion of the hopper, a cross arm connected to each of said trunnions, levers depending from each end of said cross arms and pivotally connected thereto, perches associated with said levers whereby the rectangular frame will be rocked about its pivotal points each time a bird occupies a position on one of said perches, and agitators carried by said rectangular frame and extending downwardly into the hopper.

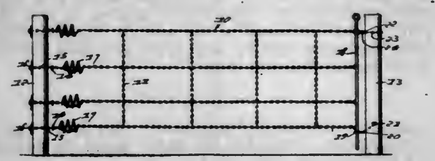
1,480,498. BOLL-WEEVIL DESTROYER. JOHN B. BROADWELL, Alpharetta, Ga. Filed Apr. 21, 1921. Serial No. 463,143. 15 Claims. (Cl. 43—140.)

1. In a machine of the class specified, a wheeled frame, suction mechanism mounted on the frame, and a tubular gathering unit connected to the suction mechanism and comprising laterally and rotatably adjustable divergent extremities adapted to closely engage the ground surface.



1,480,499. TOY MACHINE GUN. ADAM RANDOLPH BROWN, Louisville, Ky. Filed Apr. 22, 1922. Serial No. 556,041. 6 Claims. (Cl. 124—13.)

1. In a toy machine gun, a barrel, means for delivering projectiles to the barrel, an ejector adapted to shoot said projectiles from the barrel, and a striker engageable with ejector to operate the same.



1,480,500. SAVE-ALL. GEORGE WILBUR BROWN, Millwood, Wash., assignor to Inland Empire Paper Co., Millwood, Wash., a Corporation of Washington. Filed Apr. 6, 1921. Serial No. 458,927. 7 Claims. (Cl. 92—30.)

1. A save-all comprising a delivery means for the waste water, an adjustable screen in front of the delivery means and inclined downwardly and forwardly therefrom to allow the water to separate from the stock and pass through the screen and to allow the separated stock to

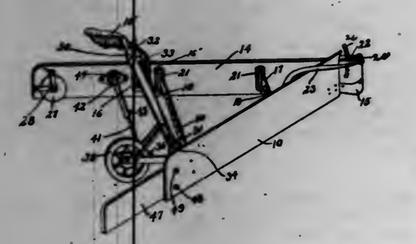
travel down the screen, and an endless conveyor into which discharges the lower end of the said screen for carrying off the stock separated from the waste water.

1,480,501. GATE. STEPHEN O. BRYANT, Bethany, Mo. Filed Aug. 18, 1921. Serial No. 493,284. 2 Claims. (Cl. 39—74.)

1. A gate having in connection with the hinge post and latch post a plurality of longitudinal flexible runners provided at one end with means for engaging the hinge post and at the other end with means for engaging the latch post and provided at intermediate points with yielding tensile cushioning means consisting of volute springs, terminally engaged with said runners with intermediate normally slack or loose portions of the runners constituting means for limiting the extension of the springs.

1,480,502. MATCH SAFE AND VENDING DEVICE. ROSTUS BUTLER, Little Cobary, N. C. Filed Apr. 12, 1923. Serial No. 631,711. 5 Claims. (Cl. 206—30.)

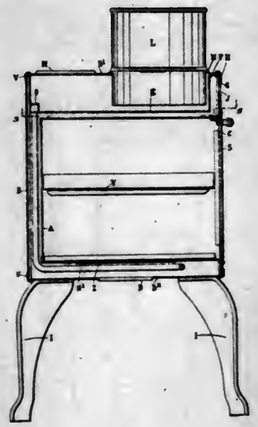
4. In a match safe and vending device, a containing body having a lower converged discharge extremity formed with a lower terminating trough provided with



an opening at each end and also a larger opening at the center, the said larger opening extending transversely and also downwardly through the trough, the trough being closed between the end openings and the said center opening thereof.

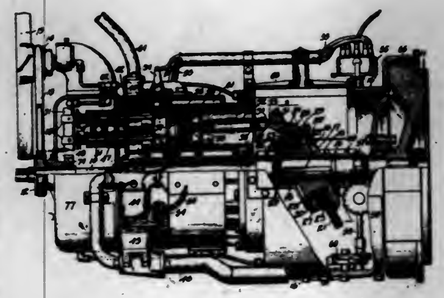
1,480,503. APPARATUS FOR AUTOMATICALLY PLACING BRAKE BLOCKS ON RAILWAY LINES. LÉON CHASSY, Firminy, Loire, France. Filed Aug. 8, 1921. Serial No. 490,743. 4 Claims. (Cl. 104—257.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Means for automatically placing brake-blocks on the rails of railways comprising a bracket a horizontal pin mounted on said bracket a brake block lugs fixed to said block and rotatable and slidable on said pin, a vertical support, a two armed lever pivoted on said support, a chain attached to one arm of said two armed lever means for guiding said chain and hand operated means for drawing said chain.



1,480,504. DITCHING MACHINE. ECTOR L. CLARK, Sidney, Tex. Filed May 27, 1922. Serial No. 564,175. 4 Claims. (Cl. 37—174.)

1. In a device of the class described, a blade, a land side member connected with said blade, the blade and land-side member converging with reference to each other, and adjustable braces extending transversely between the blade and land-side member, beams adjustably connected with the blade and landside respectively, said beams extending upwardly and then forwardly over the upper edges of the blade and landside, and means for connecting the forward ends of the beams.

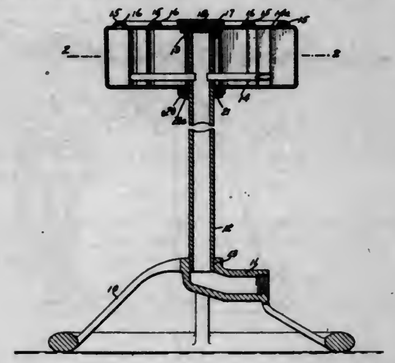


1,480,505. OVEN, HOT PLATE, BAIN-MARIE, AND THE LIKE. EDWIN CLEARY, London, England; Alfred Hutchison administrator of said Edwin Cleary, deceased. Filed May 12, 1922. Serial No. 560,352. 3 Claims. (Cl. 126—39.)

1. A cooking apparatus comprising an oven-chamber, a door to said chamber, an outer casing surrounding said chamber so as to leave an intermediate space around the oven-chamber, said outer casing having a hot-gas inlet-aperture in its bottom and an outlet at its upper part for the cooled gases, a water bath extending to the top of the intermediate space, and which communicates with the exterior through holes in the top plate of the outer casing, and a circulation pipe the ends of which communicate with the interior of the water tank and which extends into the part of the intermediate space

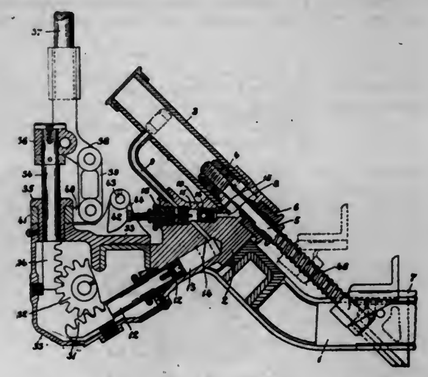
between the oven-chamber and the bottom of the outer casing where it is formed into a loop arranged around the hot-gas inlet-aperture, one vertical limb of said pipe being of larger diameter than the other.

1,480,506. CRANKLESS ENGINE. CLARENCE W. CLEMENTZ, Jacksonville, Fla., assignor to Crankless Engine Company, Jacksonville, Fla., a Corporation of Florida. Filed Aug. 17, 1922. Serial No. 582,568. 4 Claims. (Cl. 123—58.)



4. A crankless engine having a main shaft, a set of cylinders arranged in a circle concentric with said shaft, inlet and outlet valves in sets also concentric with said shaft, cam shafts extending transversely of the main shaft bearing pairs of cams each pair operating the inlet and outlet valves of a cylinder, and gearing for driving the cam shafts from the main shaft, substantially as set forth.

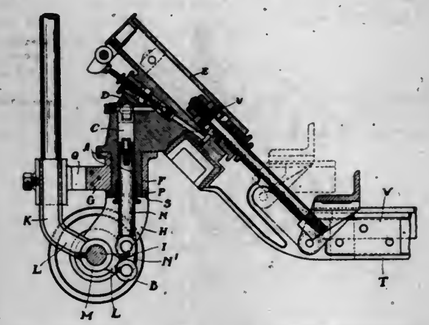
1,480,507. LAWN SPRINKLER. GEORGE WILLIAM COBLENTZ, JOSEPH ROLLINS FARIES, and HENRY PAUL BOND, Tacoma, Wash. Filed Oct. 12, 1921. Serial No. 507,310. 4 Claims. (Cl. 299—67.)



1. In a sprinkler, a water box mounted to revolve and having jet orifices at the top, blades on the box at the

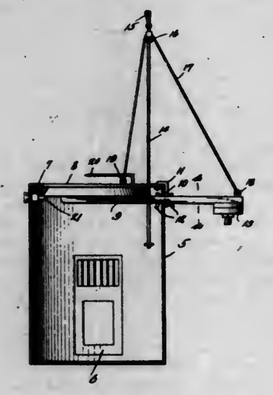
interior, said blades having sides at an angle to the side wall of the box and at an angle to each other, the

sides of the blades being convergent toward said wall, and means to direct water under pressure into said box and against said blades.



1,480,508. CONSTRUCTION OF HYDRAULIC LIFTING JACKS. LESLIE ALFRED COLLIS, Putney, London, England. Filed Apr. 16, 1921. Serial No. 461,993. 3 Claims. (Cl. 138—9.)

1. Hydraulic lifting jack comprising a ram cylinder containing a ram rod and of greater length than necessary for movement of the ram, passage ways connecting the ends of the ram cylinder, two valves and a piston controlling the passage ways, the passage way from the working end of the cylinder leading to one valve, the other passage way leading to between the other valve and the piston, a pump with a passage way leading to between the two valves the pumping action taking the liquid from the nonworking end of the cylinder and passing it to the other end the piston being operable to move the valves and reduce the opening to the nonworking end of the cylinder to allow of slow movement of the ram within the ram cylinder to eject the liquid from the working side to the nonworking side of the ram.

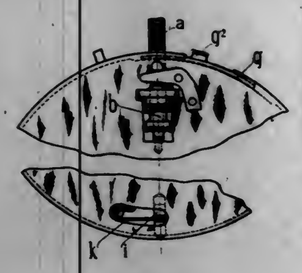


1,480,509. HYDRAULIC LIFTING TRUCK. LESLIE ALFRED COLLIS, Putney, London, England. Filed Aug. 3, 1921. Serial No. 489,452. 2 Claims. (Cl. 254—2.)

1. In a truck, a forward body portion having a king bolt thereon, a lifting platform connected to and movable relative to said forward body portion, a cylinder connected to the forward body portion, a piston slidable in said cylinder connected to the platform and a pump

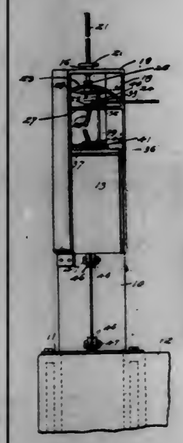
piston and cylinder concentric with the king bolt, said pump cylinder being in communication with said first named cylinder.

1,480,510. TRAP. FRANK COLMAN, Lumberton, Miss. Filed Dec. 31, 1921. Serial No. 526,190. 1 Claim. (Cl. 43—69.)



In a trap, a housing having an open upper end, said housing having an opening in the wall thereof, a beam mounted within the opening and carrying a pin disposed adjacent to the opening to restrict movement of the beam, a door mounted at one end of the beam and adapted to normally close the open end of the housing, vertical rods supported by the housing and having a loop portion, a pulley supported by the loop portion, a weight at the outer end of the beam to counter-balance the weight of the door, a flexible member having one end thereof connected to the beam adjacent to the weight, the opposite end of the flexible member having connection with the door and the intermediate portion of the flexible member operating over the pulley.

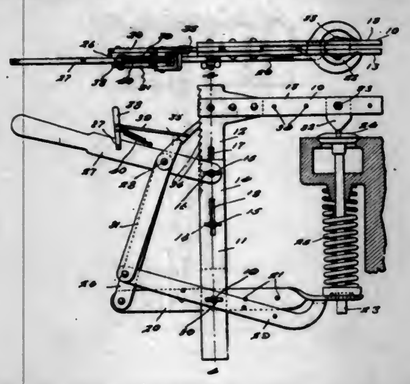
1,480,511. TIMEPIECE. HENRI COLOMB, Tavannes, Switzerland. Original application filed May 13, 1921, Serial No. 469,311. Divided and this application filed Sept. 12, 1922. Serial No. 587,782. 1 Claim. (Cl. 58—63.)



A time piece which is provided with a stem of two pieces, both parts of said stem being coupled and uncoupled by a rotative relative movement, one of said parts being locked in order to uncouple both parts, the

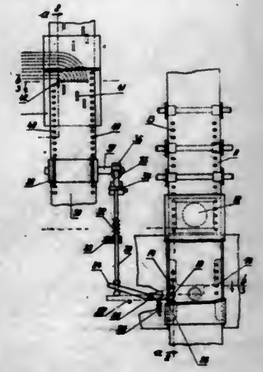
locking of the lower part being effected by means of organs directly acting on said part, the latter being pro-

vided with a notch in which a locking device may be introduced, this locking device consisting in a push-piece fitted to the plate.



1,480,512. CYLINDER-GRINDING MECHANISM. JAMES C. CAITHFIELD, Wenubleau, Mo. Filed May 4, 1922. Serial No. 558,461. 6 Claims. (Cl. 51—245.)

1. A cylinder grinding apparatus including a guide cylinder adapted for alinement with the cylinder to be ground, a frame rising from the guide cylinder having side members outwardly offset with respect to said guide cylinder, a carrier of greater length than the guide cylinder slidable therein, a grinder arbor carried by the cylinder, a yoke rising from the carrier and disposed within and guided by said frame, said yoke being of greater width than the guide cylinder and at its side being in contact with said side members, operating gearing for the arbor carried by the yoke, and means extending into the frame intermediate the side members to drive said gearing.

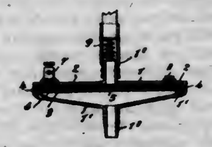


1,480,513. VALVE-SPRING TOOL. JOHN F. DANIKEN, Adonis, Mo. Filed Jan. 16, 1922. Serial No. 529,598. 4 Claims. (Cl. 29—96.3.)

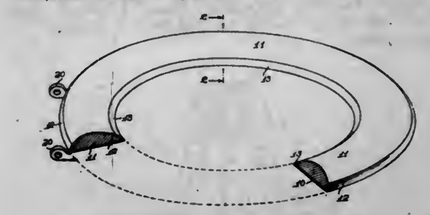
1. A valve spring tool comprising a frame including right angularly arranged members, a valve engaging element carried by one of said members, a spring engaging arm pivotally mounted upon the other member, an oper-

ating lever pivotally secured to the frame and a link connecting the arm and lever.

1,480,514. KINEMA FILM AND LIKE STRIP HAVING FEED PERFORATIONS AND MECHANISM CO-OPERATING WITH SAID PERFORATIONS. WILLIAM CECIL JEAPES, Belmont, England, and ANDRÉ LÉON VICTOR CLÉMENT DEBRIE, Paris, France. Filed June 6, 1922. Serial No. 566,408. 6 Claims. (Cl. 95—75.)



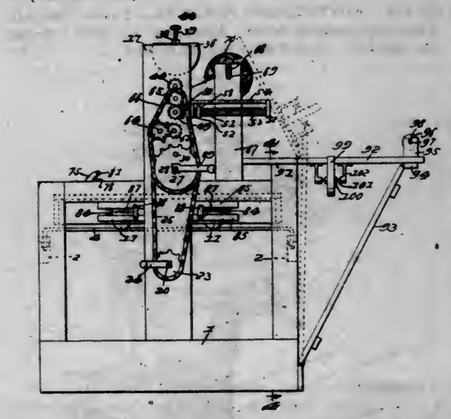
2. In apparatus handling a strip having feed perforations and particularly in film printing apparatus, the combination of a strip which is blinded at the location of appropriate feed perforations, a movable member cooperating with said strip, pins carried by said movable member and entering the feed perforations, means for moving said pins by contact with the strip at the blinded portions and operating means, actuated by the movement of said pins for changing the intensity of printing light.



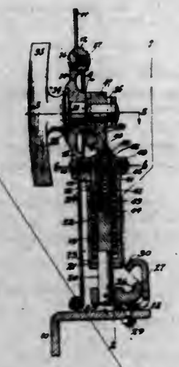
1,480,515. ELECTRICAL INSTANTANEOUS WATER HEATER WITH CONTINUOUS CIRCULATION, WORKING AT DIFFERENT VOLTAGES. ATTILIO DE MARCHIS, deceased; by Ernilia Caselli, administratrix, Rome, Italy. Filed Feb. 18, 1921. Serial No. 446,090. 3 Claims. (Cl. 219—40.)

1. An electrical water heating device, comprising a casing having an inlet and outlet, two metallic members arranged in the casing in spaced relation and upon one of

which the water is delivered and passes between the said plates to the outer of the casing, and electrical terminals, one secured to the casing and the other to one of the said members.

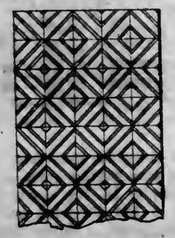


1,480,516. TOILET SEAT. GRAHAM CHARLES DOBSON, New York, N. Y. Filed Jan. 31, 1921. Serial No. 441,310. 1 Claim. (Cl. 4—287.)



As a new article of manufacture a toilet seat, comprising a flat metal ring-shaped frame having at its inner and outer edges integral annular flanges inclined upwardly and inwardly toward each other, and a ring-shaped filling having a flat lower face resting upon the frame and a curved upper face presenting curved inner and outer edges and provided in said edges with annular rabbets of a depth and length equal to the thickness and length of the flanges, whereby the flanges lie flush with the filling and the latter secured to the frame without additional means.

1,480,517. WALL-PAPER PASTING AND FOLDING MACHINE. HORACE G. DOOLITTLE, Knoxville, Iowa. Filed June 19, 1919. Serial No. 305,322. 4 Claims. (Cl. 270—79.)



1. A machine of the character described embodying a work table, means for reciprocating the work table, means for feeding paper from a supply roll to the work table, paper folding means carried by the work table, a clamp comprising spaced bell crank levers, pins spanning the levers and securing them together, means for pivotally mounting the levers on the work table, a contractile spring disposed between the levers and tensioned between one of said pins and a point on the work table, one of said levers being provided with lateral extension, and a relatively fixed lifting arm disposed in the direction of the length of the table, and engaging said extension to raise the levers against the tension of the spring in one position of the work table.

1,480,518. HOOD FASTENER FOR AUTOMOBILES. CLEBURNE EBERHART, Jr., Buffalo, N. Y. Filed Dec. 29, 1921. Serial No. 525,542. 9 Claims. (Cl. 70—14.)

9. A fastener for automobile hoods comprising a bracket adapted to be arranged on the inner side of the hood and having an upper rim which is secured to the hood and a tubular guide projecting downwardly from said frame, and having an upwardly facing shoulder, a shifting rod sliding in said tubular guide and having a downwardly facing shoulder, a spring for raising said rod interposed between said shoulders, a face plate adapted to be secured to the outer side of the hood in line with said rim and having a bearing, a shaft journaled in said bearing, a handle arranged on the outer end of said shaft, a cam arranged on the inner end of said shaft and adapted to depress said rod, an upwardly facing hook arranged on said rod, a downwardly facing hook adapted to be arranged on the automobile frame and to be engaged by said upwardly facing hook, and means for locking said cam against turning comprising a locking bolt slidable laterally on said shaft into and out of engagement with an opening in said face plate, and a lock mechanism mounted on the shaft for operating said bolt.

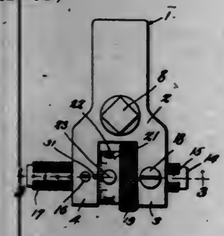
1,480,519. PROCESS OF MAKING MOSAIC, MITER-SQUARE WORK. SWAN C. ECKLUND, Hershey, Nebr. Filed Aug. 30, 1921. Serial No. 496,935. 1 Claim. (Cl. 20—75.)

A process of preparing mosaic in miter-squares which consists in arranging primary strips of contrasting color, side by side at an angle of 45° relative to the width of the respective strips and uniting the same by an adhesive, then separating the composite sheet into bars of uniform width very materially in excess of the width of said pri-

mary strips, said bars having the primary strips arranged at an angle of 45° to the length of the respective bars, then arranging the composite bars in reverse order with like primary strips matching and forming lines or strips of zig zag form, with the primary strips of adjacent bars disposed at an angle of 90°, then cutting the second sheet into bars of a width equal to the width of the first named bars, the cuts being along lines at right angles to the lines of the first cuts, then arranging the last named set of bars in reverse order and uniting the same by an adhesive, the resultant product presenting a tessellated surface having major and minor squares, the minor squares being within the major squares and the squares having the elements united by miter joints.

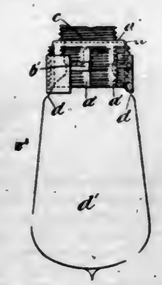
1,480,520. VITAMIN COMPOUND. JOHN R. EOFF, JR., St. Louis, Mo., assignor to Vitamine Products Company, a Corporation of Missouri. Filed July 25, 1921. Serial No. 487,457. 5 Claims. (Cl. 167—7.)

1. A vitamin compound comprising a vitamin concentrate combined with the organic substances of unclarified wine.



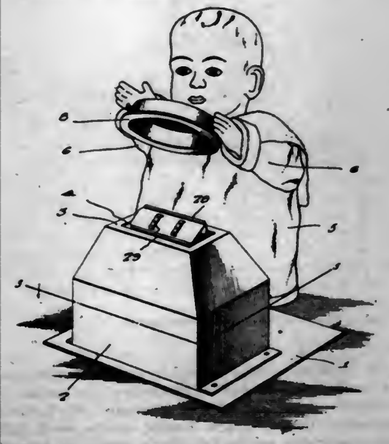
3. A vitamin compound comprising wine as the vehicle for a vitamin concentrate and in which the tannin is combined with said vitamin concentrate.

1,480,521. GUN. JAMES FALLER and ISAAC LAPIDUS, Brooklyn, N. Y. Filed Sept. 6, 1922. Serial No. 586,488. 3 Claims. (Cl. 42—1.)



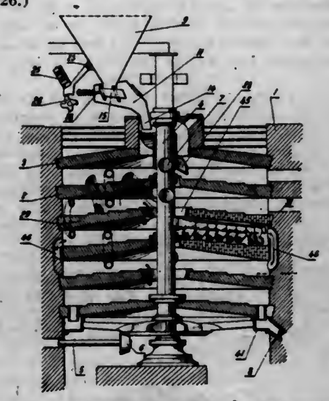
1. A gun of the class described including a casing having a cartridge discharge, a revoluble magazine within said casing and provided with radial chambers, a reciprocating trigger operable from the exterior of the casing and extending into the latter, means to cause step by step turning of the magazine by the movement of the trigger, and a firing device engageable by the magazine with the turning thereof to fire the gun.

1,480,522. STOP FOR CARRIAGES OF METAL-WORKING MACHINES. CHARLES A. FERGUSON, North East, Md. Filed Oct. 15, 1919. Serial No. 330,713. 1 Claim. (Cl. 82—34.)



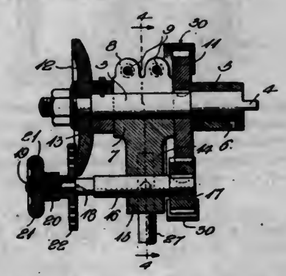
In a device of the class described, comprising a clamp including a main jaw having arms, a micrometer screw slidable longitudinally in the arms and having a flat longitudinal side, a nut threaded on the screw and located between the arms, a collar rotatable for adjustment on the nut and having a scale, and means for holding the collar in adjusted positions circumferentially of the nut—those improvements which comprise a longitudinal scale inscribed on the flat side of the screw, the flat side being located at the periphery of the screw to render the scale on the flat side readily visible, an adjustable member in one arm and cooperating with the flat side of the screw to hold the screw against rotation but for longitudinal movement, and a clamping device in the other arm and cooperating with the flat side of the screw to hold the screw against rotation at the will of an operator, said one arm exercising a three-fold office, in that it carries an index cooperating with the scale of the collar, in that one edge of said arm forms a second index cooperating with the scale of the screw, and in that said arm supports the adjustable member, the flat side of the screw exercising a three-fold office in that it carries the second specified scale and cooperates both with the adjustable member and with the clamping device.

1,480,523. DEVICE FOR LOCKING ELECTRIC INCANDESCENT LAMPS IN THEIR LAMP HOLDERS. HENRY FRANCIS, Shepherds Bush, England. Filed Nov. 15, 1921. Serial No. 515,260. 2 Claims. (Cl. 173—356.)



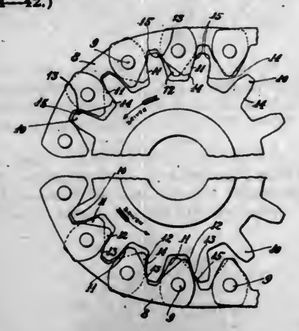
2. A device for locking an electric incandescent lamp to its holder, characterized by a collar consisting of an inner and externally screw-threaded member, a series of vertically disposed notches across the threads of said member, an outer and internally screw-threaded outer member screwing on said inner member, and a spring catch carried by said outer member and interior thereof to engage in the notches of said inner member.

1,480,524. ADVERTISING NOVELTY. ERNEST THOMAS GARLICK, Saginaw, Mich. Filed Oct. 13, 1922. Serial No. 594,297. 2 Claims. (Cl. 211—21.)



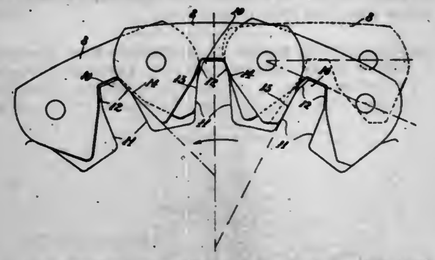
1. In an advertising novelty, a casing having an open top and representing a table, a figure having movable arms positioned at one side of the table, a flanged casing representing a hat carried by the hands of the figure and normally over the opening in the table, revoluble means in the table, articles to be displayed carried thereby, means for imparting a continuous intermittent motion to the revoluble means, means for singly projecting the articles therefrom through the opening in the table when the wheel is halted, means for automatically returning the article to normal position when the wheel is in motion, and means for swinging the arms of the figure to bring the hat thereof away from the opening when an article is in display position and for again swinging the arms to bring the hat over the opening when the revoluble means is actuated.

1,480,525. MECHANICALLY-OPERATED FURNACE FOR ROASTING PYRITES. LUCIEN JOSEPH GESCHWIND, Paris, France, assignor to Sté A° Des Manufactures de Produits Chimiques du Nord-Etablissements Kuhlmann, Paris, France, a French Corporation. Filed June 29, 1921. Serial No. 481,345. 6 Claims. (Cl. 263—26.)



1. In a furnace mechanism for roasting pyrites, having fixed stepped hearths, a central rotating shaft and a rake carried by the shaft, teeth carried by the rake being in the form of plough mold boards.

1,480,526. CUTTER-GRINDING ATTACHMENT FOR MEAT AND BONE GRINDERS. EDWIN CHEATHAM CHILES, Denver, Colo. Filed Mar. 12, 1923. Serial No. 624,621. 3 Claims. (Cl. 51—241.)



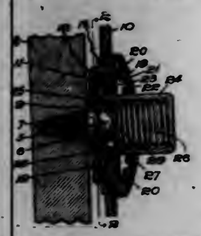
1. A cutter grinding attachment for a meat grinder or similar machine comprising a shaft adapted to be coupled to a driven shaft of the machine, a bearing through which the intermediate portion of said shaft passes rotatably, a gear secured on said shaft at the inner end of said bearing, and a grinding wheel on said shaft at the outer end of said bearing; a second bearing laterally spaced from and parallel with the first named bearing, the two bearings being rigidly joined to each other; a second shaft rotatable and slidable in said second bearing and having on its inner end a pinion meshing with said gear, means for clamping a cutter on the outer end of the said second shaft in overlapping relation with the outer side of said grinding wheel, and a knob swiveled on said outer end of said second shaft for permitting the operator to exert axial pressure thereon to hold the cutter against the grinding wheel.

1,480,527. MULTIPLATE POWER CHAIN. FRANK L. MORSE, Ithaca, N. Y., assignor to The Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 469,789. 5 Claims. (Cl. 74—42.)

5. The combination with a sprocket wheel having symmetrical double faced teeth with outer and inner bearing faces, of a drive chain formed of links each composed of a plurality of arched plates, the plates of each link having an external surface at one end for engaging said inner bearing faces upon the driving wheel, and an internal surface for engaging the outer bearing faces upon the driven wheel.

1,480,528. DRIVE CHAIN. FRANK L. MORSE, Ithaca, N. Y., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Sept. 16, 1922. Serial No. 588,574. 5 Claims. (Cl. 74—32.)

1. The combination, with sprocket wheels having teeth, each provided with a comparatively steep bearing face upon one side and a less steep bearing face upon the opposite side, of a drive chain formed of non-symmetrical links, each having an outside end engaging surface for said steep bearing face on one sprocket, and a more slanting outside engaging surface at the other end of the link for the less steep bearing face on another sprocket.



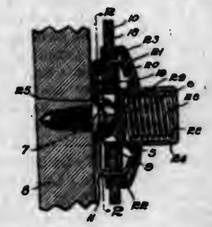
1,480,529. TILTABLE VEHICLE STAND. MYRON BAKER, Washington, D. C. Filed Oct. 3, 1922. Serial No. 592,050. 5 Claims. (Cl. 254—86.)

1. A tiltable vehicle stand, said stand comprising a frame, on which a vehicle may be disposed, downwardly extending brackets carried by the sides of the frame, the lower ends of said brackets being pivotally mounted, forwardly extending pivoted arms carried by the frame and disposed beneath the frame, ground engaging wheels carried by the forwardly extending arms, rearwardly

extending links pivoted to the forwardly extending arms, a transversely disposed rotatable shaft adjacent the rear end of the frame and rotatable in bearings thereof, worm and gear means for rotating said shaft, flexible members connecting the shaft and the rear ends of the rearwardly extending links, said flexible members extending downwardly to a point below the pivotal point of the stand and thence forwardly to the links.

1,480,530. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 2, 1921. Serial No. 519,381. 4 Claims. (Cl. 24—211.)

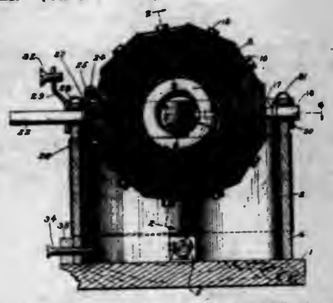
1. A fastener comprising, in combination, a stud having a head and a neck, a casing containing jaw means for engagement in said neck of said stud behind said head, said casing and jaw means secured to a carrying fabric and located on that side of said fabric from which said stud enters, and manipulatory means on the opposite side of said fabric for disengaging said jaw means from said neck of said stud.



1,480,531. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 2, 1921. Serial No. 519,382. 7 Claims. (Cl. 24—218.)

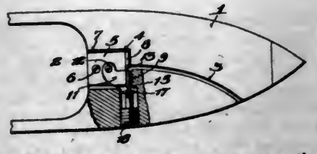
1. A fastener comprising, in combination, a socket having forwardly projecting prongs and a socket-securing part including a cover plate, a clench plate within the cover plate, said clench plate having penetrations to permit passage of said prongs therethrough, and portions of said clench plate bent toward said cover plate adjacent said penetrations to provide prong-deflecting surfaces interiorly of said cover plate.

1,480,532. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 2, 1921. Serial No. 519,384. 2 Claims. (Cl. 24—211.)



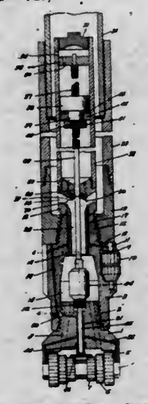
1. A separable fastener comprising, in combination, a stud having a head and a neck, and a socket comprising a casing, a spring providing two stud-engaging jaws connected by the body of the spring, a stationary part projecting between portions of said spring on that portion thereof away from the connection to the body of the spring, and a jaw-moving part adjacent said stationary part and acting to move one end of one jaw away from the stud while moving the opposite end of the second jaw about said stationary part as a fulcrum in a direction to separate said jaws from the neck of the stud, the portions of said spring at the side thereof opposite said stationary part being free to swing toward said stationary part during separation of said jaws.

1,480,533. DEPOLARIZING MIXTURE AND METHOD OF PREPARING SAME. WILLIAM R. CLYMER, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Sept. 17, 1920. Serial No. 410,923. 7 Claims. (Cl. 204—38.)



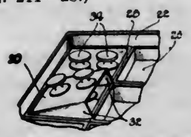
1. Method of preparing a battery depolarizer comprising subjecting a mixture containing pyrolusite and conductive carbon to a milling operation until the desired depolarizing efficiency is attained.

1,480,534. VARIOCOUPLER. ALFRED CROSSLEY, Washington, D. C., assignor to The Hartman Electrical Manufacturing Company, Mansfield, Ohio., a Corporation. Filed Aug. 16, 1922. Serial No. 582,254. 10 Claims. (Cl. 171—119.)



1. A variocoupler comprising a cylindrical support, a primary winding on said support, a flat spider web wound secondary mounted adjacent one end of said support, and means for rotating said spider web wound coil relatively to said primary coil.

1,480,535. SHUTTLE. WILFRED J. GLADUE, Providence, R. I. Filed Sept. 14, 1922. Serial No. 588,176. 4 Claims. (Cl. 139—212.)

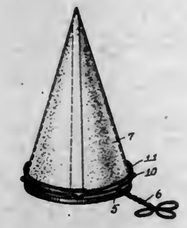


2. In combination with a shuttle having a thread slot extending from the throat of the shuttle, a pair of relatively movable thread engaging members carried by the shuttle and arranged between the slot and throat, a screw carried by the shuttle and operable from the outer side face of the shuttle, and means between the screw and one of said members whereby rotation of the screw effects relative movement between the two members.

1,480,536. GEAR-OPERATED LUBRICATOR. HAROLD W. FLETCHER, Houston, Tex. Filed Nov. 13, 1922, Serial No. 600,631. Renewed Nov. 19, 1923. 7 Claims. (Cl. 255—71.)

1. In an earth boring drill, a head, vertical toothed cutters rotatable thereon in combination with means to lubricate the bearings of said cutters comprising, a lubricator barrel on said head, having ducts leading to said cutters, a piston therein, a central shaft in said barrel threaded longitudinally through said piston and having bearings in the head, a second vertical shaft connected with said first named shaft by a speed reduction means, said second shaft having a limited vertical motion, a horizontal disc on the said second shaft, teeth thereon adapted to mesh with the teeth of said cutters so as to rotate said gear and shaft.

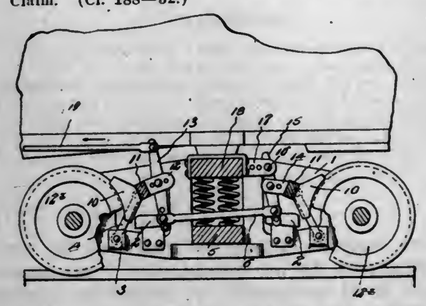
1,480,537. DISPLAY CABINET. ALBERT L. HELLER, Chicago, Ill. Filed May 22, 1922. Serial No. 562,597. 12 Claims. (Cl. 211—28.)



1. In combination, a base, a lattice for supporting engagement with a plurality of inserts on a plane spaced from said base, and inserts having end portions bent down to pass below the plane of support and offering frictional resistance to withdrawal.

1,480,538. EMBROIDERY FOR FINISHING THE EDGES OF FABRICS. WILLIAM N. PARKES, Brooklyn, N. Y. Filed Feb. 25, 1919, Serial No. 279,094. Renewed Oct. 11, 1923. 6 Claims. (Cl. 112—266.)

1. An edging for fabrics comprising a row of sewing machine stitches formed in the fabric, a row of sewing machine stitches formed in a scallop design over and away from the edge of the fabric, the stitches formed over and away from the edge of the fabric connected with those formed in the fabric by connecting links of thread, the said stitches and connecting links of thread located so that the connecting links of thread extend progressively step by step over and away from the edge of the fabric and thereby serve as a finish continuously along said edge, and an auxiliary thread looped around the said connecting links of thread along the outer edge of the said scallop design.



1,480,539. FLY PAPER. JOHN GRECU, New York, N. Y. Filed Sept. 1, 1920. Serial No. 407,473. 2 Claims. (Cl. 43—114.)

1. A fly paper, comprising a conical body coated with adhesive material and adapted to be formed into a roll, and a strip of flexible material having one end secured to the apex of the cone and extending over the face of the cone beyond the base thereof, whereby when the cone is formed into a roll and a pull is exerted on the base of the cone and the flexible strip, the cone will be unrolled.

1,480,540. SAFETY BRAKE. EMORY M. IVIE, Atlanta, Ga. Filed June 20, 1922. Serial No. 569,708. 1 Claim. (Cl. 188—52.)

In a brake construction, the combination of a truck frame including side members on which are brackets and inwardly extending shelves, and brake means carried by the said truck frame and including swinging means pivotally connected to and extending upwardly from the said brackets and carrying crosswise beams above said shelves and shoes on the beams, said shoes being arranged to be opposed to the upper inner quarters of wheels complementary to the truck frame, and means for the actuation of the said swinging means.

Patents Nos. 1,480,541 to 1,481,248.

THE OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 318—No. 3. TUESDAY, JANUARY 15, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(D. C. N. Y.) The Gilson patents, Nos. 1,004,643, claim 9, and 1,004,644, claims 1, 2, and 3, for machine and method for armoring cable, *Held* valid, but not infringed. *National Metal Molding Co.* v. *Triangle Conduit Co.*, 292 Fed. Rep. 989.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Jan. 3, 1924.*

Sara A. Devlin, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Kosmos Chemical Company, 120 East Sixth Street, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered February 24, 1903, No. 39,845, to Sara A. Devlin, 80 Henry Street, Detroit, Mich., and a notice of such declaration sent by registered mail to said Devlin at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Devlin, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 17, 1923.*

Plummer & Edwins, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Buffalo Vegetable Marketing Co., of 29 East Market Street, Buffalo, N. Y., and Sol Perlmon, of 1837 West Jefferson Avenue, Detroit, Mich., for registration of a trade-mark and trade-mark registered September 20, 1921, No. 146,841, to Plummer & Edwins, of Second Avenue and University Street, Seattle, Wash., and a letter sent by registered mail to said Plummer & Edwins at the said address having been returned by the post office undeliverable, the Office has failed to secure service upon said Plummer & Edwins. Notice is therefore given that unless said Plummer & Edwins, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Trade-Marks.

The trade-mark searching facilities open to the public at Room 159 in the Patent Office have been augmented by installing trade-marks published under the act of 1905, but not yet placed upon the register. These are arranged in accordance with the arrangement of words and symbols of registered marks, as well as by classes. All marks published since January 1, 1923, have been included.

CLASSIFICATION MANUAL.

A Manual of Classification of Patents in the United States Patent Office has been published, indicating the classes and subclasses as of January 1, 1924, on sheets about 6 inches by 9 inches, punched for insertion in a loose-leaf binder. An index is being prepared for publication. It is proposed to keep the Classification Manual current by reprinting necessary pages from time to time as changes in classification are made. While this is done primarily for the use of the Office, the Superintendent of Documents, Government Printing Office, Washington, D. C., on receipt of $1.00 will furnish a copy of the Manual of Classification at once, and for the same price will send, on publication, a copy of the index and copies of such pages as may be reprinted during the calendar years 1924 and 1925.

Condition of Applications Under Examination at Close of Business January 4, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 67,135; Trade-Mark Division, 2,232. Oldest new case, Apr. 3, 1923; oldest amended, Apr. 5, 1923. The dates given are 1923., Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

U. S. Circuit Court of Appeals—Second Circuit.

CHESTER-POLLARD AMUSEMENT CO., INC., *v.* KENTUCKY DERBY CO., INC., ET AL.

Decided February 17, 1923.

[288 Fed. Rep. 802.]

1. PATENTS—1,203,852, FOR GAME OF SKILL, HELD VALID, BUT NOT INFRINGED.

The Clorius patent, No. 1,203,852, for a game of skill, *Held* valid, but not infringed.

2. SAME—1,368,111, FOR AN AMUSEMENT APPARATUS, HELD VALID, BUT NOT INFRINGED.

The Chester patent, No. 1,368,111, for an amusement apparatus, *Held* valid, but not infringed.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by the Chester-Pollard Amusement Company, Inc., against the Kentucky Derby Company, Inc., and Arnold Neble, with counterclaim by defendants. Decree for complainant, and dismissing counterclaim, and defendants appeal. Modified.

MEMORANDUM OF COURT BELOW.

Plaintiff sues in usual form on Chester patent 1,368,111, while defendants, without admitting infringement of the Chester patent if valid, sue by counterclaim on Clorius patent 1,203,852, which patent is admittedly prior to Chester patent and is said to be infringed, not by any device made strictly in accordance with Chester's disclosure, but by the commercial apparatus which the patentee and his assignee, the plaintiff, have made, used, and sold.

Similarly plaintiff does not, and of course cannot, assert that anything made strictly in compliance with the disclosure of Clorius's prior patent infringes the Chester patent, but it is asserted that defendants, perceiving the advantages of the Chester device and its attractive novelty over Clorius (which when new had obtained marked success), proceeded to imitate Chester.

Both Clorius and Chester spent their inventive thought over what each of them calls "an amusement device," that is, a catch-penny affair intended to be set up at places like Coney Island and Asbury Park for the purpose of attracting patrons each of whom is charged a small fee to "show his skill" in bursting a balloon or by actuating the effigy of a race horse along a track, or the like, to the end that the most skillful manipulator may get a prize, presumably of greater value than the fee he paid to enter the so-called contest.

I cannot think that an "amusement device" is patentable merely because it amuses, much less because the process of amusing the public is profitable. Therefore I regard all the patents brought to the attention of the court herein merely as mechanical devices, though I pay some attention to the fact (plainly enough proven) that the defendant has put out a machine for bursting balloons solely because the plaintiff was the first person to attract and amuse a foolish public by doing the same thing with a machine requiring "skill." Nor does it make any difference that the plaintiff's balloon burster simulates an aerodrome; while defendants' balloons are when distended the heads of dancing or gesticulating manikins. These are but the attribute of the "show business," and I disregard them wholly in considering the patent question which is the only question at bar.

It is clear that the Kentucky Derby Company is entirely controlled by Mr. Neble, and it is also proven that the latter has himself personally used (if he has not caused to be made and sold) the alleged infringing devices. Therefore he is a proper defendant.

I believe the evidence that Mr. Neble examined Chester's balloon burster, that he expressed the opinion that it was the only amusement device that he had seen which did not infringe his Kentucky Derby patent, and I find that he thereupon simulated the amusement features of Chester's apparatus as soon as he could. I am also of opinion that he simulated the mechanism which an examination of Chester's apparatus revealed to him.

It needs no citation of authority to hold that as against a plain copyist a patent may be more generously construed in favor of the patentee than would be proper where the lines of action of persons wholly independent of each other happened to cross. This observation is made although I do not think that this case requires application of the doctrine referred to.

The essential inventive thought in Chester's patent is that the "fluid pressure" shall be subject to "controlling means controlled by the hand-operated member."

But an examination of Chester's disclosure proves that his controlling means consist essentially in breaking the connection between the power of the hand and the pump which furnishes the liquid pressure whenever the handle is revolved too rapidly; and the reason why the revolution of the handle no longer pumps is found in the governor, which (so to speak) diverts the pumped air from (for instance) a balloon.

The disclosed mechanical operation is very simple, a description of it would be of no value; it is sufficient to state my conclusion, viz that the prior art does not display any other mechanical combination or arrangement producing Chester's result.

I may note here that it seems to me quite immaterial that Chester's patent discloses no means of simultaneously relieving all the unburst balloons when a so-called contest is ended, by the bursting of one of them. This necessarily follows from my view of all the patents considered, viz that as producers of amusement I care nothing for them, they are to be regarded merely as mechanical devices; and Chester's mechanical device is complete, and completely disclosed when the art of bursting a single balloon is comprehended.

I think it also perfectly immaterial that in any balloon-bursting apparatus a puncturing pin may be rigged so as to prick a balloon at a predetermined degree of inflation. This is a mere adjunct, designed only to terminate inflation at a certain size. Invention resides in the scheme (with more or less rapidity) of getting the balloon to the puncturing point.

If the Chester patent is to be restricted to a device which prevents due and regular inflation through the operation of a bleed valve, defendants' actual apparatus does not infringe.

Undoubtedly, however, claims 1, 2, and 6 will read upon defendants' alleged infringement. Therefore the question is whether defendant is within a reasonable range of equivalents having regard to the prior art and common knowledge.

Defendants use the fly-ball governor of Chester's patent, but use it to wholly sever connection between his handwheel and his pump, whereas, the function of Chester's fly-ball governor is to bring a bleed valve into operation; the connection between handwheel and pump is never severed.

I think that Chester's patent is a pioneer in the use of mechanically-compressed air for the purpose indicated; that under such circumstances he is entitled to a range of equivalents which will make defendants' putting of his own pump out of action by disconnecting a clutch by means of a governor, the equivalent of Chester putting his pump out of useful action by bleeding it, also by means of a governor.

On this ground I find the defendants infringe.

I have not overlooked defendants' very careful and indeed able argument based upon the file wrapper, but am not thereby persuaded that Chester is debarred from occupying the position of a pioneer in a field commercially rather wide, whatever one may think of its social utility.

It is impossible for me not to feel that the counterclaim in this suit is an afterthought, and indeed something like a smoke screen. The Clorius patent is a very clever and ingenious mechanical contrivance; it is in its way as much of a pioneer as Chester, although Woods and others had at an earlier date disclosed and put out mechanical racers.

From the "amusement" standpoint it is quite possible to say that there is considerable resemblance between Clorius and Chester, in that both have "critical speeds," which when steadily maintained produce results at a distance, and the results are amusing. But from the mechanical standpoint there is to my mind no resemblance whatever between Clorius's means of accomplishment and those of Chester.

It is undeniable that some of Clorius's claims will verbally read on Chester, or rather on Chester's commercial device. Of this, Clorius's claim 36 is an example; but such correspondence can only be declared by saying that when Clorius claims "means connected with said units to cause the same to travel along the course at a speed which is determined by the speed of operation of said hand-operated means," he is entitled to cover by these words the air pipes and connections, etc., of Chester's pneumatic device.

If claims could be construed in this manner, patentable invention would cease.

The counterclaim is dismissed, and the plaintiff awarded a decree, with costs.

Mr. Ivan E. A. Konigsberg (*Mr. Henry J. Lucke* and *Mr. Harold E. Stonebraker* of counsel) for the appellants.

Messrs. Munn, Anderson & Munn (*Mr. T. Hart Anderson* of counsel) for the appellee.

Before ROGERS, MANTON, and MAYER, Circuit Judges.

MAYER, *Cir. J.*:

Plaintiff is the owner of United States Letters Patent No. 1,368,111 to Frank R. Chester, dated February 3, 1921, for "amusement apparatus." Defendant Kentucky Derby Company, Inc., is the owner of United States Letters Patent to A. V. and O. T. Clorius No. 1,203,852 dated November 7, 1916, for "game of skill." Defendant Neble is president of defendant company.

Plaintiff filed a bill of complaint against defendant alleging infringement of claims 1, 2, and 6 of the Chester patent.

Defendant Kentucky Derby Company, after the usual denials, alleged as a counterclaim the infringement by plaintiff of the claims of the Clorius patent, and defendant Neble answered denying liability.

The district court filed its decree holding the Chester patent valid and (1) that defendants infringed claims 1, 2, and 6 thereof, and (2) that plaintiff did not infringe the Clorius patent, and (3) therefore that the counterclaim should be dismissed.

The decree did not specifically hold the Clorius patent valid, but, after examining the opinion and the wording of the decree, it is plain that the district court assumed that the claims of the Clorius patent were valid.

This case does not involve any debatable question of law nor any mechanical nor scientific problem requiring extensive exposition.

Both devices were designed to appeal to a public which enjoys a certain type of amusement furnished by operation of these contrivances. Clorius was first in the field with toy horse racing, held by the New York courts not to be unlawful. Chester followed with toy balloons. As this balloon game became popular, defendant company, as one of its devices, substituted balloons for horses. Hence this lawsuit.

We are concerned only with the features of the controversy which relate to the mechanism used and, as pointed out by the district court, the amusement features make no difference. Clorius and Chester can each race toy horses or explode toy balloons at will, if the respective patents, as defined in the claims, are different from the patent standpoint.

[1] We agree with the district court in holding that plaintiff does not infringe the claims of the Clorius patent and, in order to remove any doubt as affecting future litigations, if any, we hold the Clorius patent valid.

[2] We also agree that the Chester patent is valid.

Our sole disagreement with the district court is that, owing to a different mental concept, we look at the Chester patent as narrower than held to be by the district court, and, hence we think, that claims 1, 2, and 6 of the Chester patent were not infringed by defendants.

We think, among other reasons, that the file wrapper prevents the allowance to Chester of the range of equivalents necessary to find infringement in the case at bar.

The Chester patent may be typified by claim 1, which reads:

> An amusement apparatus, comprising a hollow fragile object adapted to be demolished by the action of fluid pressure, a fluid pressure generating means having a hand-operated member and arranged to generate fluid pressure for demolishing the said object, and controlling means controlled by the said hand-operated member and controlling the generated fluid pressure.

Thus claim 1 of Chester is limited to "controlling means controlled by the said hand-operated member and controlling the generated fluid pressure." The word "generated" defines what the Chester patent is intended to do, namely, to control the pressure after it is generated, or, in other words, to maintain constantly a generated pressure, and to control such pressure at some point between the pump which generates it and the balloon.

Defendants' machine does not maintain a constant generated pressure, because when the critical speed of the handwheel is exceeded in defendants' machine, the pump stops operating. Thus, defendants' machin unclutches the pump or motor element. Plaintiff's invention consisted in letting the pump run continuously with the handwheel and placing a bleed valve or some other means between the pump and the balloon to effect changes in the speed of inflation of the balloon.

Claim 2 is limited to "controlling the flow of the fluid pressure from the said fluid pressure supply means to the said hollow fragile object." Defendants' machine does not control the flow of fluid pressure from the fluid-pressure-supply means to the hollow fragile object, because defendants' machine stops the operation of the fluid-pressure-supply means, and during such stoppage, there is no flow from the fluid-pressure-supply means to the balloon.

Claim 6 is restricted to "controlling the flow of the compressed air from the air pump into the said object." The Chester patent contemplates compressing air continuously while the handwheel is turned, and permitting a greater or less amount of such compressed air to flow to the balloon. Defendants' machine does not compress the air continuously, but when the critical speed of the handwheel is exceeded, the pump stops and there is no compression during the interval.

Decree modified, as indicated, with half costs in this court and in the district court.

PATENT SUITS.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,341,806, A. König, Machine for forming saw blades, decided December 7, 1923, claim 5.

Pat. 1,360,931, H. W. Graves, Roof truss, decided October 29, 1923, claim 1.

Pat. 1,370,312, F. A. Hart, Combined typewriting and computing machine, decided December 8, 1923, claim 32.

Pat. 1,396,348, B. C. Stickney, Combined typewriting and computing machine, decided December 8, 1923, claims 1, 26, 33, 72, and 73.

Disclaimers.

1,383,843.—*Carl G. Olson* and *Frank W. England*, Chicago, Ill. HOB-GRINDING MACHINE. Patent dated July 5, 1921. Disclaimer filed December 10, 1923, by the assignee, *Illinois Tool Works*.

Hereby enters this disclaimer—

"To that part of the claim in said specification which is in the following words, to wit:

"1. A machine tool having a tool holder and a rocking frame, one of which oscillates about a fixed axis for producing relative movement between the tool and the work for producing relief in the work, means for rotating the work in the work holder, a rotating cam, a pivoted arm actuated by said cam, a rider carried by the aforesaid part which oscillates, for transmitting the movement of the arm to the part which oscillates, said rider being adjustable relatively to the axis of the part which oscillates.

"2. A machine tool having a rocking frame for swinging the work toward and from the tool for taking an eccentric cut, a cam for oscillating the rocking frame, a pivotally supported arm adapted to be oscillated about its pivot by said cam, and a rider directly cooperating with the arm and the rocking frame for transmitting the oscillatory movement of the arm to the rocking frame, said rider being adjustable toward and from the axis of one of the elements with which it directly cooperates."

1,388,334.—*John E. Greenawalt*, New York, N. Y. GRATES FOR SINTERING PANS. Patent dated August 23, 1921. Disclaimer filed December 20, 1923, by the patentee.

Hereby enters this disclaimer—

"To that part of the claims in said specification which is in the following words, to wit:

"16. In combination with a treatment vessel, a grate presenting a substantially even surface for the support of the charge to be treated, said vessel being tiltable for dumping the charge, and means for causing a distortion of the charge-supporting surface of the grate with a dumping movement of the vessel.

"17. In combination with a treatment vessel tiltable in a vertical plane about a fixed axis, a grate presenting a substantially even surface for the support of the charge to be treated, and means for causing a distortion of the charge-supporting surface of the grate with a tilting of the vessel to dumping position.

"18. A grate of the character described, comprising a series of component members forming a support for the charge, and means for permitting a member to participate in a limited outward movement from its normal position of rest.

"19. A grate of the character described, comprising a series of component members forming a support for the charge, and means for permitting a member to participate in a limited outward movement in a direction transverse to the supporting surface of the grate.

"20. A grate of the character described, comprising a series of component members collectively presenting a normally horizontal supporting surface for the charge, and means for permitting a member to participate in a limited vertical outward movement.

"21. A grate of the character described, comprising a series of component members collectively forming a support for the charge, said grate being provided with openings for the passage of gases, and means for permitting a member to participate in a limited outward movement in a direction transverse to the supporting surface of the grate.

"22. A grate of the character described, comprising a series of grate-bars spaced suitable distances apart to form grate openings, means for supporting the bars, and means for permitting a predetermined number of the bars to participate in a limited outward movement in a direction transverse to the supporting surface of the grate.

"29. In combination with a sintering pan rotatable in a vertical plane for dumping the charge treated, supporting means positioned beneath the charge during the period of treatment, said supporting means participating in a limited downward movement to break up and dislodge any sintered material adhering thereto upon rotation of the pan to dumping position.

"30. In combination with a sintering pan tiltable in a vertical plane for dumping the charge treated, a support for the charge, and means for causing said support to shift its position within suitable limits with a dumping movement of the pan, in a direction operating to release any sintered material adhering to the support.

"31. In combination with a sintering pan mounted to be inverted for dumping the treated charge, a series of supports for the charge, and means for causing a predetermined portion of said supports to become displaced from their normal positions of rest with an inversion of the pan, said displacement being in a direction operating to break up and release any sintered material adhering to said supports.

"32. In combination with a sintering pan tiltable in a vertical plane for purposes of dumping, a grate for supporting the charge during treatment, said grate having component parts capable of a limited vertical movement, and means cooperating with said parts to cause a vertical outward displacement thereof from their normal positions of rest with a dumping movement of the pan, thereby dislodging and breaking up any sinter adhering to the grate.

"34. In combination with a grate-bar, a suitable support for the bar, and cooperating means between the bar and its support for causing the bar to drop a certain distance with an inversion of the bar and its support.

"38. In combination with a sintering pan mounted to be inverted for dumping the treated charge, supporting means positioned beneath the charge during the period of treatment, said supporting means participating at different points in a limited downward movement to break up and dislodge any sintered material adhering thereto, upon the tilting of the pan to dumping position.

"39. In combination with a tiltable treatment vessel, a grate member positioned to support the charge and being at rest during the treatment of the charge, and means for causing said member to drop through a limited distance away from its normal position of rest, with a dumping movement of the vessel.

"40. In combination with a tiltable treatment vessel, a perforated support for the charge, and means for causing different portions of said support to drop through a limited distance away from their original positions of rest with a dumping movement of the vessel.

"41. In combination with a tiltable sintering pan, a grate comprising a plurality of independent members for supporting the charge, and means for causing a portion of the members to participate in a limited downward displacement from their original supporting positions with a dumping movement of the pan.

"42. In combination with an open top sintering pan rotatable about a fixed axis for dumping, a grate comprising a plurality of bars spaced apart and collectively presenting an even supporting surface to the charge resting thereon, and means for causing a portion of the bars to participate in a limited drop with a dumping movement of the pan.

"45. In a tiltable treatment vessel, a grate comprising a plurality of members spaced apart, and means for imparting to any predetermined number of the members a limited outward displacement in a direction transverse to the charge-supporting surface of the grate with a dumping movement of the vessel.

"47. In combination with a treatment vessel tiltable in a vertical plane, a grate member participating in a limited outward movement or drop with a tilting of the vessel to dumping position.

"49. In combination with a tiltable treatment vessel, a grate comprising a series of component members forming a support for the charge, and means for causing a member to participate in a limited outward movement from its normal position of rest with a tilting of the vessel to dumping position."

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 15, 1924.

[VOL. 318. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 138,735. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) UNITED SHOE MACHINERY CORPORATION, Paterson, N. J., and Boston, Mass. Filed Oct. 23, 1920.

FROSCOAT FINISH

No claim is made to the exclusive use of the word "Finish" apart from the mark shown herein. The mark consists of the words "Froscoat Finish."

Particular description of goods.—Tools, Machines, and Parts Thereof Used in the Manufacture of Shoes, Comprising Splitting Knives, Skiving Knives, Scarfing Knives, Strip Bevelers, Tap Cutters, and Edge-Trimming Cutters.

Claims use since about Apr. 23, 1920.

Ser. No. 140,448. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) JONKOPING OCH VULCANS TANDSTICKSFABRIKSAKTIEBOLAG, Jonkoping, Sweden. Filed Nov. 30, 1920.

No claim is made to the words "Tandstickor, Made in Sweden, Trade Mark Registered" apart from the trade-mark shown on the drawing, applicant reserving his common-law rights thereto. The medals shown as a part of the mark presented are the representation of medals received by the applicant as an award for the excellence of its goods.

Particular description of goods.—Matches.

Claims use since about Feb. 2, 1911.

Ser. No. 147,025. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WILLIAM H. HUGHES, Washington, Pa. Filed Apr. 30, 1921.

Particular description of goods.—Oil-Base Liquid Detergent and Cleaning Preparations and Liquid Dressings for Automobile Tops and for Automobile Seats.

Claims use since June, 1919.

Ser. No. 148,667. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) NORTHWESTERN LEATHER CO., Boston, Mass. Filed June 4, 1921.

No claim is made to the word "Tannery" apart from the mark shown in the drawing.

Particular description of goods.—Leathers.

Claims use since 1898.

Ser. No. 149,794. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BLAXILK PRODUCTS COMPANY, Minneapolis, Minn. Filed June 29, 1921.

BLAXILK

Particular description of goods.—Top Dressing for Automobiles and Other Vehicles.
Claims use since Feb. 1, 1921.

Ser. No. 155,983. (CLASS 39. CLOTHING.) THE WILEY-BICKFORD-SWEET COMPANY, Worcester, Mass., and Hartford, Conn. Filed Nov. 26, 1921.

Capitol

Particular description of goods.—Knitted Suits, Knitted Coats, Bathing Suits, Sport Coats, Spiral Spats, Leggings, Overgaiters; Felt, Satin, and Leather Slippers; Insoles, and Felt, Satin, and Leather Shoes.
Claims use since January, 1917.

Ser. No. 157,094. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GLENWILD HOTEL & FARMS, INC., Monroe, N. Y. Filed Dec. 24, 1921.

TRAHANA

Particular description of goods.—Soup.
Claims use since Dec. 12, 1921.

Ser. No. 159,115. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE SALT'S TEXTILE MANUFACTURING COMPANY, Bridgeport, Conn. Filed Feb. 9, 1922.

"TEXTILE PELTS"

The mark consists of the words "Textile Pelts."
Particular description of goods.—Pile Fabrics in the Piece.
Claims use since Jan. 4, 1922.

Ser. No. 160,111. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CROFTS & REED CO., Chicago, Ill. Filed Mar. 3, 1922.

Supreme OLIVE

No claim is made to exclusive use of the word "Olive" apart from the mark as shown.
Particular description of goods.—Toilet Soap.
Claims use since June, 1922.

Ser. No. 160,916. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) ARROW NOVELTY COMPANY, INC., New York, N. Y. Filed Mar. 20, 1922.

ANCO

Particular description of goods.—Leather Goods and Novelties—Namely, Wallets, Change Purses, Pocketbooks, Bill Folds, Hand Bags, Hand-Painted Bags, Cardcases, Alligator Purses and Wallets, Wrist Purses; Combination Cases Containing Bill Fold, Notebook, Pencil, Change Purse, Cardcase, Stamp Pocket, Calendar, Either in This Combination or in Other Combinations; Finger Purses, Leather Ring Cases, Sheepskin Purses with Leather Straps, Auto Cap Purses, Frame Purses, Frame Tray Purses, Change Purses, Bag Tags of Leather.
Claims use since January, 1917.

Ser. No. 160,917. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) ARROW NOVELTY COMPANY, INC., New York, N. Y. Filed Mar. 20, 1922.

ARROW NOVELTY CO. INC. NEW YORK

Particular description of goods.—Leather Goods and Novelties—Namely, Wallets, Change Purses, Pocketbooks, Bill Folds, Hand Bags, Hand-Painted Bags, Cardcases, Alligator Purses and Wallets, Wrist Purses; Combination Cases Containing Bill Fold, Notebook, Pencil, Change Purse, Cardcase, Stamp Pocket, Calendar, Either in This Combination or in Other Combinations; Finger Purses, Leather Ring Cases, Sheepskin Purses with Leather Straps, Auto Cap Purses, Frame Purses, Frame Tray Purses, Change Purses, Bag Tags of Leather.
Claims use since January, 1917.

Ser. No. 160,918. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) ARROW NOVELTY COMPANY, INC., New York, N. Y. Filed Mar. 20, 1922.

ANCO

Particular description of goods.—Leather Goods and Novelties—Namely, Wallets, Change Purses, Pocketbooks, Bill Folds, Hand Bags, Hand-Painted Bags, Cardcases; Alligator Purses and Wallets, Wrist Purses; Combination Cases Containing Bill Fold, Notebook, Pencil, Change Purse, Cardcase, Stamp Pocket, Calendar, Either in This Combination or in Other Combinations; Finger Purses, Leather Ring Cases, Sheepskin Purses with Leather Straps, Auto Cap Purses, Frame Purses, Frame Tray Purses, Change Purses, Bag Tags of Leather.
Claims use since 1917.

Ser. No. 161,327. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) PAUL MCBRIDE, Richmond, Ind. Filed Mar. 27, 1922.

MYSTIC WHEEL

No claim made to the word "Wheel."
Particular description of goods.—Table Board Game Played with Pieces.
Claims use since Jan. 3, 1922.

Ser. No. 164,381. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) CORTLAND LINE CO., INC., Cortland, N. Y. Filed May 24, 1922.

HERCULES PRESSURE PROCESSED YDS. 25 SIZE E TEST 32 LBS ENAMELED SILK FLY LINE

No claim is made to the exclusive use of the representation of the fish and line, the words "Brand, Enameled Silk Fly Line, Pressure Processed, Yds. 25, Size E, Test 32 Lbs." apart from the mark as shown in the drawing.
Particular description of goods.—Enameled Silk Fishing Lines.
Claims use since Feb. 23, 1918.

Ser. No. 165,523. (CLASS 12. CONSTRUCTION MATERIALS.) JAMES EDWARD CASSIDY, doing business as Asphalt Roofing Products Co., Washington, D. C. Filed June 15, 1922.

TRINITY

Particular description of goods.—Coating for Roofs, Composed of Natural Lake Asphalt, Volatile Oils, and Long Asbestos Fiber.
Claims use since Feb. 1, 1922.

Ser. No. 165,768. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SOCIÉTÉ ANONYME LE CARBONE, Levallois-Perret, France. Filed June 20, 1922.

LE CARBONE

For purposes of this registration and without waiving any common-law rights thereto the words "Le Carbone" are disclaimed apart from the mark as shown in the drawing. The color lines shown upon the letter "C" are for the purpose of indicating shading only.
Particular description of goods.—Electric Cells.
Claims use since May 10, 1922.

Ser. No. 166,402. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE OWL DRUG COMPANY, San Francisco, Calif. Filed July 1, 1922.

Particular description of goods.—Soap, Ivory Polish, Glove Cleaner, a Liquid Cleaning Preparation for Use on Textile Fabrics, Fuller's Earth for Detergent Purposes, Whiting, Powdered Pumice Stone, Spanish Bark in the Nature of a Soap for Cleaning Textiles, a Textile-Cleaning Preparation in the Nature of a Soap, and a Floor Cleaning or Sweeping Compound in Powder Form.
Claims use since 1900.

Ser. No. 167,140. (CLASS 39. CLOTHING.) D. NUSBAUM & CO., INC., New York and Woodhaven, N. Y. Filed July 20, 1922.

NUKNIT

Particular description of goods.—Knitted Outer Garments and Undergarments—Namely, Knitted Capes; Hats for Men, Women, and Children; Mufflers, Scarfs, Gloves of Knitted Fabric, Mittens, Leggings, Sweaters, Vests, Coats, and Hosiery.
Claims use since Apr. 11, 1922.

Ser. No. 167,283. (CLASS 39. CLOTHING.) GOLDMAN COSTUME COMPANY, INC., New York, N. Y. Filed July 22, 1922.

Betty Wales

The script words "Betty Wales" is the signature adopted by the author, who created the fictitious character known as "Betty Wales" for the series of books bearing that name.
Particular description of goods.—Underwear and Furnishings—viz, Men's and Women's Underwear Consisting of Shirts, Undershirts, Chemise, Chemisette, Camisole, Combination Aprons, Rubber Coats and Mackintoshes, Overalls, Cloaks, Suits, Hats, Helmets, Athletic Underwear, Knitted Undergarments, Oiled Clothing and Waterproofed Garments, Sleeping Garments, Gymnasium Suits, Jackets, Bonnets, Hat Frames, Sashes, Scarfs, Mufflers, Gaiters, Bustles; Dress, Negligee, and Work Shirts; Trousers, Rubbers, Boots, Shoes, Union Suits, Shirt Waists, Brassières, Negligees, Toques, Jumpers, Leggings, Putties, Bathing Suits, Gauntlets, Sweaters, Hoods, Caps, Vests, Capes, Hosiery, Sport and Sporting-Goods Suits, Outing Shirts, Jerseys, Knee Tights, Camping Suits, Sandals, Kimonos, Neckwear, Cuffs, Shawls, Blouses, Mittens, Drawers, Bloomers, Petticoats, Corset Covers, Corsets, Teddy Envelopes, and Slippers.
Claims use since about Jan. 5. 1917.

Ser. No. 167,349. (CLASS 39. CLOTHING.) DUTCHESS KNITTING MILLS, New York, N. Y. Filed July 25, 1922.

KDM DUTCHESS KNITTING MILLS

The words "Dutchess Knitting Mills" are disclaimed apart from the mark as shown.
Particular description of goods.—Knitted Outerwear for Men, Women, Children, and Infants—Namely, Sweaters, Jerseys, Dresses, Skirts, Slip-Ons, Scarfs, Caps, Hats, Bathing Suits, Drawer Leggings, Gloves, and Bootees.
Claims use since June, 1920.

Ser. No. 167,614. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILFRID PAUL HEATH, Chicago, Ill. Filed July 31, 1922.

HEATHIZED

Particular description of goods.—Bread, Butter, and Ice Cream.
Claims use since Dec. 10, 1921.

Ser. No. 167,991. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) JAMES F. MACDONALD, doing business as Jas. F. Macdonald Company, San Francisco, Calif. Filed Aug. 9, 1922.

BRUME

Particular description of goods.—Rakes.
Claims use since July 10. 1922.

Ser. No. 168,177. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) STEMOLIN CORPORATION, New York, N. Y. Filed Aug. 12. 1922.

KLEEN KUT

Particular description of goods.—Lawn-Mower Blades.
Claims use since June 20, 1922.

Ser. No. 168,438. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) TUTTLE & BAILEY MANUFACTURING COMPANY, Brooklyn, N. Y. Filed Aug. 18, 1922.

FERROCRAFT

Particular description of goods.—Heating and Ventilating Apparatus—Namely Grilles, Screens, Registers, and Ventilators, Either Plain or Ornamental, of Bronze, Brass, Iron, and Steel.
Claims use since July 8, 1922.

Ser. No. 168,531. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) JOSEPH J. KLEINER & CO., New York, N. Y. Filed Aug. 21, 1922.

JOSEPH J. KLEINER & CO. PARAMOUNT NEW YORK, N.Y.

No claim is made to the exclusive use of the words "New York, New York" apart from the mark shown on the drawing.
Particular description of goods.—Clinical Thermometers, Hypodermic Needles, Hypodermic Syringes, Sputum-Cup Refills, Sputum-Cup Holders, Blood-Counting Pipettes, Blood-Counting Chambers; Hospital Rubber Goods, Including Surgeons' Gloves, Hot-Water Bottles, Ice Caps, Sheeting, Catheters, Rectal Tubes, Colon Tubes, Stomach Tubes, Rubber Tubing, Operating Pads, Invalid Rings; Hospital Glassware, Including Glass Urinals, Rectal Tips, Vaginal Tips, Drinking Tubes, Gruel Tubes, Murphy Drips; Hospital Enamel Ware, Including Bedpans, Douche Pans, Urinal, Irrigators, Pus Basins; Sutures, Including Silkworm Gut, Catgut, Etc.; Wood Applicators, Wood Tongue Blades.
Claims use since about Feb. 1, 1922.

Ser. No. 169,175. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MIRACLE SALES CO., Los Angeles, Calif. Filed Sept. 7, 1922.

Particular description of goods.—Soap.
Claims use since Aug. 21, 1922.

Ser. No. 169,476. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE DEMING COMPANY, Salem, Ohio. Filed Sept. 15, 1922.

OIL-RITE

Particular description of goods.—Power Pumps.
Claims use since Aug. 31, 1922.

Ser. No. 169,522. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ABILENE FLOUR MILLS COMPANY, Abilene, Kans. Filed Sept. 16, 1922.

BETTER BREAD

No claim is made to the words "Better Bread" apart from the mark as shown in the drawing.
Particular description of goods.—Wheat Flour.
Claims use since January, 1915.

Ser. No. 169,553. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MABELLA LABORATORY, Chicago, Ill. Filed Sept. 16, 1922. Under ten-year proviso.

ELSNER'S PEARL CREAM

Particular description of goods.—Cream for Removing Freckles, Tan, and All Discolorations of the Skin.
Claims use since prior to Jan. 1, 1895.

Ser. No. 171,850. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. JONES & CO., Oakland, Calif. Filed Nov. 11, 1922.

GOLDEN WEST

Particular description of goods.—Canned Peaches.
Claims use since Aug. 10, 1922.

Ser. No. 171,904. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANTONIO CORRAO, New York, N. Y. Filed Nov. 13, 1922.

The feature originally shown in the drawing, but now sought to be eliminated therefrom—namely, "Vittorio Emanuele II"—considered either alone or as a part of the mark originally shown in the drawing, is deemed by the applicant to be neither material nor essential; that the applicant disclaims the right to the exclusive use of the above-identified feature upon goods of the same descriptive properties.
